Entered at the Boston, Mass. Post Office as second-class mail matter

Items of Interest.

Political and Governmental Notes.

The bulletins issued by the United States census bureau last week give the population of a number of important cities according to the recent count. St. Louis takes fourth rank of all the American cities with a population of 575,238, against 451,770 in 1890; Boston is fifth with 560,892 inhabitants, compared with 448,477 in 1890, and Baltimore is sixth with 503,957 people, against 434,439 in 1890. Indianapolis has 169,164 people, against 105,436 in 1890; Rochester, N. Y., 162,435 against 133,869 in 1890; Denver, Col., 133,859, against 106,713 in 1890.

James A. Sample, chief of the issue division of the United States Treasury, who was sent to Porto Rico to superintend the exchange of the Spanish coins for those of the United States, has returned to Washington and is reported by the newspapers as saying: "I traveled from San Juan to Ponce, through Arecibo and Aguadillo and covered the entire island. I found the majority of the natives opposed to the United States, whereas I had been led to believe that they welcomed Americans with open arms."

A Washington press dispatch says: "Two former Presidents of the United States may represent this country as members of the International board of arbitration provided for by the treaty negotiated during the peace conference at The Hague. Each of the nations participating is entitled to four members of this board. President McKinley has asked former President Cleveland and former President Harrison to serve as two of the members for the United States."

In the official trial trip of the first-class United States battleship Alabama off the Massachusetts coast on August 28, the ship made an average run over a 33-knot measured course of 16.983 knots per hour, by the calculations of the naval trial board, and 17.024 knots an hour by the calculations of Captain Sargent, sailing master for the builders. The Alabama is a sister ship of the Kentucky and the Kearsarge.

In New York, for some time past, ex-Senator Hill has been leading a movement within the Democratic party to wrest the control of the party out of the hands of Croker and Tammany Hall. In the primary elections, held on August 28, the Hill forces were overwhelmingly defeated and the New York State convention will be dominated by Tammany Hall.

Acting Secretary Hackett has awarded contracts to the Holland Submarine Torpedo Boat Company for six submarine torpedo boats, and specified that they should be completed within eleven months from August 25. The contract price for the boats is \$170,000 each.

At a meeting of the People's party national committee in Chicago, August 27, the declination of Charles A. Towne as the Vice-Presidential nominee of the party was accepted and the name of Adlai E. Stevenson was put in his place.

The Kentucky Legislature has been called together in extra session to revise or repeal the Goebel election law, which has been unsatisfactory to probably a large majority of voters.

The Democratic party will open national headquarters in New York City, which will be in charge of William J. Stone, ex-governor of Missouri.

Foreign News.

Toward the close of last week the attitude of the principal powers concerned in determining the fate of the Chinese Empire seemed favorable to a moderate policy. All the powers, including Russia and Germany, have declared that they do not wish to bring about the partition of China, and Russia has gone so far in the direction of peace as formally to propose to the United States, Japan, and the European governments, that the allies withdraw from Peking to some convenient place near and permit the Chinese authorities to establish order in the capital in their own way. Some of the foreign residents of Peking have been escorted to Tien Tsin, but in the absence of news to the contrary it is supposed that the foreign ministers and their households are still in Peking.

Contracts for the dismantling and razing of the Paris Exposition buildings have been signed and the work has been given to the Chicago firm which tore down the buildings after the Columbian Exposition and also those at the Omaha Exposition. The contract for the work was signed the day the Paris Exposition opened. Lumber is exceedingly dear in France and there will be 75,000,000 feet available after the close of the Exposition.

China's resources, as figured by expert Russian financiers, are as follows: The land tax annually about \$17,500,000, and the yearly revenue from imports and exports \$1,500,000. It is difficult to ascertain even approximately the amount accruing from the indirect taxes. Eight foreign state loans make the national debt somewhere in the neighborhood of \$27,500,000.

It is announced in Chicago that Sweden has offered to place a Government loan in this country of \$10,000,000. It consists of an issue of bonds bearing interest for ten years from August 15, 1900, at four per cent a year. The loan is made with a view largely to the construction of railroads in the kingdom.

Lord Roberts is carrying on an active campaign against the remaining Boer forces, driving them from one stronghold to another. The Boer commanders are constantly losing men by desertion and capture, and effective resistance to the British occupancy of the country is no longer possible.

It has been arranged that the national decennial census of the United Kingdom shall be taken on March 31, 1901. The estimated population of Great Britain and Ireland is 41,000,000.

The proposed cable from Copenhagen to Iceland will be four hundred and four miles long and will cost \$850,000.

Only two hundred and seventy-nine papers are published in Russia, forty-two of these being printed in German.

Industry and Commerce.

At a banquet in Santiago, given by the Republican and Democratic parties of Cuba, Governor General Wood spoke of the coming constitutional convention as follows: "Whatever the ultimate destiny of Cuba may be,

its immediate future is independence. This is no political move on the part of the United States, but a sincere desire to do what is right. Therefore, I beg you, as a personal favor to me and to the United States government, to sink your political differences and passions, and to send men to the convention who are renowned for honor and capacity, so that the convention may mean more than the Cubans even now anticipate."

According to the National Apple Shippers' Association the crop of apples this year in the United States, Canada, and Nova Scotia, "will be the largest of any crop in the history of the country." While the drought has affected the yield in Missouri and many apples have dropped prematurely in New York and the States adjoining on the East, the crops, it is estimated, will exceed the record crop of 1896, which was 70,000,000 barrels, by from 10,000,000 to 30,000,000 barrels. This year's crop in North America, it is believed, will be from 80,000,000 to 100,000,000 barrels.

Direct telegraphic communication between the United States and Germany was opened August 30 through the new German cable, in conjunction with the Commercial Cable Company's system from New York to Fayal and thence to Emden, Germany. Messages were exchanged between the German Emperor and President McKinley.

Owing to the Philippine troubles, Manila hemp has risen fifty per cent, and now several large German companies have been formed, one of which has government connections, to start Manila hemp culture in German East Africa, where the experiments have proved very successful.

A dispatch from Vancouver, B. C., says that a mountain of copper has been discovered at Howe Sound, within thirty miles of Vancouver by prospectors engaged by H. W. Treat of New York and Sir Charles Tupper of Vancouver.

The Northern Pacific has countermanded orders recently issued for \$250,000 worth of new freight cars. The partial failure of the wheat crop in the Northwest has led to the action.

An apparatus for condensing sea fog into drinking water has been invented.

Siberia now exports butter to Denmark.

General News.

A dispatch from Desbarats, Ont., dated August 28, says: "Descendants of the poet Longfellow, comprising Miss Longfellow and sister and a party, witnessed a performance by Ojibway Indians of a dramatic oration of Longfellow's Hiawatha at Desbarats Island on Saturday. Sunday the party attended religious services of the Indians conducted entirely in the Ojibway language at Longfellow Island. Afterwards Miss Longfellow made a speech to the Indians, which was translated into Ojibway by Indian Missionary Frost. To-morrow the Indian tribe will perform the ceremony at Longfellow Island of adopting Miss Longfellow into the tribe."

The thirty-fourth national encampment of the Grand Army of the Republic was held in Chicago last week. In the street parade on August 28, forty thousand veterans were in line and the column was six hours in passing a given point. Judge Leo Rassieur of St. Louis was elected commander-in-chief by acclamation.

Oxford has among its undergraduates a Lancashire mill hand, who worked his way into the university by studying after factory hours. He has won a scholarship worth \$250 a year.

The Woman's Relief Corps, which met in Chicago concurrently with the Grand Army encampment, elected Mrs. Mary L. Carr of Denver, Col., national president.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

An Immense Project.

Entire Water of Lake Superior Utilized.

An industrial development equal to that at Niagara, perhaps surpassing it in chemical and metallurgical discoveries and new ideas, is under way here. Not less than twenty million dollars of Philadelphia and New York capital is being invested with an implicit confidence in the capacity of the management, though it will be years before the returns will be commensurate, and though many of the investments are along lines so new and revolutionary as to bring a smile of bewilderment to experts who are told of what is actually being accomplished at Sault Sainte Marie, Ont.

As the basis of the entire work all the water power of Lake Superior has been acquired, and before the establishments are fully completed the rapids of Sainte Marie, that have for unnumbered ages poured over the sandstone ledges at the lower end of the lake, will be dry, and all the vast flow of the greatest lake of the world will be at work, either turning wheels or passing ships through the canals and locks of the Sault. "It takes one one-thousandth of the water of Lake Superior to operate the ship locks," says Mr. F. H. Clergue, manager of the vast new enterprise, "and why should not the rest be utilized in employing many thousands in industries that but for cheap water power could not be carried on, and in turning to account natural advantages and materials that but for cheap power would be waste? It is not too much to say that millions will indirectly feel the result of the enterprises we are installing here."

A few years ago F. H. Clergue, then living in New York, but with an extensive acquaintance in Philadelphia, went West to look up for these Philadelphians a water power that could be improved and sold as electrical energy. It was at the height of the talk over the power of Niagara, and water power everywhere was sought for. At the lower end of Lake Superior, Clergue saw an opportunity to develop an immense power, and his company began work. They cut a canal that furnished them twenty thousand horse-power electrical energy. But when they wanted to sell the power they found no takers. The locality was new and "too far West." So in order to save the original investment they were forced to change their policy, utilize it themselves, and find a means for development.

All about the Canadian Sault, north as far as Hudson Bay and east and west, are vast forests of spruce, the ideal wood for paper-making. The Ontario government was willing to furnish stumpage at low cost, and it was decided that the first development must be a ground pulp mill. The largest mill in the world was built and is now making a product that sells for nine hundred thousand dollars a year, and fixes the price for paper pulp in all the American west, and ships to points from Japan to Europe.

While mechanical pulp is worth thirty dollars a ton, sulphite pulp, wood treated chemically, is worth nearly twice as much, and the company with its unlimited supply of the

best wood in the world, decided to make this also. So now the largest sulphite mill in the world is nearing completion. Its product will be worth one million five hundred thousand dollars a year. But for sulphite pulp sulphur is necessary, and sulphur is costly. At the great Sudbury works of the Canadian Copper Company they are pouring into the air a thousand tons daily of sulphur fumes. Sudbury is one hundred miles from the Sault, and produces the bulk of the world's nickel. The nickel ore there mined is what is called a "nickeliferous pyrrhotite," that is, it contains not only nickel, but sulphur and iron. At the matte furnaces of the Canadian Copper Company they were saving nickel, but the sulphur and iron were thrown away. There, and everywhere else where sulphur is a by-product of roasting nickel and copper ores, it is not saved. It has not been supposed possible to save it; but Mr. Clergue's experts found a way, and are now, they claim, making a commercial product from the roasting of pyrrhotite. Chemical experts over the world will not believe this possible till they see it done on a commercial scale, and this Mr. Clergue says he will be able to show them in a few months, as soon as the reduction works now under way are completed. So they bought a nickel mine near Sudbury for the sulphur, and are now building the Manitoulin & North Shore Railway to and through the rich nickel belt and on to Georgian Bay.

With the extraction of the last atom of sulphur from the pyrrhotite, there was left a ferro-nickel ore, whose possibilities for the manufacture of nickel-steel were alluring. In line with their laid-out policy the company set about the utilization of this ore. And now they claim to be able to do the work that has been the dream of metallurgists and electricians for years, no less than the reduction on an economical scale of ores of iron into steel by electricity. Furnaces were devised that to the extent of a five-ton unit, smelted this soft, high nickel ore into nickel-steel, sufficient iron ore being added to the mixture to make a hard steel. The nickel percentage of their ferro-nickel was so great that the resulting steel was very soft, it being a peculiar feature of nickel that a percentage above five or six makes the alloy soft, while a percentage of three or thereabouts makes an armor plate. The company has a very large machine-shop, and all the hard cutting tools used there are made of its own nickel-steel smelted in its own furnaces by electricity. The plans for the ferro-nickel works, which are now under construction, propose one hundred furnaces of five tons daily capacity each.

The company has closed a contract with the Krupp firm of Germany, under which a large amount of this nickel-steel will be manufactured at the Sault and shipped to Germany for a period of five years. Under this contract no metal has yet been delivered, of course, and none may be for a year; but samples have been shown Herr Krupp, and Mr. Clergue states positively that the contract is closed and will be carried out.

To obtain iron ore to mix with the ferro-nickel ore it was necessary to have a mine, and the presence of iron ores

in the contacts between the formations along the north shore of Lake Superior had long been known. The company secured a mining location one hundred and twenty-five miles north of the Sault, near the shore of the lake, three years ago, and last fall proceeded to its development. This mine has now shipped its first ore, which has been tested successfully in furnaces. It is a vast quarry of high-grade iron ore, suitable for the manufacture of steel, containing at least thirty million tons and perhaps more, no one knows how much.

The company has explored the ore region and come to the conclusion that there is a sixth great iron ore range of Lake Superior that has been discovered. The economic importance of this cannot be over-estimated. The company under its land grants has taken possession of the entire range of sixty miles in length.

To encourage this company in its expenditures and development both the Dominion and Ontario governments are pledged, and they have given it a princely grant of money and lands. The lands include one million six hundred and fifty thousand acres of land for a road running from the Sault to Missinabie on the Canadian Pacific Railroad, one hundred and fifty miles northerly, and one thousand men are now working on this road. The Dominion has also given cash subsidies, and three hundred and sixty thousand dollars were paid a few days ago, to be followed by more as the work progresses. For an extension of the road to Hudson Bay, which will be reached in five years, an additional grant of five hundred thousand dollars and one million two hundred and fifty thousand acres have been offered. The lands of these grants are not to be selected in one bunch, but within a reasonable distance of the lines of road, in small blocks. In order to avail itself of this privilege the company has now in its employ one hundred and fifty expert timber cruisers, mineralogists, and geologists, who are traversing that whole region, each party of two men accompanied by Indian guides and canoemen. These men are selecting timber lands, running out the geological formations, and verifying and correcting old surveys, and the grants will be selected under their reports. The timber is spruce, valuable for pulp wood and now scarce in the United States, and the land is underlaid by iron, copper, and other minerals. Gold has been found in many localities. The value of these grants, under these circumstances, is something that staggers the imagination.

"In five years," says Mr. Clergue, "we shall be running through fish trains from Hudson Bay to Chicago." In five years, too, the company will have absorbed all the out-flow of Lake Superior, except what is needed for vessels. One canal to give twenty thousand horse-power is now in operation. Another to give fifty thousand horse-power is almost done on the Michigan side of the river. Of its total power forty thousand has been leased for a long term of years to the Union Carbide Company and the United Alkali Company. The Union Carbide Company is now using a great power at Niagara for the manufacture of carbide of calcium. The Sault power will cost it perhaps a third of what it pays at Niagara, and yet the development concern will in twenty-five years get back all the original cost as well as an annual interest. Some ten thousand horse-power on the Michigan side will be used in the reduction of copper from that state, and for other natural uses. Two weeks ago work was begun on the Canadian side of the river on a canal that is to develop forty thousand horse-power more. It is estimated that this will take all the power of the river. The Michigan canal is to be furnished with three hundred and twenty turbine wheels, each four harnessed to one great single-phase

dynamo; the whole to generate fifty thousand horse-power. The contracts for wheels and generators have been made, and the canal is being pushed with one thousand men and all the steam and compressed air appliances that can be assembled. It is a gigantic cutting two and one half miles long, two hundred feet wide and twenty-two feet deep, through the heart of the city, and much of it in solid rock. The sides are cut by air channelers from the solid rock ledge, and the waste material is used in erecting the great buildings. There will be a power house 1,380 feet long, one hundred feet wide, and 106 feet high. It was designed by a Philadelphia architect, and is a massive and handsome structure. No such power house exists on any water power to-day. This canal and power plant will have cost, when done, \$2,750,000. The second Canadian canal will cost nearly as much.

In all the company has so far spent \$4,500,000, and has plans that will call for the expenditure of fifteen million dollars or more additional. All this money is raised by these Philadelphia and associated capitalists without the issuance of a dollar in bonds, and it is not intended that there shall be a bond on any of the institutions of the Algoma Commercial Company, which is the name of the parent organization, or on any of its ten or twelve sub-companies, at any time. The company is now spending money at a tremendous rate. The daily pay-roll is five thousand dollars, or one million five hundred thousand dollars a year, and this will have to be continued for years. So far there is no return except from the one pulp mill and the mine, and the latter cannot bring much till another year. The sulphite mill will be a vast profit-earning institution in 1901, as is the mechanical mill now.

This fall work will be commenced to remedy the difficulty that must come very soon in the permanent lowering of the waters of Lake Superior. It is an international question, and neither the Canadian nor the American government will permit any change in these waters. So dams will be built at once, clear across the head of the rapids. The dam will be two thousand feet long, and will be a series of stone and concrete piers connected by steel gates, to be opened or shut as occasion requires. It is not improbable that the company may raise, instead of lower, the level of Lake Superior. Every foot of raise in the level will mean much to it.

Here at the Canadian Sault this company has one of the finest laboratories in existence. It is carrying on analysis by electrolysis in many minerals regularly, and the laboratory and library connected with it are fitted up as completely as those of any technical school in America. The company has also a machine shop where two hundred and fifty men find work day and night on its own machinery and tools. The shop is the best in Canada, and few in the United States excel it.

In order to permit the shipment of iron ore this year and in vessels they could utilize in winter on the oceans, the company sent one of its men to England three months ago and he bought four steel ore ships that had been in the Grecian and Spanish trade. They are all here now, carrying ore. When lake navigation closes in the fall they will be sent to the sea, carrying cargoes of pulp for wherever the company has orders,—France, England, Russia, Japan, or India. During the winter they will trade on the seas, and in the spring will return to the upper lakes.

Oh thou whose mighty patience holds
The night and day alike in view,
Thy will our dearest hopes enfolds,
Oh, keep us steadfast, patient, true.

SAMUEL LONGFELLOW.

Selected Articles.

In Defence of His Faith.

To the Editor of The Herald:—In your issue of the 20th ult. you published a special dispatch from New York, in which it is stated that the Rev. Dr. F. R. Morse “preached last evening on ‘Eddyism and Christian Science.’”

I have all due respect for ministers and teachers who honestly take issue with Christian Science, but what shall I say of those who are discourteous enough to treat the venerable Founder of Christian Science with the disrespect manifested in naming her ideas “Eddyism,” and that in a period when the adherents of this healing religion have grown to a large denomination, which is composed of honest, sincere, law-abiding, courteous, kind, intelligent people.

Christian Scientists are strict believers in the Holy Scriptures, and though it may be true that their interpretation of it differs from that of some other Christians, they are, nevertheless, entitled to Christian courtesy and respect. Christian Science is richly entitled to the name selected by its Founder. The name Eddyism can no more properly be applied to it than the name Calvinism to Presbyterianism or the name Wesleyism to Methodism. If our reverend brother desires to convert Christian Scientists to his views I would advise him not to resort to epithets and the abuse of their honest beliefs. Such indulgence is beneath the practice of a Christian Scientist, and he is not likely to take a backward step and embrace the religion of one who performs such depredations upon Christian tolerance.

Christian Scientists ask the privilege of living their own ideas, and teaching only those who desire to be taught. They are making no war upon other religionists, neither do they seek to proselyte.

The Rev. Doctor Morse makes the charge: “We believe the most dangerous book that has been issued from the American press is the book of Mrs. Eddy, called ‘Science and Health with Key to the Scriptures.’ . . . We regard this book as essentially atheistic. The words are cunningly used, but they are seriously misleading.” While our critic makes this statement as his opinion, allow me to call the attention of your readers to the fact that there are hundreds of thousands of others, all of whom are people of at least ordinary intelligence, many of whom are among the brightest and deepest thinkers of our country, who have formed an opinion exactly opposite to that of Mr. Morse, and who have found in it a clear, comforting exposition of the word of God and a demonstrable definition of the nature and essence of God.

Hundreds of people have been saved from atheism and infidelity to a trusting faith in the living God. Within my personal acquaintance there are those carrying Bibles in their pockets to defend Christian Science, who formerly were not believers in the Bible. Science and Health is a consistent book, taking for its basis the Scriptural statements: “God is a spirit.” “God is love.” It does not include a single declaration which is not a conclusion properly drawn from its premise.

No people of this age are conducing more to the general welfare of mankind than Christian Scientists; none are accomplishing more toward establishing the Fatherhood of God and the brotherhood of man; and it should be remembered that whatever is accomplished in the line of good, through Christian Science, is by reason of its exalted definition of God and His creation. If God and the Bible should be removed from Christian Science there would be nothing left in it; hence Christian Scientists will continue to love God and His word, and to claim them as their very own.

Now I would like to ask our critic, since he poses as one qualified to give an intelligent exposition of this Sci-

ence, “How long have you been healing the sick through what you have learned from the Christian Science text-book?” You probably will answer that you have never healed a patient through Christian Science. If this be true I challenge your right to attempt an exposition of it. I insist that this is indeed a Science, and must be so treated. It cannot be separated from its practice and yet be understood and properly taught.

ALFRED FARLOW.

Replies to Dr. Morse.

To the Editor of The News:—In your New York dispatch of Monday’s issue you quote from a sermon delivered Sunday evening by the Rev. Dr. F. R. Morse at Calvary Baptist Church in that city, in which he assails the Christian Science text-book, “Science and Health with Key to the Scriptures” by Mary Baker G. Eddy. Being the official press representative of this denomination for Maryland, I desire to make an authoritative correction of some of Dr. Morse’s remarks.

He said: “While the name of God is frequently used, God himself is denied. We regard this book as essentially atheistic.” How any one can read this text-book and then say that God is denied and that this book is essentially atheistic, when the God of the Bible forms the basis of its teachings and is the one only God referred to, it is indeed difficult to see. The God declared throughout this book is the God taught throughout the Bible from Genesis to Revelation—Infinite, without limit in any direction; Omnipotent, all-powerful; Omnipresent, everywhere; Omniscient, all-knowing; the loving Father. According to Jesus’ word (John, 4 : 24, R. V.), “God is Spirit;” and according to John (1 John, 4 : 16), “God is Love.” Christian Science does not teach a human, corporeal, anthropomorphic God, having form or parts, because that is not the God revealed by the Scriptures, and if Dr. Morse’s idea of God is corporeal, this would explain why he cannot understand the supreme, infinite God of the Scriptures.

The reverend gentleman also says, “This book is a mass of mystical vagaries and diseased dreams,” and is “a subtle web-work of quasi theological enigmas.” Jesus said “wherefore by their fruits ye shall know them.” What are the fruits of Christian Science? I would like to give one instance that occurred here in Baltimore a few years ago. A lady who had been suffering for about five years with a fibrous tumor, during which time she had undergone several operations by the best surgeons and had been at several sanitariums, still remained a wretched invalid. When she heard of Christian Science she secured the text-book from one of the libraries in this city and read it. In two weeks she was a well woman, the tumor having entirely disappeared, and from that time to this she has enjoyed perfect health. This is only one instance of hundreds upon hundreds in which people who have read this book have been healed of so-called incurable diseases or invalidism of long standing. Is a book that produces such results deserving of such wholesale condemnation? Is it not more likely that the gentleman does not understand the book?

I ask in all candor and fairness whether a religious system which accepts the Bible as its guide; acknowledges God as the Infinite Supreme Being, the Father of all; Christ Jesus as the Son of God, who was Immanuel, God-with-us, the Way-shower, Master, and Saviour; establishes the true brotherhood of man; reclaims the infidel, reforms the drunkard, restores the sick, sinning, and dying to health and holiness; establishes prosperity in place of poverty, happiness in place of misery, joy in place of sorrow, by bringing man to the knowledge of the Father and enabling him to follow Jesus’ commands and do the work he requires of us; I say, if such be the fruits of Christian Sci-

ence, and I know they are, is it a fit subject for such denunciation? When the Jews stoned Jesus he said to them: "Many good works have I shewed you from my Father; for which of those works do ye stone me?"

The *Christian Science Sentinel* quotes some one as saying: "If Christian Science is error and its adherents are following a delusion, they can be easily beaten in a fair race, and it will not be necessary that their words and works shall be misrepresented in order that they may be defeated."

HERMANN S. HERING.

In the *News*, Baltimore, Md.

Like Produces Like.

THE Principle of existence is Love. Applied to human affairs, its fundamental command reads thus: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself." Add to this the declaration of John, that "God is Love," and we have the statement that we shall love Love. This indicates that the true relationship between man and God is a spiritual relation of love. The sensations of the physical senses are not spiritual, and in the highest sense, are not to be considered in religion, they are not modes of divine consciousness and communication. Pagan religions associate the indulgence and gratification of the physical senses with the worship of God, or gods, but not so Christianity. There is a difference between spiritual joy and sensual pleasures.

Christian Science holds that cause and effect correspond in quality and quantity. It holds to the integrity of the Divine character, that like produces like, and not its opposite. A spiritual cause cannot have a material effect. If the Cause is good the effect is good. Perverse logic makes evil proceed from good, and good from evil. But the law of Christ declares that Truth does not change character and that we may know a tree by its fruits. "A good tree cannot bring forth evil fruit." "Do men gather grapes of thorns, or figs of thistles?" Again it is asked "Doth a fountain send forth at the same place sweet water and bitter?"

If Love is Cause, it cannot have for its effect hate. If God is Love and His creation reflects Him, it reflects love, not hate or evil. The senses give false testimony when making evil a seeming reality. What is real is true, a lie is not true, it does not express Truth, it is a denial simply of what is true. The only way to destroy a falsehood is to expose it and efface its false evidence. So long as a lie seems true we hold to its deception and are unwilling to give it up. The very word lie means something—that is not true, a something pretended, a falsehood, a counterfeit which would pass for the genuine, but which is not a reality, not a fact, but an erroneous, false sense, assuming the importance of an eternal reality. And herein lies the awful character of evil, that it deceives, leads astray, seeming to be something—equal with Truth, when it is nothing.

If evil is evolved from Good, the Divine character changes species; but divine Love does not change its nature. The imperfect sense of existence is the error that obscures the vision of the Christ, by which the sick, the lame, the blind, the dumb, and the sinner, are healed. To hold that Cause, or its effect, or both, are in matter—that the spiritual is in the material—is to affirm that pantheism is true, and that mind "sleeps in the mineral, dreams in the animal, and wakes in man."

If this be a fact, then materialism is indeed true. But above the confusion of material life, a universal voice speaks, "Love not the world, neither the things that are in the world. If any man love the world, the love of the Father is not in him." This points us beyond the

testimony of sense to that divine Science wherein Love is supreme. This much we know, that where peace and hope and joy and goodness are most expressed there is most Love, and where envy and hatred and persecution and the world reign most, there is reflected least of Love.

Coos County (N. H.) Democrat.

Remarkable Cures.

A LARGE number were present at the regular Wednesday evening meeting of the First Church of Christ, Scientist, at their handsome and commodious edifice, corner of Main and Seventh Streets, last night. The platform was nicely decorated with flowers, and everything attractive.

After the usual exercises were conducted, Judge Ewing of Chicago, who has been the guest of Mr. William Van Arsdale, and who was present at the meeting, made a short address.

Judge Ewing is one of the brightest and best-known men in the state of Illinois. The Judge spoke on the benefits of the Wednesday evening meetings and their method, for the reason that it gives to the community a fuller understanding of Christian Science through the statements of those who tell what Science has done for them in the way of healing and making their lives better and happier.

He advanced the idea that Christian Science is by no means a new religion or "fad." He said that it simply carried out what Christ positively declared could be done by those who believed on him in the way of healing.

Among the many demonstrations told at the meeting, perhaps the most interesting were those of two prominent ladies, residents of Racine. One of them a few weeks ago had her arm burned in a horrible manner, and within a week it was entirely healed through Christian Science. What gave emphasis to this statement of the power of healing through Christian Science was this fact: A number of years ago the lady met with a similar accident, the same arm having been burned as badly as it was the second time, and on this first occasion it took fourteen weeks to recover, during which time she suffered the most intense agony that accompanies a serious burn.

The second lady, looking the picture of health, told what Christian Science had done for her. Not many months ago she was suffering from frequent attacks of hemorrhage of the lungs, and her life was despaired of. All medical aid seemed of no avail. After having four hemorrhages in one day, and realizing that there was no help for her through medicine, she turned to Christian Science as a last resort. After the first treatment she has never had a return, and is now able to do her own work and is enjoying perfect health.

Others present told of equally remarkable cures resulting from the understanding of Christian Science.

Racine (Wis.) Daily Journal.

The Courage to Face Ingratitude.

INGRATITUDE is the most popular sin of humanity. It is the shortest cut to the attainment of all the other vices. It eclipses all the virtues of the individual except those that it kills. Ingratitude is forgetfulness of the heart. It is a man's confession that he is armor-proof against kindness. It is the revelation of the emptiness of pretended loyalty. People who are ungrateful never forgive you if you do them a good turn. They resent the humiliation of having been helped by a superior.

Gratitude is thankfulness expressed in action. It is the radiation of justice. It is the heart's recognition of kindness that the lips can never repay. Gratitude never counts its payments. No debt of kindness can ever be outlawed; it can never be paid in full. Gratitude ever feels the insignificance of its instalments; ingratitude, the nothingness of the debt. Gratitude is the flowering of a seed of kindness;

ingratitude is the dead inactivity of a seed of kindness dropped on a stone.

Grateful recognition of goodness and favor is gratifying and stimulating. It is a tonic we should always give but never crave. We must rise superior to dependence on human gratitude, or we can do nothing truly great. The expectation of gratitude is the alloy of an otherwise noble act. The only real reason for doing right is because it is right—everything else is an excuse, not a reason. Because we meet with ingratitude in life we must not feel that our good deeds have failed; they merely have not been appreciated. Most persons look at gratitude as a protective tariff on virtues. The man who is weakened in well-doing by the ingratitude of others is serving God on a commission basis. He should be honest enough to see that he is working for a reward—he is expecting a bonus for doing good. He is really regarding his kindness and virtues as moral stock that he is willing to hold only so long as they pay dividends. Ingratitude is harder to bear than failure, sorrow, or reverses. Its most bitter sting is that it touches us on our vulnerable spot—our vanity. We are chagrined that our judgment has been proved wrong, that our goodness has not been appreciated, that we have been deceived.

Living in expectation of gratitude dulls all our best actions. There is in such living always a touch of the pose; it is playing to the gallery, it is asking for a receipt for a good act, it is demanding compound interest on trifles of favor. We must let the consciousness of doing right, of living in harmony with our ideals, be our reward and stimulus, or life will become to us a series of failures and disappointments. Let us defy ingratitude; let us tower above it, and be independent of it. Let us never surrender to the pessimism that falsely tells us there is no gratitude in the world, that our good deeds are wasted.

Ingratitude is composed of equal parts of selfishness, vanity, and injustice. The self-same elements are present in the morbid hunger for gratitude. Much of the seeming ingratitude of life comes from our magnifying our own acts, our minimizing the acts of others. We do not make sufficient allowance for the varying ways in which individuals may manifest gratitude—genuine, heartfelt appreciation of kindness. Merely because we have had the privilege of doing some one a favor, we should not act as if we held a mortgage on his immortality, and expect him to swing the censer of adulation forever in our presence. Constantly reminding a man of the favors he has received from you cancels the debt. The care of the statistic should have been his privilege; you are usurping his prerogatives when you recall them. We should realize the awful cowardice of ingratitude, not to criticise it in others, but only to eliminate it from our own lives.

People who make one individual the legatee of the ingratitude of another are unjust. There is too much of this suffering by deputy already in the world. The worst enemy to the philanthropy of the rich is the ingratitude of the poor. It requires moral heroism to continue giving to the poor and planning for their betterment and development in the face of so many instances, one after the other, of fraud and ingratitude.

Profuse expressions of gratitude do not cancel an indebtedness any more than a promissory note settles an account. It is a beginning, not a finality. Gratitude that is so extravagant in words is usually economical in everything else. A friend's need is gratitude's opportunity.

Index to the Sentinel.

An index to Volume II. of the *Christian Science Sentinel* is now in the hands of the printer, and when completed it will be mailed to our subscribers and supplied upon request.

Board of Lecturers.

THE following constitute the Board of Lectureship for the year beginning June 1, 1900:—

EASTERN SECTION.

The lecturers for the New England States are:—

Rev. Irving C. Tomlinson, C.S.B., Concord, N. H.

Rev. William P. McKenzie, C.S.B., 1010 Massachusetts Avenue, Cambridge, Mass.

Maritime Provinces, Rev. William P. McKenzie, C.S.B., 1010 Massachusetts Avenue, Cambridge, Mass.

The Province of Quebec, the cities of Ottawa and Kingston, Rev. Irving C. Tomlinson, C.S.B., Concord, N. H.

MIDDLE SECTION.

For the States of New York, Pennsylvania, New Jersey, and Delaware, and the Province of Ontario:—

Carol Norton, C.S.D., 170 Fifth Avenue, New York.

Rev. Arthur R. Vosburgh, C.S.B., Powers Block, Rochester, N. Y.

SOUTHERN SECTION.

Mrs. Sue Harper Mims, C.S.B., 575 Peachtree Street, Atlanta, Ga.

John Freeman Linscott, C.S.D., 1511 Twentieth Street, N.W., Washington, D.C.

WESTERN SECTION.

For the Western States and all Southern States west of the Mississippi River:—

Edward A. Kimball, C.S.D., 5020 Woodlawn Avenue, Chicago, Ill.

Mrs. Annie M. Knott, C.S.D., Suite 508, Chamber of Commerce Building, Detroit, Mich.

Judge William G. Fwing, C.S., 3743 Ellis Avenue, Chicago, Ill.

Judge Joseph R. Clarkson, C.S.B., Room 450, Bee Building, Omaha, Neb.

Silas J. Sawyer, C.S.D., Room 301, Masonic Building, Milwaukee, Wis.

PACIFIC COAST SECTION.

F. J. Fluno, M.D., C.S.D., 1319 Grove Street, Oakland, Cal.

Abraham A. Sulcer, M.D., C.S.B., 1062 Ninth Street, Riverside, Cal.

GREAT BRITAIN.

William N. Miller, Q.C., C.S.B., 57 Bryanston Street, Marble Arch, W., London, Eng.

Wanted.

A good florist, who is a Christian Scientist, and will present a written recommendation from a loyal student. Address G. F. W., care of Thomas W. Hatten, 68 Westland Ave., Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY, TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Preservation of the Legationers.

THE preservation and rescue of the foreign ministers in Peking, their families and suites, is a matter of wonderment to people of all countries. We read, even in the daily dispatches, such expressions as these:—

"The survival and rescue of the foreigners in Peking causes much wonder. Those acquainted with the city and with the Chinese are almost as much at loss to account for it as those who have no knowledge of either.

"A few hundred Americans and Europeans were huddled within the walls of the Legations, many of them women and children. Surrounding them were hordes of Boxers and Chinese imperial troops, all thirsting for the blood of the 'foreign devils.' They were well supplied with arms and ammunition, with an exhaustless commissariat to draw upon. Their prisoners had to count and husband every round in their limited supply of ammunition, while they were weakened by lack of food.

"They were bombarded and attacked with small arms day after day, until by some means an armistice was agreed upon by the imperial authorities. This was violated frequently, and at last, when the allied forces were almost at Peking's gates, it was thrown to the winds, and a constant onslaught kept up for two days."

In *Leslie's Weekly* we also read the following:—

"Considering that it is so unhealthy in Peking in the summer, and that all the people in the Legation have been accustomed to going to the hills, the health during the siege has been remarkable, and even the wounded have almost all started toward recovery without any symptoms of blood-poisoning."

We have also read that the clergy of the Legations both prayed and fought. Nor was the praying confined to the clergy. There were other devout ones who prayed.

Did these prayers avail? Was there any connection between them and the preservation and final deliverance of the besieged denizens of the Legations? What believer in the teaching of the Bible shall say that there was not a direct connection, and that the fervent prayers of the righteous persons within the Legations as well as those without availed much, even to the bringing about of the conditions which made their rescue possible?

All thinking persons admit that the march upon Peking by the allied forces was a remarkable one; that in view of the bad condition of the roads, the inundated country through which the rescuing army had to march, the resistance offered by the Chinese, the intense heat and unpropitious climatic conditions, scarcity of water and difficulty of bringing up provisions, the distance between Tientsin and Peking was accomplished in an incredibly short time. Then, too, the entrance into the city, considering its strong fortifications and the great hordes of Chinese within its walls to assist in its defence, was not less astonishing than the march from Tientsin to its gates. The

promptness with which the rescuing forces reached the besieged legationers, just in the nick of time to save them from massacre or starvation, is likewise most striking in its significance.

The feeble resistance made by the Chinese both outside and inside the Peking walls, as compared with that which was possible in view of their great numbers, their really effective armament, the opportunity of defence afforded by the great walls, and the smallness of the army of rescue, is matter of scarcely less amazement than the other-mentioned circumstances. The fact seems to have been that, with all their advantages, the Chinese were panic-stricken before the little band of rescuers. Fear seized them, as it seized the armies mentioned in Scripture, and they fled precipitately before their pursuers, even those constituting the Chinese government itself. As compared with what, under ordinary circumstances, it might have been, the conquest made by the rescuing army was a marvelously easy one.

That prayer should have had a controlling influence, is in strict accord with Scripture, and to question the possibility of its efficacy in such circumstances, is to question the very foundation fact of the Christian religion. If prayer was really efficacious in Bible times, or in past ages, it ought, by every fair inference, to be not less so now. If it was not efficacious then, the Bible is false, its narratives mythical, and its very existence an imposition.

We say, then, that no one professing a belief in the Bible can afford, for a moment, to doubt the Divine interposition in the Peking affair.

Christian Scientists have no difficulty whatever in believing, nay, in *knowing*, that prayer did aid mightily in securing the deliverance of the imprisoned.

Our Third Volume.

WITH this number the *Sentinel* enters upon its third year of usefulness. The good it has accomplished (to say nothing of what it will accomplish in the future) can hardly be estimated.

We take this occasion to thank our contributors and all others who have freely given time and talents in the support of our periodicals. Every honest effort for the cause of Truth will certainly be rewarded.

To our many readers, we desire to send a word of greeting, a message of Love and best wishes for their spiritual growth and progress during the coming year. We realize that this is more important than all else, and whatever aids in this great work is of untold value. Among other valuable assistants is the *Christian Science Sentinel*, which comes to your home each week bringing its message of Truth and Love.

As we have said before, the *Sentinel* is in some sense a newspaper, and each week it gives brief mention of the most important events of the world's history. There are also articles of miscellaneous character, culled from various publications, which are instructive and educational in a way, showing the growth and progress of humanity in various directions. As the human mind feels the touch of Truth it is quickened thereby, and finds expression in ways that are constantly removing the limitations of material sense. These all point to the fact, as revealed in Christian Science, that Mind is infinite.

The mission of the *Sentinel* is, primarily, to aid in the upbuilding of the cause of Christian Science. Each number contains original articles by Christian Scientists who are able to write from the standpoint of demonstration rather than theory. These articles, which are intended to throw light upon different questions relative to Christian Science, are supplemented by testimonies from those who have experienced the healing and saving power of Truth,

and who gladly testify to the physical and moral benefits they have realized. Thus it is seen that Christian Science is not only sound in doctrine but practical in results.

The *Sentinel* also reports the progress of the Cause throughout the world. The organization of churches, opening of reading rooms, moving into larger and better quarters, the erection and dedication of church edifices, all go to show how the idea of a practical Christianity, which enables humanity to prove that God is a present help, is finding favor with the multitudes. Truly these are among the signs of the times which cannot be ignored.

We might speak of other ways in which the *Sentinel* is successfully fulfilling its mission; but enough has been said to show, in part at least, the importance of the work it is accomplishing.

We would not forget our other publications—the *Journal* and *Quarterly*. The *Sentinel* can in no sense do the work that is being accomplished by them. All our periodicals are doing a grand missionary work. They go hand in hand, and all true, wide-awake Christian Scientists realize the importance of having these messengers of Truth, not only for the good they may themselves derive from them, but also for the great good that can be accomplished by giving them a wide and general circulation among those who feel their need of something that will enable them successfully to fight the battles of life.

We recognize that the work of our publications is secondary to that of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, and other works by the same author. The object of our work as Christian Scientists is not merely to heal disease or relieve the suffering. It is to point the individual to God and encourage him to strive diligently for the understanding of Truth which will enable him to work out his own salvation. This understanding can be gained by a faithful and conscientious study of the Bible and the Christian Science text-book.

Our periodicals are paving the way for this work. They create an interest in Christian Science and the individual has a desire to know more of the teaching which is bringing such rich blessings to mortals. Thus he is encouraged to study the Bible and Science and Health. These books impart the understanding of divine Principle which governs man and the universe harmoniously.

The *Sentinel* will continue to fulfil its mission by giving to the world the pure and unadulterated teachings of Christian Science. Should not the readers seek to give it the increased circulation to which it is justly entitled?

Among the Churches.

Will Build a New Church.

Christian Scientists of St. Louis have decided to build a new edifice of worship on Lindell Avenue, just west of Boyle Avenue, at a cost of one hundred thousand dollars. The money necessary has already been pledged and the lot has been bought at a cost of seventeen thousand dollars.

Work on the structure will be begun early in the autumn months.

The new edifice will be erected by the same congregation which established and which has maintained First Church of Christ, Scientist, in St. Louis and the name will not be changed. It has not been decided what disposition of the original church will be made, but if the membership continues to grow, the trustees say, it will continue to be used by the denomination and two congregations are possible.

The First Church, at 2726 Pine Street, was established in April, 1894, and the structure was at once erected at a cost of forty thousand dollars. It is not the intention to dispose of this property, the one hundred thousand dollars

for the new church having been contributed from independent sources.

The Christian Scientists have no national organization so far as business affairs are concerned. Each congregation conducts its affairs in toto, and it is for this reason that the members of the church take unusual pride in the fact of having raised the sum necessary for the erection of the new church, a fact which in itself, they declare, shows the remarkable growth of the organization in the short time of its existence.

"We are about to build our new and larger church simply because our congregation has outgrown the capacity of our present place of worship," says James A. Logwood, the present First Reader. "Beginning with less than a dozen our organization has grown in a little over five years until it now numbers over four hundred members. Our church seats six hundred persons. For some time the edifice now in use has been filled to overflowing at the services both Sunday morning and Wednesday evening. We simply have to find room to accommodate the attendance.

"We will establish our new church on Lindell Boulevard mainly because the new location will afford convenience to the majority of our members, a large number of whom are men of wealth and residents of the West End.

"A large number of designs for the new church have been received, but none of them has been considered. Many churches of our denomination so far erected in the United States have been of the Greek style of architecture, square set and with a cupola. It is probable that no notable departure will be made from this character of building, although, of course, there is no rule about it, and it has been brought about simply by coincidence, followed by general admiration and implied understanding."

The Christian Scientists have moved their reading room down town from the church, having established a library devoted to the interests of the denomination in three handsomely fitted rooms in the Columbia Building, at Eighth and Locust Streets, which are hereafter to be kept open daily, with attendants, from 10 A.M. to 5 P.M. In accordance with the enlarged plan of placing their beliefs directly before the people, they have had published thousands of tracts and are widely distributing a concise statement of the tenets to be signed by those uniting with the church organization.—*St. Louis Post-Dispatch*.

Church Edifice to be Erected at Baltimore, Md.

The members of the Second Church of Christ, Scientist, will shortly begin the erection of a church edifice at Mount Royal Avenue and Cathedral Street on a lot purchased last February from the McKim estate.

Plans for the edifice were prepared by the Co-operative Building Plan Association of New York. They contemplate the erection of three structures on the lot, which is irregular in shape, having a frontage on Mount Royal Avenue of ninety feet and a depth varying from thirty-six to ninety feet. A church edifice will be built across the rear, a two-story chapel at one side, fronting on Mount Royal Avenue, and a tower in the space in front.

The style of architecture will be English Gothic. The walls will be of rough-cut Falls road stone and the roofs covered with dark Spanish tiles. The Gothic and Rose windows will be glazed with ripple glass, leaded in patterns. The woodwork in the interior will be white oak and the fixtures will be of wrought iron. Gas and electricity will be used for lighting, and the buildings will be heated by a hot water system.

The chapel will be built first. On the second floor will be an auditorium capable of seating one hundred and seventy persons. It will be used for services until the church is completed, when it will become the Sunday School

room. On the first floor there will be a reading room, four offices, and a cloakroom, and in the basement there will be two lavatories and the heating apparatus. On the first floor there are two bay windows and a projecting room. The auditorium and reading room will be lighted by opalescent domes on the ceilings.

As designed, the church building will seat about six hundred persons, but it can be enlarged to seat eight hundred. The tower will be eighteen feet square and about sixty feet high. The base will be used as the vestibule for the church and chapel. Over the vestibule there will be a trustees' room and above this will be the belfry. The chapel will cost about ten thousand dollars and the church and tower about twenty-five thousand.

The first meeting of Second Church was held in March, 1897; the society was organized in October and the church incorporated in December of the same year. The meetings have been held in the Lyceum Parlors. Miss Ellen E. Cross, a student of Rev. Mary Baker G. Eddy and a graduate of the Massachusetts Metaphysical College, is First Reader of the church, and Mr. Hermann S. Hering is Second Reader.

The church, when completed, will be the third Christian Science Church in the South, the others being at Fitzgerald, Ga., and at Atlanta, Ga.—*The Sun*, Baltimore, Md.

Establish Reading Rooms.

The Christian Scientists of this city have introduced an innovation in the proper direction. They have opened public reading rooms on the second floor of the new Arnold Building on West Jefferson Street, and the general atmosphere of the place is really captivating.

The suite consists of two rooms, elaborately furnished and artistically decorated. The rooms have hard wood floors and are beautified by handsome rugs, suitable draperies, and furniture of the most attractive style and finish. The rooms were opened to the public yesterday (August 9), when a reception was held. Scores of visitors were received and the appreciative remarks must have created a feeling of deep satisfaction among those who brought the reading rooms to a state of reality.

There is plenty of Christian Science literature in the rooms, the library including "Science and Health with Key to the Scriptures" and all the other works of Mary Baker G. Eddy.

The object in establishing a place of this sort was to give the general public an opportunity to study the doctrines of Christian Science and obtain a better understanding of the faith. The rooms will be kept open each day from 10 A.M. to 5 P.M. and the general public is invited to visit them. A three years' lease of the suite has been taken, and many of the prominent people of the city are behind the project.—*South Bend (Ind.) Daily Tribune*.

Reading Room at Hurley, S. D.

The Christian Scientists of Hurley have opened a reading room in the building recently purchased and fitted up by them on the north side of Center Avenue, which will be open every afternoon except Sunday from two until five, where Christian Science literature will be found free for the use of all visitors and also for sale.

A cordial invitation is extended to the public to visit the room and investigate Christian Science, "Prove all things: hold fast that which is good."

Turner County (S. D.) Herald.

You know that a little thought and a little kindness are often worth more than a great deal of money. This charity of thought is not merely to be exercised toward the poor; it is to be exercised toward all men.—JOHN RUSKIN.

The Lectures.

At Rockland, Me.

The Christian Science lecture delivered by Mr. Tomlinson in Farwell Opera House Thursday evening (August 23) was listened to by an exceptionally fine audience. Mr. Tomlinson is a speaker of much power and held the closest attention of all present. The full text of his address appears elsewhere in this paper.

In introducing the lecturer Rev. Mr. Chapin, pastor of the Universalist Church, said among other things:—

"One or two summers ago a friend spent a number of weeks in Chicago. While there he took occasion to visit the various churches in that city. He worshiped with Methodists, Baptists, Congregationalists, Universalists, Unitarians, and Christian Scientists. But he said that none of these churches were attended by the throngs that went to the Christian Science churches Sunday after Sunday. We have an example here of a new order of zeal—one which orthodox and liberal believer alike may well emulate.

"There is another thing which Christian Science is teaching the whole religious world, and that is that we have made altogether too much of the ills or supposed ills of this life. All of us have done too much complaining. We have lived as though evil, rather than good, were an entity. Christian Science has come to emphasize anew the positiveness of life—that in essence it is health, goodness, love, and not their opposite. I say these things the more freely because I am not a Christian Scientist. But this shall not hinder me in seeing or in acknowledging the beneficent features in a faith other than my own.

"One of the most serious objections I would find with Christian Science is that it has claimed as its own, too many of the most liberal and helpful members in my own church. They were those whom we were glad to honor while they were with us for noble deeds, and I have no doubt they are just as worthy of all confidence and esteem now as they were then.

"I am glad to be able to say that the one who is to lecture to you this evening was once one of the most devout, conscientious, and self-sacrificing clergymen in the Universalist Church. I, therefore, take very great pleasure in introducing the Rev. Irving C. Tomlinson to the people of Rockland and vicinity, who will now address you on the subject of Christian Science."

Rockland Courier Gazette.

At Barre, Vt.

A large and attentive audience gathered in the Opera House last evening (Friday, August 17) to listen to a lecture on Christian Science by the Hon. William G. Ewing of Chicago.

Judge Ewing was presented in a few well-chosen introductory remarks by the Hon. F. A. Howland, Secretary of State, of Montpelier.

The subject of the lecture was, "Christian Science, the Religion of Jesus Christ." In an entertaining and logical manner the lecturer discussed the progress of religious thought, its effects upon present customs and conditions, stating clearly and concisely the religious aspect of Christian Science in its attitude toward other religious sects, correcting many misconceptions and misrepresentations prevalent to-day.

The close attention of the audience was complimentary both to the lecturer and the subject.

Barre Evening Telegram.

There lurks in the mind of man a longing for something beyond the present.—HUMBOLDT.

From Our Contributors.

From the Christian Fathers.

BY JAMES J. ROME.

PERHAPS it will be of interest to the readers of our periodicals to hear what the writers of the early Christian church had to say concerning some of the teachings wherein Christian Science is considered peculiar. The testimony and opinion of these "holy men of old" is considered by all Christians as very valuable on account of their living at such an early date in Christian history, when the pure teachings of Jesus and the apostles must have been fresh in their minds, and also because of their consecrated, holy lives.

St. Augustine, who lived 354 to 430 A.D., gives us some helpful and suggestive reflections on the allness of Good and the unreality of evil, a doctrine considered so dangerous by many. In Eusebius' writings we find some remarkable demonstrations by martyrs over the ferocity of wild beasts and in deliverance from bodily sufferings. This writer also quotes from Irenæus 140 to 202 A.D., and Papias, of the first half of the second century, who both testify to the manifestation of healing in the churches. These extracts need no comment, they speak for themselves.

ST. AUGUSTINE ON THE ALLNESS OF GOOD AND THE UN-REality OF EVIL.

And I said, Behold God, and behold what God hath created; and God is good, yea most mightily and incomparably better than all these; but yet He who is good hath created them good, and behold how He encircleth and filleth them. Where, then, is evil, and whence and how crept it in hither? What is its root and what its seed? or hath it no being at all? Why, then, do we fear and shun that which hath no being? or if we fear it needlessly, then surely is that fear evil whereby the heart is unnecessarily pricked and tormented,—and so much a greater evil, as we have naught to fear, and yet do fear. Therefore either that is evil which we fear, or the act of fearing is in itself evil. Whence, therefore, is it, seeing that God, who is good, hath made all these things good? He, indeed, the greatest and chiefest good, hath created these lesser goods; but both Creator and created are all good. . . . So long, therefore, as they are, they are good; therefore, whatever is is good. That evil, then, which I sought whence it was, is not any substance; for were it a substance, it would be good. For either it would be an incorruptible substance, and so a chief good, or a corruptible substance, which, unless it were good, it could not be corrupted. I perceived, therefore, and it was made clear to me, that Thou didst make all things good, nor is there any substance at all that was not made by Thee; and because all that Thou hast made are equal, therefore all things are; because individually they are good, and altogether very good, because our God made all things very good. . . . Thou holdest all things in Thine hand in truth; and all things are true so far as they have a being; nor is there any falsehood unless that which is not is thought to be. . . .

Because my soul dared not be displeased at my God it would not suffer aught to be Thine which displeased it. Hence it had gone into the opinion of two substances and resisted not but talked foolishly, and returning thence, it had made to itself a god, through infinite measures of all space; and imagined it to be Thee, and placed it in its heart, and again had become the temple of its own idol, which was to Thee an abomination. But after thou hadst fomented the head of me unconscious of it, and closed mine eyes lest they should "behold vanity," I ceased from myself a little, and my madness was lulled to sleep; and I awoke in Thee and saw Thee to be infinite, though in another way, and this sight was not derived from the flesh.

EUSEBIUS ON THE POWER OF TRUTH TO PROTECT AND DELIVER MARTYRS.

Those of them who were conspicuous in Palestine we know, as also those that were at Tyre in Phœnicia. Who that saw them was not astonished at the numberless strifes, and at the firmness which these truly wonderful athletes of religion exhibited under them? and at their contest immediately after the scourging, with blood-thirsty wild beasts, as they were cast before leopards and different kinds of bears and wild boars and bulls goaded with fire and red hot iron? and at the marvelous endurance of these noble men in the face of all sorts of wild beasts?

We were present ourselves when these things occurred, and have put on record the divine power of our martyred Saviour, Jesus Christ, which was present and manifested itself mightily in the martyrs. For a long time the man-devouring beasts did not dare to touch or draw near the bodies of those dear to God, but rushed upon the others who from the outside irritated and urged them on. And they would not in the least touch the holy athletes, as they stood alone and naked and shook their hands at them to draw them towards themselves, for they were commanded to do this; but whenever they rushed at them they were restrained as if by some diviner power, and retreated again. This continued for a long time and occasioned no little wonder to the spectators, and as the first wild beast did nothing, a second and a third were let loose against one and the same martyr. One could not but be astonished at the invincible firmness of these holy men, and the enduring and immovable constancy of those whose bodies were young. You could have seen a youth not twenty years of age standing unbound and stretching out his hands in the form of a cross with untiried and untrembling mind, engaged earnestly in prayer to God, and not in the least going back or retreating from the place where he stood, while bears and leopards, breathing rage and death, almost touched his flesh, and yet their mouths were restrained, I know not how, by a divine and incomprehensible power, and they ran back again to their place. Such an one was he.

Again you might have seen others, for they were five in all, cast before a wild bull, who tossed into the air with his horns, those who approached from the outside, and mangled them, leaving them to be taken up half dead; but when he rushed with rage and threatening upon the holy martyrs, who were standing alone, he was unable to come near them; but though he stamped with his feet, and pushed in all directions with his horns, and breathed rage and threatening on account of the irritation of the burning irons, he was, nevertheless, held back by the sacred Providence, and as he in no wise harmed them they let loose other wild beasts upon them. Finally after these various and terrible attacks upon them, they were all slain with the sword; and instead of being buried in the earth they were committed to the waves of the sea. . . .

But Sanctus also endured marvelously and superhumanly all the outrages which he suffered. . . . His body was a witness of his sufferings, being one complete wound and bruise, drawn out of shape, and altogether unlike a human form. Christ, suffering in him, manifested his glory, delivering him from his adversary, and making him an example for the others, showing that nothing is fearful where the love of the Father is, and nothing painful where there is the glory of Christ. For when the wicked men tortured him a second time after some days, supposing that with his body swollen and inflamed to such a degree that he could not bear the touch of a hand, if they should again apply the same instruments, they would overcome him, or at least by his death under his sufferings others would be afraid, not only did not this occur, but, contrary to all human expectation, his body arose and stood erect in the midst of the subsequent tormentors, and resumed its usual appearance and the use of its limbs, so that, through the

grace of Christ, these second sufferings became to him not torture but healing.

EUSEBIUS QUOTES IRENAEUS' TESTIMONY OF HEALING IN THE CHURCHES.

These things Irenæus, in argument with the account already given by us, records in the work which comprises five books, and to which he gave the title "Refutation and Overthrow of the Knowledge Falsely so called." In the second book of the same treatise he shows them manifestations of divine and miraculous power continued to his time in some of the churches. He says, "But so far do they come short of raising the dead, as the Lord raised them and the apostles through prayer, and oftentimes in the brotherhood, when on account of some necessity our entire church has besought with fasting and much supplication, the spirit of the dead has returned, and the man has been restored through the prayers of the saints."

And again after other remarks he says: "If they will say that even the Lord did these things in mere appearance, we will refer them to the prophetic writings, and show from them that all things were beforehand spoken of him in this manner, and were strictly fulfilled; and that he alone is the Son of God. Wherefore his true disciples, receiving grace from him, performed such works in his name for the benefit of other men, as each has received the gift from him. For some of them drive out demons effectually and truly, so that those who have been cleansed from evil spirits frequently believe and unite with the church. Others have a foreknowledge of future events, and visions, and prophetic revelations. Still others heal the sick by the laying on of hands and restore them to health, and, as we have said, even dead persons have been raised and remained with us many years. But why should we say more? It is not possible to recount the number of gifts which the church throughout the world has received from God in the name of Jesus Christ, who was crucified under Pontius Pilate, and exercises every day for the benefit of the heathen, never deceiving any nor doing it for money. For as she has received freely from God, freely also does she minister.

EUSEBIUS QUOTES PAPIAS ON THE SAME.

But it is fitting to subjoin the words of Papias which have been quoted, other passages from his works in which he relates some other wonderful events which he claims to have received from tradition. That Philip the apostle dwelt in Hierapolis with his daughter has been already stated. But it is to be noted that Papias, their contemporary, says that he heard a wonderful tale from the daughters of Philip. For he relates that in his time one rose from the dead. And he tells another wonderful story of Justus, surnamed Barnabus; that he drank a deadly poison, and yet, by the grace of the Lord, suffered no harm.

Why I am a Christian Scientist.

BY MRS. JANE M. PENNEY.

I AM a trained nurse, having graduated from one of the largest hospitals in New York City five years since. Three years ago this summer, while spending some weeks at my home, about two hundred and fifty miles from New York City, I visited a friend who, in my absence, had learned something of Christian Science. During my stay with her she talked to me a great deal of the beauties and helpfulness of this wonderful religion, and of what peace it had brought to her. I was favorably impressed with it, because she was so happy in it, but I did not understand it in the least. As she was about to go to Boston to the annual Communion, I asked her to send me the book, *Science and Health*, which she did, and I tried to read it, although with very little un-

derstanding. On my return to New York, I left the book at home.

Some two months later I contracted a severe cold, but kept on with my duties in an operating-room. One day I was seized with a most violent attack of asthma, the first I had ever had, although I had seen my mother suffer with it for years. Doctors and nurses in numbers were at once at hand, but no one could relieve the paroxysm, and the best the greatest doctor of all could advise was a trip to the White Mountains, "for," said he, "my aunt has been a sufferer from this trouble for thirty years, and her only relief is the White Mountains." This was poor consolation to me just then.

During the evening I was taken to my room, several blocks away. It was in a home for nurses, and there I was obliged to stay for several weeks, suffering tortures with asthma and bronchitis. One night the thought came to me, Why not try Christian Science? With the aid of the address of a Scientist that had been given me by this friend at home, I found First Church of Christ, Scientist. I went to a healer, who told me I could be cured without a trip to the White Mountains, and I was, although not instantaneously, as I expected, but after careful and patient work from my healer, and most of the time study and work on my own part. Although at times I became almost discouraged, the asthma left me in a minute's time, and with it all fear that it would return.

In the beginning of my treatments I sent home for my *Science and Health*, and studied it faithfully, as I have ever since, and thought and prayed, as so many have before me, to have the Truth shown to me.

The asthma was overcome two and one half years ago, and I have never had a return of it. Since then I have been able to make some beautiful demonstrations for myself. One case was a severe sprained ankle, which in twenty-four hours was entirely relieved of pain and swelling, and in a day or so more, of discoloration. Another was a severe earache, which lasted for hours, until I declared the Truth audibly, and it left in about a quarter of a minute. I take Christian Science into my every-day life, and it is always my first thought, and never fails.

For many years I was a consistent member of a Baptist Church, but during my two years' service in a City Hospital, I lost faith in everything, for, I thought, how can God, who is our Father, so afflict His children as to bring eight hundred helpless, hopeless, homeless ones under one roof—and there are many more Institutions of the kind in New York. This was the state of mind I was in when Christian Science found me, but now that I have learned the Truth, and that God is our Father indeed, and does *not* afflict His children, nor yet allow it to be done, I am happy to know I have a something that I know to be true, with no *ifs* or misunderstandings, and one can readily see how the physical healing must follow the understanding.

I am a self-supporting woman, and as yet I continue in my profession, feeling and knowing that divine Love leads, and that in time I shall find something different to do, although I find many ways and means of speaking a word of Truth to my charges, as a nurse comes very near to the hearts of her patients.

I have made what I think is a beautiful demonstration this summer, for I was appointed to be nurse-in-charge of a small convalescent summer hospital, where the matron is a loyal Christian Scientist, who is a great help to me. I attend church services always when I can, and in June last united with both First Church of Christ, Scientist, in New York, also with the Mother Church in Boston.

How much we owe to the dear Mother for giving us this knowledge that helps us to help ourselves and others, and how grateful we should be to her, and to the ones who have been so patient with us.

I so enjoy reading cases of healing and individual ex-

periences in the *Sentinel* and *Journal*, that I felt I must contribute my mite, although, as I read it over, it seems so little to say of so much and on so great a subject. Words are inadequate to express my gratitude for all Christian Science has done for me. The sense of spiritual uplifting is beyond telling; and it is my earnest desire to show my gratitude by my works, and to help others to know this Truth.

Where is Wisdom Found.

BY JANE DUDLEY STONEMAN.

THROUGHOUT all the world's history men have sought wisdom as something greatly to be desired. They have traversed foreign lands, crossed mighty oceans, climbed lofty mountains, explored the deep places of the earth, calculated the movements of planets and stars, lived as hermits in the lonely wilderness, plunged into the busy whirl of active life, suffered many hardships and deprivations, seeking ever the precious pearl of wisdom, which should bring to them honor, wealth, power, happiness. What they have acquired in this laborious search is knowledge, tuition, something from without,—the shell which covers the pearl but not the pearl itself.

The Bible says: "If any of you lack wisdom, let him ask of God," also "Thou shalt hear a voice beside thee, saying, This is the way, walk ye in it." That still, small voice is the voice of conscience, the voice of wisdom, the voice of God. It is from *within*, it is *intuition*, and wisdom is a knowledge or acknowledgment of God as omniscient, omnipotent, omnipresent Good. The still, small voice is con-science, with Science, with God.

When we apply ourselves as earnestly to seek wisdom, as we do to find silver and hidden treasures, we shall understand that the fear of the Lord is the beginning of Wisdom. Solomon says, "When wisdom entereth thine heart, . . . discretion shall preserve, understanding shall keep thee." "Forsake her not, and she shall preserve thee: love her, and she shall keep thee." "Wisdom is better than rubies; and all the things that may be desired are not to be compared to it." The words of wisdom bring health to the flesh, riches and honor, long life and peace, to those who incline their ears and obey. A wise man departeth from evil, so a wise man is a good man. God is wisdom, God is Love; then to be filled with love is wisdom. Man, made in the image and likeness of God, must reflect the words and works of wisdom.

The closer we listen for the inner voice, the plainer and oftener we shall hear it; and the more readily we obey it, so much the more, will plenty, happiness, strength, wisdom, and peace be ours. We need not traverse the round world to find it, but in seclusion and silence enter our inner sanctuary, and the still, small voice will show us the way out of every seeming difficulty, fill us with wisdom, and surround us with the calm, perfect peace which the world can neither give nor take away.

Religion may be learned on Sunday, but is lived in the week-day's work. The torch of religion may be lit in the church, but it does its burning in the shop and on the street. Religion seeks its life in prayer, but it lives its life in deeds. It is planted in the closet, but it does its growing out in the world. It plumes itself for flight in songs of praise, but its actual flights are in works of love. It resolves and meditates on faithfulness and it reads its Christian lesson in the Book of Truth, but "faithful is that faithful does." It puts its armor on in all the aids and helps of the sanctuary as its dressing room, but it combats for the right, the noble, and the good in all the activities of practical existence, and its battle-ground is the whole broad field of life.—JOHN DOUGHERTY.

Testimonies.

A Teacher's Experience.

Many times I have felt that I should like to express my gratitude for the help I have received in my school work through Christian Science.

It has been of untold value to me. It has given me health so that I never lose a day because of sickness. It enables me to close school in June feeling just as bright and active as on the first day of September. It has shown me how to be calm and patient, and how to rise above discouragement, the teacher's great enemy.

I have experienced a partial meaning of this sentence: "Patience, while it knows best how to wait, is of all the virtues the most active." I have proven in a degree, the words of our Leader, Rev. Mary Baker G. Eddy, in "Miscellaneous Writings," page 340, "Be active, and, however slow, thy success is sure."

It seemed to me that this past year brought more conditions which might cause one to be discouraged, than any previous year of my teaching. Owing to unfortunate conditions, the school that came to me in the fall was poorly equipped for the work. In it were a number of pupils who had been considered failures as students, incapable of doing good work. It was thought best to reduce a few of the pupils. The rest remained during the year. The thought of the One Intelligence, which they reflected, was held daily. I left them long enough to attend the annual Communion in Boston and returned to give them their final examinations with the result that not one failed to be promoted.

I find many opportunities to overcome various aches and accidents, and the children generally yield very quickly to a few thoughts of Truth.

One day last winter one of the girls said she felt ill, and almost before I knew it, fainted. The declaration that "Man's consciousness and individuality are reflections of God" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 231), and therefore cannot be lost for one moment, restored her to consciousness immediately. This little girl had been out of school for two years because of ill health. This year she was scarcely absent a day, and stood at the head of her class.

Very often through impersonal demonstration the general health of pupils has been improved. Children have attended school regularly, who were never before able to attend through the winter or were absent frequently because of sickness. An epidemic of measles did not disturb my attendance. One little girl told me that she had hardly known before what it was to remain in school a whole day; she suffered so severely with headache. She was not absent once, as far as I know, because of this trouble, and was never excused from school.

My work in the schoolroom has been very kindly recognized and appreciated by my Principal, who called me to the office one day and asked, "What is it you do with bad boys? Somehow or other when a bad boy enters your room he is no longer bad." He spoke further of the work, showing much appreciation, and then paused for my answer. I said, "Whatever good result in any way, you see from my work, is all owing to Christian Science."

He knew that I was a Christian Scientist and had been bitterly opposed. In reply to my answer he said, "O, pshaw! you would do the same without any Christian Science." I replied, "No; I could not possibly do the same work without Christian Science, because I should not know how to do it." Perhaps a year later, he again called me to the office, asking me the same question. I again answered him in the same way. This time he replied, "Well, if it is Christian Science, I wish all the teachers had it."

A gentleman, very prominent in the community, whose

child I had in my room, and who thought Christian Science could only be the work of the Evil One, came to complain to the Principal that I was teaching Christian Science in my schoolroom, saying that his little boy had made a statement at home that he could not possibly have heard from any one but myself. The Principal assured him that I was not teaching Christian Science in the schoolroom; that I was not a person who would force my religious views on any one. After some discussion on the subject, my Principal asked him if he knew of any more Christian Scientists that he could get as teachers, saying if he did to let him know, as he would like to have all the teachers of that kind he could get.

Several years ago I had in my schoolroom a boy who was considered incorrigible. He yielded quite easily to the thoughts of love held for him, although trying my patience severely at times. His sister came to me and said his mother wanted to know what I had done with O., he was so much better boy at home.

For the many, many benefits I have received through Christian Science, I feel deeply grateful. Christian Science does indeed enter the minutiae of human affairs, and the government of Immortal Mind is supreme, even in the physical realm.—FLORENCE HAZZARD, Peoria, Ill.

Completely Healed by Christian Science.

I desire to tell of a demonstration related last Sunday morning after our service, by a regular attendant.

The gentleman had suffered since boyhood, whenever he went into the water, from cramps, and he said even from bathing in cold water his flesh would turn purple. The week before the demonstration was related he had worked in the water helping unload and launch a boat that had come on the train to Newport, and was to go on the lake down beyond here to Magog, Canada. He worked three days and a half in the water up to the arm-pits, going home to his dinner without changing his clothes. There has not been the slightest manifestation of cramps, discolored flesh, or cold, and he rejoices to tell what Christian Science has done for him the past year.

About a year ago his wife came for me to treat him. He had had a painful shock. The doctor had forbidden him to do any work on account of being liable to bring on another attack of the kind. At the time treatment was asked for every breath he drew caused intense pain. It was about noon when the wife came. I was not able to go to the house then, but told her I would treat him at once and go to see him about four o'clock, which I did. He came out to assist me out of the carriage, and was over at the postoffice that evening. The law made by the doctor that he should not work was made null and void by the law of Truth. "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 379, says, "Every law of matter in the body, supposed to govern man, is rendered null and void by the law of God."

Another of our number had a beautiful demonstration last winter in overcoming deafness in the left ear. She had been reading one of the lectures in the *Journal*, where the lecturer stated that he was healed of deafness through Christian Science. The reading of the lecture made a great impression, and the thought came that if Christian Science could cure him why couldn't it cure her. She kept thinking about it after she went to bed, and all of a sudden the realization came that she could hear. Where, before, if the right ear was buried in the pillow she could not hear a sound, she then heard the clock tick distinctly. The deafness was entirely destroyed at that time.

There are only a few of us in this place, but we have many proofs that the Truth is in our midst.

ELIZABETH F. SLEEPER, West Derby, Vt.

No Evil shall befall Thee.

To realize that there is no accident in the divine Mind is a great protection in time of danger. I was riding in a cart when the horses ran away,—dashing across in front of an electric car, just missing the curb-stone on a corner, to whirl almost on to the stone edging of a public flower bed. The cart stood on two wheels most of the time. The dash was soon over, but furious while it lasted. It is said we can think quickly at such times. From the start, I held to the Truth, and not once did I fear. I knew I was safe, no matter how the ride ended. A dear friend saw me as I passed her carriage, and spoke to the coachman to follow us. She also declared the Truth. When all was over and I sprang out of the cart, she was waiting to take me home. We soon had a hearty laugh; not a bit of nervousness was left. In the old thought it would have prostrated me.

The more we realize the protecting power of divine Mind the more safe we are. We have always known it in a vague way, but Christian Science makes it tangible and real.

At another time I was crossing a crowded street when a messenger boy, riding a bicycle at a furious pace, turned the corner, striking me with such force that I was thrown on my side on the pavement. The boy was thrown from his wheel which fell in another direction. A crowd collected at once. On gaining my feet, I felt shaken up and dazed, but at once realized the Truth, that there is no accident in divine Mind. I had walked only half a block when all nervousness was gone and no trace of the shock I had received was left, not even a bruise.

SUSAN H. F. BROWN, Minneapolis, Minn.

From a Traveling Man.

I am a traveling man, and as I have read a number of testimonies in the *Journal* and *Sentinel* from traveling men, I desire to add my testimony as to what Christian Science has done for me. Perhaps it may be of help to others.

I was healed of a very severe eye trouble. I saw everything double. I could hardly see to read and write, as the lines would run together. The eyelids were nearly closed. I was weak, and my hands were cramped and out of shape.

I thank God that I heard of Christian Science and went at once to it. To-day I am well and strong.

I am trying each day to know more of the Truth that has made me free. You will always find in my grip the Bible, Science and Health, "Miscellaneous Writings," the *Journal*, *Sentinel*, and *Quarterly*. I wish to express my gratitude to Mary Baker G. Eddy, the Discoverer and Founder of Christian Science.

I ask God to give me strength to overcome all error and to understand more fully the Allness of God.

G. W. V., Augusta, Me.

A Word of Thanks.

I feel I owe a testimony to our dear *Sentinel*, and words seem too feeble to express my gratitude.

I will give one of the many ills and ails that I have been perfectly healed of,—a dislocated knee joint that was out of place twice in three months, the last time I fell on it making it seemingly much worse.

Our physician said a knee-cap was necessary to keep it in place, and that it would probably always bother me; but thanks to our great Physician, for He was sought and found, an ever present help in time of need.

Many thanks for the Love and patience that brought this blessed Truth to mortal sense.

MRS. CORA PHELPS, Wellsboro, Pa.

Religious Items.

The *New-Church Messenger* says: "On a foggy morning the landscape is covered and only a few things are visible. An atmospheric curtain drops down and the hills, the horizon, everything a few feet away is excluded. Our world is very small indeed, and the objects visible can almost be counted upon one's fingers. Suddenly the sun-breaks through, the mists roll back, and the enraptured eyes sweep over a country that transcends anything the most powerful glass could have revealed before. At once a complicated creation seems called into being. More is seen than before—and yet so much less in proportion to what there is to be seen. The land has been draped in a robe of light. The figure holds in relation to great men, great books, the great universe—and more than all, of the great God.

In a discourse on "Forgiveness," a writer in the New York (Methodist) *Christian Advocate* says: "The unforgiving spirit is a source of much evil. 'I have known,' says Dean Farrar, 'a man nurse the tiny cockatrice of unforgiveness till it had burst into the fiery serpent of crime.' The exercise of the forgiving spirit is a specific against the worst passions of the human heart—malice, hate, anger, spite, revenge, murder; and it is God alone who can enable us to perfect such a spirit by the indwelling of His all-conquering spirit of love."

Charles S. Kay, in an article in the (Baptist) *Standard* on "Dialectics or Impulsion?" says: "Much in current literature which occupies the mind and time of mankind is as husks and shavings for food. Books upon books are written to serve as mere time-killers for aimless readers, or as mediums for the display of fruitless dialectics. Public addresses and sermons, not calculated to impel the hearer to do anything, are delivered by the score—mere animadversions on things possibly true, but unimportant if true."

"The Highest Ideal Makes the Best Life," is the subject of an editorial in the New York (Methodist) *Christian Advocate* in which we find the following: "That life is barren that is destitute of high ideals, while that life is rich and fruitful that, having its ideals, has been successful in actualizing them. It is emphatically true that no man liveth unto himself. He could not if he would; for every life influences some other life for good or for ill."

A writer in the *New-Church Messenger* says: "Everything worthy of study contains depth. This is why there is less patience with religion than anything else—because there is no end to it. Truth about God unlocks His greatness—it is the lamp that irradiates His being. Impatience clips the wings of revelation. The very joy of study lies in the fact that it leads out on the breezy, roomy plains of research."

The (Baptist) *Examiner* says: "The envious can never be happy. Addison calls it 'a wretched and apostate state,' and justly says: 'The condition of the envious man is the most emphatically miserable; he is not only incapable of rejoicing in another's merit or success, but lives in a world wherein all mankind are in a plot against his quiet, studying their own happiness or advantage.'"

The (Unitarian) *Christian Register* has the following: "Let us conceive it possible, as Cromwell said, that we may be mistaken; but, however confident we are obliged to be, let us be slow to account our opinions and tastes to ourselves for righteousness, yet slower to imagine that they pertain to us as being of a higher order than the average of human kind."

Dr. Lyman Abbott says: "One cannot think once for all and then live thoughtlessly; he cannot choose once for all and

then live carelessly; every day and every hour he must make his choice between the narrow path of virtue and the vice which lies all the way on either side of him."

The *Hartford Seminary Record* says: "The Christian life does not consist in one act of supreme surrender. It is not to have and to rest, but to go on and on, making endless additions to itself. The Christian life is a process of culture. And culture involves individual effort."

The (Baptist) *Watchman* says: "Perhaps the man who is illustrating in his personal life the power of Christianity to curb passion, to make him patient and steadfast and brave, is doing more to commend the gospel than the author of the acutest apologetic."

The *Independent* says: "In working toward the Christian life and love, we are but opening the door to let in the power which shall complete what we can only imperfectly long for. In serving others we accomplish the most ennobling mission of human life."

The *Universalist Leader* says: "All the fruits of the spirit as enumerated by St. Paul may not be exhibited by any one life to-day in a uniform degree, yet every one of them is included in the term love as expounded by him in 1 Corinthians, 13."

The *Church Standard* says: "The church has no greater need to-day than for a doctrine of retribution which shall be both Scriptural and scientific, and which will commend itself to every man's conscience in the sight of God."

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order or exchange on New York or Boston. Individual checks cannot be received, as a charge is made by the Boston banks for their collection.

All orders for Journals, Sentinels, Quarters, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or vice versa.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but

fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

No. 6.—Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25.

TRACTS.

Practical Demonstrations. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filed at this price.

Address all orders for above literature to The Christian Science Publishing Society.

Applications for Membership.

The next regular meeting of the First Members of The First Church of Christ, Scientist, in Boston, Mass., will be held November 6, 1900. It is desirable that applications for membership in the Mother Church, to be acted on at this meeting, should be sent in as early as possible. They must be in the hands of the Clerk by October 15, 1900.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

- Price (cloth) each \$3.18
Two to Twelve books to one address, each, prepaid . . . 3.00
Twelve or more books to one address, each, prepaid . . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid . . . 5.00
Twelve or more to one address, each, prepaid 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
Twelve or more to one address, each, prepaid 5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS.

- A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth) each, prepaid \$2.25
Twelve or more books to one address, each, prepaid . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid . . . 4.00
Twelve or more to one address, each, prepaid 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS.

- An illustrated poem.
Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid . . . 2.50

RETROSPECTION AND INTROSPECTION.

A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS.

A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE.

An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM.

The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers: 31 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES.

A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.

A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD.

A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP.

Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp. SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.

MR. KIMBALL'S LECTURE. 33 pp.

HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.

Political and Governmental Notes.

A State election for Governor, and members of the Senate and House of Representatives was held in Vermont on September 4. According to unofficial figures the vote stood as follows: Republican, 47,876; Democrat, 15,842; Republican plurality (estimated) 32,250. The Republicans elected the Governor and all the members of the Senate, but the House of Representatives will have two hundred Republicans and forty-six Democrats. In the election for Governor, etc., in 1896 the vote stood, Republican, 50,991; Democrat, 10,146; Republican plurality, 40,384, showing in the present election a Democratic gain of over five thousand votes. In 1896 there were only twenty-one Democrat representatives in the lower house after the September election.

There are approximately 75,578,000 persons in the United States according to the count of the federal census. Sufficient progress has been made to enable the total population of the country to be estimated with reasonable accuracy. The population in 1890, according to the census of that year, was 62,622,250. This shows an increase during the decade of 12,955,750, or about 20 per cent. The official figures which will be given out at the conclusion of the count will not differ widely from these.

The United States post-office department has established a "star" route postal service two thousand miles long from Skaguay, Alaska, to Cape Nome. Mail during the winter will be carried over this route once a week on sledges drawn by dogs. Although it will probably cost the government a dollar for each letter sent by this route, yet a two cent postage stamp will carry a letter from any point in the United States to Cape Nome.

Ex-President Harrison has accepted the appointment from President McKinley as member of the international arbitration commission provided for by The Hague treaty. Ex-President Cleveland, who was also tendered an appointment on the commission, has attached certain conditions to his acceptance.

The United States government has decided to send a transport to Cape Nome to bring back destitute miners who are stranded there and to supply clothing and provisions to the Indians. General Randall estimates that there are one thousand persons at Cape Nome in extreme want.

The British North American squadron, under command of Vice-Admiral Bedford, paid a visit to Bar Harbor, Me., on September 4 as a compliment to Rear Admiral Farquhar, who was at the time in the har-

bor with the United States North Atlantic squadron.

The New York State Republican convention was held in Saratoga September 5 and B. B. Odell, Jr., of Orange County was nominated for Governor and Timothy L. Woodruff of Kings County was nominated to succeed himself as Lieutenant-Governor.

The Connecticut Republican convention nominated George P. McLean for Governor, and Edwin O. Keeler for Lieutenant-Governor on September 5.

Foreign News.

The military authorities at Halifax have been advised that the British War Office has named Sir Charles Warren as successor to Lord William Seymour, in command of the regular forces in British North America. Sir Charles Warren was with Gen. Buller during his campaign in Natal, designed to raise the siege of Ladysmith. He was in command of the British troops which occupied Spion Kop, a manoeuvre which proved disastrous, the important position occupied at tremendous cost being abandoned during the night.

A Pretoria dispatch says: "The mines at Johannesburg which are at the producing stage are able to start the crushing of ore already developed immediately. Only a moderate number of workers need return as the mills can be operated effectively without a full complement. Development work at these mines will be delayed probably for three months, but this will not interfere with the general running of the mills. The mines and the machinery are all in good condition and pumping is proceeding."

The Chinese situation has not materially changed during the past week. The Boxers and other Chinese revolutionists seem to have abandoned operations and now the difficulty is with the outside powers. They are trying to agree on some policy with regard to the future administration of the affairs of China. The negotiations have been halting. Meanwhile there seems to be no likelihood of the foreign troops being withdrawn for some time.

Sir Charles Dilke says: "The cost of the defence of the empire (British) by military and naval means in a normal year of peace has now reached £83,750,000 by one computation, and £75,750,000 by another. Of this gigantic sum, the amount spent from military and naval estimates at home is £51,500,000, leaving £32,250,000 or £24,250,000 spent annually upon defence from other sources than our estimates."

A press dispatch from India of September 7 says: The weather is now promising for the crops. Excellent rain has fallen in all the famine tracts, and the winter sowings are practically assured. The number now receiving relief is something under 4,000,000, an encouraging reduction.

A London press dispatch says that Elder, Demster, & Co., will acquire a fleet of twenty-five steamers belonging to the British & African Steam Navigation Company, at a cost of £900,000.

Lord Roberts has issued a proclamation formally annexing the Transvaal to the dominions of the British crown.

Industry and Commerce.

A good instance of the enormous growth and importance of the electro-chemical industry in the United States is afforded by the huge power plant of the St. Lawrence Power Company at Massena Springs, N. Y. This installation will take advantage of an extremely curious configuration of the country, whereby the St. Lawrence River is nearly fifty feet higher than one of its tributaries, the Grass River, which is only three miles distant.

A canal cut across this short stretch of country gives one of the best water powers in the world, and no less than 150,000 horse-power, or three times that generated in the great plant at Niagara, will be produced. All this gigantic power will be used on the spot in electrolytic processes for the manufacture of calcium carbide, bleaching powder, alkali, etc.

The transformation of the street railways of the country from horse power to electricity has been the work of scarcely a decade. The close of 1899 found in this country 871 roads, with upwards of nineteen thousand miles, of which less than five hundred miles were of the old-fashioned system. The total mileage of street and elevated railways at the close of 1899 was 19,213 miles; number of cars, 58,736. Capital stock, \$1,023,819,987; funded debt, \$777,862,571; total, \$1,801,682,558.

Labor Day was celebrated as a public holiday in all parts of the United States on September 3. In the cities there were parades by the labor organizations and public speaking. The celebration in Chicago was perhaps of greatest importance. Among the speakers there were William J. Bryan, the Democratic-Populist candidate for President, and Governor Roosevelt, the Republican candidate for Vice-President.

It is rather a surprising fact, considering how enormously they have grown, that at the beginning of this century there was not a savings bank in the world, says the *New York World*.

General News.

A recent press dispatch from Duluth, Minn., says: Sheldon Jackson, commissioner of education for Alaska, is conveying across the continent twenty-five Laplanders who were sent by the Government to Alaska thirty months ago with reindeer, and who are now on their way home to Jokkonkk. The Laplanders were sent to Alaska early in the Klondike excitement with reindeer that were to be used as beasts of burden and food by the starving miners. The Laplanders were employed as mail carriers and deer drivers at a salary of \$268 a year each, besides food and clothing. They are now going home rich with from \$600 to \$700 each, enough to keep their families in affluence for years.

M. Picard, Commissioner General of the 1900 Paris Exposition, has, it is stated, been informed by the president of the jewelry section that an enormous diamond from Kimberley will be exhibited in the jewelry pavilion. The stone was found shortly before the war. It has been insured for £400,000, and will be shown in a showcase guarded by four policemen. At night the showcase will sink into the ground in the same way as that in which the Regent is kept at the Louvre. The new diamond is said to be finer than the Regent, the Shah, the Grand Mogul, and the famous Koh-i-nor exhibited in London in 1851. No name has yet been given to it.

There recently visited Boston a man who was once a slave of Jefferson Davis. This man, Mr. Isalah T. Montgomery, is the founder of a prosperous colony of colored people in the valley of the Yazoo River in Mississippi, and the mayor of the village of Mound Bayou, the centre of the colony. Mr. Montgomery came to Boston to attend the meetings of the National Negro Business League. He is a man of education and refinement, and possessed of unusual business ability.

It is stated that the University of Oxford will be hampered financially for two generations because of the cost of the New English Dictionary, which contains "the minutest record that science and unrelenting labor can achieve of all the facts concerning every word in the whole English language, past and present."

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Mrs. Eddy to the World.

"You may send out to all the world this message from me:—

"I am well, despite the many attempts of those opposed to the Principle of Christian Science to prove otherwise. For thirty-four years I have labored in this great field and never have I been so keenly alive to the glorious privilege of living and working.

"You have asked me if it were true that I am a sufferer with cancer. You have asked me if it is true that a doctor of medicine is in attendance upon me.

"To both these questions I answer NO with all the truth in my being. I am free from disease and there is but one physician guarding my welfare. He is the Great Physician.

"Stories telling of my illness have been, I am sorry to say, industriously circulated. They are naught but malicious falsehoods. Their object, I presume, is to injure my health, and to discredit my belief and practice of what I have expounded for more than thirty years. This indeed would be much to those who oppose the growth of the Science of Christ.

"For many years I have been aware of what you tell me, and in a quiet way I have guarded against these unseen enemies, not personal enemies but enemies of the faith.

"With your own eyes you can see that I am well and strong, although the cycle of years usually allotted to man has passed over my head.

"I shall be pleased to answer any questions that may serve to set aright any mistaken belief aroused by unfounded and unworthy reports concerning my health and adherence to the great Principle of Christian Science."

REV. MARY BAKER EDDY to the *Post*.

CONCORD, N. H., August 9. The Rev. Mary Baker Eddy, the head of the Christian Science Church, to-day made a statement to the *Post* concerning the avalanche of stories which have been circulated of late, attributing to the Mother a lack of faith in the doctrines of Christian Science. It has been further stated that Mrs. Eddy has the constant services of a physician. Among the three hundred thousand people constituting the membership of the Christian Science Church throughout the world these statements caused a profound sensation. Until to-day Mrs. Eddy has not made any public references to these charges.

The Mother is a very busy woman, and Secretary Frye doubted that she could spare the time necessary for an interview, but when the mission of the *Post* man was made known, Mrs. Eddy immediately granted the request for a personal talk.

There was a slight rustling of silk at the top of the stairs, a moment's whispering, and then Mrs. Eddy came down the broad staircase of her home. In another moment she stood at the doorway leading into the reception room.

"They have shown you into a rather dark room," she said. "Come with me," and she led the way into the front

drawing room which was brilliantly lighted by the afternoon sun.

Mrs. Eddy impressed one as singularly graceful and winning in bearing. Her figure is tall, slender, and flexible in movement as a Delsarte disciple. Her face is oval in shape, the features regular yet indicative of strong character. Her eyes are a luminous blue, a bright contrast to the mass of wavy white hair that falls over her temples.

Mrs. Eddy is a striking picture of health in old age. Her step is firm and she walks with an easy grace, strongly conveying the impression of health and strength.

Taking a seat on the sofa, and motioning the reporter to a chair near at hand, she said, "Now I am ready to give you any information that you think will be of interest to the public.

"It is with sadness that I have noted a certain inclination to ascribe to me a condition that does not exist. Did I not believe that reports wholly false have been scattered abroad concerning my physical condition, and that these falsehoods coming to the ears of my many friends would cause them pain, I would not feel that it were necessary publicly to utter any denial.

"Is it not strange that some natures are so constituted that they can return evil for good? It has always been my practice to return good for evil, and that is a good practice, do you not think so?" she said with a smile that lighted her features.

"You came here to ask me if I were sick. I answer no, for when God heals the sick or sinful they know the great benefit Mind has wrought. They also know the great delusion of mind when it makes them sick or sinful. Many are willing to open the eyes of the people to the power of good resident in divine Mind, but they are not as willing to point out the evil in human thought and expose its hidden mental ways of accomplishing iniquity.

"There was once a time in my life when bodily ailments laid me low, but I have learned that Mind reconstructs the body as nothing else can do.

"I claim nothing more than to be the Discoverer and Founder of Christian Science; that I should depart from its great Principle must indeed shock the world. I feel that in the face of what I have heard I ought to give you every opportunity to print in your paper personal observations that will directly refute such statements, founded in the brain of some one, who, disregarding all truth, all facts, gives to the world a lie in the shape of truth."

"It has been persistently reported, Mrs. Eddy," the reporter said, "that you are a sufferer from cancer. Will you kindly make a positive statement, denying or confirming the truth of such report?"

Sitting upright with eyes that shone with a strange light, Mrs. Eddy replied in tones that carried strong conviction.—

"I do not suffer from any bodily ailment, and never before in all my life have I so thoroughly enjoyed the blessing of perfect health. I am an old lady," she added more

softly, and then smiling, added, "That is, in years but not in my own sight."

"Is it true that a doctor of medicine calls upon you regularly, and that you are under his care professionally?"

"To that question let me reply as I did to the previous one; No! and in addition I will summon my household, and they will tell you in language that there is no mistaking that those responsible for such statements are untruthful and unjust."

Mrs. Eddy rose, and with a quick movement touched an electric button at the drawing room door. Her whole bearing was one of suppressed earnestness, leaving no doubt that her whole heart was intent upon proving beyond a question the accuracy of her statements.

A few minutes later the entire household assembled in the hallway, and in answer to questions put by the representative of the *Post*, plainly and fully told what they knew of the daily life of the head of the Christian Science Church. All expressed amazement that for a moment any one should think Mrs. Eddy in ill health, adding that each day she is seen out driving about the streets of Concord in all kinds of weather. Indignation was evident on every face.

All were positive that no doctor of medicine has ever attended upon Mrs. Eddy since her discovery of Christian Science, and that she was under the care of a physician was positively denied by her personal servants.

"The world may not be willing to accept this as proof positive, but I think that I will receive the usual truthful representation in the press of the country and the base canards circulated receive but scant recognition.

"If there is nothing further that you would like to say I will ask to be excused," Mrs. Eddy said, "for I have much work to do. Work has grown to be a habit with me. There is much to be done; and our desire is to do so much in a short time."

Mrs. Eddy went toward the stairs, and as she went to the upper story called back: "I climb these stairs a great many times each day. Do you not think that I am very sprightly?" and then she disappeared, leaving the impression behind that converse had been held with a being far above the average of mortals.

As the reporter was leaving the house Secretary Frye stepped out to the door. "I am glad you have seen her," he said, "for it is seldom that a moment occurs that can be spared from the regular work. Mrs. Eddy is a tireless worker and accomplishes more in one day than many do in twice the time.

"That she is well and vigorous you have observed, and I trust that in the cause of truth and right you will tell exactly what you have seen."

For a number of weeks a rumor has been current here to the effect that Mrs. Mary Baker Eddy was affected with a frightful disease. Despatches from this city have appeared in many parts of the country stating that Mrs. Eddy was dying, and of course such news was widely read. Not until to-day has Mrs. Eddy made any statement to the public concerning these rumors, and her reply is most emphatic.

It is generally becoming an accepted fact among close observers that this city has become the seat from which constant statements damaging to Christian Science are sent out. It would appear, say her friends, as though those opposed to the growth of Christian Science had taken up a situation right in the heart of the stronghold of the Scientists and were working assiduously to accomplish harm. There are more than two thousand believers in Mrs. Eddy's doctrines in this city alone, and much bitterness of feeling has been engendered by the persistent attempts to discredit the Mother's adherence to her own faith.

Bulletins announcing the decadence of Christian Science have been, it is said, traced to one source, and it is probable that some action may be taken with a view to ridding Concord, the Mecca of the Scientists the world over, of this element.—*Boston Post*.

Twentieth-Century Church.

The *Toronto (Can.) Globe* gives the following synopsis of a sermon recently delivered by the Rev. J. P. Gerrie, pastor of the Zion Congregational Church in that city.

The twentieth-century church will be one of liberty. The membership will not enter into conflicts and divisions over questions of immersion and sprinkling, higher or lower criticism, evolution, eternal punishment, Biblical inspiration, or no. The honest, loyal disciples of the great Master will not quarrel and divide over mere doctrines, but will give to one another the fullest liberty of the Gospel of Jesus Christ. All caviling about comparatively unimportant theological differences will cease. There will be room for all. It will be a democratic church. The tendency of the age is toward democracy, and there are few nations in the world not manifesting movements in this direction. It is so in the church. Churches and congregations which heretofore revealed a concentrated authority resting in the hands of one or a few, to-day show the rule of the membership. There are few congregations where any ecclesiastical official can assume the role of the dictator. In political affairs our own Canada has shown the emphatic refusal of the people to be controlled by a hierarchy. It needs no special prophetic insight to see that the twentieth-century church will be a democratic one, a fact which calls from its membership the highest intelligence and the deepest spirituality.

It will be an every-day church. It is a crying shame that millions of money should be expended in edifices which are in use but a few hours of the week. A change is coming. The sepulchral stillness of the week will give place to every-day life and action. The gloom of imprisoned walls will be brightened by the sunshine from without. The institutional church is coming, which will give service on Monday as well as Sunday, and prove itself the servant of the community on every day of the week.

It will be a here and now church. For centuries the special aim of the church has been for the great hereafter—something that is not to be belittled, but its mission was too exclusively a religion for "mansions in the skies." Now there is attention to the sternly fought battle of every-day life. There is found a mission to help men with the heavy burdens which they carry. The twentieth-century church will contribute more and more to the ennobling of individual life, the brightening of the home, the peace and equity of industrial toil, and the exaltation of citizenship.

This church, too, will be a missionary one in the highest and noblest sense. The distinction between home and foreign missions will largely cease. The wanderer will be sought wherever strayed. The down-trodden will be lifted up wherever fallen. Its mission will be to trade, business, politics, everything. It will seek to drive out heathenism at home and abroad, and make this world indeed the very kingdom of God.

Hearts on the altar laid
May seem to perish, slain;
The sacrificial blood
May seem to flow in vain;
But a secret voice still whispers,
"Oh true soul, not in vain!"

SAMUEL LONGFELLOW.

Selected Articles.

Reply to Mr. Stokes.

To the Editor of *The Spy*.

Dear Sir:—In your issue of June first you published a letter from James Stokes, which contains some claims that I desire to consider. He makes the statement, "After the death of the last individual on whom the apostles had laid their hands, miracles could not exist, and as a writer of half a century ago remarked, 'All pretences to them now therefore are of necessity characterized by falsehood and imposture.' It is the divine nature—the nature of the risen and glorified Jesus—which God is now seen to be engaged in propagating." With the latter part of this statement I heartily agree, and I would add that the propagation of the nature of the risen Jesus must of necessity improve not only the moral and spiritual condition of those who labor in this line, but their bodily condition in the same proportion. It is impossible for one to improve spiritually without improving physically. The best man that ever trod the globe was also the healthiest. Throughout the practice of Jesus among men, we find him healing the sick as well as the sinner. Indeed, he healed the sick man by destroying his sins, and he made no distinction between sickness and sin. He said, "For whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" He also said on one occasion, "Sin no more, lest a worse thing come unto thee," clearly setting forth the idea that sin is the seed which produces sickness. Here it should be understood that the word sin means perhaps more than its most commonly accepted sense, and includes all the mistaken and ignorant acts of mortals as well as the wilful wrongs. It is true, many of the best people are sick—not because of their goodness, however, but because with all their goodness they are not yet good enough to escape the discords of life. Some of this class are more conscientious than the indifferent, wilful sinner, and fear more because of their little wrongs than the hardened sinner because of his greater wrongs, and this timidity is not a protection against disease, but rather renders them more liable thereto. On the other hand, oftentimes the wilful sinner seems to fare the best, and to be at present without suffering. Nevertheless, we can truthfully say the good man is on the way to harmony, though he may not yet have reached it; while the sinner is on the way to suffering, though he may not yet have found it.

If the day of healing the sick through divine influence is past, the day for preaching the gospel is also past, for we find these two statements given together in the Scriptures, "Preach the gospel" and "Heal the sick." We also find this: "He that believeth on me, the works that I do shall he do also," which is equivalent to the statement, "He who understands what I understand and who practises what I practise, shall be followed by the same results." In the latter part of St. Mark we read: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." Just previous to this statement, we find our Master's words, "He that believeth and is baptized shall be saved." The same who are to be baptized and saved are to be followed by "signs." Those who were merged into divine grace sufficiently to merit their own salvation or immunity from sin and suffering were to be able to help others out of sin and disease. If it is true that these signs of our belief will cease, then it is also true that the day of salvation will cease. The statement is nowhere to be found in the teachings of our Master or of his disciples that the time will come when mortals must cease to look to divine power for health, and must depend

upon their own or the power of material remedies. Our critic asks some one to give the name of the beast referred to in Revelation. They are the various means and methods which claim to be divine and real, and yet are directly opposite to the genuine method which Jesus practised. The true method of healing recognizes no power but divine Love.

Respectfully yours,

ALFRED FARLOW.

In *The Worcester (Mass.) Spy*.

About Christian Science.

Mr. Editor:—The following brief exposition of some of the salient features of the Christian Science faith, is given in compliance with a request from the *Telegraph* for a statement, correcting so far as possible the general misconceptions concerning Christian Science, and differentiating between its teaching and that denominated "The Higher Thought."

A comprehensive definition of Christian Science is impossible in the limited scope of a newspaper article, hence reference is made only to those phases of the subject which are most generally misunderstood.

In a recent publication concerning a new church organization the author makes reference to the term Christian Science and attempts to define it.

The name "Christian Science" is the specific term employed by the Rev. Mary Baker G. Eddy "to designate the Scientific system of Metaphysical Healing," discovered by her in 1866. (*Science and Health with Key to the Scriptures*, p. 17.)

The Standard and Encyclopædic dictionaries which define the term refer exclusively to the theological and therapeutical system taught in the Christian Science text-book, "Science and Health with Key to the Scriptures," published by Mrs. Eddy in 1875, and containing the complete statement of the Principle and practice of Christian Science.

The Church of Christ, Scientist, is the denominational name of the Christian Science churches, and should not be confounded with the organization in question.

I would not be understood as assailing either the individual or the organization. The statement is made because those uninformed or misinformed sometimes classify the two together.

Christian Science pure and unadulterated neither includes nor resembles the various occult theories given out under the names of New Thought, Higher Thought, Advanced Thought, Mental Science, Theosophy, etc., nor are the phenomena evolved through these agencies, allied to the healing wrought by Christian Science.

Christian Science is not a revival of the pantheistic doctrine that God is in nature, *i.e.*, in matter or its phenomena. It does not make "gods many" nor endow mortals with the prerogatives of petty deities; it does not teach that Spirit and matter are different phases of the same thing; its teaching is in accordance with the dictum of the Bible, "For the flesh lusteth against the Spirit, and the Spirit against the flesh: and these are contrary the one to the other."

"It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit and they are Life," said Jesus.

The theology of Christian Science inculcates faith in one supreme, infinite God; the God of whom the Scriptures bear witness; it repudiates the theosophical vagary that man is God or that God is in man; it acknowledges one Saviour, Christ Jesus, and affirms the verity and authenticity of the sacred Scripture; it declares that Jesus taught a complete salvation, saving from sickness as well as from sin; and that the law which he declared may be scientifically and practically applied to all human conditions.

This healing power of divine Truth is not an infraction of law; it is the fulfilment of law, testifying to ways "higher than our ways." It is the power of Truth over error, Spirit over matter, Soul over sense; it is Immanuel or God with us, it is the law of the Spirit of Life in Christ Jesus, which makes free from the law of sin and death. The operation of this law renders material phenomena subject to Spirit, and establishes in human consciousness the recognition of God as supreme over all, the Healer of sickness as well as the Saviour from sin.

The Scriptures from Genesis to Revelation attest God's willingness and ability to heal, and there is no Scriptural authority for assuming that His willingness and ability are less now than nineteen hundred years ago, since God is the same yesterday, to-day, and forever.

Jesus declared: "Ye shall know the Truth, and the Truth shall make you free." This freedom is attainable by mortals whenever they are willing to "put off the old man with his deeds," and earnestly and prayerfully seek the solution of the perplexing problem of human existence in a true knowledge of God.

The panacea for human ills is to be found in God, not in man. There never was, is not, and never will be any healing power in man.

Christian Science demands of its adherents absolute obedience to both the Law and the Gospel, and in solemn warning reiterates the decree: "Whatsoever a man soweth, that shall he also reap."

It does not make the superficial assertion that there is no sin and then leave mortals free to sin *ad libitum*, as has been falsely asserted by a critic. It does not tell the sick man that he only imagines himself sick, on the contrary it recognizes the sufferer to be in a condition which requires a remedy, but it finds that remedy in God, not in matter.

Only the highest morality and Christian practice are consonant with the teachings of Christian Science.

The feasibility of a purely spiritual therapeutical system is no longer an open question with those who have through such means been lifted out of hopeless invalidism.

The beneficiaries of Christian Science have found that there are more things in the heaven and earth of spiritual possibilities than are dreamt of in the realm of material pharmacology.

Christian Science asks of the public, not blind credulity, but intelligent and unprejudiced investigation.

Accurate information concerning the theory and practice of Christian Science is easily obtainable, therefore its adherents reasonably ask that judgment be suspended until the facts relative to it are known.

No falsehood however gilded with sophistry can stand the crucial test of time.

"If this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

—CORA E. DOWNER.

In the *Kalamazoo* (Mich.) *Telegraph*.

A Word in Favor of Christian Science.

THE REV. W. H. P. FAUNCE, just elected President of Brown University, wrote an article (so it is stated) upon Christian Science, which was published in the *Examiner*, a Baptist newspaper issued in New York City, March 31, 1898, which is said to contain these words: "This new doctrine, if it be new, must have some truth in it because of its points. Jesus gave his disciples power to heal, and that power has never been revoked. It will not do for theologian or historian quietly to assume that Jesus meant such power to fade with lapse of years or to vanish at the end of the third century. Men will believe either that miracles are continuous throughout the history of

Christianity, or that they never occurred in the Christian Church. No middle ground is logically or theologically possible. It is absolutely certain that hundreds of men and women in this country have received in the healing of their diseases a demonstration that there is a fundamental truth in Christian Science. Beholding the men who are healed we must beware how we declare ourselves against it. Even though many have died while hoping to be healed, even though many have forsaken the faith they once held, a marvelous number of cures are being daily performed. It is easy to pronounce this Satan's work; but Satan's work is to bind men, not to loose them."

Book Notes.

• Science vs. Sight.

THE following from the pen of Professor S. C. Mitchell, Ph.D., of Richmond College, Virginia, appeared in a recent number of the *Standard*.

It is often said that religion is opposed, not to reason, but to sight. Science, the product of reason, is no less opposed to sight. An obvious illustration of this truth is found in the opposite conceptions of the sun given by the senses and by science. The eye reports that the sun rises and sets, a view in which man rested for thousands of years; science teaches that the sun is relatively still, that the earth revolves—knowledge revealed to the reason only after centuries of toilsome effort. In this case, as so often happens, the truth of reason stands in direct contradiction to the impression of the senses.

Hence it is that Sir John Herschel regards distrust of the senses as the prime requisite of those who wish to enter into the truths of science. "There is," says he, "no science which, more than astronomy, stands in need of such preparation, or draws more largely on that intellectual liberality which is ready to adopt whatever is demonstrated, or concede whatever is rendered highly probable, however new and uncommon the points of view may be in which objects the most familiar may thereby become placed. Almost all its conclusions stand in open and striking contradiction to those of superficial and vulgar observation, and with what appears to every one, until he has understood and weighed the proofs to the contrary, the most positive evidence of his senses."

Socrates was perhaps the first to realize fully that the same contradiction exists between popular opinion as to society and politics and the results of a scientific study of the facts in these domains. The principle of his reform was to reconstruct human opinion on the basis of "reasoned truth." The poignancy of his irony lay in his ability to puncture men; who, resting in popular generalizations, had the seeming and conceit of knowledge without its reality. The outcome of his life-work was the enforcement of the idea that truth must be tracked by the reason alone, in defiance of the senses, of our impulses, and of popular opinion.

As Grote has pointed out, Lord Bacon furnishes us a key to the purpose of Socrates, since he did for physics what the Greek philosopher had attempted to do for social, political, and moral truth. Bacon pronounces the first notions of the intellect radically vicious, confused, badly abstracted from things, and needing complete re-examination and revision. "*In notionibus nihil sani est, nec in logicis, nec in physicis.*" Thus science insists on the purification of the intellect as a prerequisite to a knowledge of the truth. In this it is at one with Jesus when he declared that only the pure in heart shall see God.

Again, it is often said that the great forces in nature are silent. Yes, and more; they are unseen. A venerable gentleman, who was in Baltimore when there came from Washington the first telegraphic message, told me recently how the crowd, apprised of the time at which the message

was expected to arrive, gathered on the street near the telegraph office and waited to see the message pass along the wires. He pictured their amazement when presently the message, whose arrival had been without the heralding of trumpets, was read to them. All events in nature come in the same way. No man ever saw, smelt, or felt a cause. Effects alone are seen, causes are among nature's arcana.

A still more significant fact remains to be stated. Science resolves all phenomena—stone, water, tree, and star—into primal forces that are invisible. "The things which are seen" are only transient forms, phantom-like, that those hidden forces assume from time to time. For example, that lump of coal, so hard and seemingly indestructible, can be converted into heat; the heat, into electricity; the electricity, into light; the light, into chemical affinity, and so on until the circle is complete. Is matter the coal, or the heat, or the electricity? No, matter is the invisible force of which these are the fleeting appearances. Some hand has roughly carved on a huge rock on one of the islets overlooking Niagara Falls this inscription, which states one of the deepest truths of science: "All is change. Eternal progress. No death." Huxley was led to say that in the last analysis there are in the world only energy and the law which controls it—both alike invisible. This conclusion of science is akin to that great principle struck out by Paul: "The things which are seen are temporal, but the things which are not seen are eternal."

Right Thinking as a Help to Success.

Most of the people who are down in the world financially, or from the success standpoint, have lost their ambition, their hold upon high ideals. They are poor and talk poverty. They think poverty, and make little effort to get away from it or to change their depression.

How could even a Raphael paint the face of Christ with that of Judas in his mind? The ideal, the model, is the first step toward betterment of one's condition. No sculptor can carve an angel's form out of rough marble until he has first seen the angel in his mind's eye.

To be forever thinking poverty, talking of failure, and living in an atmosphere of dejection and demoralized self-confidence, is just the condition of things that naturally brings poverty into our lives. There is no hope of success in such an environment. A strong, vigorous purpose, held firmly and persistently, is the first step toward progress. Without this there can be nothing but mediocrity or failure. Any one who constantly holds the picture of want in his mind, talks incessantly of his misfortunes or ill luck, and thinks that fate is against him, has no chance of winning in the battle of life. He must change his point of view or his fortunes will not mend. It is fear that makes beggars.

Neither dread nor anticipate poverty or ill luck, but surround yourself with the bracing atmosphere of prosperity, no matter how little money you may have.

It is not the greatest poverty to lack money, however, but rather to believe yourself poor, wretched, and unfortunate. To be without some of those things which we strongly desire should not make us miserable. One who has health, is possessed of all his faculties, and can appreciate the beauties and harmonies of nature can never really want. John Burroughs, the great nature-lover, says he cannot imagine how any one possessed of his senses can be wretched in a world where love and divinity are reflected in every blade of grass, in every flower, and in every bit of landscape.

The trouble with Americans is that they are brought up to believe that there is nothing of value in the world but money and the things that money can buy. But money can buy comparatively little, outside of the necessities of

life, that is desirable. Happiness depends upon a sound mind in a sound body, the love of our friends, and the ability to appreciate the beauties and harmonies of earth and sky which are the free gifts of the Creator to every living creature.

When the friends of Epictetus pitied him because of his poverty, he told them he had no use for money, that it did not afford any means of happiness to him, and that he could be rich without gold in his appreciation of the beauties of nature and the love of his friends. These to him were real wealth, and financial wealth by comparison would be a mere bauble.

What are houses and lands and a big bank account in comparison with a fine, rich culture, the ability to associate with the greatest minds in all history through books, the inestimable blessing of true and exalted friendship? Indeed, he who would be successful, in the best sense of the word, must rise superior to dependence upon money for his happiness.—*Success.*

The Russian Calendar.

It is stated that the Russian government is proposing to effect an alteration in their calendar, the dates in which since the end of last February, have differed thirteen days from those of western Europe and America. We are told, however, that they do not purpose to adopt the Gregorian reckoning, but to bring into use a scheme more simple and more accurate, and to invite other nations to accept this. It is then to be presumed that the plan in question is that of dropping a leap year regularly each 128th year, which would keep the calendar right and in accordance with the true lengths of the tropical year for eighty thousand years. Obviously this is far more simple than the Gregorian rule, which is this:—

Drop a leap year in each year the number of which is divisible by one hundred, unless it is also divisible by four hundred. This would keep the calendar right for over three thousand years; but, if it were further modified by dropping a leap year in each year the number of which is divisible by four thousand, it would preserve the year in accordance with its true length for one hundred thousand years. So that the modified Gregorian rule, with an exception of an exception of an exception, would be scarcely more accurate than the above simple rule, according to which the next leap year dropped, after the present one, would be 2028. To prove its accuracy it is only necessary to point out that it implies having, in every period of 128 years, ninety-seven common years of 365 days each, and thirty-one bisextile years of 366 days each. This makes in all 46,751 days in 128 years, or the average length of a year 365.24219 days, which differs only in the fifth decimal place from the true length of a tropical year.

London Notes and Queries.

Evening Service at Concord, N. H.

First Church of Christ, Scientist, hereafter will hold, in addition to its morning service, an evening service beginning at 7.30 P.M. To these services and to the Wednesday night meeting at 7.30 P.M., all are welcome.

Concord Evening Monitor.

Wanted.

A good florist, who is a Christian Scientist, and will present a written recommendation from a loyal student. Address G. F. W., care of Thomas W. Hatten, 68 Westland Ave., Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY, TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The New Hampshire Fair.

THE results of the New Hampshire policy of "expansion," a leading exponent of which is the able chief executive of that state, Hon. Frank W. Rollins, were made conspicuously manifest in the success attending the Annual State Fair held last week at Concord. It was, by common consent, the best Fair the old Granite State has ever had, and, in all its aspects, bore favorable comparison with any similar event in any state. The exhibits, as a whole, were of the first order, many of the paintings and pictures, as well as the large variety of household handiwork, such as fine needle-work (the old-fashioned patchwork quilts of our grandmothers being among the most attractive), and innumerable other articles of domestic virtue, having been donated for the occasion by the patriotic citizens of Concord and other places in the state.

The exhibit of stock was most creditable, an interesting feature of which was the large number of sleek and powerful oxen.

The daily balloon ascensions, as a rule, were successful and interesting, while the high diving was thrilling in its novelty. The artist—for such in his role he surely was—performed the feat of leaping from an eighty-foot tower into a pool of water only five feet in depth and of small circumference. The pose, during the swift descent, was graceful in the extreme, and to the Christian Scientists present, and no doubt to others, furnished a striking example of the dominion of mind over matter in consequence of the absence or overcoming of fear.

We, of course, cannot go into detail as to all the many interesting features of this very attractive exhibition, nor is it necessary. We confidently predict for the future a series of annual exhibitions in this grand old state that shall bring it more and more to the front among the sisterhood of states of the great Republic.

The present year surely evidences a revival of vitality and a laudable state pride that pre-ge well of the future.

Christian Scientists feel an especial interest in New Hampshire and her welfare, very naturally, because it is the native state of the Discoverer and Founder of their religious system, as well as her worthy ancestors for some generations back, and in the Rev. Mary Baker Eddy they recognize one of the noblest daughters of the long line of noble daughters this state has given to the world.

Thursday, September 6, was set apart as "Governor's Day;" and on this day, as hereinafter related, occurred events which gladdened the hearts of Christian Scientists in an especial sense—this was the appearance of their Leader, the Rev. Mary Baker Eddy, on the grounds by special invitation of the management, the clearing of the race course for the passage of her carriage around the circle, her escort by the governor's aide and by the marshals and policemen on horseback and on foot, and her cordial and warmly spontaneous reception, full and graphic accounts of which were published in the daily press of the country, from some of which we below extract. These accounts are so full and generous that there is nothing to be added to them in the way of detail.

The writer and his wife were honored by an invitation to accompany Mrs. Eddy in her carriage, and were thus afforded the privilege of witnessing her delight at the demonstration of welcome and cordiality, as well as her lively interest in all that transpired while she remained on the grounds. There were two events that deeply impressed her because of the thoughtful consideration evinced: the announcement of her name and designation as the Discoverer and Founder of Christian Science, and the request by the management that anything in the nature of a boisterous demonstration should be avoided because of her well-known distaste for undue publicity.

The incident quite reversed the Scriptural adage that a prophet is not without honor, save in his own country, and in his own house, for never did prophet or dignitary receive greater honor and respect than was accorded Mrs. Eddy on this occasion.

In view of the malicious falsehoods which have been so industriously circulated as to the state of Mrs. Eddy's health, it is not strange if she was deeply touched by this spontaneous exhibition of respect and confidence on the part of her eminent fellow-citizens and neighbors. Nor will her adherents be at fault if they feel a pardonable pride and gratification at the high honor thus accorded her whom they so well know and so much love. They do so feel, and their hearts in due proportion, are thankful to those who were instrumental in bringing about the happy event.

The *Concord Evening Monitor* gave the following interesting account of the event:—

"One of the most prominent Christian Scientists spoke as follows concerning the visit of Rev. Mary Baker Eddy to the Concord State Fair Thursday:—

"This is the first instance in recent years that Mrs. Eddy has attended a public function except such as might be connected with her church. The hearty reception by the vast throng expressed their recognition of the high character of the distinguished guest.

"This visit of the Discoverer and Founder of Christian Science to such a public gathering and the spontaneous and cordial reception by the vast multitude reveal Mrs. Eddy to the world as she has been long known to her followers.

"Every person present had the opportunity to see that Mrs. Eddy is in excellent health. She is in full possession of every faculty. She is youthful in appearance and vigorous in every act and movement. Her bright, sparkling eye, her clear, fair complexion, her quick, vivacious movements, bespoke a strong body and a forceful intellect. Her public appearance is conclusive evidence that she is no recluse. She is glad to meet the people, and the only reason for so seldom appearing is the strict attention she gives to the vast and important interests in her care. Her appearance on the State Fair grounds shows the breadth of her interests.

"No pent up Utica" confines her powers. The demands of her religious duties are exacting, but she is concerned with all that makes for the public's highest welfare. Her cordial patronage of this state enterprise betokens her hearty support of home interests. Though a great religious leader, her religion has not removed her from those concerns which are close at hand. It shows a public spirit of which the people have many proofs, and is evidence that every worthy public enterprise has her cordial support."

The *People and Patriot* of Concord, of date September 7, 1900, also contained an account which concluded thus: "Her appearance disproves the stories current of late of her serious illness."

We append also extracts from some of the other newspaper accounts.

The Sun, New York:—

"Concord, N. H., September 6.—This was Governor's Day at the Concord State Fair, and nearly thirty thousand people attended. The special guests of the Fair Association were Governor Rollins and staff, the Governor's Council, Senators Chandler and Jacob H. Gallinger, Congressmen Clarke and Sulloway, and a party of Boston and Maine Railroad officials, headed by President Lucius Tuttle. An unexpected feature was the appearance, this afternoon at three o'clock, of the Rev. Mary Baker Eddy, Founder of the Christian Science cult, who visited the fair in response to the invitation of the management. She was driven in a victoria carriage completely around the grounds and on the race track, which was cleared in her honor. She was received with much enthusiasm, and was accompanied by Judge Septimus J. Hanna and Mrs. Hanna of Boston.

"Mrs. Eddy was much pleased with her reception. She looked remarkably well, and smiled upon the vast audience in the grand stand."

The Boston Journal:—

"Concord, N. H., September 6.—Rev. Mary Baker Eddy was a guest at the Concord State Fair this afternoon, at the special invitation of Governor Rollins, the day being observed as Governor's Day.

"Accompanied by Judge and Mrs. S. J. Hanna of Boston, Mrs. Eddy arrived at the grounds at 3 P.M. in her victoria. She was received at the gates by the city and state authorities, represented by the City Marshal of Concord and an escort of police, mounted and on foot, and a mounted military aide of Governor Rollins, specially detailed. With her escort, Mrs. Eddy made the circle of the track, which had been previously cleared for her benefit.

"As the carriage approached the Governor's reviewing stand, she was announced to the throng as the Rev. Mary Baker Eddy, the Discoverer and Founder of Christian Science. The band struck up a patriotic air and the ten thousand spectators in the amphitheatre waved handkerchiefs, cheered, and applauded. In deference to Mrs. Eddy's distaste for undue demonstrations, the crowd had been requested by the authorities to refrain from a too boisterous recognition of her presence. After having made the circuit of the grounds, Mrs. Eddy and her escort, together with about fifty visiting Christian Scientists, witnessed the greater part of the afternoon programme. Before leaving Mrs. Eddy expressed to the authorities and to her escorts her appreciation of the honor paid her.

The Boston Daily Globe:—

"Concord, N. H., September 6.—The Concord State Fair drew the largest crowd to-day that has gathered in this city for a quarter of a century. The official statement from the management placed the number at twenty-five thousand.

"This was Governor's Day, and as usual attracted the largest crowd of the week. Before noon fifteen special trains came into the city, all heavily laden, and reporting, as yesterday, that the supply of fair tickets, which was thought to be adequate, gave out at every station.

"Governor Rollins, accompanied by his staff, the council, and guests, reached the grounds at 10.30 A.M., and as the party entered the combined bands of the exhibition played 'Hail to the Chief,' and a great cheer went up from the crowd. At the grand stand the governor and party held a brief informal reception, being presented by officers of the Fair Association. They returned to the city for dinner, and visited the grounds again this afternoon, remaining from 1.30 to 5 o'clock.

"In Governor Rollins' private box were seated the Governor and Mrs. Rollins, whose guests were Adj. Gen. A. D. Ayling and Mrs. Ayling of Concord, and General and

Mrs. W. E. Spaulding of Nashua. The remaining members of the staff and Governor's Council occupied adjacent boxes, and among other guests present were U. S. Senators William E. Chandler and J. H. Gallinger; Congressman Frank G. Clarke, Hon. F. D. Currier, Hon. Henry M. Baker, and Hon. Henry N. Blair, all accompanied by ladies.

"A company of Boston & Maine Railroad officials also occupied boxes, the party including Pres. Lucius Tuttle, T. A. MacKinnon, general manager; Frank D. Barr, assistant general manager; J. O. Melcher, superintendent, Fitchburg division; G. Bean, superintendent southern division; Henry Bartlett, superintendent motive power; A. C. Cheever, assistant engineer, and J. T. Chamberlin, master car builder.

"The feature of the day was not on the set programme. This was the appearance of Rev. Mary Baker G. Eddy. She arrived at the main entrance at three o'clock. The races on the track were immediately suspended and, under the escort of mounted police with patrolman on either side of her carriage, Mrs. Eddy drove around the race track in her victoria, drawn by a pair of handsome bays. On the seat beside the driver was Judge Septimus J. Hanna, First Reader in The First Church of Christ, Scientist, Boston, while Mrs. Hanna rode beside 'Mother' Eddy.

"The coming of Mrs. Eddy was announced through a large megaphone, and when her carriage was driven before the grand stand, filled with five thousand people, and surrounded by three times that number, there was considerable applause and many bared heads. Mrs. Eddy responded with a gracious smile and nods of recognition. She looked remarkably fresh and fair for a woman of eighty years, and in her quiet dress of lavender shade presented a picture not soon to be forgotten.

"Mrs. Eddy remained on the grounds over half an hour and when departing expressed much appreciation of the exhibit and the kindly reception given her by the people. The forty First Members of The First Church of Christ, Scientist, Boston, who were called here by special invitation yesterday, remained over night, and early this afternoon were Mrs. Eddy's guests at Pleasant View, her home, and also accompanied her to the Fair grounds."

Full accounts, similar to the above, were also published in the *Boston Post*, *Herald*, *Transcript*, *Traveler*, and other papers.

The *Manchester Union* (N. H.), contained the following:—

"Another feature of to-day's happenings which is quite noteworthy was the appearance of Mrs. Mary Baker G. Eddy, the Founder of the Christian Science doctrine, on the grounds. Mrs. Eddy was safely ensconced in a victoria, and was accompanied by Judge and Mrs. Hanna. She drove around the track and while passing the grand stand she was generously applauded. Judge Hanna acknowledged the compliment. Mrs. Eddy was much interested in the high diver and drove to the centre of the field to witness the act."

To Christian Scientists the day was verily an historical one, and no more appreciative people can anywhere be found than those who bear this name. Thousands of eyes, from all parts of the globe, will turn with renewed interest toward this state of diverse resources and scenic grandeur by reason of the kindly recognition of their beloved Leader as above chronicled.

We gladly bear personal testimony to all that is above said as to the health, youthful appearance, and activity of Mrs. Eddy. In the more than ten years of our personal acquaintance with her, we have never seen her when she expressed greater activity or better health. She moved around among her visiting students the sprightliest of the group.

Among the Churches.

Opening Services at Plymouth, Mass.

First Church of Christ, Scientist, Plymouth, Mass., which for some time held services in A. O. U. W. Hall, has removed to their new quarters, 93 Court Street.

A few months ago it was deemed advisable to seek new quarters; a little later the opportunity to purchase a place was offered. A business meeting was called, at which money was subscribed, and measures taken for immediate action.

As the work became more widely known, help was received from other sources, both in thought and deed, from kind, loving brothers and sisters, thereby enabling us to make the demonstration. We hope to show our appreciation by lives of faithful obedience to the teachings of Christ as given in the Bible, illumined by "Science and Health with Key to the Scriptures."

Work was commenced at once; the contract was made, and although error tried to confront us in many ways, the seeming obstacles were overcome and work went on. In one month the building had been renovated, and the main floor converted into a pretty, attractive hall for church services. The prevailing colors are green and white with touches of tan and mahogany shades. The furnishings are golden oak. Through the week the front part of the room is separated by a pretty screen for a reading room, and is tastefully arranged, affording a quiet place for all who wish to investigate the teachings of Christian Science.

The first service was held August 5, 1900. There was a good attendance. The hall was prettily decorated with cut flowers.

Previous to the reading of the Lesson-Sermon, we listened to the following remarks, by our First Reader, Edgar B. Pierce.

It is a pleasant privilege to speak the word of welcome at this opening service of First Church of Christ, Scientist, in this beautiful audience-room. A footstep in Christian Science has been taken, and as we look upon the pleasant surroundings, we realize that a forward movement has been made in the interest of our cause in this field.

It is a gratifying coincidence that here, in the shadow of Plymouth Rock, where the Pilgrim came for religious liberty, Christian Science has become established. In briefly referring to the history of our church we find that Christian Science came to the adjoining town of Kingston about 1884, since which time it has gradually advanced to Plymouth as a centre for the work in this field.

This church was organized in 1896, and chartered in 1898, and is now making favorable progress.

Every Christian Scientist joins in earnest love and thankfulness to God and our Teacher and Leader, the Rev. Mary Baker G. Eddy, author of the Christian Science text-book, "Science and Health with Key to the Scriptures," for to her untiring efforts is due the great blessing of Christian Science in the world to-day. Jesus said, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

In the Epistle of James we read, "The effectual fervent prayer of a righteous man availeth much."

To quote from Science and Health, p. 315, "Christian Science reveals the necessity of overcoming the world, the flesh, and evil, and thus destroying all error. Seeking is not sufficient. It is striving which enables us to enter. Spiritual attainments open the door to a higher understanding of the divine Life."

In connection with this advance is the Christian Science reading room which is to be found with the churches of this denomination. The reading room will be opened during the coming week, and its object is that all may gain a correct understanding of Christian Science.—N. F. S.

Meeting Among the Thousand Islands.

It may be of interest to Scientists who frequent summer resorts to hear of an enjoyable meeting held among the beautiful Thousand Islands in the St. Lawrence River, Sunday, August 12.

Notices had been posted in all the large hotels that a Christian Science service would be held at Woodbine Cottage, St. Lawrence Park, to which all were cordially invited. At three o'clock, the hour appointed for the meeting, the cottage and veranda were well filled.

Music was furnished by the orchestra from the hotel in the park. The regular order of service was followed, being conducted by the First and Second Readers of First Church of Christ, Scientist, Utica, N. Y. It was apparent from the interest and attention of the audience that the words of the opening hymn,—

They who seek the throne of grace
Find that throne in every place.

were well verified.

At the close of the service strangers were well supplied with Christian Science literature.

Over sixty people were present, including Scientists from Cleveland, Rochester, Watertown, Utica, and other places.

There is a legend among the Indians that the Great Spirit promised His presence every evening at twilight among the Thousand Islands, because of their great beauty, and indeed the river, with its always clear water, seems a type of a spiritual "channel of thought" (Science and Health, p. 584).

It is expected that next summer regular Christian Science services will be held every Sunday in August at St. Lawrence Park.—C. F. H., Utica, N. Y.

From Mason City, Ia.

About twelve years ago, a few seekers for Truth, most of whom had been healed through the instrumentality of Chicago Scientists, began to hold Christian Science services at the home of one of their number. In 1890 we rented a hall for our services. In May, 1892, a church was organized under the direction of a loyal student of Mrs. Eddy. Many have gone to other fields of labor; several are Readers, and all are doing good work in their new homes. The growth of our church has seemed to be slow. Our present membership is sixty-two, and every Communion Sunday brings some new ones into the fold. We know that the good seed is being sown. Many, who do not seem to be able to come with us in person, are with us in thought, and are reading Science and Health and other Christian Science literature in their homes.

A year ago we purchased a lot in a beautiful part of the city for nineteen hundred dollars. We hope to build a church in the near future.

We have a Sunday School, numbering twenty-five, and the little ones give many beautiful demonstrations, showing their understanding of the healing power of Truth.

We have many good workers and hundreds have been made better and happier through the understanding of Love and Truth. A Christian Science reading room was opened in December, 1899, and all the works of Mary Baker G. Eddy are kept on sale, and many Sentinels and supplements distributed free.

We have had two lectures; one by Mr. Edward A. Kimball and the other by Judge Ewing. Both were well attended. They were well received by the people, and were very helpful to the church.—ELIZABETH DENISON.

Before we can have any progress, we must have faith in the possibility of progress. We must believe in the capacity and destiny of man.—JAMES FREEMAN CLARKE.

A Wednesday Evening Meeting.

THE following testimonies were given at a recent Wednesday evening meeting at Savannah, Ga.

One gentleman told about his aunt in England who was a great sufferer from a complication of diseases, among them rheumatism, paralysis, dropsy, asthma, and cataract of the eye. The attending physicians had given her only one month to live; their skill had been exhausted in trying to relieve her. This gentleman had recently been benefited by Christian Science, so immediately sent her some Christian Science literature. She soon ordered a copy of *Science and Health*, and commenced to take treatment. At once there was an improvement in her condition, and now, although she is an old lady, she is able to attend to her household duties and can see. This was a year ago, and to-day she says she is in better health than ever before in her life, and knows that Christian Science saved her from the grave.

Another gentleman said that a great many people say "Oh, you would have gotten well anyhow," trying to detract from the power of Science. But he is confident that no material remedy could have done anything for him, as he had been under medical treatment since boyhood, and steadily grew worse. He had pulmonary trouble since childhood. The doctors said his left lung was full of ulcers, and finally pronounced it entirely destroyed, and the right one liable to go in the same way. He had lived on medicated air for eighteen months, and gone through every form of treatment advised. After a while a specialist decided that he had Bright's disease also. He bought medicine by the wholesale, but grew worse and worse until, in his extremity, he found Christian Science. He immediately commenced reading the text-book, and his health began to improve. That was seven years ago, and to-day there is not a stronger, healthier man in the city, all his old diseases have completely disappeared.

A lady stated that she had been brought into Christian Science by the healing of her uncle of rheumatism, asthma, and hay fever. She was healed also of several troubles, and to-day rejoices in a consciousness of health and peace that only the religion of Christian Science can bring.

Another lady spoke of the healing of hereditary diseases through the understanding of Christian Science. She said no material means had ever been discovered that was able to destroy the fear of disease which had been handed down from parent to child and held so many people in bondage. But the realization that God is the Father of all mankind, and that in Him there is no disease to be inherited, completely destroys the mortal belief of inherited evil, and shows that man's birthright is health and not sickness.

A gentleman told how he had been healed of appendicitis in one treatment two years ago, just as he was on the eve of going to a hospital for an operation, and he had never had a return of the trouble. He said that he was steadily growing in the understanding of Truth that lifts man above the claims of mortal mind, and its endless train of diseases and discords, and was finding that an absolute reliance on divine Mind instead of matter brought a corresponding sense of peace and safety from all ills.—H. P. W.

Oh voice of Duty still,
Speak forth: I hear with awe;
In thee I own the sovereign will,
Obey the sovereign law.

Thou higher voice of Love!
Yet speak thy word in me;
Through Duty let me upward move
To thy pure liberty.

SAMUEL LONGFELLOW.

From Our Contributors.

A Hymn.

BY M. P. CAMERON.

LORD, I was blind, I could not see
Aught in Thy life's sweet purity;
But now, Truth shining on my night
Giveth eternal sight.

Lord, I was deaf, I could not hear
God's message to this world so drear;
But now, Thy voice comes from above,
Listening, I know 'tis Love.

Lord, I was dumb, I could not speak
Nor sing Thy words, O Master meek;
But now in humble prayer and praise
My voice to Thee I raise.

Lord, I was dead, I could not move
Nor wake, my sense of life to prove;
But now with joy, I rise to see
Life "All-in-all" with Thee.

Material Destruction and Spiritual Construction.

BY R. P. VERRALL.

THE process of erecting one of the large buildings of modern times offers an apt symbol of practical Christian Science. In a large city, where the ground is already occupied, it is frequently necessary to pull down a number of small houses, that one large structure may be built. After this is done, excavations are commenced; all loose material, soft soil, and sand are removed, and eventually a reliable formation, perhaps rock, is reached. The surface has now to be prepared to receive the stone blocks and iron chairs on which will rest the vertical columns of the new building. In most cases a temporary fence of wood is made between the street and the building site, to avoid the interference of inquisitive people, and to prevent the workmen from being hindered by the distraction of surrounding objects.

These preparations having been made, the work of construction can now proceed. The parts have all been made at a distance and are brought to the spot to be placed in their relative positions. The perpendicular columns are first set up in their respective places and tested carefully by plumb-line and level; then come the iron girders, cross-beams, and joists, all bolted together and forming a metal frame work, or skeleton, which will soon be filled in with stone and brick. When this is done, an army of sculptors, decorators, and skilled mechanics are set to work to beautify the exterior and interior of the building. Modern inventions are introduced for heating and ventilating, and interior communication by bells, telephones, and elevators. The premises are now ready for occupation, and all who see this new triumph of art and industry admire its outline, proportions, and utility.

Having sketched this material symbol, let us draw from it the spiritual lessons that it has in store. In the mental development from sense into Soul, spiritual growth leads us into the recognition of our limited surroundings, and compels us to admit that our foundation is unsafe, and our dwellings unfit to meet present requirements. Having arrived at this conclusion, there is but one course to pursue, namely, to pull down the old beliefs of life, substance, and intelligence in matter, and start afresh on a spiritual foundation, which reveals the "house not made with hands, eternal in the Heavens," "whose builder and maker is God." In Paul's first epistle to the Corinthians, he says, "Now if any man build upon this foundation gold, silver, precious

stones, wood, hay, stubble; every man's work shall be made manifest: for the day shall declare it, because it shall be revealed by fire; and the fire shall try every man's work of what sort it is."

In modern construction, perhaps the two principal materials employed are iron and stone; let us subject these to the ordeal by fire, and see what will become of them under the influence of heat. Iron is first made pliable and then melts; if the heat is increased still further the molten metal will evaporate and pass away in a blue smoke. Granite, marble, or even a diamond will fare no better; under the action of intense heat they will disintegrate and become dust. We are now compelled to admit that no material element can be used if we would construct a permanent abiding place. Having exhausted the resources of this world, and found them to be at best imperfect, we turn at last to find the original, of which these have been but poor imitations. Christian Science here comes to our rescue, saying: "Spirit is the only substance," reminding us of the words of Paul: "Ye have in heaven a better and an enduring substance." These comforting words give us new life and courage to advance, and we now willingly turn from matter to Mind to find the true foundation and superstructure of Spirit.

The process of excavation typifies the removal from our minds of the sand and rubbish of mortal thought, which must be disposed of before the rock, the true character, can be revealed. The vertical columns are upright thoughts that represent honesty and trustworthiness; these support the entire superstructure that will follow. The temporary fence is the protection which separates the individual from the world and its distractions, while developing the stature of perfect manhood in Christ. The parts coming from a distance are the lesser ideas that are brought out through spiritual attraction, and fit into the places, without noise, "so that there was neither hammer nor axe nor any tool of iron heard in the house, while it was building." The sculptors, decorators, and skilled mechanics represent the beautifying and utilitarian forces that are brought into our lives, producing the graces of the Spirit and the amenities of disposition which make our character building beautiful and useful.

The perfect man can only be manifested by the architecture of divine Science, which alone demonstrates Elohim of the Hebrew Scriptures, and reveals Him "as one Father, with His universal family, held in the Gospel of Love" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 568).

To carry on this work, from our present standpoint, money is needed to pay for the work as it proceeds. Those who possess this world's goods give them gladly, and so free themselves from the bondage due to the love of materiality. Those who are under beliefs of poverty learn to declare for the affluence of the divine Mind, and to deny sense limitations, on the ground of man's God-given inheritance, as heir to the Kingdom of Heaven. Having one common object in view, the work goes on rapidly. Each day brings us nearer to its completion, and as we rise higher in spiritual understanding we are led to see that, by uniting in our desire for the establishment of God's kingdom on earth, we have at the same time forged the bands of brotherly love, all being joined in the One Mind, and under the guidance of one Leader, whose wisdom and love have first found and then shown us the way to Life Eternal. Our gratitude to her can only be shown by a willingness to submit to the discipline of divine Love, as it leads us higher, and gradually fits us for the reception of absolute Christian Science, when we shall hear the voice of Revelation, saying: "Behold, the tabernacle of God is with men, and He will dwell with them, and they shall be His people, and God Himself shall be with them, and be their God."

We learn through Christian Science that man is the

temple, or dwelling place of God, and this temple is built of spiritual qualities of thought, such as honesty, truthfulness, purity, courage, strength, affection, justice, obedience, patience, humility, love, and every good motive and purpose, making up the Christ character or ideal man in God's image and likeness. These component parts, like precious stones, are found in the rough, and have first to be dug out of the earth, and then cut, polished, and finally prepared for their respective places in the fire-proof structure of Christian Science.

No building can be occupied, or even furnished, until it is completely finished; this accounts for the fact that while at work on our characters, perfecting them for the habitation of the Holy Spirit, we must wait patiently for the realization of our purpose, knowing that in Christ the building is "fitly framed together" and "groweth unto an holy temple in the Lord: in whom ye also are builded together for an habitation of God through the Spirit."

Our highest aim in life is to become naturalized under the government of divine Principle, which will take possession of our motives and actions, and force us gently but firmly to understand the infinite nature of omnipotent Mind; and "Blessed are they that do His commandments, that they may have right to the tree of life, and may enter in through the gates into the city."

Pulling the Weeds.

BY L. G. O.

A FEW days ago while pulling the weeds along the back walk, I had many uplifting thoughts which I will try to put into words, hoping they may help some one as I have so often been helped through that blessed messenger of Love, the *Sentinel*.

I started out with a fixed purpose to pull the weeds along the walk, but soon found myself wandering away ever so far, straining and reaching and really accomplishing very little, when right at hand was more than I had the time to uproot. I came back and started afresh. There were all kinds of weeds; the tough and beld standing up straight and tall, seeming to say, "Try me if you dare; I am too much for your feeble strength." But when they were grasped firmly they were comparatively easy to uproot. Then came a small vine which was grasped in a half-hearted manner. I was surprised that it did not yield. I pulled harder and a small bit broke off in my hand, then I began to look for the root. Following branch after branch I finally reached the root. I gave a good strong pull and up it came, bringing with it countless branches I had not seen and would not have believed were there. It was quite large and uncovered countless bugs, worms, and nests of vermin which hurried away in dire alarm at the penetrating rays of the sun. When I was through the ground looked ragged and torn, and as I looked I wondered if I had improved it any, but during the day came a flood of rain and the ground was smooth and clean.

Thus it is in our daily experiences. When Christian Science first touches us we start out bravely but soon find ourselves wandering away from the tasks of to-day to speculate on the future or sigh over the past. Meantime the weeds of mortal thought are growing apace; when we come back and go to work earnestly the bold, hard thoughts that mortals call wrong are easily seen and destroyed, but not so with the hidden, secret, creeping thoughts. When by patient, earnest seeking we find the roots they seem to rend our very heart-strings, so interwoven are they with our whole being, seemingly, but by faithfulness they are finally uprooted, and what was under it, all uncovered. The sunlight of Truth pours in illumining and uplifting. All the loathsome vermin of mortal thought disappear, for they cannot live in the sunlight of Truth. Thus the

battle leaves us scarred and oftentimes weary, but victorious. Then come the floods of spiritual understanding, rounding off the corners, leveling up the work, and leaving all in harmony for the growth of tender humility, typified by the grass.

How my heart goes out to God in gratitude to the dear Mother for her patient work of a lifetime and all her faithful helpers in this great labor of Love.

What is Christian Science?

BY I. NELSON WARD.

DOUBTLESS there are to-day many people who would be glad to know just what Christian Science is. Many do know, and the percentage that do not is smaller than one year ago. Judging by the inquiries from all classes of people, we see the time is near at hand when all shall know.

Ask a student of the Massachusetts Metaphysical College, at Boston, Mass., and he will tell you that Christian Science is Christianity demonstrated. Ask the person who has been healed of disease, through some Christian Science practitioner, and he will tell you the power of God is omnipotent and omnipresent, that God is the Great Physician. Ask the person who has been spiritually benefited, who by reading the text-book, "Science and Health with Key to the Scriptures," has been shown man's true relation to God, and he will tell you God is Spirit, Soul, Mind, Life, Truth, Love; for God is All-in-all.

Christian Science explains the life of Jesus, and upholds this wonderful man as the only true example, as the only true type of manhood, and demonstrates that the power of God is with us now the same as it was with Jesus. As the Apostle James said, "Shew me thy faith without thy works, and I will shew thee my faith by my works," so it is with a Christian Scientist, he shows his faith by his works.

We are glad to know the day is at hand when man can understand his relation to God. Jesus prayed, "Our Father," without condition as to time or person. If God was our Father in the time of Jesus; He is to-day and forever; and we are the Sons of God.

If our relation to God is understood, why should not Christian Scientists, in accordance with their understanding of the Omnipotent Good, teach and practise as Jesus taught and practised when here on earth? His command was to preach the gospel and heal the sick, and he said the believer should do the works he did, and even greater.

Good Measure, Pressed Down, and Running Over.

BY S.

PROBABLY to others whose privilege it was to attend our last Communion, these words may have come as they did to the writer again and again during those beautiful days. What a feast it was! and how faintly words express the meaning of it all! The joyful coming together, the blessed Communion, Mother's message, the meetings, and, to crown all, the visit to Concord on the 7th, and the priceless greeting so unexpected, the free access to the beautiful grounds and the house; symbol, indeed, that this is God's hour, and every door wide open toward the New Jerusalem.

With our little party to Concord was a dear friend from Colorado. This was her first visit to the Mother Church. Only those who may have had a like experience can appreciate her deep, quiet joy as one day's privilege followed another. Back again with grateful hearts to our work, we recognize, as never before, the obligation to joyful labor, and also to let a few words of heartfelt acknowledgment go out to the Giver of all good through our *Sentinel*.

Testimonies.

Found Health in Christian Science.

How well I remember the day I decided to take Science treatment. I had been to our family physician and he had told me he could give me nothing which would *cure* me, that if I found any drug that relieved me to use it. At that time I was taking tonics and stimulants continually. *No cure*, only relief! No one to whom that has not been said can realize the utter hopelessness of such a statement.

On my way home I met an old friend to whom I related what the doctor had said, and he urged me to try Christian Science and I consented for him to write to a practitioner at once. I commenced reading and studying at this time. My healing was very slow. I think I was treated about three months and it seemed to me I was little if any better. My sense of health was freedom from aches and pains, and it did not seem to me I was in any less bondage to them than before, but time has proved I was mistaken. Many troubles that I considered of minor importance disappeared at that time, such as chronic sore throat—sometimes quinsy, sometimes diphtheretic,—an inability to travel either by land or water, nausea, constipation, fear of getting feet wet, weak ankles, inability to eat certain articles of food, a liability to fever and delirium at the slightest provocation. It seems to me as I look back that I was freed from almost all the ills that flesh is heir to, but because the trouble for which I had come to Christian Science had not been destroyed I did not see why I was not healed. However, as I progressed in understanding, I found that true health was spiritual wholeness, that as I became better spiritually I was better physically. Three times during my first years in Science I was healed instantaneously of severe pain, once of an ulcerated tooth.

Always before I came into Christian Science I was obliged to go to a dentist every six months or oftener, but have only been to a dentist once within the last four years. I was probably treated more than a year, and every one of those treatments helped to free me from beliefs in material laws and the direful consequences of those beliefs.

From the first the theology of Christian Science was beautiful to me. Baptized and confirmed in the Episcopal Church, I was never satisfied. My father's people being all Baptists, I tried the Baptist Church, but found nothing there better than I already had. When I decided to join the Christian Science Church and wrote asking for a letter from my old church the rector, while refusing to give me a letter, said he would give me two years to come back, and that he would pray that the Spirit of Truth would lead me into all Truth. *I had no doubts*. I knew his prayer was answered and that the "Spirit of Truth" was leading me unto all Truth.

Christ is risen. I have learned what Paul meant when he said, "I die daily [to material sense]." Every death of material sense is spiritual gain, and if any think as I did that they are slow in being healed I can say from experience that if they are patient and persevering, omnipotent Truth will make a "new heaven and a new earth" and "former things will pass away." If the battle is well fought it will always be won. Success is natural, and there are no failures in Truth.—KATE BUELL MOREY, Chicago, Ill.

Many Blessings Received.

Christian Science was brought to my notice in February, 1898. I did not accept on account of physical help, but I went to church the first time to please my brother, and that Sunday happened to be the dedication of our church. I was not in the habit of going to church, but after attending the service there that Sunday morning, I was so impressed with the happy looks of the people, that it was impossible for me to stay away, and I went to church again

that evening through a heavy snowstorm. My wife was a Lutheran, and her father was a Lutheran minister. I was just thinking of joining the Lutheran Church to please my wife; I even went so far as to take confirmation lessons from the minister, as I could not be a communicant without being confirmed. I told the minister that I would be confirmed, but I would not promise never to leave that church. After attending the first service I had my name withdrawn, and of course the minister asked me the reason of this step. I told him Christian Science is what I want. I gave my last money to buy "Science and Health with Key to the Scriptures," Hymnal, and the *Quarterly*. I soon began to realize the meaning of the text: "Seek ye first the kingdom of God, and his righteousness, and all things shall be added unto you."

Shortly after my wife and I received class instruction from a loyal student of Mrs. Eddy. We are members of the church in Detroit, and this spring I had the blessing of attending the Communion service at the Mother Church in Boston, and we were both received as members.

It would be impossible to tell of the many blessings that we have received since we accepted this Truth that makes men free, but I will speak of two. One was a case of an accident that happened last May at the shop. I am a tinsmith and one Friday morning I was going to do some soldering and in trying to remove the cork from the muriatic acid bottle it exploded and the whole contents went in my eyes and face. The pain was intense, and for one hour I was unable to open my eyes. The fear of becoming blind presented itself, but was destroyed by realizing the Scientific Statement of Being and John, 6:63, "It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life." After that one hour the fear and pain were entirely destroyed; when I arrived home my wife treated me. The following Sunday our teacher gave me one treatment. The following Wednesday, when I gave my testimony in church, every evidence of the burn had disappeared.

The other case was that of a thirteen-month-old baby that had the measles. His little body and face were all covered. We made no difference in his daily habits, excepting that my wife took him up from his play oftener and treated him, and in a few days the eruption had all disappeared.

After I had the first conversation with my brother about Christian Science my wife said to me, "If it is wrong to take medicine, it is wrong to smoke." I have never smoked from that day. How can we be thankful enough to our dear Heavenly Father for giving us this wonderful Truth!

I am so grateful for all these blessings. Christian Science has made me better physically and spiritually, and brings the peace that passeth all understanding.

HENRY MARX, Detroit, Mich.

Hereditary Diseases Healed.

Christian Science has done *everything* for me, and in gratitude I would tell some of the demonstrations.

The physicians said I had three incurable diseases, and what would relieve one would aggravate the others; that my days were numbered; that I could never go up or down stairs, lift my babies, or be of any further comfort to myself or others. Truly those were dark days.

Through my mother's earnest entreaties I was led to try Christian Science. I wrote to a healer, and began absent treatment. I wrote, not because I had any hope of being healed, but to please my mother, thinking she would feel better after I was gone if I had tried Christian Science.

After several days' treatment I read on page 171 of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, "Matter has no life to lose, and Spirit

never dies." The Light of Truth flooded my mentality, and gave me hope. My thought was changed from death to life, from sorrow to joy, from pain to peace. The physical healing was complete and permanent. But far above and beyond the physical healing was the spiritual regeneration. To *know* that God is a present help in every time of trouble, and that underneath are the everlasting arms, brings a sense of peace and security that the world can neither give nor take away.

No medicines or material remedies have been used in my family since my own healing. I have been enabled through my understanding of Truth to perform tasks that would have been impossible in the old thought. I have been able to be on my feet almost constantly from early morning until late at night for the past five years, without fatigue or inconvenience to go up and down stairs *many* times each day, and lift any necessary articles (much heavier than my babies) with perfect freedom.

In my own family three cases of so-called hereditary consumption, one broken limb, one dislocated joint, tumor, and many less dreaded diseases have been healed by the blessed Truth as taught by our dear Leader and Mother, Mrs. Eddy.

My heart goes out in deepest love and gratitude for what she has done for all mankind. I cannot be grateful enough for all Christian Science has done for me, for it has raised me from a helpless, hopeless sufferer, and made me a healthy, happy, and useful woman.

NETTIE Y. COYLE, Eureka Springs, Ark.

God's Ways not Our Ways.

When I first heard of Christian Science in the spring of 1897 from a friend who had left our chapel to become a Scientist, I so chemicalized over the answers to my questions, that for several months I denounced it, and warned my friends against it. At last I realized that I was condemning a thing which I had not really studied. I then determined to go right into it, prove its falsity for myself, and also prove it to my friend and save him. I scorned the idea of healing by its means.

With this view, I occasionally attended the meetings, and began reading Science and Health at the reading room. While reading, I was conscious of assimilating the Truth it contained. This alarmed me at first, but the fear soon subsided, for I said, "If it is Truth, I want to know it, but if not, I want to be fully persuaded against it."

I had read nearly half through the book, when, like Gideon, I wanted a sign that it was not simply a theoretical religion, but a practical one. I had a trouble at the time of ten years' standing or more. I thought, that if Christian Science was true, it would cure me, and I could prove it for myself. So I took up my own case with the slight understanding of Christian Science that I had, honestly, and unprejudiced, with the result that within a fortnight, the trouble had gone and I was healed.

For two years previous to this, I had come to a standstill in my religion, I could not move on; I was a member of a Calvinistic Baptist Church, and the sermons I heard seemed to profit me no longer; I was reaching out for more than they had to give; and not knowing why, this verse was almost my only prayer constantly: "O send out thy Light, and thy Truth: let them lead me." The answer came through Christian Science, for Light and Truth was revealed to me as never before.

Also, a significant part to me is, that about the time that I began to feel an unrest, a seeking for something more, Christian Science meetings were about to be organized in this country. Thus the Scripture is fulfilled: "Before they call, I will answer; and while they are yet speaking, I will hear." History repeats itself. Like St. Paul I joined the very people I came to persecute.

R. GIDDINGS, London, England.

Religious Items.

Theodore L. Guyler says in the Baptist *Standard*: "Prevailing prayer must always be accompanied with prevailing effort on our part. God never puts a premium on cowardice, or laziness, or palpable neglect of duty. There is no haphazard in prayer. All God's promises have their conditions; we must comply with those conditions, or we cannot expect the blessings coupled with the promises. No farmer is such an idiot as to look for a crop unless he has ploughed his field and sowed his seed. Be sure, my Christian friend, that you are honestly and perseveringly doing your part, if you expect God to do His part."

The *Congregationalist* has the following: "A United States military officer last week, commenting on the contrast between the grim facts and the sensational reports of luxurious living by the officers in Tientsin and of the jealousies between the Powers, said with truth 'the Pekin relief expedition is the first military expedition in the history of the world in behalf of whose success the efforts as well as the sympathies and prayers of the whole civilized world have ever been enlisted. I wish that some of the writers who are trying to discredit and embarrass it could comprehend and appreciate that fact.'"

The *Congregationalist* says: "A bubble is bigger than a drop, but it does no more to fill the spring, for bubbles are but drops distended. Bubbles of pride, bubbles of hypocrisy and self-assertion, bubbles of outward seeming unhelped by inward worth, shine on the surface of the river of time, until God's finger touches them and they are gone. It may be well for some of us to pray that we may not be bubbles on the stream, deluding others by pretense of worth; but we need to pray also that we may not be bubble worshipers, caught by social pretense or intellectual arrogance."

The (Episcopalian) *Church Standard* says: "If we are right in saying that one chief cause of the loss of power in the pulpit is not so much that it has lost in learning or in eloquence, but that it has lost in authority, that the hearers, have, in the excellences or defects of one who seems to be speaking his own words and thoughts, lost the idea of a message from God spoken by one sent for that purpose, then our problem is, how to bring back to the pulpit that divine prestige."

The New York (Methodist) *Christian Advocate* says: "As the sentinel watches for the approach of the enemy, and does not give way to slumber for a moment, so must we watch against the prince of this world. One unguarded moment may cause our ruin. And when we have done all we can, and guarded ourselves by constant vigilance, we must realize our helplessness. Pray as well as watch. Pray without ceasing. Pray everywhere."

A writer in the *Universalist Leader* says: "Through fidelity, self-denial, prayer, patient and loving service to men, by sweetness of disposition by humility, by opening the heart as a little child to receive the heavenly guest, the soul is brought into harmony with the touch of God's spirit. Whatsoever things are true, honest, just, pure, lovely, and of good report, think on these things. Let them fill your thoughts, the whole nature. This is spiritual culture."

The (Baptist) *Watchman* says: "When a man has lived in such a way as to win the confidence and become the guide of others, he bears a responsibility which he can meet only by unalterable fidelity. Every word of his is believed and rested upon. What if he speaks an untrue word a word which misrepresents the divine teaching! His example, too, is of infinite importance."

To accept the will of God is not to surrender, but to order a charge. To say, "Thy will be done," is not to sink back discour-

aged and resigned before misfortune or sin, but to consecrate ourselves unreservedly to warfare against it, and at last to complete victory over it. It is not the prayer of resignation, but the prayer of enlistment.

W. W. FENN.

A writer in the New York (Methodist) *Christian Advocate* says: "When Satan tempted Jesus he found nothing in his spirit which responded to his evil suggestions. So pure and guileless was his inner life that the solicitations of evil fell harmless at his feet. There was no inclination, no desire, no propensity rising up in response to the temptations of the devil."

The *Christian Register* has the following: "Every one who knows himself, his neighbors, and human nature in its many forms, knows that there are retributions which match every crime, sufferings which match every vice, and a hell of woe which endures so long as the evil cause persists."

The (Episcopalian) *Church Standard* says: "The curiosities displayed in the new Babylonian room at the British Museum include a memorial tablet 6,400 years old, Nebuchadnezzar's bronze doorstep, and the seal of Darius, of the den of lions fame."

"If only we could once try the highest form of Christianity on a large scale in our treatment of the heathen or in the relations between nations, an astonishing change might be noticed," says the *Christian Register*.

The *Congregationalist* says: "You cannot live up to your ideal, you say. But at least you can keep your ideal from being lowered. Are you doing that?"

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on New York or Boston. Individual checks cannot be received, as a charge is made by the Boston banks for their collection.

All orders for Journals, Sentinels, Quarters, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards, and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be

relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Literature for Distribution

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omana, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science: Its Promises and their Fulfillment. By Edward A. Kimball of Chicago, Ill.

No. 6.—Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$6.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society.

Applications for Membership.

The next regular meeting of the First members of The First Church of Christ, Scientist, in Boston, Mass., will be held November 6, 1900. It is desirable that applications for membership in the Mother Church, to be acted on at this meeting, should be sent in as early as possible. They must be in the hands of the Clerk by October 15, 1900.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each \$3.18
Two to Twelve books to one address, each, prepaid . . . 3.00
Twelve or more books to one address, each, prepaid . . . 2.75

Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid . . . 5.00
Twelve or more to one address, each, prepaid 4.75

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
Twelve or more to one address, each, prepaid 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid \$2.25
Twelve or more books to one address, each, prepaid . . . 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid . . . 4.00
Twelve or more to one address, each, prepaid 3.75

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid . . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedication Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp. **SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.**

MR. KIMBALL'S LECTURE. 33 pp.

Political and Governmental Notes.

The biennial state election for choosing of a governor and other state officers, representatives in Congress, and members of the State Legislature, was held in Maine September 10. The Republicans carried the State by a plurality of 33,245. In the State election in September, 1896, the Republican plurality was 48,377, showing a Democratic gain of 15,132.

It is said that of all the line and staff generals in the United States army to-day, only two—Ludlow and J. M. Wilson—are graduates of West Point. The men who are now at the head of affairs are those who filled up the reorganized army at the close of the Civil War, coming from the volunteers as lieutenants and captains.

Tammany Hall, under the leadership of Richard Croker, controlled the Democratic New York State convention in Saratoga last week in spite of the strongest opposition that David B. Hill could offer. John B. Stanchfield was nominated for governor.

In 1790 three per cent of the population of the United States lived in cities, in 1890 twenty-nine per cent, and the indications now are that the census of 1900 will show that thirty-three per cent of the present population resides in cities.

Chester B. Jordan was nominated for Governor at the New Hampshire Republican convention held in Concord, September 11.

At the opening of the September term Boston had eighty-two thousand children in the public schools.

Foreign News.

The fugitive emperor of China has appointed Li Hung Chang to act as peace commissioner, conferring on him absolute and unconditional authority to negotiate with the Powers for a settlement of the questions growing out of the Chinese troubles.

Affairs in China were still very much unsettled last week. The foreign powers were not of one mind in regard to the withdrawal of troops from Peking, and the programmes suggested by Russia and France on the one hand, and Germany and Great Britain on the other, were irreconcilable, as Germany insisted on holding Peking with a strong military grasp, and Russia wanted to withdraw all troops. A compromise seems to have been effected whereby the American proposal to keep the allied troops in Peking until the Chinese form a government capable of safely administering affairs, is likely to be adopted.

A Peking dispatch of August 28, delayed in transmission, describes a triumphal march

of the allied troops through the imperial palaces and grounds in the "Forbidden City," which occurred on the date the dispatch was written. It says that by previous agreement the triumphal column was made up of 800 Russians, 800 Japanese, 400 British, 400 Americans, 200 French, 200 Germans, and detachments from the Italian and Austrian forces. The diplomatic corps of all the foreign nations headed the line, which is described as having marched through the "Forbidden City" with banners flying and bands playing.

President Kruger and other officials of the South African Republic went to Lourenzo Marquez, in Portuguese South Africa, last week and stated that the affairs in the Transvaal would be directed from that place, and it was reported that Mr. Kruger would sail for Europe in a German vessel on September 28. Press dispatches of September 14 state that he had been virtually made a prisoner by the Portuguese governor, who is reported to have refused permission to the French consul to visit the Boer leader, but later reports say he will be permitted to sail for Europe with his wife.

The protocol for the arbitration of the claims of the United States citizens for the seizure of vessels in the North Pacific by Russia was signed by the diplomatic representatives of the two countries last week. The signing of the protocol terminates negotiations which have lasted five or six years. The amount of the claims to be arbitrated is nearly four hundred thousand dollars.

The Canadian postal authorities issued a notification to all postmasters on September 8 that on and after October 1 next the domestic rate will apply to Porto Rico, Hawaii, Guam, the Philippines, and the American islands of the Samoan group.

Industry and Commerce.

On September 12 the executive board of the United Mine Workers of America issued a general strike order for the anthracite coal region of Pennsylvania, to go into effect September 17. A strike has been threatened for some time past. The principal demands of the miners are higher wages and the abolition of company stores. The mines in the district affected employ about 145,000 and about 80 per cent of these men belong to the union. Before ordering the strike the miners' union proposed arbitration, but the operators took no notice of the proposal.

A Berlin press dispatch says that it is officially announced by the board of directors of the Disconto-Gesellschaft that the Norddeutsche Bank of Hamburg, the M. M. Warburg Company of Hamburg, and Kuhn, Loeb, & Co. of New York, acting in conjunction with the National City Bank of New York, have taken over eighty million marks of four per cent treasury bonds of the German Empire, falling due in 1904 and 1905. With the approval of the Imperial bank, the issue will be placed on the market in the United States.

The Maryland Steel Company has received contracts to build two large Atlantic liners for Kidder, Peabody & Co. of Boston. The vessels will be the largest freighters under the Stars and Stripes, and will operate between Boston and England. They are to be twin-screw steel ships, 500 feet long, 58 feet wide, and 40 feet depth of hold. They will carry 12,750 tons of dead weight cargo, and will register 9,700 tons gross.

Cotton again leads in the export record of the United States. The seven months ending with July, 1900, showed an exportation of cotton amounting to \$142,576,097, while of breadstuffs the total exportation during the same period was \$138,304,529; that of provisions, \$106,808,856, and that of mineral oil, the next largest item, \$39,498,151.

The Chicago drainage board has adopted the report of the joint commission for a

\$2,500,000 bond issue, the money to be used for river improvements, including the erection of Baccule bridges in substitution for the centre pier bridges across the river.

The wind storm which passed over the country from Chicago to Massachusetts, wrought great damage to the apple, peach, and pear crops. Great quantities of late apples were shaken down by the wind, and practically no use can be made of them.

General News.

A West Indian hurricane visited the Texas coast on September 8 and 9 causing the partial destruction of Galveston and many other coast cities and villages and the loss of thousands of lives. Galveston bore the brunt of the disaster, as more than two thousand of her people are counted among the killed, and property estimated to be worth \$25,000,000 was destroyed. The storm began at two o'clock Saturday afternoon, September 8, and increased steadily in violence, sweeping the waters of the Gulf before it in huge waves. When darkness came on Saturday the city was completely submerged. By 1.45 o'clock Sunday morning the streets were ten feet under water and the highest ground in the city was covered with two or three feet of water. The wind and water subsided suddenly leaving behind a city of wreckage. Huge ocean steamships were found perched on the docks and on high ground, railroad bridges connecting with the mainland were badly damaged, and even the largest buildings were in ruins. The Weather Bureau records show that the wind attained a velocity of eighty-four miles an hour when the measuring instruments blew away. The United States Government, the mayors of the large cities and towns, and the citizens of the country in general promptly furnished aid.

The question as to what shall be the future of Galveston is being considered by the citizens and by the transportation companies. The people are anxious to see the city rise again, but much will depend on the decision of the railway and steamship companies.

To enable people to get away from Galveston the President authorized foreign ships to carry passengers from Galveston to other United States ports. The law provides that American vessels only can carry passengers between American ports.

The newspapers quote reports from the forest officers in the central provinces of India of the discovery of a food substance exuding from the trees in the bamboo forests in the famine district which has been gathered by the natives in considerable quantity and used for food. David Hooper, a scientific writer, refers to the substance as manna, and says: "The occurrence of the manna at this season is all the more remarkable, since the greatest famine India has known is this year visiting the country, and the districts where the scarcity is most felt are in the Central Provinces."

An exchange says: "The general testimony of those who do business with the Chinese is, that the word of the Chinese merchant is as good as his bond. Cases are known where a man will spend his life's best efforts paying a debt contracted by his grandfather. The corruption seems to be among the rulers. With the Japanese, on the other hand, their rulers are more upright and public spirited, while their merchants have not so good a reputation as the Chinese."

Professor Otto Tittman of the Coast and Geodetic Survey attributes the damage of the Galveston storm in part to the removal of the sand dunes which originally protected the eastern end of the low, flat island on which the city is situated. In the regular course of improvements these dunes were levelled off, and there is now no break for a violent wind coming from the east.

The Odd Fellows order now has 1,093,899 members and its invested funds amount to \$27,714,364.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Oklahoma's Quick Rise.

In Ten Years it has Become Prosperous.

ONE of the first bills which will be presented this winter for the consideration of Congress will be an enabling act for the Territory of Oklahoma. Having secured the passage of the Free Homes Bill, which gave to this territory remission of cash payments upon land of over \$15,000,000, the people are now united in an effort to secure statehood. It seems most probable that with the showing which is now made in this remarkable territory Congress will accede to the wishes of its people and prepare the way for the organization of a new Commonwealth.

In round numbers, the population of Oklahoma is about 375,000, the taxable value of her property is over \$75,000,000, and her area about the same as the State of Ohio. The most remarkable feature of this existing wealth is that it has been created within the past ten years. This has been accomplished so quickly for several reasons, the first and greatest being the natural fruitfulness of the soil and the ease with which it can be made to repay the agriculturist for his labor. Another reason for this rapid development and accrued wealth is the fact that Oklahoma has been settled and is now occupied by an American-born people, full of enterprise, energy, and love of adventure and speculation.

It required unusual nerve ten years ago for a man to betake himself, to say nothing of his family, into the lonely valleys or out upon the wind-swept prairies of this virgin country and there, struggling with all the difficulties incident to lack of transportation and the ordinary facilities of business, to build himself a home and produce sufficient surplus to reap the advantages of far-away cash markets. The dangers, difficulties, and risks which surrounded this enterprise deterred all except those who were physically and mentally fitted to do their share in the building up of a new state. With these men, of course, came many whose love of adventure amounted to lawlessness and who were uncomfortable in more settled communities under the stricter guardianship of the law.

During the first years succeeding the formation of the territory this lawless element brought it into disrepute, but after all it was but a very small percentage of the community whose doings occupied such a prominent position in the annals of the time. To the one "bad man" there were a thousand steady, sober, brave, and industrious citizens, who, with an eye single to the future, builded, ploughed, fenced, and planted, for they had come to stay and were determined to reap the full benefit of their pioneer hardship. The lawless element at first so prominent was rapidly eliminated as civilization spread over the prairie and put its stamp upon the little towns and villages which sprang up along the lines of railroads or on the banks of flowing streams.

The story of the organization and settlement of this territory which is now knocking for admission as a state

reads like a romance in the greatness which has apparently come from nothing. In the early days the buffalo herded by thousands across the grass-carpeted prairies, and later they were followed by the vast herds of cattle from Texas, working their way northward to the ranges which have since had their rise and fall. Summer and winter, man and beast found means to sustain life in this country, as nature had prepared, and it needed but the stirring of the soil to turn the sources of this fertility into other channels and to produce results which are now so plainly marked. At first it was supposed that only the eastern portion of Oklahoma was fit for human habitation, but the farming settlements have been pushing out to the westward until the desert, so-called, is rapidly receding before the plough. The older history of the Western frontier is being repeated in Oklahoma, and it will not be long before sections of this country which are even now considered unfit will be as densely populated as those sections which were first settled upon when Oklahoma became a territory.

This year Oklahoma has an area in wheat greater than that of many entire countries; her corn crop rivals that of the well-known corn-growing state. Her people have built seven hundred churches, and one hundred and fifty newspapers are published within the boundaries of the territory. The area of Oklahoma is equal to the combined area of Vermont, New Hampshire, Massachusetts, Rhode Island, New Jersey, and Delaware. Nearly all this area is south of the thirty-fifth parallel, and it is the most northerly state or territory in which the cotton crop is one of the great sources of wealth. As a whole, the country is rolling, with several large rivers and smaller streams flowing generally from the northwest to the southeast, and in the eastern portion of the territory are large areas of valuable timber. The elevation above the sea is an average of about fifteen hundred feet.

The country known originally as Oklahoma, meaning "beautiful land," comprised less than three million acres, and was opened by proclamation of the President in 1889. The territorial government was not provided until 1890, however, and during that interval of a year more than seventy-five thousand people lived under a code which originated in the common consent of those who were governing themselves. With the creation of the territorial government "No Man's-Land" was added to Oklahoma, thus doubling its area, and in the latter part of 1890 several Indian reservations were opened to settlement, once more adding as much again to the area.

In 1893 came the opening of the Cherokee strip with six million acres of fertile land. In succeeding years more Indian reservations were added to Oklahoma, until in the present year there are about nineteen million acres open to settlement and seven million acres included within Indian reservations in the territory. Every child in Oklahoma is afforded full opportunity for securing an education at public expense, and over one hundred thousand attend the public schools. In the first year of her existence as a territory Oklahoma had less than six per cent of illiteracy among

her people, which was a smaller percentage than that of thirty-five other states and territories. During the past two years, as a result of four successive great grain and cotton crops, the deposits in the Oklahoma banks have gained over one hundred per cent. Three great railroad systems cross the territory and find it to be one of the most profitable feeders to their total receipts.

One important point in the rapidity with which this territory has acquired wealth is the enormous return which is received from one good crop upon money invested by the farmer. It is not an unusual thing for a wheat farmer in Oklahoma at the close of a good season to realize enough money from the sale of his product to cover more than the entire value of his farm and the improvements upon it. It was not thought possible ten years ago that cotton could be raised farther north than Texas, but this idea has been dispelled by the energy of the Oklahoma farmers, and the cotton crop of the territory now brings in over five million dollars a year to the people of the territory.

The politics of Oklahoma are distinctly Republican, and especially so this year. Delegate Flynn, who did much to secure the passage of the Free Homes Bill, will be re-elected to Congress this fall, and he has announced that he will devote his entire energies this season to securing the passage of the proposed enabling act.—J. D. W.

In the *Boston Transcript*.

The World's Mountain Observatories.

MOUNTAIN observations, for the purpose of studying astronomical, meteorological, and physiological questions at high levels, have been established in almost all civilized countries. It is a well-known fact that the ascent of high mountains is, in most instances, connected with many risks and disadvantages. It must also be borne in mind that observatories on high mountains must either be abandoned altogether during the winter season or, if occupied, the observer must be subjected to extremely trying conditions and to some danger from terrific storms of wind, snow, hail, from lightning, etc. The discomfort and monotony of such a life, subjected to very low temperatures and surrounded by clouds and snow for long periods, will unfit an ordinary individual for making the best use of the few clear days which an alpine winter presents. Telephone and telegraph lines cannot be maintained in working order under such conditions without taking extraordinary precautions, and there must be days and weeks together when travel between the summit and the valley is shut off. Even on Mt. Hamilton, explorers have been without any communication with the valley for a week, and without stage communication for three weeks, and Mt. Hamilton winters are a bagatelle to the summers of Mt. Blanc in Switzerland.

Some of the material hindrances in the case of mountain stations are:—

1. The great expense of erecting suitable and safe buildings at such sites. The cost of building M. Vallot's observatory on the flanks of Mt. Blanc was \$74 per cubic metre.
2. The cost of maintenance.
3. The immense difficulty in arranging for an adequate water supply.
4. The great expense of freight. Transportation to the summit of Mt. Blanc costs \$2.50 per kilogramme, or about twenty-three cents per pound.
5. Forest fires.

So far back as 1760 the naturalist, De Saussure, offered a prize for the discovery of a practical route to the summit of Mt. Blanc (15,780 feet), but it was not until 1786 that such a route was found by Balmat, the guide, and the ancestor of a family of guides. In the next year De Saussure himself made the ascent, and spent several weeks on the flanks of the mountain. Since that time many ascents

have been made, but none of them without difficulty and danger. Mountain sickness has been experienced on Mt. Blanc by the great majority of climbers from the time of De Saussure until now.

The establishment of a meteorological observatory on the Pic du Midi and of stations at the Theodule pass (13,300 feet), and on the Sonnblick (12,600 feet), of late years, suggested to M. J. Vallot of the French Alpine Club, that a station on Mt. Blanc might be practicable and useful. In 1887 a party of thirty guides transported to the summit a tent and sufficient material to allow M. Vallot and three other persons to remain three days. M. Vallot recognized the great difficulties to be overcome in establishing a station at the summit, and, therefore, determined to erect a permanent meteorological station at the Rochers des Bosses, 14,321 feet. It was erected in 1890. In the same year, M. Janssen proposed to build an observatory at the very summit, and as a preliminary step did erect an observatory station at the Grands-Mulets, 9,843 feet.

The observatory of M. Janssen at the summit of Mt. Blanc, 15,780 feet, was erected in 1893, under the greatest difficulties. M. Janssen (by the way a member of the French government physical observatory of Meudon, near Paris, an institution which paid the whole expenses), says that he is perhaps the only person who has stood on the summit of Mt. Blanc without having made severe exertions to reach it, and who, therefore, was completely possessed of his intellectual vigor, which is always diminished after bodily toil.

Before leaving Paris M. Janssen had a sled constructed which resembled in general pattern the reindeer sledge of the Laplanders. In front and behind this were double parallel cords, united by wooden rungs like ladders. A long line was attached to the front of the sled, and another to the rear. The ascent was made as follows: M. Janssen was seated in the sled and twelve selected guides managed its movements. Two guides, far in advance, sunk an ice axe in the snow as far as it would go and kept two turns of the forward line wound round its handle. The remaining guides pulled on the rope ladders front and back, or, when possible, supported the sled at the sides. In this way, foot by foot, the sled was moved. It was necessary for the guides to cut steps in the steep slopes for their feet to rest in. Two days and a half had to be spent in waiting at the station des Bosses during the prevalence of a hurricane, and at the end of the seventh day the summit was reached. The descent, M. Janssen says, was much more dangerous than the ascent.

The main work of M. Janssen's stations is to be in the fields of astronomy, physics, and meteorology. The cost of building the observatory was about sixty thousand dollars.

The Sonnblick meteorological station, in Austria, was built at a cost of \$13,200, and is located at a height of 9,843 feet. The sunniest month yet experienced at the Sonnblick observatory was July, 1893, when there were 204 clear hours. There is eight times as much snowfall as rainfall. All meteorological phenomena are daily observed at the Sonnblick, and these observations are employed in daily weather predictions. The movements of the barometer; the wind pressures and velocities, the relative humidity, the formation and movements of clouds, the amount of atmospheric electricity, etc., are also daily observed.

The meteorological station on the Saentis was erected in 1887 at a first cost of \$60,000 (\$12,000), and its annual budget is \$6,000 (\$1,200). It serves especially for astronomical purposes. Dr. Muller of the Potsdam astrophysical observatory spent a considerable time on the

summit of the Saentis, engaged in photometric and spectroscopic observations. The station is situated in a height of 8,200 feet (Switzerland). Very valuable astronomical observations are constantly being made there.

The meteorological observatory on Pike's Peak was for many years the highest meteorological station in the world. The station was continuously occupied, without accident, for fifteen years, from October, 1873, till September, 1888. A telegraph line from the summit to the town of Colorado Springs, some ten miles distant, and eight thousand feet lower, was maintained for a considerable portion of this time. A railway to the summit was completed in 1891, which is regularly operated for the benefit of tourists during the summer. The running time from Manitou (6,563 feet), to the summit (14,115 feet) is an hour and a half, and the fare is five dollars. The distance from Manitou by rail is eight miles. The maximum speed is eight miles, the minimum three miles per hour. This station can be constantly occupied, is very accessible, and only 1,646 feet lower than Mt. Blanc. The mean temperature of Pike's Peak is about 19 deg. Fahr. The highest observed temperature was sixty-four degrees, and the lowest minus thirty-nine degrees. Mountain sickness does not affect observers permanently stationed there. The electrical storms at the summit, however, are terrific. By taking proper precautions they are not dangerous to life, though most appalling. The lightning is nearly continuous for long periods, and the deep rolling thunder is shattering to the strongest nerves.

Among other leading mountain observatories in Europe and America are those on the summit of the Etna (Italy), 9,652 feet; at Nice (France), and Arequipa (Peru), 16,650 feet.—*Boston Herald*.

Twentieth-Century Religion.

THE twentieth century will not be a century of atheism or mere secularism. People still have souls to save and they are interested in those vital and fundamental themes which are ignored by the political and literary journals. Religion is still a mighty element in life, but it must be the real thing, not some imitation of it. The old polemic treatment is as much a thing of the past as the bleeding and cupping to which our fathers heroically submitted. The religious weekly of the future must be irenic or it is lost. It must breathe the spirit of the Master and be instinct with his life. It must not only admonish sinners but comfort saints. It must emphasize all the manly virtues and the womanly graces. . . . Into the household it will come enriched by all the resources of art, itself a product of the highest mechanical skill and displaying genius and faith in every line. Many papers now living will die, in some of them the process of dissolution can be no longer disguised, but those will survive which are fittest to survive, and those are the journals consecrated not to a catechism or a past, but to a living Christ and a glorious future.—*The Interior*.

From the French.

It is because we have not learnt to persevere, that the work seems never to progress.

More than half one's troubles arise from an exaggerated idea of one's own importance, and the efforts we make to increase our position in the world.

Let us each cultivate carefully and joyously the portion of soil Providence has committed to our care. Let us never be hindered, or distracted by ambitious thoughts that we could do better, or a false zeal tempting us to forsake our daily task with the vain desire to surpass our neighbors. Let this one thought occupy our minds: To do *well* what is given us to do, for this is all that God requires at our hands. It may be summed up in four words: simply—zealously—cheerfully—completely.

Selected Articles.

Critic of Christian Science Answered.

To the Editor:—Will you kindly grant me space to reply to some of Dr. Kummer's criticisms of Christian Science as published in your issue of August 13.

In seeking "to ascertain why Methodism has not had a greater numerical increase in the last quadrennium," the doctor says, "we must not overlook the leakage of distinct organizations with such doctrines as 'divine healing,' 'Christian Science,' etc., that have drawn to themselves many of God's true people from all denominations." This being the case it might be well to ascertain why "many of God's true people" are leaving the other denominations and identifying themselves with the Christian Science Church; and if this is done, the reason will be found to be that they were not satisfied with the results of their former teachings and were seeking a religion that would make them "every whit whole," which they have found in Christian Science.

When Jesus sent his disciples forth on their mission, "he sent them to preach the kingdom of God, and to heal the sick, . . . And they departed, and went through the towns, preaching the gospel and healing everywhere." Thinking people are asking: If when Jesus was on earth the ministry of Christ included healing the sick, why should it not do so now? Is not Christ "the same yesterday, and to-day, and forever"? When Jesus said: "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free," did he limit that promise to any time? Did he not, rather, announce a divine law of cause and effect that is ever-operative, that the understanding of Truth makes man free from all error? and did not Jesus and his disciples prove throughout their ministry that this freedom included freedom from sickness as well as from sin? Christian Science does not make of none effect part of the Gospel, but recognizes a full salvation from sin and its effects, sickness and death, and those who are experiencing this salvation are rejoicing in a religion that brings forth the fruits of the Spirit, and an understanding of God which the other denominations failed to give them.

Dr. Kummer says: "We may admit the sincerity and culture of many of the Christian Scientists and also concede to them many wonderful cures without medicine, but any one who has even a slight knowledge of the history of this mysterious realm knows that miraculous cures have been claimed all the way from the wild medicine man of Central Africa to the smooth-tongued magnetic healer of San Francisco and San Jose," and he seems to see nothing more in Christian Science healing than the action of the human mind. But what does this prove? Because there is a counterfeit, does that make the genuine any the less true? Because Simon used sorcery, is that any evidence that Peter did not have the Holy Ghost? The true healing of Christian Science not only removes physical disorders but gives a spiritual illumination that can only come from the divine Mind.

The doctor says: "If the principles of Christian Science are true, food should not be necessary." He then quotes from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy: "Teach your patients that their bodies are nourished more by Truth than by food," and asks, "Then why do they not quit eating?" Why did not the disciples "quit eating," if the teachings of Jesus were true, when he said, quoting from the Scriptures, "Man shall not live by bread alone, but by every word that proceedeth out of the mouth of God"? The reason is given in Science and Health, p. 387,

where it says, "It would be foolish to venture beyond our present understanding, foolish to stop eating until we gain more goodness, and a clearer comprehension of the living God. In that perfect day of understanding, we shall neither eat to live, nor live to eat." So until that day comes we shall continue to eat, and through our present understanding of Christian Science, we may do so without dyspepsia or indigestion.

In regard to the question of the use of drugs, the doctor quotes from a writer who is not a Christian Scientist; draws conclusions that are not taught in Christian Science; and then kindly refrains from expressing the "irony, ridicule, and sarcasm" that this theory invites. At the same time he admits "that in many cases the effect of medicine depends considerably on the imagination, and physicians have been known to give pseudo medicines and pseudo treatments which produce all the desired effects." The broad position of Christian Science on this question is, that drugs have no curative power in themselves; that the power of God, who healeth all our diseases, is all-sufficient, therefore drugs are unnecessary; and we have the example of Jesus, who did not use drugs, and who said, "He that believeth on me, the works that I do shall he do also."

Dr. Kummer also says: "The limitations of Christian Science are such as to reduce the whole system to absurdity. Take all those cases of extraordinary accidents such as to render surgery necessary, and Christian Science is perfectly helpless. The loss of a limb, a broken bone, a missing organ; to these may be added insanity, which yields to scientific treatment and surgery; the perpetuation of youth and the abolition of death." Does the doctor admit that the whole system of medical practice is reduced to absurdity because it does not replace a lost limb or a missing organ, or has not abolished death? There is abundant evidence to show that in cases of accident and broken bones, recovery is quicker under Christian Science treatment than under medical care; many cases of insanity have been cured by Christian Science; and those who have gained some understanding of this Science testify that their "youth is renewed like the eagle's," and the Scripture is fulfilled, "They shall run, and not be weary; and they shall walk, and not faint." Paul said: "The last enemy that shall be destroyed is death." With the overcoming of each lesser enemy, sin and sickness, the foundation of death is being destroyed, and in the understanding and demonstration of the Life that is God, the last enemy will disappear.

In considering some of the so-called "evil effects of this strange hallucination," as the doctor calls it (as strange, no doubt, as the teachings of Jesus were to many of the scribes and Pharisees), allow me to say that Christian Science is not "a degradation of the true idea of God," but is the reappearing of the true idea of God, as promised by Christ; it is not "Pantheism gone to seed," for rightly understood it has nothing in common with Pantheism; it does not "confound God as a personality with the human mind and its ideas," but carefully distinguishes between them; it does not "rob God of His personality," in its higher sense, "and of all those characteristics which have brought Him nearest our faith and hearts," but brings Him still nearer to us as ever-present Love, and reveals God as the only true remedy for sin, sickness, and death.

Christian Science does not "substitute strange vagaries and unrealities for the sure word of God and the bedrock of axiomatic and rational truth," but brings out the Scientific understanding of that Truth; it does not "feed upon impressions and intellectual vagaries," nor "make great use of dreams," but gives a clear consciousness of the reality of Being that destroys dreams.

Christian Scientists cannot truthfully be charged with a

"denial of the God-made remedies and their stubborn refusal to use them," for there is no Christian evidence that matter or drugs are "God-made remedies," and the Christian Scientist insists on using God's remedies, Truth and Love.

The claims that Christian Science "tends strongly to fanaticism" and "endangers life," are disproved by the harmonious results of this Science and the sick that are healed by it after all other remedies have failed.

The last charge the doctor makes is that "they disrupt the church of God. Many have gone out from the fold of Christ from all denominations." Did the Methodists "disrupt the church of God" when they went out from the church of their fathers? Do members of other denominations "disrupt the church of God" when they leave them and join the Methodist Church? Let the other denominations preach and demonstrate the full gospel of Christ that heals the sick as well as the sinful, and they will have no cause to complain of the Christian Science Church, for then all will be doing the same work. When that day comes, and Dr. Kummer learns something of what Christian Science really is, he will no longer denounce it in the name of many things which practically deny Christ, but will manifest more of that Truth and Love, which to know aright is life eternal.

FRANK W. GALE.

The Bible and Christian Science.

To the Editor of *The News*:—I desire to reply to the questions asked by "Inquirer" in your issue of August 25 concerning the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. It is not my province nor my intention to enter into a controversy with any one, but it may be well for me to allude to a few points in connection with "Inquirer's" questions.

"Inquirer" says, "Now it is a fact which needs no further proving that the Holy Scriptures are written in a style so plain and simple that even when speaking on the sublimest subject a child may grasp their meaning." This statement is remarkable in view of the fact that many of our Saviour's sayings and parables, St. Paul's intricate doctrinal writings, many of the Psalms, the prophecies, and especially the Apocalypse, have puzzled the deepest thinkers. There is one thing upon which all theologians and Bible students agree, and that is the obscurity of most of the Bible language and the need for interpretation, and it is also admitted by all that there must be a spiritual meaning back of the Bible language. It is because of the different interpretations that the many hundred religious sects and denominations have arisen. If the Bible language is "so plain and simple," why are there so many interpretations, and why are there so many agnostics and infidels among the most intelligent and cultured classes? As your correspondent's premise is therefore wrong, his conclusions are necessarily wrong and therefore valueless throughout.

If the language of Science and Health "is so complicated and mystical as to be, in most parts, beyond comprehension," as "Inquirer" asserts, how is it that there are nearly two hundred thousand copies in circulation, and that at present about two thousand copies are issued each month, and also that there are now a half million believers in Christian Science who read and understand this text-book of the denomination? As a matter of fact, I want to say that children understand Christian Science very readily and are able to heal. This may seem strange to "Inquirer," but when we remember that Jesus said, "I thank Thee, O Father, . . . because Thou hast hid these things from the wise and prudent, and hast revealed them unto babes," we can see that it is the pure, childlike thought, devoid of self-righteousness, that is capable of receiving spiritual

Truth. Little children, as a rule, are more humble, loving, and teachable, not being wrapped up in materialism and sin as older folks are, and therefore they are better able to perceive the spirit of Truth, which Jesus said could come only when we "become as little children."

In regard to your correspondent's criticism of the price of the book, I will merely say that Christian Scientists, or those who understand it, would not part with this book for any sum of money. Its value is incalculable to them because it has given them blessings such as no amount of money could buy. If the price of this text-book is compared with the price of text-books on medicine, surgery, mathematics, etc., it will be found to be a just price.

The lady of whom I spoke who was healed of a fibrous tumor by reading this book, and to whom "Inquirer" refers, secured the book from a public library and after her healing purchased a handsomely bound copy for five dollars. A year later her husband told me that whereas he had had an invalid wife for five years at an expense for medical and surgical treatment of about two thousand dollars a year, his wife was now perfectly well and his only expense during the year on account of her health was five dollars for this copy of "Science and Health with Key to the Scriptures," which he considered a most excellent investment.

The charge that the price of this book keeps it from the poor is groundless. It can be read at all public libraries and Christian Science reading rooms, and experience proves that all who earnestly desire it find themselves able to secure a copy, even "the suffering poor."

HERMANN S. HERING.
In *The News*, Baltimore, Md.

In Reply to Professor Riddell.

THE following letter in response to the lecture of Prof. N. N. Riddell at the Danville Chautauqua Assembly last week, in which he devoted some time to Christian Science, is from the pen of Archibald McLellan, and explains several issues made by the speaker in his address here, and which are handled by argument of Scripture. The believers in Christian Science are many and they endeavor to answer all arguments worthy of notice which conflict with their belief and teachings:—

Chicago, August 13, 1900.

To the Editor:—In your issue of August 10 is a report of an address delivered by Professor Riddell at the Chautauqua Assembly, in which you say, "the speaker devoted himself to the facts and fallacies of hypnotism, mind reading, spiritism, Christian Science, and kindred things."

Please permit me to say that Christian Science is not kindred to hypnotism, mind reading, and spiritism. It stands by itself as the practical exemplification of the religion of Jesus Christ, through which sinners are reformed and the sick are healed. That it is doing this work is proved by the testimony of hundreds of thousands of persons who are described by the *Chicago Chronicle* in an editorial as "intelligent and educated men and women," and Professor Riddell himself is quoted as having said that "he had not known any one to become a Christian Scientist but he was greatly bettered by it."

The professor is reported to have said among other things that a great error of Christian Science is in "holding that God is a Spirit and that God is all; that we are of God, hence we are spirits."

If the professor is correctly reported, his statement is equivalent to saying that Jesus taught "great error"—for we find in John, 4 : 24 that he used the identical words, "God is a spirit." The following from Revelation, 1 : 8: "I am Alpha and Omega, the beginning and the ending," certainly implies that God is all. That we are of God is sound doctrine, as is proved by Genesis, 1 : 26, 27: "And

God said, Let us make man in our image, after our likeness. . . . So God created man in his own image, in the image of God created he him." Also Matthew, 23 : 9: "And call no man your father upon the earth; for one is your Father which is in heaven."

It is a mis-statement to say that Christian Scientists hold that "we are spirits." Nothing in the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, can be construed into anything of the kind.

Christian Scientists in denying the reality of sin and pain do so upon Scriptural authority: "And God saw every thing that he had made, and, behold, it was very good." "All things were made by him; and without him was not anything made that was made." The wildest flight of imagination cannot call sin and pain and death "very good." It is in the sense that sin and sickness and death are not of God's creation that their reality is denied by Christian Scientists. If sickness and pain were real—of God's creation—would Jesus have destroyed them, or would Paul have said, "The last enemy that shall be destroyed is death"?

The person who can demonstrate the rule of Christian Science by healing the sick and reforming the sinner, is the only one who knows—understands—what it is. Demonstration is the only proof of sufficient knowledge of the subject to justify any one in assuming to explain or criticise.

ARCHIBALD McLELLAN.
In the *Danville* (Ill.) *Daily News*.

Wanted.

A good florist, who is a Christian Scientist, and will present a written recommendation from a loyal student. Address G. F. W., care of Thomas W. Hatten, 68 Westland Ave., Boston, Mass.

Applications for Membership.

Applications for membership in the Mother Church to be presented at the semi-annual meeting of the First Members to be held Tuesday, November 6, 1900, must be in the hands of the Clerk of the Church on or before the 15th day of October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

Manhood Overtops Titles.

It is one thing to succeed in business according to the ordinary acceptance; it is another and a totally different thing to succeed in life, writes O. S. Marden in *Success* for September. Many a man has failed in business and yet lived a truly successful life, because he has lived up to his highest ideal. The man who does the very best he can under all circumstances, who makes the most of his ability and opportunities, who helps his fellow-man whenever it is in his power to do so, who gives the best of himself to every occasion, who is loyal and true in his friendships, kindly, charitable, and magnanimous toward all, is a successful man, though he may not leave enough money to pay his funeral expenses.

He who regards manhood and character as the supreme objects of life may not be rich in money, but he is rich in a truer and better sense; for manhood is above all riches and overtops all titles, and character is greater than any career.

He is truly good who desires always to bear the inspection of good men.—ROCHEFOUCAULD.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY, TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Lectures.

I HAVE the pleasure of announcing to our readers, by consent of Judge Joseph R. Clarkson of Omaha, Neb., that he is now available as a lecturer throughout the United States and Canada. Any Church of Christ, Scientist, can call for his valuable services in this capacity, and be supplied according to the rules regulating the Board of Lectureship.

MARY BAKER EDDY.

A Congratulatory Letter.

WE take pleasure in publishing, by permission, the following letter of congratulation written by Mr. George H. Moses, editor of the *Concord Evening Monitor*, to the Rev. Mary Baker Eddy:—

Monitor and Statesman Company,

Publishers *Concord Evening Monitor*, *Independent Statesman*.

GEORGE H. MOSES, EDITOR.

WILLIAM D. CHANDLER, PUBLISHER.

Concord, N. H., September 8, 1900.

The Rev. Mary Baker Eddy, Pleasant View, Concord, N. H.

My Dear Mrs. Eddy:—Ere this you have doubtless seen Mr. Pearson's account of your reception at the Fair Grounds on Thursday. I trust his language is acceptable to you, though, with the weight that the Fair has put upon us, I am surprised if anything has gone as we would wish it.

The main thing about your visit which should be remembered, as I regard it, is the genuine spontaneity of your reception. Nothing was pre-arranged, nothing was studied. It was the true recognition of your personality—and as such is worthy to be cherished as indicating the real feeling of the people.

Speaking for myself, and for the other managers of the Fair, I beg to express our thanks for your visit, and our wish that we may see you on future Governor's Days, when you may fitly share with "The First Citizen" the honors of "The First Resident" of the state.

Faithfully yours,

G. H. MOSES.

A Word of Caution.

THERE seems to be of late a wave of speculation sweeping over the country. It appears largely in the form of syndicates and stock companies. Some of these purport to be organized on a Scientific basis, promoted by Christian Scientists, and Christian Scientists are asked to interest themselves in them for that reason.

It is obvious that business enterprises should not be put upon such a basis. Scientists should not feel bound to patronize any business venture simply because they are solicited to do so.

Whenever anything has proper endorsement, it is so announced in our periodicals. Unless it is so announced the Field should know that it is simply an individual undertaking, and if they enlist in it, they do so as individuals and on their own responsibility.

This is true, no matter what the form of the proposition, or how it is placed before Scientists.

We will say in this connection that when the time arrives for ascertaining, in a systematic way, the membership of the branch churches, it will be done under proper authority.

A Prophetic Letter.

WE publish below an extract from a letter written over eleven years ago by a prominent clergyman to one of his parishioners who had shortly before been healed of a most serious malady through Christian Science. This letter was in reply to one written by the lady healed, giving an account of her healing. It is not strange that the clergyman wrote in an enthusiastic strain, for the lady, for years, had been a confirmed invalid, and the best medical skill obtainable had been called into requisition, and her case pronounced beyond its reach.

She is now, and ever since has been, in the enjoyment of excellent health, and an earnest adherent of Christian Science. The names are, of course, withheld.

"June 6, 1889.

"Dear Brother and Mrs. —:—Mrs. — and myself are delighted to hear from you. Under any circumstances it would have given us pleasure, but bearing such good news your letter was doubly welcome. We rejoice with you both. To Mrs. — it must seem the opening of a new life. I cannot say I am astonished, for I have long been convinced that there was more in that form of healing than the world has dreamed of. Yet it is very wonderful, and the practice is only in its infancy. It seems to me sometimes that we are on the borderland of a new order of things and forces. That gradually a new era is being developed in which mental and spiritual forces are to be supreme, at least dominant. The materialistic philosophy is going out of fashion. It has failed really to explain anything. The mystery of cause remains untouched in the materialistic scheme. So the tendency is apparent in the philosophy of science to look to immaterial forces to account for material things. Matter alone cannot account for itself. More and more is Spirit being invoked to solve the problems of the ages. The tendency is no less apparent in the matter of social problems. Brute force is less and less relied upon to solve the problems of poverty and crime. They are seen to be restrictive only. Spiritual forces—love, sympathy—are curative. . . . That there is an unworked realm of spiritual forces, in and outside of the individual life, forces superior to, and in a measure independent of, matter, will be in time the belief generally accepted and acted upon. That truth is bound to change the order of procedure in every phase of life and thought. Somewhere in this Spiritual philosophy of things will be found the new methods of healing. It is to be Mind *versus* Doctors, Spirit *versus* Drugs. I think we may expect great things of it in the future. It falls in with the new idea of things; that is to say, it runs with the currents of the latest thought. It will be found eventually to be a part of the same universal movement toward a Spiritualized philosophy of things."

A Letter to Mrs. Eddy.

WHITE MOUNTAIN HOUSE.

R. D. ROUNSEVEL.

White Mountains, N. H., September 10, 1900.

My Dear Mother:—Pardon me for trespassing on your time, but one of my guests in conversation with another guest, said, "I never expected to live long enough to see a church and hotel run together so successfully, but I have." It came to me when I heard it that it would please you

to hear it. This gentleman is not a Christian Scientist, and this made it more noticeable to me.

It rejoiced me very much when I heard of your presence at the Concord State Fair. I am,

Sincerely yours,
R. D. ROUNSEVEL.

Among the Churches.

In their New Home.

In its issue of the 18th ult. the *Saturday Review* of Galveston, Texas, had the following to say regarding the growth of Christian Science in that city. It will be understood that this was published previous to the recent calamity which brought such great destruction of life and property. Word has been received from Mr. Chauncey G. Sweet, First Reader, that with but two exceptions all the members of the church were saved. The church building also withstood the storm, and services were held as usual on Sunday, September 16.

We learn from the Galveston papers that the use of the church was cordially extended to any denomination whose church was so damaged by the storm as to be unfit for service.

If any religious sect has made more rapid advancement in Galveston than the Christian Scientists the past few months I am not aware of it. Three years ago five believers in Christian Science organized the First Church of Christ, Scientist. Gradually there were additions to the quintette until a private house was too small and a hall was engaged. And it was only a few Sabbaths ago that the enthusiastic workers settled down with a sigh of satisfaction in new chairs resting on a new carpet within the newly decorated walls of their pretty house of worship. At an expense of nearly one thousand dollars they have transformed the one story square building on the southeast corner of Twenty-second and Ball Avenue, opposite the Ball High School, into a most inviting meeting place.

The auditorium is not large, but between eighty and ninety members and interested listeners gather there Sunday mornings and Wednesday evenings to worship God in their own way. The walls are rose tinted. Emblazoned on the south wall in gold is the following, taken from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy: "Divine Love always has met, and always will meet, every human need." One of the most conspicuous things in the auditorium is a handsome electrolier of burnished brass which lights the place at night.

Beyond the auditorium is the reading room, open every evening from five until seven o'clock, where any one may become conversant with the teachings of Christian Science through books, pamphlets, and papers.

Opening Service at Chillicothe, Ill.

Perhaps no place of worship was ever opened under more favorable circumstances than those attending the formal opening of the new suite of rooms over Kelly's store by the Christian Scientists of this city last Sunday (August 5). The weather was extremely warm, but otherwise the day was a beautiful one, and lent enchantment to the services with which one of the most beautiful places of worship in the city was opened.

The members of this church had labored faithfully to equip the rooms and on the above day they shone forth in all splendor. Beautiful plants blended with the tastefully decorated and painted walls, and seemed to bring out all the splendor of the results of the work of the designers.

After the usual opening exercises, the following address was delivered by the First Reader, I. T. Kahn:—

Before continuing our regular form of service, it becomes my pleasant duty to express, in my feeble way, the pleasure we feel in having so many of you here to-day to rejoice with us in the possession of our new rooms which we believe will add to our happiness, and we hope to the happiness of others. Our pleasure is not based simply on having you with us in large numbers, but the presence of each one of you is gratifying, so you may see how inadequate words are to express our feelings on this occasion. However, we cannot depend entirely on words so we shall leave our future actions to attest our sincerity. We hope you feel at home in these new rooms and that your desire will be to share them with us on all future occasions to the end that you may also share with us the peace and happiness which comes with the understanding of omnipotent Truth.

In viewing these premises, the thought may occur to you that to make all these necessary alterations and buy these furnishings must have been quite a task for so small a congregation, but our efforts, I can assure you (and I know that I voice the expression of each member of this church) have been a pleasure to us and not a task. We have been upheld in our efforts by the abiding consciousness that we were not doing this from selfish motives; quite the contrary: our object and purpose is for the general welfare of mankind.

It will probably not be out of place to state that this church is out of debt, and when all bills were paid we had a surplus of over one hundred dollars which was turned over to the building fund, and brings the total of that fund to the sum of \$1,328.52, and with a lot bought and paid for on which we expect at some time in the near future to build our church. For all these manifestations of love we are indebted to the living God, the giver of all that is good, and to our Leader, Mary Baker G. Eddy, through whose efforts and labor it has been possible for us to destroy the sense of limitation and come into our rightful inheritance, and in this way we have accomplished that which is well-pleasing in His sight.

For the benefit of those who are not so familiar with the history of the growth of this church, I would say that services were held as early as the year 1890. At that time the little band worshiped in private houses. Some five years later, when the active members numbered but four persons, a hall was rented, and for two years the services were conducted in what was known at that time as the A. P. A. Hall. The next move was into Kauff's Hall, where an organization was perfected as a church and services have been held up to the present time. It is acknowledged by all competent authorities in religious matters that the growth of Christian Science has been a phenomenal one. Is it not patent to every one unfamiliar with this new dispensation, or who have heard nothing to cause them to make inquiries, that the proper place for any information on this subject should be at the fountain-head? For this reason we have opened up reading rooms in this building, where such information can be obtained free of cost. These rooms are for the benefit of the inquiring public. They are under the superintendence of Christian Science practitioners who have experienced benefits from the understanding of this grand Truth. Here you will find books on this subject that are accessible to every one who is earnestly seeking the Truth, and Christian Science literature is placed on sale.

The rooms were well crowded for the services, and to those who had never before had the pleasure of attending them they were a revelation, and created a very favorable impression. A very notable feature of the meeting was the fact that no collection was taken. It is a rule with the

Scientists that no church or place of worship shall be dedicated until all bills are paid, something radically different from churches in general. The Scientists may well feel proud over their new home and the successful services attending its dedication.—*Chillicothe Enquirer*.

Christian Science in Clinton, Ia.

A few weeks ago we saw the necessity of a better location for our reading room than we at that time possessed. Divine Principle guided us, and we soon found ourselves located in a front room on the ground floor near the principal street of our city,—a suitable and desirable place. In the rear of the reading room is a tasty little parlor at our disposal when needed. In one corner of the reading room upon an easel stands a large photograph of Mrs. Eddy, and two large pictures in crayon, one of her home in Concord, and the other of her birthplace, adorn the walls; also the cross and crown in India ink. There is no attempt at elegance, but with the pretty shades, lace curtains, and neat-patterned carpet, the room has a home-like appearance. We have all Mrs. Eddy's works; the *Journal*, *Sentinel*, and supplements; beside other books from The Publishing Society. Our book-case, writing desk, library table, ebony clock, window shades, and Bible, were the gifts of our Sabbath School children as was also the sign upon the outside of the building,—“Christian Science Reading Room,”—which tells the passer-by of the opportunity to inform themselves upon the subject of Christian Science.

When we opened our little church the children gave fifty dollars, also the Readers' desks and twenty-five chairs for the school. Later they placed Science and Health in the High School library and in the county jail; furnished the money to send for one thousand tracts for free distribution, and purchased six boxes to hold Christian Science literature. These boxes will be placed in public places, the children of the school keeping them filled.

Our hearts are full of praise and gratitude to our beloved Mother who gave us the book, Science and Health, which unlocks the Bible and leads us daily and hourly to know that “God is All-in-all.” We are thankful for our sentinels at the Publishing Society, and glad that by their watchfulness and care our literature is not contaminated or adulterated.

Our Bible Lessons lead us higher and higher each quarter into the light of Spirit and teach us to “walk in the light while we are in the light.” We are filled with gratitude that we are privileged to enjoy all these blessings.

HARRIET A. CRIDER, Clinton, Iowa.

From Vinalhaven, Me.

First Church of Christ, Scientist, in Vinalhaven, Me., has six members. This Church was organized August 28, 1899, and previous to that time was known as the Christian Science Society of Vinalhaven, Me.

This Society subscribed to the *Christian Science Journal* and *Sentinel* for the Vinalhaven Public Library, and also placed in the same library a copy of “Science and Health with Key to the Scriptures.”

The Society at first held meetings in a private house, but afterwards secured a desirable hall on Main Street, which they furnished, being able to pay at once for fifty chairs, two Readers' desks, two large hanging lamps, and a lamp to be placed outside the entrance door, which, with furniture previously obtained, prettily furnished their new church home. It should also be stated that the Society had purchased and paid for a piano in one year and ten months.

Since the organization of the church, two literature racks have been made and placed on board the passenger steamer Gov. Bodwell, whose route lies between Vinalhaven and Rockland, one in the ladies' and one in the

gentlemen's cabin, which are kept filled with Christian Science literature.

Five hundred copies of “Christian Science History” were received from Boston, and have been placed in all the barber shops in town and in the Board of Trade rooms. One lady went through the net factory and handed one to each of those employed there.

A Sunday School is connected with the church, the little members of which have purchased two mottoes for the hall and have subscribed for the *Journal* and two copies of the *Sentinel* for six months to be placed in our literature racks on the steamboat, and have purchased one hundred tracts for the same purpose.

The church opened a reading room, Thursday, June 14, 1900, and both *Journal* and *Sentinel* subscribed for to be placed on the reading table.

From a mortal sense standpoint, these people have not much worldly means with which to maintain a church, but it is done through the realization of God as the source of supply.

STELLA SMITH LAWRY, Clerk.

Progress of Second Church at Rochester, N. Y.

The Communion season just passed brought vividly to mind the thought of progress. Nearly five years ago I attended the Friday evening service of a group of worshipers who met in a small office, and perhaps numbered fifteen or twenty persons. Having become interested in their work, it has been my pleasure to see the steady growth of this body, as they took the steps pointed out to them through their understanding of divine Principle.

After some six months they rented an adjoining room, and then, later on, came the thought of organization as a church. This was accomplished, and very soon, our quarters having become too small, we found a delightful suite of rooms, consisting of a hall capable of seating nearly two hundred people, and two pleasant offices opening therefrom.

One year ago this Communion but one person asked for admission, but this year nine came knocking at our portals.

In compliance with the request that the “Christian Science History” be circulated, we distributed about fifteen hundred in this city, and have also sent out a number of lectures and other literature. We are laboring that all who come may receive spiritual, mental, and physical aid, and that Love may be reflected in such a manner that the harvest given us by the Father shall be well garnered.

C. R. FRICKEY, Clerk

From Elwood, Ind.

First Church of Christ, Scientist, of this city, was organized March 27, 1899, with six charter members. A state charter was obtained, and articles of incorporation filed in the county. The first services of the organized church were held at the home of our First Reader on the first Sunday morning in April. It was indeed a most glorious Easter morn to the half-dozen Scientists. There were two visitors in attendance. A hall was secured and the following Sunday the services were held there.

Hymnals and quarterlies were purchased for the church, and the work progressed as nicely as could be. At the December Communion two members were received into the church, and at the last Communion five, so now we are thirteen in number. Average attendance from twenty to twenty-five.

Last March a reading room was opened under the auspices of the church. The room is open daily from two to four o'clock, except Sunday.

MAMIE E. WOODS, Clerk.

From Our Contributors.

The Reflection of Love.

BY W. M.

THE meek Nazarene demonstrated the law of Love. The proof of the Truth he revealed lies in the work he accomplished. His existence was the living embodiment of Love. His teaching was practical and susceptible of proof, as seen by his achievements. A continual contemplation of his words, the pathos of his life, the injustice he received, and the persecution he suffered, results frequently in ecstatic emotion, sometimes mistaken for spirituality, but far removed from it. Becoming rapt in adoration of the man Jesus, losing sight of the Christ-Truth he reflected, does not solve the problem of Being, nor enable one to do the works he did. The Truth he proclaimed was the revelation of God with us as the divine Principle of existence,—all-inclusive, all-embracing,—the kingdom of heaven at hand, available to all who choose to enter therein.

These were the glad tidings his life attested, and he promised that those who hunger and thirst for righteousness shall be filled; those who seek shall find; and those who strive shall attain. Expecting to benefit by another's life and works, effort and sacrifice, will end in disappointment and despair. Sooner or later each must realize his own responsibility if he would gain the fulfilment of the glorious promises of our great Master. What could be more sublime than their fulfilment? Worldly success, place, and power, pale into insignificance, for such are but the transitory vaporings of worldliness, compared with the substantial realities of spirituality.

Consider Jesus' life and works; his power; his healing; his purity, meekness, and gentleness; his calm amid the seething discord of error; his uniform sweetness and light; his tender compassion, kindness, and love. All the turmoil of mortal mind could not ruffle his tranquillity. Cruel indignities and insults provoked no retaliation. Ingratitude and persecution beat relentlessly upon him, yet "opened he not his mouth." All the forces of this world could not prevail against the power of divine Love. He stood, and still stands, as the highest earthly representative of divine Love, demonstrating the inseparable unity of God and man, as Principle and idea, and forever establishing the superiority and might of Truth over all error.

To emulate him, mortals must become as little children, unburden their beliefs, materialistic intellectuality, preconceived notions, pride of opinion, and selfishness. The old Mosaic law of an eye for an eye, a tooth for a tooth, with its corollated law of retaliation,—a blow for a blow, scorn for scorn,—has yet to give place to the law of Love, ere the demonstrations of Jesus become practical. Pride spurns meekness, mistaking it for weakness, yet the promise is that the meek shall inherit the earth. Envy, malice, and revenge occupy the place of love, gentleness, and mercy, yet it is recorded, "Blessed are the merciful: for they shall obtain mercy." Selfishness, self-seeking, and covetousness leave no room for kindness or generosity, yet a cup of cold water given in his name shall not be unrewarded. Sensualism and sin seem triumphant, yet it is declared, "Blessed are the pure in heart: for they shall see God." These solemn words, words which shall not pass away till all be fulfilled, cannot be ignored nor lightly discarded. They were given for practical use, for every-day application, and until thus applied, mortals will continue to grope blindly, continue to believe evil a power, selfishness a necessity, sickness and sin irresistible, and death inevitable.

Most people, while not questioning the soundness of Jesus' teaching, consider it impracticable in this age, and the centuries have rolled on in ignorance of the Science

which makes his words and works practical. In the fullness of time, one whose exceptional life, purity, and goodness had specially fitted her for the revelation, discovered this Science, reduced it to a system, and gave it forth to the world in her inspired text-book, "Science and Health with Key to the Scriptures." She, Mary Baker G. Eddy, one of earth's noblest and best, when in the twilight of the border-land, caught a glimpse of the true Light, which resuscitated her, and afterwards enabled her to declare the Principle of existence and the Truth of Being. She called her discovery Christian Science, and since its discovery it has been amply tested and not found wanting. It makes practical that which has hitherto been considered visionary and transcendental, and enlightens man as to who and what he is, and his relationship to his Creator. This understanding is followed, as was promised, by signs and wonders. The world will yet unreservedly acknowledge its deep debt of gratitude to her who alone, amidst the maelstrom of mortal mind, was not sucked into its vortex nor overcome by its tumult, but ever steadfast at her God-appointed post of duty, guided by Wisdom and Truth, reached the haven of divine Love, to proclaim to a weary world her momentous discovery for the benefit of all mankind.

Christian Science is the loadstar to eternal life, harmony, peace, health, and holiness. To imbibe its Spirit is to become Christ-like; to adhere to its rules, is to attain the power to do the works Jesus did, and to live the life he lived. It commences with the first commandment, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind," followed by a second of equal importance, "Thou shalt love thy neighbor as thyself," and it shows how and why these commands are to be obeyed. It also makes Jesus' teaching applicable to every-day life.

Christian Science reveals God as the one and only Cause, Creator, and Intelligence of the Universe.

God is Good, and He made all that was made and made it good. In Good there is no evil, nor can evil emanate from Good, or form any part of His creation, for God is All-in-all. Evil, then, not being in or of Good, is consequently an illusion, existing only in contemplation, not in reality; having no substance or inherent power of its own, for Omnipotence is indivisible, and Omnipresence is never absent.

Man, made in the image and likeness of his Creator,—Spirit,—partakes of His constituent qualities and is spiritual, good, and perfect; co-existent with and inseparable from Him, having no life, mind, or intelligence of his own. He is not dependent upon or sustained by aught else than God, the divine Principle of his being. Error urges that man is physical, an independent entity, a self or something apart from God. Truth declares that God and His idea—man—are the only realities. Man reflects only the good and true, the real and eternal, and whatsoever evil appears, is not reflection, does not emanate from God, and must be false and illusive.

As man reflects Life, Truth, and Love, he shows forth his God-likeness, and his unlikeness to the creature of error. Man lives in Mind, not matter, and thus can say with St. Paul, "In Him we live, and move, and have our being." Living in body instead of Soul; in matter instead of Mind; ascribing Intelligence to non-intelligence. Substance to shadow, Truth to error, leads to bondage and servitude, wherein man is believed to be mortal and material, unrealities seem real, and sin, sickness, and death appear to be actualities. This mortal material falsity misnamed man,—the counterfeit of God's man,—is neither the offspring of the one and only Cause and Creator, nor sustained by Him, but possesses all the elements of self-destruction; whereas man, the idea of the Infinite God, being sustained by Him, is indestructible and eternal. This

is the teaching of the Christian Science text-book, "Science and Health with Key to the Scriptures."

Thus Christian Science, separating the real from the unreal, Truth from error, reveals the indissoluble unity of God and man, establishes the brotherhood of man and the universal Fatherhood of God,—ever-present Life, Truth, Love.

How I was Led to the Truth.

BY LILLIAN L. MORSE.

THE account of the "new birth" in an individual "not of corruptible seed, but of incorruptible, by the word of God, which liveth and abideth forever," has a perennial interest for us all. In "Miscellaneous Writings" by Mary Baker G. Eddy, p. 15, we read, "The new birth is not the work of a moment. It begins with moments, and goes on with years." So it has been with me. As a child I was taught that man and the universe were the mechanical products of mindless matter. In such a universe there was no room for God; hence the belief in God was a superstition, the Bible a lie, and its central character, Christ Jesus, an impostor; a hereafter was a fiction born of human hope and affection; death and the grave were the end of that soulless but intelligent machine called man.

Along with this teaching I was educated into dyspepsia, sick-headache, and medicine dosing. My father was a dyspeptic, and gave much time to the study of the digestible properties of different articles of food. Gradually one food after another was condemned, until only hot water and medicine were thought an entirely safe diet. In time I almost eliminated those two articles, and would go many hours without taking anything into my stomach. The headaches became so bad that I was like one crazy while they lasted, and morphine was my final resort.

During these years, while I was growing up, I was not satisfied with the atheistic-materialistic theory of existence I had been taught. Something within was always pushing on in search of a truth more satisfying. I felt that there was a Supreme Being, even if reason allowed for none. I studied the older churches, and also investigated every new theory and cult that came to my notice,—theosophy, spiritualism, hypnotism, but adopted none.

Then my attention was called to Christian Science. I met a dear old lady who had been wonderfully healed of rheumatism, and it was amazing to see her work and go about like a young girl. She loaned me *Science and Health*, which I tried to read, but with indifferent success. It denied the existence of matter, in which I thoroughly believed. I returned the book, and in my conceit decided that the old lady was somehow pleasantly deluded.

A few months later I went to study in one of our large universities, taking special work in philosophy. I entered a materialist; as time went on I was forced to confess that there was much argument on the other side, and against materialism; before the year was finished I was convinced that all was not matter but Mind, a pure idealism. I rejoiced to learn that in God "we live, and move, and have our being." I saw that the Bible was a book of rare moral and spiritual wisdom. I was glad to know that I was not a soulless, material machine, but God's child, with the hope of immortality. I recalled that such was the teaching of that book, *Science and Health*, a copy of which I procured from the University library, and spent many hours poring over it. It seemed more comprehensible now that that stumbling-block, the belief in matter, was destroyed. I perceived that Christian Science was a rational and also a heart-satisfying religion, making plain the miracles and mysteries of faith.

But a new stone obstructed my path. I had found the pearl of great price, but I thought I could not afford to buy it, so I did without *Science and Health* and Christian Sci-

ence treatment, though I continued to suffer extremely. I grew worse, and finally was so ill that I did not sit up half the time. An honest doctor told me that he knew of nothing to cure a case like mine; he had been afflicted the same way for years. I decided to write for treatment at any cost, and did so secretly, knowing that I would have no sympathy from friends and relatives. I was well from the hour the healer received my letter and began treatment. It seemed as if a new life were breathed into me; there was a novel buoyancy of mind and body; I went about like one walking on air. I was surprised and delighted, but continued treatment for three weeks, as I feared a return of the trouble. Not only was I healed of the dyspepsia and headaches, but an eye trouble vanished directly it was mentioned. After such practical benefits I was glad to pay the small price charged for healing and teaching and the Christian Science literature, that I might learn of this wonderful Science of God and His creation, and the marvelous healing influence of thought when Truth is understood and realized.

Again I would refer to the article on "The New Birth" in "Miscellaneous Writings," p. 16, which so beautifully and completely describes this spiritual development of an individual, speaking of it as "the awakening from the dream of life in matter, to the great fact that *God is the only Life*." What a large hope is ours, as expressed in these lines on page 18, "The purification or baptisms that come from Spirit, develop, step by step, the original likeness of perfect man, and efface the mark of the beast." "For," according to the Bible, "whatsoever is born of God overcometh the world: and this is the victory that overcometh the world, even our faith."

Lessons from Experience.

BY FRANK DUNLAP.

My occupation is that of gardening and fruit raising. I have learned that by constant cultivation of my crops the weeds will not appear, but if I delay cultivation and let the weeds get a start, my work is much greater. Once let the weeds get well started, I can only destroy them by uprooting them.

I have learned that in the same manner we must work in Christian Science. If we keep our thoughts filled with Truth and Love, error cannot master us; but if error is allowed to take possession of our thought and is then permitted to take root and grow, we have hard work to pluck it out.

Another lesson I have learned is that work partly done, which is put off for a more convenient season, will very likely have to be all done over again. I have often found that when I have returned to complete the work I had stopped to attend to something else, the unfinished work was in worse shape than when I left it.

In Christian Science we learn that if we stop our work before we have fairly mastered a particular form of error, it may re-appear in a worse form.

When many things have demanded my attention at the same time, I have felt hurried and worried, but by performing the most important first I have accomplished the whole work. So in Christian Science, when error pours in upon us we cannot accomplish anything by striking first at one error and then another, but by giving our attention to the most important work, the rest will be easy.

In the west of England, after some engineers had laid the piers of a bridge upon what seemed solid rock, they found that the latter gave way and shifted its position. The true firm rock lay beneath it, and when that at last was reached, the superstructure was sound, but not till then.

ANON.

Testimonies.

A Business Man's Testimony.

I wish to express my appreciation of the article in a recent number of the *Sentinel* entitled, "There is Rest and Peace on Earth." The reading of this beautiful contribution has been very restful indeed to me, and I am sure it has also brought a new sense of peace to other readers of the *Sentinel*. How true it is that there is "rest and peace on earth" to those who are trying to apply the teachings of our beloved Leader to their daily experience. Rest in Christianly Scientific work—peace in the consciousness of work well done.

In my business I have just had an experience which was particularly satisfying, because the problem involved almost no element of material loss or gain, to me. I was notified one morning recently that some people with whom our firm has business had failed to provide promptly a large sum of money which was due other people on a certain date. Ordinarily a delay of this nature would inconvenience and perhaps embarrass a large number of people, so when I first heard of the seeming neglect I was temporarily overcome by a great sense of disappointment, anxiety, and condemnation of the one who had apparently failed to do his duty. I, however, went at once to a part of the office where I could be alone, took "Science and Health with Key to the Scriptures," read a few sentences of the Truth contained therein, and worked against the sense of error which had been presented to me until it was completely destroyed. After sending the necessary telegrams and doing what seemed wise from a business standpoint, I went about the other duties of the day without the least anxiety, fear, worry, or resentment. Within forty-eight hours from the time the matter was presented to me, the necessary funds had been supplied and the whole affair had been adjusted harmoniously and in a manner perfectly satisfactory to all concerned. So far as I know, the incident has worked no hardship to any one. I am sure it has been a positive benefit to me. I give Christian Science credit for the happy outcome of what ordinarily would have been a very disagreeable business complication.

After an experience of several years as a student of Christian Science I have learned that a demonstration of the Allness of God, in business, does not always consist in the attainment of some particular end or object. Oftentimes we may think we want something which really is not at all in harmony with our ultimate good. Although I give Christian Science credit for a marked improvement in my so-called material condition, nevertheless, to my sense, the highest demonstration of Christian Science which a business man makes, lies in constant, watchful application of the teachings of the Bible and Science and Health to his relations with his fellow-men, letting "that Mind . . . which was also in Christ Jesus" unfold itself in his consciousness and bring out a higher sense of honesty, humility, patience, and Love. This sort of demonstration is not tainted by the thought of "loaves and fishes," but approaches, in a measure, the beautiful and unselfish work of our dear Mother.

G. S. C., Chicago, Ill.

Healed of Many Ills.

For many years I sought the understanding of the Scriptures, which I found at last in "Science and Health with Key to the Scriptures." It was with great joy I learned how to pray aright. My baby boy, two and a half years old, was passing away with bowel trouble. Medicine had no effect whatever, and he was given but a short time to live. This seemed more than I was able to bear. Five months previous to this, my husband and little girl had an attack of malarial fever in its worst form, while living in

California, and were convalescing at the time my baby was taken ill. I was led to call upon a Christian Science practitioner. I was told my baby could be perfectly well through Christian Science. I was given the tract on "Prayer." After waiting two days I carried him to the practitioner's home,—a helpless little form with high fever, moaning with pain, and all the symptoms accompanying such a complaint. Treatment began at once. In less than an hour he was enjoying health such as he had never known before, and when he returned home had a natural passage of the bowels, the first in ten days. His sister was also healed at the same time, and to-day they are pictures of health.

From the time of my birth it was predicted if I lived I would always be frail and sickly. I never knew what it was to feel well. Each winter I was confined to the house with my eyes, most of the time in a dark room. The best oculists in New York failed to cure me, giving only temporary relief. Contagion in the neighborhood always found me a ready subject. As I grew into girlhood consumption claimed me, but that was destroyed after coming to Colorado, only to take other forms. When Christian Science found me I was doctoring for biliousness, chronic malaria, dyspepsia, female trouble (having passed through an operation for tumor), and nervous prostration. During the second treatment I was awakened from a refreshing sleep, the first in many months, to receive the manifestation of Truth casting out error. In less than a minute I was transformed from the old self into a perfectly well woman with marvelous strength, a wonder to all who had seen me before the change. Glasses were left off, the sight restored in the left eye as perfectly as the right eye, the sight, but not the light, having been lost several years ago.

Could any one doubt the love and gratitude which goes out to our dear Mother who has labored long and patiently to bring this blessed Truth which makes free, to suffering humanity? But infinitely greater than freedom from suffering is the freedom from doubt and fear, and the understanding that plants our feet upon the rock, Christ. Recently my husband and I have had the great privilege of class instruction from a loyal student of Mrs. Eddy.

MRS. SARAH M. SMITH, Cripple Creek, Col.

Fear Overcome by Christian Science.

Before coming into Christian Science, some five years ago, I suffered from intense nervousness, and could never be left alone at night. When my husband was away, he always took care to see that I was provided with plenty of whiskey, in case I should have one of my heart spells; also that a companion could stay with me at night. After the glorious truths of Christian Science were presented to me, life assumed an entirely new outlook. I realized so vividly the omnipresence of divine Love that there seemed to be no place for fear in my consciousness. When my husband had to take his customary trip East, I declared I would stay alone, as it seemed unreasonable to depend upon a frail mortal to look after me, when I could realize Love's protecting presence. When he suggested the whiskey, I almost laughed in his face. I had found my heart's Saviour, and where was the need of drugs or whiskey?

That very first night my faith was tested. About two o'clock in the morning I was suddenly awakened by the old suffocating feeling of fright, but through it came the still, small voice of Truth, speaking so clearly that it seemed to me it could have been heard all over the house: "Thou shalt not be afraid for the terror by night. . . . There shall no evil befall thee." Instantly I lay down with an indescribable feeling of peace and security that no words can ever express. Every bit of fear had fled, and I calmly and quietly went to sleep. That was the last of that old trouble. It has never returned since.

I also desire to give a demonstration I had with my little boy some months ago. He was playing with a group of children in the yard, when he was pushed violently to the ground, and fell on some rusty nails that protruded, point upwards, from a piece of wood. One of the nails pierced the eyeball, and he ran screaming with pain, to me. His sobs were so distressing that I could think of nothing but the first few lines of "Shepherd, show me how to go." I took him in my arms, and sang those lines repeatedly, while his little voice tried to join with me, until his head fell on my shoulder and he was fast asleep. Then I went to work to calm my own fears. Then he awoke with a severe spell of vomiting, but I realized the Truth for him, and he again went to sleep. My husband wanted to take him to an oculist to have the eye examined, but I begged him to wait until the following day, I felt so sure of the victory. The following day there was such a decided improvement that nothing more was said about the oculist, and on the morning of the third day he was entirely healed. There is not even a mark to show where the nail entered.

A. M. J., Denver, Col.

Healed by Reading Science and Health.

Over three years have passed since I first heard of Christian Science. I was then living in Kendrick, Idaho. I happened to go across the street to one of my neighbors, and in speaking of my illness (the trouble was called by several good physicians, consolidation of the lower part of my right lung), my neighbor in some way mentioned Christian Science. She knew very little about it herself. She gave me some tracts and also procured a book on Christian Science for me. With it and the tracts I went home and began to read. From that hour I was healed. I was very happy because of what I had found, and felt as if I wanted to get on the very housetops and shout to every one. I did not know what it was, but I did know I was in every way a changed woman.

I have had many beautiful demonstrations of God as an ever-present help in time of need.

I am very grateful to the neighbor who first presented Christian Science to me, and to the dear Scientist to whom I wrote a few days after I heard of the blessed Truth, asking her to come and tell me more of what Christian Science was. She came promptly, and was willing to tell all she could to help me, and she did open the way for me.

In a few days, I purchased Science and Health, and money could not buy it if I could not get another. I have had no teacher except Science and Health, and have been very little associated with Scientists.

I have had many hard battles to fight. Unless we fight, the enemy (error) will be victorious, and we cannot allow the victory when we have the sure weapons. Truth and Love.

I desire in this way to thank the person who wrote in the June *Journal*, "Humility." It is a grand lesson, and was just what I needed.

To our dear Mother who has worked, and is still working so faithfully for all, words cannot express my love and gratitude.

There are only three of us here, but God is with us.

MAME CROW BREYMAN, Hilo, Hawaii.

Healed after Operations Failed.

An old farmer in Scotland had been laid up during the winter, with blood-poisoning in his leg. This was a great trouble and loss to him, as he was unable to do any work. When the Christian Scientist first went to him, he could not believe it possible for him to be healed, as the doctor

had failed. However, after four days' treatment, all the swelling and discoloration had completely disappeared, and to his intense joy he was able to put his boot on and get to work once more. The doctor was much astonished to meet him walking to market, perfectly well.

Another case was that of a young man who had been in the infirmary in Glasgow, to undergo two operations at different times, and was finally sent home incurable. He had been laid up three years when he began to take Christian Science treatment. He was on crutches, and quite unable to go outside his cottage door. At night he was unable to sleep for the pain in his leg. He had two running sores which had baffled all medical skill, but after one week's treatment they were quite healed, and he was able to put away one crutch, and slept well all night.

After continuing treatment for four weeks, he was able to walk without any crutch, but with two sticks, which he has since put away. His leg has now grown as long as the other one, and all the stiffness and swelling are completely gone. It is some months since he was healed, and he writes that he is able to work now and to walk any distance, and that he weighs fourteen stone (196 pounds).

V. M., London, England.

A Joyful Message.

"Remember you are God's child!" What a message that was to one who had been for many years a sufferer from what physicians said was an inherited and incurable disease. All through the following night, as I awakened—and I did so very often—those words came to me, and I would repeat, "Yes; I *am* God's child!" I had heard them before, now they had a strange, new meaning. The Truth of Being was beginning to dawn upon my darkened sense. I soon learned that God's child could not inherit disease nor suffer pain.

That was the beginning of the Christ-healing with me. My physicians were dismissed, and medicines thrown away, and for ten years the understanding, and demonstration of the Truth, as taught in Science and Health, has been my only physician; through it I am to-day a well, happy woman. Often, I hear the sweet, encouraging voice of the dear Scientist who was instrumental in turning my thought from sense to Soul, still repeating those life-giving words, just as she in turn, had understood their deep significance through the teachings of Christian Science. I am deeply grateful for all that Christian Science has done for me.—J. L. L., Louisville, Ky.

Grateful for the Communion Service.

Since my return from attending the annual Communion at the Mother Church, I have been filled with the deepest sense of gratitude for all the privileges enjoyed there, and would like to express my loving thanks to all the dear brothers and sisters in charge, who were always so patient and kind in answering the questions continually put to them at such a busy time.

What the Communion service and the hearing of the Mother's message meant to me on this my first opportunity of attending, I cannot find words to explain. I only know that I came home with an earnest desire to do whatever work my Father has for me, obediently, humbly, and steadfastly looking joyfully for the day when all shall realize the oneness of Mind, when that blessed experience of the presence of Love, which was so evident at the meeting, shall be shared by many more and become indeed a foretaste of Heaven—the reign of Harmony.

E. A. L., Elgin, Ill.

Religious Items.

The *Universalist Leader* says editorially: "Religion is vital even in this commercial age. In spite of the current indifference to many of the religious forms, no one can question the interest in religion itself. There is hardly a novel published to-day that commands attention, which is not at heart a religious dissertation or discussion; in editorial words in the great journals, the moral side of important questions is emphasized, and national acts require moral justification. The serious danger which is faced to-day by the Church, is its loss of the personal hold upon the individual, for which it has itself to blame in abandoning its unique function of securing personal righteousness, and trying to regulate the affairs of nations and races for men instead of through men."

Commenting on the worldly methods of attracting attendance sometimes practised by churches, the (Unitarian) *Christian Register* says: "Piety and good works will lag in the rear of the advance whose banner flaunts worldly watchwords. The innovation always sufficiently new is the life which makes deeper gladness than distraction, the interpretation and fulfilment of religion which shall make it the root of all courage and good cheer. The preachers who hunt for novelty do so, perhaps, because the chief opportunity is laborious, and the expedients are easy and seductive. The great novelty is the preaching of the highest things, so that they will inspire and direct the common life. New works of spirituality will be most welcome to the world-sated men of the day."

The (Episcopalian) *Church Standard* gives the following concerning a sermon preached by Kaiser Wilhelm on board the Hohenzollern to German soldiers about to leave for China: "His Majesty drew a picture of the trials of war—the long marches beneath a blazing sun, the longer nights under pelting rain, thunder of cannon, bursting of shell, the slaying of comrades—'this,' said he, 'demands more than edged weapons, more even than youthful courage and the fire of enthusiasm. It needs living strength and victorious might from above. And this heavenly world is accessible to prayer—alone. Prayer is the golden key to the treasury of our God.'"

The New York (Methodist) *Christian Advocate* says: "There is real pleasure in self-sacrifice. An eminent English author has recently written a book on the pleasures of life. This great thinker does not appear to have discovered one of the chief sources of human happiness. Too many look upon self-sacrifice as an irksome duty. To them there is no beauty in it that they should desire it. But one of the sweetest experiences that can enter the human heart is the consciousness of having given up some light or good or pleasure for the good of others or the advancement of righteousness."

A writer in the *New-Church Messenger* says: "The spiritual alone is anything. Loves and friendship that have any other foundation than the spiritual, are but as the contact for a moment of figures in a dissolving view, in which scene follows scene, each with some variation in the outward show, but each as it closes leaving only fading memories of sensations that have forever passed away; but spiritual truths once seen and loved, become identified and as it were incorporated with ourselves, and never decay."

"Men cannot live isolated; we are all bound together, for mutual good or else for mutual misery, as living nerves in the same body. No highest man can disunite himself from any lowest. Not in having no business with men, but in having no unjust business with them, and in having all manner of true and just business, can either his or their blessedness be found possible, and this waste world become, for both parties, a home and peopled garden."—CARLYLE.

A writer in the (Baptist) *Watchman* says:

"Communion with the Father and with the Son is that we have all things in common with Him, and then it becomes easy to understand how all things are held in common with each other; and the spirit is here in order that through the people having that communion under the Lordship of Christ, God's work should be carried on and God's enterprise brought to consummation."

In an editorial dealing with the general lament of religious writers over the "decline of faith," the (Baptist) *Watchman* says: "A man of devout habits, who fills his mind with the thoughts of the Scriptures, who keeps a clear conscience, responding to every duty as it arises, who takes delight in communion with God in prayer will seldom be found to be lamenting the dulness and deadness of his faith."

The *New Church Independent* says: "The knowledge of what is Divinely good and true and heavenly is attainable by all, and with a desire to possess this knowledge, with a love for its growth within us, there come an increase and multiplication of its effects in our lives, if we are also laborers in the field of active life of goodness and of truth."

The *Congregationalist* quotes Caroline Gilman as saying: "To repress a hard answer, to confess a fault, to stop, whether right or wrong, in the midst of self-defence, in gentle submission—these sometimes require a great struggle for victory, but these three efforts are the golden threads with which domestic happiness is woven."

A writer in the (Baptist) *Standard* says: "Only he who walks with God, who knows the meaning of Paul's admonition to pray unceasingly, can know the blessedness of communion with Him in the Chamber when the door is shut. Without this vital connection with a prayer life, the stated prayer time becomes perfunctory and dead."

"All the wise words that are poured into a child's ears from birth to maturity," says a writer in the *New York Evening Post*, "cannot begin to equalize the weight of influence absorbed by watching the actions and accepting the practical decisions of its father and mother."

"The joy of doing good! Is there any joy like it? The opportunities for securing such joy are all about us, but they come only to the men and women who are unselfish, and true, and brave," says the (Episcopalian) *Church Standard*.

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on New York or Boston. Individual checks cannot be received, as a charge is made by the Boston banks for their collection.

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and

should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science. Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

No. 6.—Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each \$3.18

Two to Twelve books to one address, each, prepaid 3.00

Twelve or more books to one address, each, prepaid 2.75

Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00

Twelve or more to one address, each, prepaid 3.75

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 5.00

Twelve or more to one address, each, prepaid 4.75

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00

Twelve or more to one address, each, prepaid 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid \$2.25

Twelve or more books to one address, each, prepaid 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00

Twelve or more to one address, each, prepaid 3.75

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00

Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid \$3.00

Twelve or more books to one address, each, prepaid 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedication Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883.

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription :

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription :

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale :

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp. SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.

MR. KIMBALL'S LECTURE. 33 pp.

HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.

THE BUSWELL TRIAL. 24 pp.

THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.

HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna. One copy or more, each, 6 cents; 12 copies, to one address, 60 cts. Twenty-five copies to one address \$1.15; 50 copies to one address, \$2.25.

Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.
Entered at the Boston, Mass. Post Office as second-class mail matter.

Items of Interest.

Political and Governmental Notes.

The National party has abandoned the idea of keeping a presidential ticket in the field, and Archibald L. Howe of Massachusetts, who was nominated for Vice-President in New York on the 5th inst., is expected to follow Senator Caffery of Louisiana, the presidential nominee, in formally withdrawing his candidacy.

While the Governor of Utah was absent in Idaho attending a political meeting at which Governor Roosevelt was the speaker, the president of the State Senate, who was acting governor, appointed Judge O. W. Powers, a Democrat, to fill the place in the United States Senate left vacant because of a deadlock in the Legislature.

A general election for the choice of delegates to the constitutional convention was held in Cuba, September 15. There was 186,240 votes registered. The party in favor of absolute independence will be in a majority in the convention.

Governor Roosevelt, the Republican candidate for Vice-President, made public his letter of acceptance last week.

Foreign News.

Lord Roberts last week had pushed his lines up close to the Transvaal frontier, with the results shown in the following report which he made September 20: "Of the three thousand Boers who retreated from Komatiport before the British advance from Machadodorp, seven hundred have entered Portuguese territory; others have deserted in various directions, and the balance are reported to have crossed the Komati River and to be occupying spurs of the Lobombo Mountain south of the railway."

Lord Roberts reported on September 14 that General French had surprised and captured Baberton, a Boer supply depot, and secured forty-three locomotives, many rifles, large numbers of cattle and sheep, and other valuable supplies. Later fifty additional locomotives were captured.

The national debt of Sweden at the end of 1899 was \$91,000,000, and against this the State owns about \$98,000,000 worth of railroads and has lent \$12,400,000 to private roads, with rights of priority. Budgets of recent years have shown a surplus of \$3,000,000 to \$4,500,000, and the unused surplus in the treasury now amounts to over \$21,000,000. The indebtedness per capita of Sweden is 2.47 per cent, only one-tenth that of France, one-fifth that of Great Britain, one-quarter of Germany's, and but a small shade more than that of the United States.

The Chinese problem seemed no nearer a settlement last week. Germany, in a circular note to the other powers, asks, as a condition precedent to entering into peace negotia-

tions with China, that the ringleaders of the anti-foreign party be punished personally, and not by proxy. As it is generally believed that the Dowager Empress herself, and leading men in the government were at the head of the movement, it is thought, in some quarters that Germany's demand is equivalent to demanding the downfall of the present dynasty.

Canada's financial statement for the year ending June 30 last, showed that the revenue was \$51,000,783 and the expenditures \$42,976,051, leaving a surplus of \$8,024,732, and after all ordinary obligations were met, there was \$771,828 to apply toward the reduction of the public debt.

Justin McCarthy, the novelist and historian, who has been a member of Parliament for North Longford since 1892, and who was formerly chairman of the Irish Parliamentary party, has announced his retirement from parliamentary life.

Count von Waldersee, the German Field-Marshal, who is expected to take supreme command of the international forces in China, has arrived on the ground.

A bill has been introduced in the Mexican Congress providing for an appropriation of thirty thousand dollars for the Galveston sufferers.

Industry and Commerce.

The great strike of miners in the anthracite coal region of Pennsylvania went into effect on September 17, as declared. On the second day of the strike President Mitchell of the mine workers, stated that 118,000 of the 141,000 mine workers of the region affected by the order are idle. The number of men out, he says, exceeds that of any other industrial contest in the history of the United States. At Shenandoah, the men still working in the Indian Ridge colliery belonging to the Reading Railroad Company, were intimidated by the presence of a number of strikers, and the sheriff was asked to protect the men. When the sheriff and his posse were escorting the men from work on September 21 they were stoned by the crowd, and one shot was fired from a saloon. Thereupon the sheriff ordered his men to fire, killing a man and a little girl and wounding seven other men. The sheriff telegraphed for military assistance and Governor Stone ordered out twenty-five hundred men of the National Guard, and on September 22 the region about Shenandoah was under military control.

Captain J. H. McClintock, in *Ainslee's Magazine*, says: "To-day the seat of the sheep-rearing industry of the Union has shifted from the middle west to the plateau region between the Rockies and the Sierras. Ohio is still doing very well in the business, with nearly three million head, but she has dropped from first to fourth in the list of mutton-producing states. New Mexico is at the head with more than four million eight hundred thousand; Montana has nearly as many, while Wyoming leads Ohio by a few hundred thousand head. Idaho closely follows Ohio in the rating. Oregon, California, and Texas each has about two million five hundred thousand sheep.

A French scientist, M. A. Dufour, has succeeded in constructing a thermometer for high temperature by employing quartz. For a long time quartz, or rock crystal, was regarded as a matter which could not be melted or softened, but the English physician, Dr. Boys, succeeded finally in softening it to a paste with a flame of oxy-hydrogen. M. Dufour based his experiments on this fact, and finally succeeded in making tubes of quartz for his thermometer. In this instrument the bulb and tube of quartz are similar to those of an ordinary mercury thermometer, but the metal inside is tin. The scale runs from 240 up to 580 degrees Centigrade.

Coal deposits in China are said to be the largest in the world, and Herr von Richthafen, the famous geographer, estimated the anthracite coal deposits in the southern

milliards of tons. But these are only a small part of China's wealth of coal, more especially in the provinces of Shangpi, Hunan, Shantung, Szetschwan, and Yunnan. Mining of coal in China is far older than in Europe, more especially in the western and northern part of the Chinese Empire, where it dates back more than one thousand years.

It will take two and one-half years more and \$7,000,000 to finish the new East River bridge between New York and Brooklyn. It was begun May, 1896, and has cost, up to the present, \$5,135,516. It will have twelve highways, with total width of 118 feet, suspended 115 feet above the river.

To change the motive power on the New York elevated railway system from steam to electricity will cost twelve million dollars, it is said, not including the loss entailed through the abandonment of the locomotives now in use, of which there are several hundred.

W. W. Sylvester, vice-president of the Kansas City, Mexico, & Orient Railway Company, which purposes building a new trans-continental line to the Pacific coast, says that contracts have been awarded for the construction of about four hundred miles of the total fourteen hundred miles.

Chicago is agitating the question of a subway to relieve the congested street traffic in the down-town sections. The plans provide six loops, and are so arranged that passengers desiring to be transferred will not have to walk further than a single block.

A Constantinople dispatch says that the bid of the Carnegie Company to supply all material for the railway from Damascus to Mecca is lower than that of any other competing firm.

Sudero, one of the Faroe islands in the Atlantic ocean between Scotland, Norway, and Iceland, is thirty miles long by twelve miles wide, and is said to be virtually a solid block of coal.

According to Chicago Board of Trade statistics the damaged grain elevators at Galveston contained 2,223,000 bushels of wheat.

General News.

The fourth Zionist Congress, which met in London last month, numbered 748 delegates. It voted one thousand francs to the Jewish public library at Jerusalem, and two thousand francs to the Agricultural Society at Jaffa. It reported increased antipathy to the Jewish race in nearly every country. The aggregate funds in the bank in support of the movement are \$2,000,000.

Professor Hilpreche estimates that five more years will be necessary to excavate the unexplored part of the great library at Nippur, when he thinks one hundred and fifty thousand tablets will be added to those already unearthed. There will be no example in the world's history of so complete a recovery of the records of an ancient civilization.

Four Filipinos, who have won the privilege by gaining the highest rank in competitive examinations held in Manila, have arrived in this country, one of whom will go to the University of California and three to the University of Michigan, to study on scholarships provided by the International Club of Manila.

Colonel Henry M. Robert, United States Corps of Engineers, and divisional engineer of the Atlantic and Gulf coasts, says that Galveston can be absolutely protected from every storm by a sea-wall built along the Gulf front.

Galveston was thoroughly renovated last week and order was established. The needy were cared for and prospects for the rebuilding of the destroyed portion of the city are bright.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Light Without Heat or Waste.

A Wonderful Substance Discovered by a Woman.

PROFESSOR LANGLEY, of the Smithsonian Institution at Washington, D. C., is in receipt of a wonderful little piece of what the inventor has termed "radium," that has sent a thrill of wonder through every scientist in the land. The specimen was received incased in a small box made of lead, accompanied by instructions for the professor to open it in the dark. This was done. A number of the principal officers of the Institution repaired to the photograph "dark room" and the wonderful substance, no bigger than a silver dollar, was taken from its bed, and before those present could realize what had occurred the room was lit up as completely as though the full rays of the sun had penetrated the place. The substance emitted a clear greenish glow, and the features of every one were clearly outlined. There was a natural hesitancy on the part of those present to touch the thing, but investigation soon proved that the source of this wonderful light was cool and solid, and that it could be handled with ease.

What is this wonderful substance? It is a discovery made by a woman, Mme. Sklowdowska Currie, of the Municipal School of Physics in Paris, and if what is claimed for it be true it is the light of the future—the dream of alchemists—in short, a lamp that will burn forever, consume neither oil nor wick, is devoid of heat and requires no attention. Mme. Currie was awarded four thousand francs, and had her name enrolled on the books of the French Academy of Sciences for this discovery, which is regarded as one of the most stupendous of the age, upsetting as it does all hitherto accepted theories of heat, light, and physical energy, and opening up fields of knowledge heretofore regarded as beyond the scope of man. This light, it is claimed, will not only be very cheap when first installed, but after that there will be absolutely no expense in maintaining it, even though left to itself for centuries. Night after night for an indefinite period it will throw out its brilliant rays, and at the end of untold years the illumination will be as great as at first. No underground or overhead wires, no dynamos nor gas retorts, nothing but a little disk of greenish stone. Place this in the wall or in the ceiling and rooms will be lighted as long as the houses stand.

The origin of light as accepted by the layman is that it is merely the demonstration of energy produced by the destruction, combustion, or consumption of certain substances, like coal, oil, or gas. Heat is produced by the destruction of burning coal. This, transformed into motion by the steam engine and the dynamo, results in electricity for arc and incandescent lights. In short, no artificial light has ever been made for man's use that has not been the result of some material that was consumed in order to make it. A feeble light without heat is obtained from phosphorescence, but even this owes its origin to the slow consumption of the substance that produces it. To produce light without the expenditure of some sort of energy has

been looked upon heretofore as an idle dream, but the discovery of the wonderful properties of the X-ray caused the scientist to put on his thinking cap. The X-ray discovery proved that there was more than one form of radiant energy, although all of them have the same qualities in certain directions, yet entirely different in others. Thus, while the powerful rays of the sun were unable to penetrate a thin piece of cardboard, the X-ray, which could hardly be seen, was able to go through wood and metal. This fact contradicted the universally accepted theory that the power of light was due in all cases to the material consumed. Experiments along this line soon convinced scientific students that uranium possessed remarkable qualities—that it had the power of absorbing light and emitting it afterward. It was then discovered on experimenting with salts of the metal that it would produce substances having properties similar to the X-rays, and that while they could not be seen by the human eye they yet had the power of "fogging" a photographic plate when brought in contact with it.

Different investigators produced different forms of these rays, but all failed of producing anything more than a laboratory experiment. There was energy, but unaccompanied by luminosity, and all the experiments were useless, so far as the commercial world was concerned. Then Mme. Currie began her work where the others left off. She reasoned that the wonderful properties manifested by different substances obtained from uranium were not due to any real power in the metal itself, but to some substance which is held in a state of non-activity. Working on this theory she began her work with a substance known as "pitch-blend," which is uranite, chemically considered, and which is simply the refuse from the factories where various uranium products are made. She first discovered a substance similar to bismuth, but several thousand times more powerful than the uranium salt from which it was obtained. The presence of this metal in combination with uranium was, up to this time, unsuspected, and the discovery was regarded as an important one. About three months ago the efforts of the talented lady scientist were crowned with success along the lines laid down by herself. By using different salts in combination with the bismuth she produced a substance with some of the properties of barium, which, after being heated, had the power of emitting visible rays of light. This is the substance which she has named "radium," and which promises to revolutionize the system of house lighting.

After she had obtained the long-sought-for substance, Mme. Currie set herself about measuring its power, and found that there was no need for the fine instruments which she had prepared for this purpose, as the light was strong enough to be measured by ordinary methods. A negative of ordinary density was placed in a frame in front of a fast photographic plate. She found, after repeated trials, that she was able to obtain a strong impression in about fifteen minutes—the slide produced was perfect—just as good as could be produced by daylight. A duplication of the plate showed that another could be produced in exactly

the same time, which demonstrated that the power of the light was unchanged. At the end of two weeks, during which time the precious substance had been subjected to all sorts of conditions, still another test was made, with the same results, thus proving the stability of the power of the new light. The first piece of radium being produced, Mme. Currie argued that some accident might have been responsible for it, instead of scientific manipulation, but investigation proved conclusively that the results were sound—that radium could be produced at will. Tests were then made to show the exact nature of the material. Pieces were dropped into gunpowder, and, while a glow spread through the inflammable material, no explosion took place. There was no heat and no fire—merely light. Everything was tried that was at all likely to start combustion, but all failed.

The only thing that would destroy the luminosity of radium was boiling water, in which it must be kept for an hour. On taking it from the water it resembles green quartz—cold and dead. On heating it again, however, to the point of incandescence, it regained its luminosity with the same powers as before. It was then that several pieces of radium were manufactured and sent to scientists throughout the world, and this is how Professor Langley came to receive the queer little thing done up in a leaden box.

Recently Professor Bach of Berlin, a noted scientist, has made tests of the light, with a view of establishing its claims to permanency, and was unable to discover any waste of material whatever. He gave it as his opinion that it would require the lapse of one million years or more to destroy the luminosity of a piece of this radium no bigger than a quarter of an inch square. When it came to explaining the reason for the light's existence, however, he was dumb.

Even as the discovery stands to-day, it is one of the most useful on record, as small pieces may be used to illuminate dwellings, public buildings, and theatres, with the absolute certainty that there would result no flame from their extinguishment, as sometimes happens from the use of ordinary means of lighting, and that the expense of maintaining them would be absolutely nothing.

In its present stage of development there are many uses for this magic substance, yet without doubt it has been left to a talented member of the fair sex, whose work along this line exceeds all others, to benefit the world by one of the greatest discoveries of the age.

The Enquirer, Cincinnati, O.

Electric Railways.

WITH each succeeding year we approach nearer to the final electrification of the main line railway, and to-day we are very close to the happy era when the steam locomotive shall be no more in the thickly inhabited section of cities. It has been everywhere a tendency of population in this country to gather itself in large centres, and, as if by a re-action, subsequently to tend to spread into the region surrounding those centres, and while increasing in numerical total to decrease in density in city areas. In other words, the great suburban movement has begun, and this has called for classes of transit unknown twenty years ago, and has made demands upon all varieties of engineering for its improvement and perfection. It is still far from perfect.

In all quarters where great centres of population exist we hear accounts of the change of existing steam railways serving this suburban travel into electric railways. During the next year a large and important installation of medium-class railways is to be made in New York City

and its adjacent neighborhood. This variety of work can only be considered as a step in the direction of electric power for heavy railway uses.

The question of motive power for a railway, alone and uncomplicated with other considerations, resolves itself into a purely economical problem. It is not difficult to calculate with great exactness what it will cost to equip a certain line of railroad with electricity, and what it will cost to operate it afterward. In any given instance a comparison between this cost, and that for steam locomotives may be made, but even as a basis for argument it is scarcely worth making. The reason for this statement is that the mere cost of motive power is by no means the largest factor in determining the choice of an electric system. It will probably be hard to convince railroad superintendents and presidents that a more expensive power might be advantageous, or that a change in equipment involving the expenditure of a large amount of money would produce an entirely new and highly profitable condition of affairs as regards passenger traffic; yet one has only to look around and see what has already been done to gather an idea of what it is possible to do in the same direction. It is not possible to know the magnitude of the future of the electric railway, as every one may realize who will think back ten years ago and consider the derision with which he would then have met a plain statement of the growth of the electric railway in the decade now ending.

Looking at the problem, then, of long-distance railroad-ing by electricity, one sees that the engineering questions involved are few and comparatively simple. It is obvious that alternating current in some of its various forms must be employed; consequently the choice of a system lies between a purely polyphase system and a sub-station system feeding direct current to the track conductors. The sub-station, in which rotary converters are installed, necessarily involves an increase in the labor cost. It is probable, considering everything, that some form of polyphase distribution, using induction motors on the trains, would be simplest, for its whole conducting and distributing system from power house to moving trains would not require further supervision than that necessary for the maintenance in good order of outdoor equipment. So far, experiments with railway motors of this kind have been confined to Switzerland and Italy, but the results have been promising.

For long-distance work, the main difficulties that have been urged against these machines are of small importance. The question of stopping and starting is not so important on these long lines as that of keeping moving at a uniform speed. The conducting system necessary, if the track is included as an element of it, will naturally consist of at least two elements for three-phase work, which is the simplest that can be conceived. While some additional complexity in switches and yards will be introduced by this doubling of the conducting system, it will not be of a sort to cause serious difficulty. It should not be beyond the inventive ability of those who have done such admirable work in the perfection of the electric railway as it now exists.

No one can foresee the economic results that will follow from a change in the method of railway operation such as can be made alone through the agency of electric power. It would have been impossible to foresee ten years ago the immense increase of business that has followed the electrical equipment of comparatively short interurban lines. In one well-known case the traffic on such a line has increased eleven-fold in two years since the adoption of electricity in place of the steam locomotive, the reason being that trains are more frequent, rates of fare are lower, rates of speed are actually higher, and the pleasure and convenience of travel are much increased.

It should be borne in mind that great increases of speed are not really necessary. The average railway journey can be accomplished within a day, which means, for the average traveler, within a night. Between New York and Boston, for example, it is useless to attempt to reduce the time of night trains below seven hours, because the passengers sleep on the train, and the reduction would be of no benefit to them. High speeds are not the desideratum; what is wanted is uniform speed; light trains; freedom from dirt, cinders, and dust; and the flexibility of electric service, which will permit as many and as frequent trains to be operated as the exigencies of travel may require. In the direction of the application of electric traction with its manifold advantages to the main line railways lies the greatest opportunity now before the electrical inventor and engineer.—*Electrical Review*.

Typewriting by Wire.

TYPEWRITING by wire is the newest marvel of electrical science. To the ordinary person the statement that one may sit at a typewriter keyboard in New York and write a message in San Francisco as easily as though the receiving paper were in the machine before one, while sufficiently wonderful, is less startling than it would have been before the other marvelous achievements of electricity became common property. To the man who is versed in electrical science, however, who knows its limitations as well as its wonders, the news of the invention comes as a surprising piece of intelligence. Thousands of dollars and the energies of scores of inventors have been bent to the task of bringing about exactly this result. Within the past decade half-a-dozen machines have been built in the attempt to reach a practical method of long distance writing. None of these have been entirely successful, and electricians, though not denying the possibility of a successful result, will be inclined to accept any new solution of the problem only after the most severe practical tests.

These tests the inventors of the new device claim they can satisfactorily meet. For some time they have been working an experimental line demonstrating the method of operating the machine. Recently it was tried over a circuit of 265 miles of wire belonging to the Central Union Telephone Company in Illinois, and the results of the test were satisfactory in every way, according to those who witnessed it. Within a few days the invention will be exhibited to electricians and telegraph men in this city, and will be put to practical long distance tests here. It is intended, later on, to try it upon the Atlantic cables, as the inventors are confident that it may be made to work across the ocean.

The men who have originated the typewriting telegraph are two young Chicagoans, Mr. Z. G. Sholes and Mr. A. C. Gilmore. The former is the inventor of the Sholes-Remington typewriter, and the latter is a young electrician, who has had a thorough training in the practical application of that science. They have been working upon this problem for several years, their first machine having been built in 1896. This early machine was a success so far as the recording of messages was concerned, but it was not sufficiently reliable for long distance use, as a current of more than ordinary strength was required for transmission. Accordingly, the inventors abandoned the plan that they had been following, and set to work on a new tack, the result of which they announce they now are ready to give to the world.

The unique feature of the new machine is that while it receives and delivers messages in the ordinary alphabetical spelling, it transmits them in the Morse code. Thus both

the sending and recording instruments are transformers which change the messages that pass over them from the ordinary medium of written expression to that in use in regular telegraphic work. The transmitter turns each letter, figure, and point into the Morse equivalent of dots and dashes, and the recording instrument, by means of a curious device called a selector, turns the dots and dashes back into the more familiar signs.

In appearance the transmitting instrument differs but little from the regulation typewriter. Its only unfamiliar feature is a shaft along which raised brass points corresponding to Morse signs, are grouped. These dots and dashes, representing the various letters, run around the shaft in a circle, so that each letter has its place at some point along the bar.

When a key of the instrument is pressed, a contact brush similar to that used in other electrical machines, is brought against the shaft at the point where the corresponding Morse letter is located. The shaft revolves once, causing the brush to touch successively the dots and dashes which make up the letter. The connections thus made flash the various signals along the wire, and, with an ordinary receiving instrument at the other end, the operator would have exactly the same sounds as in the prevalent method of transmission.

The Sholes-Gilmore receiver, however, is another electrical device. It includes two magnets, one intended for the dots and one for the dashes. These are connected with the selector, which, as the name indicates, picks out and records the letter indicated by the Morse signals. The moment one letter is recorded an arm breaks the contact and sends the selector back to its original position, ready for the next letter that is to be sent.

The advantages claimed for the new machine by the inventors are two. The first is a saving of expense. As their instrument records messages automatically its general adoption would do away with the necessity for one-half the telegraph operators now employed. At the same time, there would be no loss in the capacity of the wires. Duplex messages could be sent in opposite directions over each wire with only two operators, instead of four, as at present required.

The second argument advanced in favor of the apparatus is its absolute accuracy. As the method of recording messages is automatic, this does away entirely with the factors of human fallibility, and makes the machine especially desirable for train despatching and other uses where accuracy is the great essential.

The trials which the mechanism will receive within the next few weeks probably will determine absolutely its success or failure. But if all that is claimed for it can be accomplished, there is small reason to doubt that within a short time all our ordinary telegraphing will be done via typewriter.—*New York Herald*.

The Literature of the Chinese.

Chinese literature is so extensive that a catalogue of the books in the four imperial libraries of the present dynasty classifies and briefly describes no less than ninety-three thousand books, and itself fills two hundred volumes! Although some western writers have described the collection as a whole as a vast library of Oriental conceit and a dreary wilderness of words, the Abbé Rémusat, a genuine student of the Chinese language, wrote enthusiastically regarding their charm, saying he found in them "eloquence and poetry, enriched by the beauty of a picturesque language preserving to imagination all its colors." The description is a very accurate one, too.—*Success*.

Selected Articles.

An Answer to Rev. M. J. Grable.

Editor *Plain Dealer*.

Sir:—My attention has been called to an article in your paper of August 20, 1900, being a summarized account of a sermon by Rev. M. J. Grable of the Dunham Avenue Disciple Church, the subject of which was Christian Science. The article states that he had received a number of questions about Christian Science during the previous week and answered them before he began his sermon.

It would seem that the Rev. Mr. Grable was a student of the Christian Science text-book, if he was able to answer the questions correctly. That does not seem possible when he states "Christian Scientists have laid hold of an important principle of healing, namely, suggestions." I have been a student of Christian Science for about twelve years, and have yet to learn that there is the first word in the text-book relative to "suggestion" as a method of healing; therefore, there is no ground upon which such an assertion can be made. The charge of suggestion as a healing method in Christian Science is most common and it is generally referred to as "mental suggestion." Can any one but practitioners of Christian Science tell by what power they heal, and are not assertions to the contrary by any minister, assuming more than they have any right to do when they insist that the Christian Scientists do not know by what power they heal? Christian Scientists heal by divine power, not by any other method. Suggestion is akin to hypnotism, which claims to assume control over a subject by an idea suggested to his mind. This is evidently on a material basis. If hypnotism is a science it is mortal made and is not taught by Christ. There is, therefore, no affinity between "suggestion, hypnotism, innuendo, etc., and Christian Science," for Christian Science is the Science—knowledge—of Christ. Christians are not taught in the Scriptures that Jesus hypnotized his patients. He said that without the Father he could do nothing, therefore, God healed by His word and Christian Science interprets the word of God and thereby heals, demonstrating the power of Truth over error.

Does Rev. Mr. Grable mean that Christian Science teaches the suggestions that God is All-in-all; "God is love;" There is but one God, Spirit, Supreme Being, divine Life, Substance, Intelligence; "Thou shalt have no other gods before me," and "Thou shalt love thy neighbor as thyself;" We should have that mind in us which was also in Christ Jesus; We should be pure, merciful, just; That God forgives sin by destroying it? Then I would agree with him regarding suggestions, for these teachings accord with Christian Science.

Rev. Mr. Grable states that putting part for whole is one of the mistakes of Christian Science, but inasmuch as Christian Science teaches that God is the Principle of Christian Science and that God is All-in-all, it is evident that his statement is erroneous. He states that the Principle of Christian Science is not so used as to secure a maximum of good and a minimum of evil. God being All, is the maximum of good. He being too pure to behold iniquity, in His presence evil is destroyed. This accords with the teachings of Christian Science, that is, the maximum of good and the destruction of evil.

Rev. Mr. Grable endeavors to place Christian Science in the same category with the deductive and inductive systems which were practised before and after the time of Francis Bacon, claiming, therefore, that it is not a science and its methods are not scientific. The methods of Christian Science are certainly Scientific, for they follow the teachings of Jesus, who was "the Way." His method was spiritual and Christian Science interprets His method to this age through the Christian Science text-book, "Science

and Health with Key to the Scriptures" by Mary Baker G. Eddy. If Christian Science heals one case of sin or disease, is it not a natural consequence that if Principle is proved in the one case it is able to heal any disease? Thus far it is deductive and inductive. But Christian Science has not only healed one case, it has healed over one million cases. It has healed typhoid fever, yellow fever, locomotor ataxia, etc.

Christian Science can be called syllogistic in the following propositions:—

Divine Mind—God—is perfect.

Man in the likeness of God reflects perfection.

Hence all men—ideas of God—are perfect.

Again:—

God is Spirit.

Man is created in His likeness.

Therefore God's man is spiritual.

Christian Science is metaphysical, spiritual, not material in its science. There is extant a fulsome store of material science, so-called, much of it scientific, and some of it drawn from incorrect premises, but after all, the all-knowing, omniscient God is all the Science there is, and Christian Science demonstrates the Principle of Being.

Rev. Mr. Grable states that "a man who can throw a brickbat over the back fence might as well claim that he could throw a locomotive over a high building," as well as for a Christian Scientist to assert that because Christian Science can heal one case, it can cure them all.

In the first proposition, mortal man is a finite being, limited in power and strength, unstable and mutable. In the last proposition, "with God, all things are possible." Jesus said, "If ye have faith as a grain of mustard seed, ye can say unto this mountain, be thou removed," etc. Does not Christianity to-day adhere to the teachings of the Christ? Does not Christianity to-day believe that Jesus healed with disregard to material laws, that he did not diagnose any case, but healed in accordance with spiritual law—God's law? Christian Science is not a material science, does not treat of material laws, else its name were not "Christian." Christian Science follows the platform laid down in its text-book: God is the Supreme Intelligence. Power, Life, Being.

E. A. MERRITT.

In the *Cleveland (O.) Plain Dealer*.

In Reply to Critics.

Editor of the *Springfield Daily Press*:—Will you kindly permit me to reply to the remarks of Rev. S. O. Royal and Dr. C. W. Barnes made at the Urbana Camp Meeting as reported in your Sunday morning issue. It would appear that Christian Science is classed with Dowieism and Spiritualism. Had Christian Science been more carefully studied, these ministers would never have stated that it is allied to Dowieism, or that it is associated with Spiritualism. To thus class it shows a lack of understanding of the subject of Christian Science.

As in mathematics, so in Christian Science, one must understand, and the proof that one does understand Christian Science is that he can heal the sick in accord with its teachings, and unless this demonstration can be brought out at least in a small degree it cannot be intelligently discussed, and it would show greater wisdom to leave the subject untouched. When a course is pursued otherwise an exposure of ignorance is made.

A careful perusal of the twelfth chapter of Matthew shows that Jesus proved the practicability of his teaching by healing the sick, that this practice greatly incensed the Pharisees, and that after seeing instance after instance of healing, they accused him of doing his work "by Beelzebub the prince of the devils." Then they said to him, "Master, we would see a sign from thee. But he answered and said unto them. An evil and adulterous generation

seeketh after a sign." The life of Jesus Christ was one constant manifestation of goodness and this was manifest in what he commanded his disciples to do, "And as ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils." Among the last words uttered by our Master as recorded by Mark he stated that when his gospel was preached as he taught it, "These signs shall follow them that believe; in my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

We would ask, Is it foolishness to take the Bible for our guide? Is it foolishness to have but one Supreme Infinite God? Is it foolishness to have but one Christ? Is it foolishness to acknowledge Jesus as the "Way-shower"? Is it foolishness "to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus"? Can it be classed foolishness to "love one another, and to be meek, merciful, just, and pure"? We believe any honest, unprejudiced, unbiased thinker would say, No. We believe Dr. Barnes would say No when he learns what Christian Science is. That this is the teaching of Christian Science may be seen by a perusal of the tenets of the denomination as found in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. In Luke we read "And Pilate, when he had called together the chief priests and the rulers and the people, said unto them, Ye have brought this man unto me, as one that perverteth the people: and, behold, I, having examined him before you, have found no fault in this man touching those things whereof ye accuse him: No, nor yet Herod: for I sent you to him; and, lo, nothing worthy of death is done unto him. I will therefore chastise him, and release him. . . . And they cried out all at once, saying, Away with this man, and release unto us Barabbas: Pilate, therefore, willing to release Jesus, spake again to them. But they cried, saying, Crucify him, crucify him. And he said unto them the third time, Why, what evil hath he done?"

To-day there is scarcely a city or hamlet in this country and in many foreign countries wherein may not be found living witnesses of what Christian Science is doing in healing the sick, comforting the sorrowing, and reforming the sinner, teaching them to trust God and to lead a purer life. Can this work be classed as foolishness? Go to the bedside of the sick that have been under the best medical treatment (and here we wish to state that we believe that the honest physician does all he can to relieve suffering), and how often we hear the patient cry "Is there not something to relieve me?" At the present time in more than one million instances this has been answered. Would it not be wise to heed Gamaliel's advice: "And now I say unto you, Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

LLOYD B. COATE.

In the *Springfield (O.) Daily Press*.

The Mission of Christian Science.

To the Editor of the *Boston Journal*.

Sir:—In the article entitled, "Hypnotism as it is Used in Medicine," published in your issue of the 9th inst., referring to Doctor Quackenbos's comments, it is stated: "The author takes occasion in his chapter on auto-suggestion to oppose the claims of Christian Science healers, while at the same time he admits the efficacy of the so-called science in many cases."

The opinion seems to be quite prevalent that Christian Science is simply a system of curing physical ailments,

while to the Christian Scientist this is the very smallest part of its mission. The exalted purpose of Christian Science is to make the world better morally and spiritually, to inculcate into the minds of its students higher ideals and the earnest desire to be better themselves, and to make others better—with the understanding that it is possible to so regenerate mankind as to abolish suffering and discord.

As an example of the good effects of Christian Science in the home, I have procured from the Rev. Mary Baker Eddy the following letter for publication. This letter is written by a thrifty business man of Chicago, and is only one of thousands in her possession.

Chicago, Ill., July 30, 1900.

My Dear Mrs. Eddy:—In May, 1895, I was led to read a copy of Science and Health to see whether or not I considered it a fit book for a sweet Christian girl, my daughter, then a miss of fifteen years, to read. I read first the chapter on "Prayer."

For upward of thirty-five years preceding, I had in a way endeavored to lead a Christian life, but after reading the chapter on "Prayer" in Science and Health, I saw myself as never before; this was one Sunday afternoon in May, 1895. Mrs. Hubbell and myself continued to read Science and Health from about five o'clock in the afternoon of that day until one o'clock Monday morning. The copy of Science and Health was then given to the daughter at breakfast, Monday morning, with the request that she and her brother, then a lad of about seven years, make that book and the Bible the guides of their lives. The following Sunday we attended what was then the Third Church of Christ, Scientist, in Kansas City, and by constantly endeavoring to follow your teachings, my wife says I am a better husband, my children say that I am a better father, and a great many people say I am a better citizen, and I know that I am a better man, and through the desire to "Seek first the Kingdom of God and His righteousness," solely because it is right to be right, my cup literally runneth over.

This morning I begin a new business in a new location, and I feel that in entering upon this work I first want, in a measure, to pour out to you something of the depth of gratitude with which my heart overflows. This is not done in any sense of hero worship, because I respect and revere your desire that your followers shall lose sight of your personality and that we shall glorify God only because your light has so shone into us that we see through and beyond the medium, and therefore discover the real power and gain a faint glimpse of eternity.

With loving gratitude, yours sincerely,

IRA C. HUBBELL,
1504 Fisher Building.

Rev. Mary Baker G. Eddy, Concord, N. H.

Boston, September 19, 1900.

ALFRED FARLOW.

Wanted.

A good florist, who is a Christian Scientist, and will present a written recommendation from a loyal student. Address G. F. W., care of Thomas W. Hatten, 68 Westland Ave., Boston, Mass.

Applications for Membership.

Applications for membership in the Mother Church to be presented at the semi-annual meeting of the First Members to be held Tuesday, November 6, 1900, must be in the hands of the Clerk of the Church on or before the 15th day of October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

My Reply.

BY MARY BAKER G. EDDY.

THE *Granite Monthly* published in New Hampshire, for which I requested Christian Scientists to subscribe one year, is not adapted to the issuance of Christian Science literature, and it was not my intention to make it an organ therefor. If you have paid a subscription fee for said magazine one year, that suffices. My purpose in calling on you for this subscription, was personal, not however in relation to myself, nor was it to aid our Cause—it concerned alone the interest of the proprietors.

Pleasant View, Concord, N. H., September 22, 1900.

Some Suggestions about Hypnotism.

THE Baptist *Watchman* for September 20, contains an editorial under the above title referring to a Baptist minister who has been giving exhibitions upon the subject of hypnotism, and asks, "What should be the attitude of reasonable men in regard to it?" The editor quotes from authorities and makes comment as follows:—

"Dr. John Duncan Quackenbos says:—

"The responsibility of the moments that follow the induction of hypnosis is awful beyond the power of language to depict. The operator stands in a closer relation to the mind in rapport than father and mother, teacher or preacher, husband or wife, can ever attain; and it becomes his Christian manhood to act only as the vicegerent of the Almighty in the use he makes of this great power and sacred opportunity. Would he dare to smutch a soul so completely at his mercy with a single untoward thought? Would he venture to trifle with what is holy in character?"

"These questions indicate the danger in the practice of hypnotism. . . . The facts, as we gather them, are that the "suggestion" of the operator tends to permanence, quite independently of its moral character.

"The power that hypnosis confers is too vast to be intrusted to any one in whom one does not absolutely believe; and we strongly incline to the opinion that, in spite of the good that may come from it in occasional instances, no sober-minded, well-balanced person will be apt to give this power to another human being. If the statements that are made in the books on this topic are to be believed, one should exercise greater caution in intrusting to another an absolute "power of attorney," to deal with his property as he saw fit, than in giving another the keys of his soul, to enter at will and work his pleasure.

"Ministers of the gospel, who happen to have hypnotic power, in our judgment will do well to refrain from exercising it. Those who are seeking to "uplift humanity" by this power are playing with edged tools. . . . There are danger signals all along that path."

Even among those who believe and practise hypnotism it is frequently admitted that the good one may seem to

receive in this way does not compensate him for the risk he runs in permitting himself to be governed, even for the time being, by the mentality of another.

The mortal mind (or the carnal mind as Paul calls it) takes away the rights of man. What man needs, more than all else, is the governing and sustaining power of divine Mind, but this he cannot have if he yields willing obedience to the suggestions of mortal mind. These should be guarded against rather than submitted to. Mortals, blinded by the thought that hypnotism may relieve suffering and seem to heal disease, are not ready to see that "the last state of that man is worse than the first." The most bitter experience may be necessary to open blind eyes, but when this awakening comes humanity will learn that divine Mind can and does bestow all good.

The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, clearly points out the evils of hypnotism and shows how they can be overcome through the understanding of divine Mind.

A Cordial Spirit.

The following extract from a letter recently received from a Christian Science friend, emphasizes the growing spirit of cordiality toward Christian Science entertained by many of our clerical friends.

The spirit thus manifested, the good fellowship thus exhibited, by the brother referred to, is deeply appreciated, and he may be sure it will return to him, not void, but laden with a full measure of reciprocal love.

"We had a call from a preacher who preaches every other Sunday at the country church (Free Will Baptist) and he listened with earnest attention to a little talk on Christian Science and expressed himself as highly interested. When he was invited to attend the 'Grove meeting' Sunday afternoon to listen to the Lesson-Sermon, he suggested that the Christian Science meeting be held at his church. We accepted the kind invitation, and also the invitation to be present at the morning service to hear him preach. We were on hand, and he kindly came down the aisle to our seat, and extended a loving invitation to occupy a seat in the pulpit. The latter was declined with thanks. He preached from the text: 'Seek ye first the kingdom of God and his righteousness' etc. It was an honest, sincere effort.

He was very much disappointed at the conduct of the church trustees, who refused to allow the church edifice to be used for a Christian Science meeting. But the minister announced from his pulpit that a meeting would be held in the grove at 3 P.M., and extended a cordial invitation for all to be present. There was quite a large turnout. The Lesson-Sermon was read, and a few remarks made on the subject of Christian Science. At the close the minister came forward, and was the first to thank us for the spiritual feast, and with tears welling up in his eyes invited us to visit his home and be his guests, and he would guarantee us the church there, and an audience every night."

Christian Fellowship.

THE following letter given by the Pilgrim Congregational Church of El Reno, Oklahoma, to Dr. and Mrs. J. M. Patterson, recommending them to the fellowship and care of First Church of Christ, Scientist, of that city, is an evidence of that truly Christian fellowship which should characterize the lives of all God's children in whatever part of His vineyard they may be working.

Differences of opinion on questions of theology are of little importance compared with the spirit of meekness and humility which enables one to work out his own salvation according to the light that is given him. It is evident that

the present limited understanding of Truth must be greatly increased before evil will be overcome, and it is also evident that one can gain more only as he makes an honest, conscientious use of what he has.

The world greatly needs that Christian charity which "thinketh no evil," and grants to another all the rights and privileges one claims for himself, "Till we *all* come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ."

The letter was as follows:—

The Pilgrim Congregational Church of El Reno, Okla.,
To the First Church of Christ, Scientist, of El Reno,
Okla.

Greeting:—This certifies that Dr. and Mrs. J. M. Patterson, members in good and regular standing of this church, are at their own request hereby dismissed and affectionately recommended to your fellowship and care, and, when received by you, their membership with this church will cease.

By vote of the church.

June 4, 1900.

JNO. C. DELANA, Clerk.

The Lectures.

At Duluth, Minn.

Judge Joseph R. Clarkson of Omaha, lectured at the Lyceum last evening (Thursday, September 13) on Christian Science. The theatre was filled and the audience was a very attentive and evidently a studious one, for the speaker was followed closely throughout the discourse. Judge Clarkson is a man who has won distinction at the bar of Omaha, having been a partner of Senator Thurston and associated in much important litigation. He is a member of the Board of Lectureship of the Christian Science Church. His voice is very distinct and his enunciation perfect so that not a word was lost. He talked for a considerable length of time and his lecture was thorough and comprehensive.

D. G. Cash introduced Judge Clarkson, saying:—

Ladies and Gentlemen:—No one can look far into the centuries past without being deeply impressed with the progress which man has made in subjugating the forces of nature and making them obedient to his will; and we usually indulge in a feeling of pride when we contemplate the especially rapid progress our race has made during the last half of the present century. We like to draw a contrast between the rude implements and weapons with which our remote ancestors carried on their war for supremacy over the forces of nature and the powerful machinery in use to-day; and with the delicate instruments by which we are enabled to transmit messages almost instantaneously from one end of the world to the other; carry on conversations in ordinary tone of voice with friends hundreds of miles away; store up the human voice in wax receptacles and reproduce it at will in future years; photograph running animals, flying birds, and projectiles fired from a gun while at full speed, and the still more delicate and ingenious instruments by means of which scientists carry on their work of investigating other worlds, and are amazed at the marvelous advance that has been made, the almost miraculous results already accomplished, and wonder at the possibilities of the future.

The lords of creation arrogate to themselves by far the greater part of the honor and glory which they deem are justly due to these signal triumphs over what are commonly termed the material forces of the world, but it remained for a modest, unassuming American woman, inspired by

the dawning advent of the sixth sense, first to formulate and publish to the world the doctrines of a new Science, which appeals more strongly to humanity than any material science, because it deals with more subtle forces and powers, and teaches that we can overcome here on earth those arch enemies of the human race, poverty, disease, and death. Christian Science wages war against these evils with weapons as far transcending in power the mightiest machinery in use to-day, as the most powerful battleship excels in power the first crude war canoe of the savage, as far surpassing in delicacy of adjustment the most sensitive instrument used by the skilful astronomer in prosecuting his researches among other worlds, as his instrument excels the first rude implements fashioned by man from wood or stone.

The foundation doctrine or Principle of this new Science is that "All is Mind," and the all-powerful weapon with which it encounters and overcomes the enemies of mankind is the realization of God's presence and power. Its doctrines have been gladly accepted by the most intelligent classes everywhere, and have spread with startling rapidity throughout this continent and beyond the seas to the uttermost bounds of civilization. Its foundation doctrine has already been accepted by some of the most noted leaders of the scientific world.

If the marvelous doctrines taught by Mrs. Eddy are true, then all the splendid achievements upon which man now plumes himself are dwarfed to insignificance, and it is not strange that she should number among her followers many able and distinguished men and women from every calling in life, and that they should with all earnestness and zeal seek to disseminate the glad tidings among their fellow-men, and that people everywhere should be as eager to hear as to teach. We have one of the distinguished teachers of the new Science here to-night who will address you on the subject of Christian Science.

I have the honor to introduce Judge Joseph Clarkson of Omaha, Neb.—*Duluth Evening Herald.*

At Devils Lake, N. D.

Edward A. Kimball lectured on Christian Science on the grounds of the Devils Lake Chautauqua Assembly, on Sunday, July 15, once in the afternoon and again in the evening.

Several months prior to the Chautauqua Assembly meeting, the branch church at Devils Lake had secured Mr. Kimball to deliver a lecture at the Auditorium, and Sunday, July 15, was named by the management. This day was advertised in all the literature and programmes of the Assembly that were sent out, and the result was a large and interested audience composed of people who had a desire to hear something of Christian Science.

Rev. Dr. May, D.D., conducting the platform exercises, introduced Mr. Kimball in a pleasing and generous manner.

In introducing Mr. Kimball the Reverend Doctor stated that he was not a believer in this faith, but he had read "Science and Health with Key to the Scriptures," and other works of Mrs. Eddy, and one in particular, "No and Yes," he was much interested in, and he was impressed by the high and lofty sentiments therein expressed. He had visited Mrs. Eddy at her home in Concord, N. H., and he paid high tribute to her.

Mr. Kimball replied eulogizing the Doctor for his generous spirit and evident fairness.

Mr. Kimball's remarks were listened to with interest throughout the lectures. It was estimated that the afternoon audience numbered about fifteen hundred and that in the evening about one thousand.

The daily Chautauqua edition of the *Devils Lake Inter-Ocean* gave a synopsis of the lecture six columns in length.

Correspondence.

Among the Churches.

Christian Science in St. Louis.

James A. Logwood, a leader in the Christian Science congregation of St. Louis, has written concerning the objects, and the accomplishments of the sect.

Mr. Logwood has written this as a defence of Christian Science in St. Louis and to dispel a misunderstanding which he feels exists in the city with regard to the aims and methods of the sect. He requests the *Post-Dispatch* to publish his statement, which follows:—

Since Christian Science, through its healing and regenerating work and its phenomenal growth in our midst, as well as throughout the entire land, has become the subject of much thought, pro and con, and since there has been a slight misunderstanding from some recent publications of the church movement in St. Louis, I beg to make the following statement for publication:—

On March 10, 1894, the First Church of Christ, Scientist, in St. Louis was organized with a membership of fifty. In April of the same year this church was duly incorporated under and pursuant to the laws of the State of Missouri.

In 1895 we erected and dedicated the present church building on Pine, near Twenty-eighth Street. The building, including furnishings and subsequent changes, cost about forty thousand dollars.

Since the purpose of a Christian Science Church is to heal the sick and reclaim the sinner, as well as to preach the Gospel, the results have become more or less known to the public, and our little band, which then did not nearly fill the church, has increased to such an extent that it has become necessary for us to enlarge our borders in order to accommodate our growing congregation.

A few months ago, at a meeting of our church members to consider the necessary expansion, it was agreed that an executive committee be appointed at once to purchase a suitable lot for a large central church, in a location available to the majority of our members, who are scattered over almost all parts of the city. A lot on Lindell Boulevard, west of Boyle, was finally purchased at a cost of seventeen thousand dollars. It is a most beautiful and attractive location. It is our purpose at an early date to consider plans for the erection of a large edifice on this new site. The new church will have a seating capacity of from twelve to fifteen hundred, and the probable cost, when completed, will be one hundred thousand dollars.

Our membership at present is about three hundred, while our congregation is about double this number, and even now tests the capacity of our present church.

The treasury of this church is supplied by voluntary contributions, and the funds for the building of the new church will be acquired in the same manner. The money necessary for this purpose has not yet been contributed or subscribed, but will be forthcoming at the proper time.

While none of the members of our church are what the world would call wealthy, they are people of liberal resources, and are always ready to give to a righteous cause, knowing that the capacity to give and to get is the same; that God is the only giver of every perfect and good gift, and He is the inexhaustible source of all good.

September 15, 1900.

JAMES A. LOGWOOD.

The growth of the Christian Science congregation in St. Louis has been almost as great as that of any other congregation in the great American cities, and the St. Louis church is to be one of the finest the sect has ever built. It will likely be ready within less than a year.

St. Louis Post-Dispatch.

From Creston, Ia.

First Church of Christ, Scientist, again opened their church to the public September 2, 1900, after one month's vacation, during which time the audience room had undergone a thorough renovation, having been elegantly papered and grained, new blinds, sash curtains, and the aisles nicely matted. At the opening service every seat was taken and more harmony and love was never expressed than at this time, showing the demonstration to have been complete. The hall looked unusually inviting with its profusion of flowers, ferns, and palms. Especially inviting is the southeast corner of the audience room, with its nice, easy chairs, library table, writing desk, and book case. This cosy corner is to be used as a reading room and to be opened to the public three afternoons each week, including all day Saturday. All the writings of Rev. Mary Baker G. Eddy, together with the periodicals issued by The Christian Science Publishing Society of Boston, Mass., will be on sale. We are centrally located, occupying the entire second floor of the east end of the Creston National Bank Building. Practitioners occupy the rooms to the right leading into the audience room. We feel that this demonstration is but the dawning of a brighter day. We have a building fund started, and hope to build our own church home in the near future.

MRS. AMELIA HURLBURT, *Clerk.*

Site Secured at Tacoma, Wash.

August 1, 1900, after the regular Wednesday evening meeting, a gentleman presented to the church the deed to a piece of property for the erection of First Church of Christ, Scientist. The lot fronts two streets, with an alley in the rear. It is opposite the city park, and its location could not be improved upon. The property was bought at a cost of nine hundred dollars.

The gentleman who presented the gift said he did not consider it a gift, but felt that he owed a debt to God for the healing of his wife seven years ago, and this was his way of paying the debt. We hope very soon to have a comfortable place of worship, where one will find a place of welcome.

The Wednesday evening and Sunday services following this demonstration were better attended than any service for many months.

Several hundred dollars were subscribed by Christian Scientists the evening the deed was presented.

A building committee has been appointed and the work of building is to commence at once. L. J. ENELL.

Columbus, O., Reading Rooms.

For years we had talked reading rooms, but not until our Leader's request came did the thought find expression in demonstration. The ease with which it was made surprised us all. Every need, financial and otherwise, was promptly and lovingly met. Abundant furnishings, chairs, tables, bookcases, rugs, etc., came without solicitation from a generous membership and the rooms delight all visitors by their bright and cheerful appearance. Even the Sunday School children contributed of their pennies about forty dollars for pictures of Mrs. Eddy, "A Little Child shall Lead Them," etc. While the Readers have a general supervision, about twenty-four faithful ladies have the rooms in charge, two from 9 A.M. till noon and two from noon to 5 P.M., each week day, and all enjoy this voluntary assignment. These rooms in the new, up-to-date Schultz Building, three blocks from the depot, serve as headquarters and rallying-point for Scientists and meet the great and growing demand to know more of Christian Science.—M. C. S.

From Our Contributors.

My Experience.

BY HERBERT G. HOAG.

ABOUT a year and a half before coming to Christian Science I joined a Congregational Church. Not with the feeling that I was a Christian, nor understanding clearly how to become one; but I had determined to try to lead a higher, purer life, and felt that joining the church would be a step in that direction, and trusted that being obedient to that thought, the next step in the right direction would be shown me.

My thought in regard to the relation between God and man at that time was something like this. I saw some among my friends and acquaintances who seemed to be earnest Christians, and appeared to be a great deal more peaceful, contented, and happy than I was. They seemed to be able to find something in religion that satisfied them while I could not, although I wanted to, and had made attempts at different times to do so. Then I wondered why it was that some persons so naturally turned to God and seemed to find happiness, while others (myself included) were unable to find God or happiness, although they were satisfied that they did not experience as much happiness in life as their religious friends. Then the thought came to me that if God was all-powerful, all the conditions and circumstances which seemed to exist must be as He wanted them. In other words, God had created some natures that turned naturally to Him, and others that turned away from Him; and these two opposite natures must have been just as God wanted them, inasmuch as He was all-powerful, for if anything was not as God wanted it, He had only to speak the word and it was changed. Therefore, whether a Christian or not, I must have been just as God wanted me. And it must be conceded that if God is the only Creator, and has all-power, then every thing, every condition, every circumstance, must be exactly as He wants it, for it is impossible to conceive of any power or influence being able to mar, retard, or obstruct the work of Omnipotence, Omnipresence, and Omniscience.

I had been told that all men were free moral agents to accept or reject God, but still it seemed as if God had discriminated in creating some natures that turned naturally to Him and others which could not find Him, although they wanted to. This did not seem consistent in a God who is Love, but I could not find the error and did not until I came to Christian Science.

After having joined the church the questions would come to me, "Are you really any better for having joined the church?" "Are you a Christian? Does God recognize you as a Christian?" I could not see that any change had come over me. I felt about as unsettled as before, and it troubled me considerably, as I abhorred the thought of being a church member and not a Christian.

After I had begun to work in Christian Science I remembered how these questions had troubled me, but had ceased to do so. I felt that I could answer them satisfactorily, and I began to look around to see what it was that had produced the change. I did not have to look far for the cause.

Christian Science teaches the necessity of watching our thoughts vigilantly in order that evil and error may be overcome while still in a formative or embryotic mental state, before it can be expressed in word or action, or even in a glance of the eye or an expression of the countenance. And as I commenced to work in this direction, watching my thoughts, casting out the evil and cultivating the good, I saw that the more I contemplated Good, Life, Truth, and Love, the more I reflected them; and the less I allowed myself to think of evil, the less it was manifested in me. Thus I saw that I was actually at work in God's vineyard,

and that was the reason those questions no longer troubled me.

Christian Science also corrected my erroneous thought in regard to God being the author both of the natures that turned towards Him and those that turned from Him, and that this must be according to His will, because He was the only Creator. Christian Science assured me that all power does belong to God, and that He made all things just as He wanted them. Also that God's works would not be as He wanted them if there were any possibility of their degenerating. Therefore He must have made them without spot or blemish which could cause them to degenerate or become discordant.

After this much had been established there remained the mystery of evil to be solved; its seeming presence, reality, and power; which must be impossible if God is the only Creator and all that He made is good.

Christian Science accounts for this mystery of evil in one way by calling attention to Jesus' words. Jesus said that the devil (evil personified) "was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it."

This emphatic denunciation of evil must be as strong Scriptural authority for the conclusion that God does not create evil, or even tolerate it or make use of it, as can be quoted in support of any other proposition or conclusion. For if God had created evil or had any use for it whatsoever, Jesus would not have condemned it. Note particularly that he said "there is no truth in it." What further witnesses do we need to testify that evil is not real?

But there is still further proof that evil is not real, and that is in Jesus' works, considered in connection with his words. He said, "Think not that I am come to destroy the law, or the prophets; I am not come to destroy, but to fulfil." Therefore in destroying sin and sickness he demonstrated two things: first, that evil is not real or he could not have destroyed it if he would, and would not if he could; for he came not to destroy but to fulfil God's law. Second, that he was fulfilling God's law in destroying sin and sickness at the same time and by the same method. And if these works were in accordance with God's law at that time, they are so still, for God is without variable-ness, or shadow of turning. Also the fact that sickness and sin are to-day being destroyed by understanding the relation between God and man as taught in Christian Science, proves that God's law has not changed, and that evil is not real or it could not be destroyed, for "what God doeth, it shall be forever; nothing can be put to it, nor anything taken from it." It also fulfils the prophecy of Jesus: "Ye shall know the truth, and the truth shall make you free."

When these mists of error were cleared away, I found that I, too, turned naturally to God, and am learning that "The Lord is my strength and song, and He is become my salvation."

Patience.

BY JOHN CLIFTON MERRILL.

ONE thing we all need to cultivate is patience. Patience is the result of faith, faith in Principle, in God; impatience is doubt. Victory always comes to him who is patient, constant, and persevering. It is comparatively easy to do a thing once, but to continue patiently, day after day, to perform the same tasks requires courage, strength of purpose, and heroism. Think of Homer and Milton, men unrecognized by the people of their own day, yet in spite of every obstacle they gave utterance to their highest convictions, and patiently continued in the path of duty; to-day their names are known and honored all over the world.

What shall we say of her who, with no one to aid, to

stand by her, alone with God, dared to give to the world the light of Christian Science. How patiently and lovingly she has ever sacrificed self that the world might know God, Love; "Who forgiveth all thine iniquities; who healeth all thy diseases; . . . who crowneth thee with lovingkindness and tender mercies." It is the duty, the privilege, of every one to follow humbly and faithfully in the pathway of Divine Science. Remembering the words of Paul, "Let us lay aside every weight, and the sin which doth so easily beset us, and let us run with patience the race that is set before us, looking unto Jesus the author and finisher of our faith." It is only by the patient performance of every task of love that we rise to the height where sin, sickness, and death are unknown, and Truth, Life, Love, and harmony are the ever-present realities.

Mrs. L. M. Childs in her short story, "Patient Continuance in Well-Doing," has brought out most beautifully and forcibly the lesson of patience. She tells us that a German, a musician, a stranger in this country, was one day passing by a church. Hearing the music he entered, but found the singing most discordant. His sensitive ear was pained by the inharmony. He was filled with the desire to hasten from the church and leave the discord behind, but knowing that this would appear rude, he decided to remain and endure the torture. He listened and soon distinguished amid the discord the clear, sweet voice of a woman singing in perfect tune, not in the least disturbed by the discord around her, apparently not even hearing it. She sang on; one after another caught the harmony, until at length all were singing in perfect tune.

Now to apply this story, so rich in its lessons. Like the German, Mary Baker G. Eddy found herself in a world of discord, surrounded by sin, disease, and death; she did not shut her eyes nor turn away, but listened, heard the sweet and gentle voice of the Master, and above the din of discord caught his message, "Peace, be still;" "I am the Resurrection and the Life." Then she, like the sweet singer in our story, hearing only the harmony of the Christ message, sang patiently and bravely on, alone in this world of seeming discord. Never did she yield to the temptation to sing louder than the world, in vain attempt to drown the voice of error which cannot be thus forced into harmony; never yielding to the temptation to stop singing when the discords of sense seemed so many and so real, but she has ever been loyal, brave, and true, until poor, suffering humanity has caught the harmony she so sweetly sings. How supremely happy we are that we are privileged to join in this song of "Peace on earth, good-will to men."

Patiently we strive to follow in the way which Jesus trod, the way that our Leader has pointed out anew; ever remembering her words of guidance, "Keep your minds so filled with Truth and Love that sin, disease, and death cannot enter them."

Christian Science at the North Dakota Chautauqua.

BY MARTHA SUTTON THOMPSON.

A GOOD initiatory work for Christian Science has been done at our Chautauqua grounds this summer. For several successive years we have made unsuccessful attempts to get a Christian Science lecture on the programme. This time we succeeded. Edward A. Kimball, C.S.D., was secured and the date fixed for Sunday, July 15.

This was indeed a gratifying accomplishment. But it did not stop here. It was soon proposed to establish Christian Science headquarters and reading room on the grounds. The matter was laid before a number of Christian Scientist churches and individuals, and these contributed sufficient funds for our purposes. The contributions came from North Dakota, Minnesota, and one society in Iowa.

A centrally located lot, overshadowed with trees, was purchased upon which a suitable tent was erected. Another purchase was pretty, light-colored furniture, consisting of couch, settees, rockers, other chairs, and table. A large amount of Christian Science literature was provided for reading and distribution.

The attractive and comfortable appearance of the place elicited many compliments, and the spirit of the work called in many visitors. The greater number registered, and about one hundred and fifty names were thus secured. It is purposed to build a suitable cottage on the lot next year. We desire to take this opportunity of again thanking those who so gladly assisted us in this step.

Our able speaker gave two talks—or rather divided his lecture—giving one part at 3 P.M. and the other at 8 P.M. We think fully two thousand people heard him speak. He expressed his pleasure at the intelligence and remarkable attention of the audience.

We are proud of our Chautauqua grounds. Here nature has been grandly generous in her bestowals. A large lake of clear mineral water, with more than fifty miles of shore-line and unexcelled bathing facilities, inspires the eye. The lake is dotted with several islands and is nearly surrounded by grand forest trees. The Chautauqua grounds occupy a slightly elevated situation on the north shore. The cooling breeze from the water is delightful, and the not to be accounted for absence of mosquitoes leaves the charm unmarred. On some days five or six thousand people visited the Assembly, so it would appear that not even the misinterpretation of the Indian name—Devils Lake—has acted as a restraint upon visitors. The cars from Devils Lake City run directly to the spot, and are kept busy during the entire session from June 29 to July 22. We look for a large attendance of our Christian Science friends and others at the next session. Here much good seed has been, and will be, sown.

Obedience.

BY FANNIE CARSTARPHEN BRADY.

THE word obedience is to me one of the most beautiful in the English language. In the allegory of Adam and Eve we find that through disobedience they lost Paradise, and coming on down through the ages we notice in the lives of the prophets and disciples that so long as they obeyed the first commandment—"Thou shalt have no other gods before me [Spirit];"—they were blessed by God, and prospered; but when, like Adam and Eve, they disobeyed and ate of the forbidden fruit, seeking wisdom through the material instead of the spiritual; and, like Solomon, seeking love through the material instead of the spiritual; disobeying the first commandment, "Thou shalt have no other gods before me [Spirit];" and like Judas betraying the Master for worldly wealth; seeking wealth through the material instead of the spiritual, they lost that which they so earnestly desired. When we consider the lives of Elijah, and Paul, and many others who obeyed God to the utmost of their understanding, we see what good they achieved and what a grand example they have left for us all.

Through obedience I was saved from a life of total blindness. When I went to Christian Science for healing I had no faith in it, but faithfully did everything I was told to do, although it seemed to me then impossible that what my healer requested me to do should result in any good to myself.

I earnestly urge upon all those who are seeking the physical healing through Christian Science, to be obedient, and although you may not now understand, you will not only receive the physical healing, but will reap a rich harvest of wisdom and love.

Testimonies.

Tobacco and Liquor Habits Destroyed.

With a grateful heart I acknowledge the multiplied blessings I have received through the teachings of Christian Science and the study of the text-book, "Science and Health with Key to the Scriptures." My wife's thought had been earlier directed to the Truth for a chronic affection of the eyes, and seeing the benefit she was deriving, although entirely uninterested myself in the work which was bringing out happiness where for years misery had reigned, I wished to help her with a copy of this text-book, which I accordingly procured. This, for me, proved to be "God's opportunity," for with what, from a human standpoint, might be called curiosity, but which I now recognize as the prompting of divine Love, I opened the book and glanced at its contents. From this moment my journey out of material belief into spiritual understanding commenced. Having tasted of the water of life I thirsted for more. The scales began to fall from my eyes, and I was learning that "Man is spiritual and not material" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 464). I then experienced a pleasure in the study of the Scriptures that I had never known before. Its precepts, illumined by the (to me) new thought revealed in our text-book, began to destroy the error of mortal sense almost before I realized it.

I had been a tobacco smoker for upwards of twenty years; nothing but the very strongest mixtures and brands seeming to satisfy this so-called taste. It was entirely destroyed within four weeks from the time I first saw Science and Health; and although two years have passed I have never had the slightest desire for tobacco in any form since. For even a longer period I had been addicted to the use of intoxicating drink and profane language, with social habits in organizations that kept me from home four or five nights in the week. These also have been destroyed through the application of the Truth taught in this remarkable book. My thought, actions, and aspirations have turned in a completely opposite direction. My home is harmonious, my business has lost its worry, and things that I once thought of the highest importance to my prosperity have now lost their force. My one desire is to "press toward the mark for the prize of the high calling of God in Christ Jesus," earnestly striving for that mind to be in me which was also in him.

I had been totally indifferent to any religious observances, but I now rejoice that I have membership in First Church of Christ, Scientist, in this city, and my name is enrolled among the members of The First Church of Christ, Scientist, in Boston, Mass.

For the light that I have thus far received; for my earnest desire for a clearer understanding of God (Good) as the only mind, and of my relationship to Him; for the certainty I have that perfection will eventually be reached if I am faithful,—for all these blessings I realize that I owe endless gratitude and love to the Discoverer and Founder of Christian Science, our Leader and Mother, whose exalted thought, holy life, and incessant toil fitted her to be the recipient of this revelation, and who, being led by divine Love, has given it to the world in such a form that "the wayfaring men, though fools, shall not err therein."—T. D. BLIGHT, New York, N. Y.

Evidences of the Power of Truth.

Sixteen years ago Christian Science was brought to my notice, and I received much help. Fifteen years ago I received class instruction from the Mother. Since then I have seen many beautiful demonstrations of the divine Power that heals.

Last October I was asked to treat a lady some miles

away during childbirth. I received a dispatch at 11 A.M., saying, pains began severely at 9 A.M. Later on I received word that at 11 A.M. nearly all pain ceased, and at 1.45 P.M. a fine son was born, and the demonstration was a beautiful one.

In February I was called to a child with scarlet fever. The schools here were being examined thoroughly by physicians. This child was examined on Wednesday and pronounced perfectly well. Thursday he did not seem quite like himself, and Friday morning I was sent for. I found him in high fever, etc. Saturday I reported the case to the Board of Health. They sent a doctor there on Monday whom I met. I had a pleasant talk with him and informed him the child was under Christian Science treatment. He examined the child according to the orders of the Board of Health and said, "Why, how can this be possible? You say the child was pronounced perfectly well by the examining doctor Wednesday, Friday you were called, and it is now Monday, and this child has passed through the different stages, only a mere trace of them to be seen, and is feeling well. I don't understand it!" I replied, "God's law is greater than material law in destroying errors, if we understand it." He said, "Truly, strange things are being done." The child was confined to the bed but one day, and ate anything he desired. There was a difference between Christian Science treatment and the practice of *materia medica*, when their daughter was confined to her room for seven weeks with the same disease.

One Sunday while out with my husband and our little boy, four children passed laughingly by us, and one turned around and said, "I am having a lovely time!" and there was the dear little girl who three years ago was healed of blood poisoning after the physician had said to the mother, "The child will have to be taken to the hospital and have both limbs amputated." My little boy looked up and said, "Oh, mamma!" I knew what was in his mind and I said, "Yes; how beautifully God healed that child, and to-day she has her feet and can run along with the other children;" and then my thought went out to God and our dear Leader in thankfulness for what has been and is being done for suffering humanity, and these words in Matthew 25, came forcibly to me: "Lord, when saw we thee an hungred, and fed thee? or thirsty, and gave thee drink? when saw we thee a stranger, and took thee in? or naked, and clothed thee? or when saw we thee sick, or in prison, and came unto thee? And the King shall answer and say unto them, Verily I say unto you, Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me."

RUTH A. BRIERLY, New Bedford, Mass.

Christian Science a Welcome Guest.

In 1887 Christian Science awakened me from a sickly, selfish cynic, to the realization that in this present world, there is something that I can work for with all my mind, soul, and strength.

When I heard for the first time that Mind was God, that we lived in Mind and were not bound to live after the flesh, to me the veil of the temple seemed rent, and as I stepped out to the street, and saw the people hurrying back and forth, looking for something—always hurrying, always looking—I thought, If I could only tell them how near God seemed, and what gladness the world reflected.

My ill health was forgotten and the promised land looked very near. I did not know at that time of the valley of humility, of the hills of pride and selfishness, or of the narrow path of patience and honest perseverance that leads through the undergrowth.

Because of my poor health the doctors had told my mother to let me have my way always; so when Christian Science came into our home it was made welcome, and

all the medicine, along with my aunt's opium box of twenty years' constant use, was discarded.

It was because of this aunt's condition, both mental and physical, that we were led to investigate Christian Science. In three weeks time her old physician came to ask if it were true that she had thrown away her drugs. He found her clothed and in her right mind, and bearing witness to God's Truth. The doctor said, "Well, I did not tell you to do it; I should have thought it would have killed you." That was thirteen years ago, and since then she has never thought of meeting error with anything but Truth. She is now in her eightieth year, and a wonder to all who knew her in the old condition.

Seven years ago circumstances brought us to West Pullman, a little town seventeen miles from the heart of Chicago. A more barren or unlikely place for Christian Science, it seemed to my homesick sense, could not have been found. I had forgotten that God had promised that the desert should blossom as the rose.

After a long time, it seemed to me, when the mortal sense of doing something had settled into patient waiting, the impressions of Truth came clear enough to be followed. When certain well-known invalids were healed, the general interest in Christian Science was awakened.

Now we are happy in our own Christian Science Society, and our services are well attended.

MRS. ELLA ENGWALL, West Pullman, Ill.

Christian Science is for All.

To the Editorial Department:—I enclose a letter received from a former seamstress of mine, now living as lady's maid with a friend.

SARAH T. WINSLOW.

Madam:—I have your letter which was forwarded to me, and for which I thank you most kindly. It seems a long time since we had one of those nice talks about Science which I have much enjoyed, and on looking back I feel I owe a great deal to you for your kind thought of me, which has helped me much through some of the dark days that are past.

We came to the country on Friday, and the air is refreshing after the heat of London. The only thing I miss here is the Sunday and week-day meetings. Lady A. and I read the lesson to-day—a beautiful subject, "Love." Only in Science can one fully understand the meaning of that little word, Love. It means everything to the Christian Scientist, for love is the fulfilling of the whole law.

I am rejoiced to hear about B. I should be so pleased to hear how it happened you found him out in the church. You see how the little seeds spring up when least expected. I remember once saying to you that Christian Science was only a religion for the drawing-room, for those who had money to spend and time to study, and I could not see how it could possibly benefit the poor and working classes, those whom the Christ came to save and to heal without money and without price; but I know to-day that Christian Science can be made practicable in every condition, and I wish Science and Health could be found in every poor working-man's home—the naked would be clothed, and the weary find rest.

It seems to me the harvest is plenteous, but the reapers are very few. Let us pray that the Lord of the harvest will send more laborers into his vineyard.

Sincerely yours,

E. H.

From a Young Convert to Christian Science.

Christian Science has made me a better man morally, physically, and spiritually. It always gives me much cause for rejoicing when I read the beautiful demonstrations in the *Journal* and *Sentinel*.

I desire to tell of one of many demonstrations I have had in overcoming error in my own family. Our little boy, three and a half years old, had a cough this spring which turned out to be the whooping cough. Every one that saw him said it would last two or three months; but, thanks to the power of Truth over error, it was healed in less than a week. He is a happy little Scientist, and takes a great interest in all things pertaining to Christian Science. He knows that God healed him, and several times he has tried to overcome error by realizing that he is God's perfect child.

The children's demonstrations are beautiful, it seems to me. They seem so full of implicit faith in the power of Good over evil.

I have been in Christian Science not quite a year, and I have found light instead of darkness. I find that Life is eternal, that God is All-in-all.

We have a church here which was organized last March, and by earnest, concentrated efforts each member is sowing the seed of Truth and Love. We have found many people asking for literature and making inquiries in regard to this new-old religion. My earnest desire is to help the sin-sick, heavy laden, imprisoned ones, and make them free, and show them that all is harmonious and eternal in His kingdom.—ARTHUR J. MASTERMAN, Ingersoll, Ont.

Good Work being done in Europe.

The following extract from a letter giving good news of work and demonstrations in Christian Science are published that others may enjoy them.

My dear Mrs. —:—My husband writes me of the work in Europe, and told of many beautiful demonstrations in Russia and Germany. He told of people who could read that book (Science and Health with Key to the Scriptures by Mary Baker G. Eddy) who could not read another word of English. I think he visited about all the churches over there, and says they all seem to be much alive spiritually.

It is impossible to obtain a copy of Science and Health in Europe without ordering ahead, because their orders are so far in advance of their supply.

I have heard of many beautiful demonstrations in South Bend, Ind., but haven't time to write them now. With best love for yourself and the church, I am

Yours in Truth and Love,

H.

We are daily in receipt of letters similar to the above, acknowledging the spiritual as well as the physical benefits derived from Christian Science, and speaking praise and gratitude for the *Sentinel* and *Journal*.

Yours sincerely in Truth,

A., Nashville, Tenn.

A Tribute to the "Little Book."

One of the prisoners at the jail in Concord, N. H., was healed of catarrh, heart disease, a cough of thirty years' standing, and of the tobacco habit. When he left there a few days since he went at once to Christian Science Hall and purchased a copy of Science and Health, saying, "I would rather go without food than go without that book."

I. C. TOMLINSON, Concord, N. H.

An essential part of culture is weeding. We have not only to develop ourselves; we have to extirpate from ourselves certain things that stand in our way.

DR. ALEX. MACLAREN.

Religious Items.

A writer in the *Christian Register* says: "We are ever disposed to measure ourselves by what is conspicuous and tells in our favor with others. Jesus teaches us to measure ourselves by what is childlike. All the efforts we may put forth to add to our religious stature does not imply growth, but partakes more of the nature of spiritual pride. One quaint old English writer declares that the Christian grows tall by stooping: the heaviest wheat is not found upon the most upright stalks, and so the growth of the divine life is not marked by imposing greatness."

The (Swedenborgian) *New-Church Messenger* says: "There are various degrees and qualities in the obedience of truth, and that government is best which in the most complete way causes truth to prevail in the world. The mere external maintenance of order by means of an efficiently organized police force, is not so perfect an expression of governmental maintenance of truth as that carrying out of order among the people accomplished by a hearty obedience of the laws of order by the people themselves from their own self-control and from their own self-imposed obedience."

The (Episcopalian) *Church Standard* quotes the following from an address of the Bishop of London before the World's Christian Endeavor convention: "This is the message that I would leave with you: 'If you take care of your temper, your energies will take care of themselves.' It is not by what we decide or violently assert, but by our temper in the small things of life, by our grace, humility, and self-sacrifice, that we shall turn the hearts of others to see shining through the Christian the earnest of a power which the world does not contain."

In an editorial article the (Baptist) *Standard* says: "The uncalculating servant of mankind shall have his reward. He that can bring himself to do good to those who have never done good to him shall be a son of the Most High because he has begun to learn the secret of the divine love, free, unmeasured, and unquenchable. Never despairing of the ungrateful or even of the deceitful, he seeks them out that he may do them good, and then it is that he begins to understand Jesus Christ."

In an editorial *The Christian Life*, organ of the Unitarian denomination in England, says: "Christianity alone contains elements of absolute universality because of its spirituality and progressive nature, and in each age of Christianity there continue to arise new demands for an advancing faith. The existence of so many parties in the Christian Church is proof of the desire of each to get nearer to truth in one or another respect."

The *Universalist Leader* asks: "Is your faith worth anything to you? Has it made you any better, any happier? Are you glad you believe as you do? When the test has come and you have found yourself sustained and blessed by the Gospel you profess, do you not feel that you are indebted for it? As you see others about you lost in doubt or struggling with an unhappy belief, do you not long to open your heart to them and make them glad?"

The Baptist *Examiner* says: "The true philosophy of life is crystallized in our Lord's saying, 'Be not anxious.' More people are killed by worry than by work. A 'calm and heavenly frame' of mind and heart is the best prophylactic against the mental breakdown to which so many in our day fall victims. It is difficult, sometimes, not to worry: but the remedy, unfailing and always at hand, is *trust in God*."

The New York (Methodist) *Christian Advocate* says: "In the New Testament it is said that love 'seeketh not her own.' Love does not clamor even for its own rights. Those

who fix their hearts on their own promotion, their own pleasure, their own way, can never attain the glory of a noble manhood. That goal lies in the opposite direction. Self-denial is the first step toward the kingdom of God."

The *Universalist Leader* says: "Jesus found error and sin in the world. The sin had its root largely in the error that was accepted as truth. There was darkness in men's souls. They were in spiritual thralldom. Their religious rites were cold formalities. Their doctrines had no inspiring influence. Jesus gave the world the truth and it began to revive."

The *Homiletic Review* says: "It makes all the difference many times between being a helpful personality whom men and women thank God for, and a demoralizing force that weakens the already tried and struggling pilgrims, whether through forbearance and reverent patience we keep sweet tempered and cheerful under the annoyances of life."

In its comments on the parable of the Good Samaritan, the New York (Methodist) *Christian Advocate* says: "It is a high duty as well as a privilege to cultivate our Lord's idea of neighborliness. Loving one's neighbor perfectly is an aid to the perfection of our love for the Father, and upon the perfection of that love our highest welfare depends."

The (Baptist) *Watchman* says: "The commandments of God are among the clearest revelations of His character. He aims to bring us into a fellowship with Him based on likeness to His own character. The ground of the commandment is not caprice, but His own nature. What He tells us to do, therefore, shows what He Himself is."

An old writer beautifully says: "All can give a smile." Who does not know the brightness which some faces bring whenever they appear! The smile of kindly recognition is conveyed by a glance, and none can tell how often the effort to be cheerful has helped a weaker brother to endure.

Christian Life.

"A convention is to be called at Syracuse next November of representatives of various denominations to consider possible plans looking to co-operation of religious bodies working in New York State," says the *Congregationalist*.

Knowledge is proud that he has learned so much:

Wisdom is humble that he knows no more.
WILLIAM COWPER.

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on New York or Boston. Individual checks cannot be received, as a charge is made by the Boston banks for their collection.

All orders for Journals, Sentinels, Quarters, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances

should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or vice versa.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science. Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

No. 6.—Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love Are Christian Scientists Cranks? Is Christian Science an opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution, may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each	\$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/2 x 6 1/2 inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	\$2.25

Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/2 x 6 1/2 inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid	\$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedication Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12 1/2 cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price \$1.00 per copy, \$9.00 per dozen.

Entered at the Boston, Mass. Post Office as second-class mail matter.

Items of Interest.

Political and Governmental Notes.

In Victor, Col., one of the mining towns in the Cripple Creek gold belt, a mob of ruffians broke up a Republican political meeting, stoning Governor Roosevelt, the principal speaker, and roughly handling his escort. The Republican candidate for Vice-President was not injured, and he was not so much troubled by the hostile demonstration as were the other members of the party. The incident was deplored by the leading Democrats and Governor Roosevelt generously condoned the affront.

Statistics have been compiled at the Census Bureau, based on the population of large cities which have been announced to the present time, which demonstrate that the 155 largest cities in the United States numerically increased in population from 1890 to 1900, almost exactly as they did between 1880 and 1890. These 155 cities increased their population 4,706,107 from 1880 to 1890, and 4,267,593 from 1890 to 1900, or just 78,154 less during the latter than in the former.

The United States government has given evidence of its purpose to leave the Chinese authorities free to re-establish a government, by ordering all the American troops to Manila except enough to form an adequate legation guard. Orders to this effect were cabled to General Chaffee September 25. About fifteen hundred men will be retained in China and about two thousand land troops and one thousand marines with extra stores, etc., will be sent to the Philippines.

Foreign News.

The partition of China was generally spoken of as being near at hand by the newspapers last week. The European powers seem to have no sympathy with the policy of the United States, which involved the withdrawal of all troops above the number required for a legation guard, and the opening of peace negotiations with Li Hung Chang and Prince Ching, who were appointed to represent China. Just after Germany sent the note to the powers suggesting as a condition precedent to negotiations for peace, that the Chinese government turn over the ringleaders of the Boxer uprising to the powers for punishment, the most active of these leaders were selected by the Empress Dowager for special honors. Prince Tuan was notoriously the most active anti-foreign agitator, and seemingly to show contempt for the German demand, the Empress Dowager caused Prince Tuan to be appointed grand secretary to the Emperor. It is thought that the United States will not take much further part in the Chinese dispute.

The Russian General Kryanovsky is endeavoring to carry out a novel idea in connection with the Thirty-Fourth Division of

Infantry, which is under his command. He has ordered that each company shall learn a separate war song, to be sung when making an attack, so that the general in command may know at a distance which company is attacking. For this purpose each battalion of the Thirty-Fourth Division will form a choir from among the men belonging to it, and to this choir will be attached some drummers, players on cymbals, and other musicians.

Lord Roberts has issued a proclamation announcing that the burghers who voluntarily surrender will not be sent out of the country, but will be detained in camps at Bloemfontein or Pretoria. In case of their having stock, selected representatives will be allowed to take charge of the cattle. The localities in which the herds will be kept will be designated by the commanding officers of the districts.

A Berlin dispatch of September 26, says: "It is semi-officially announced with reference to the meat inspection bill that the date when the law will be applied to domestic or foreign produce has not yet been fixed, except, as already known, that the prohibition of the import of sausages and tinned meats will be enforced October 1."

Great Britain has sent a note to the Dutch government, according to a dispatch from Amsterdam, which contains a warning that, if Mr. Kruger is allowed to carry bullion or state archives on board the Dutch warship which is to take him to Europe, it will be regarded as a breach of neutrality on the part of the Netherlands.

Telegrams from South Africa of September 24 announced that fifteen hundred Boers, including Commandant Peinner and thirteen leading officers who had crossed the border into Portuguese territory, surrendered on September 23 with their arms and ammunition, to the Portuguese authorities.

Advices from Yokohama of September 29, state that the Yamagata ministry has resigned and that Prince Ito will succeed to the premiership. It is stated that the change will not alter Japan's policy with regard to China, and partition of the Chinese Empire will be opposed.

In anticipation of an early cessation of military operations in South Africa, the British government has authorized the organization of a large force of mounted police for the Transvaal under the command of General Baden-Powell, the defender of Mafeking.

Industry and Commerce.

The anthracite coal miners' strike was extended last week to many mines which were not at first affected, and by the end of the week the shut-down was nearly complete. There were no riots last week. Late in the week there were persistent rumors that the operators had decided to yield to the extent of making an increase of ten per cent in wages. On Sunday, September 30, the truth of the rumor was shown by the appearance of notices in the vicinity of all the Philadelphia and Reading collieries announcing that an advance in wages of ten per cent would be made by that company, dating from October 1. Other companies, it is expected will follow with similar notices. The officers of the miners' union are not favorable to accepting the terms.

Sixty thousand iron and steel workers, who have been idle since June 30, when the mills shut down, will soon be at work again. At a conference between committees of the manufacturers and the Amalgamated Association of Iron and Steel Workers, held in Cincinnati September 23, the wage scale was agreed upon and signed. It holds good until July, 1901. This scale usually takes effect in July, but owing to the unusual fluctuations of the market, it had not been signed when the mills shut down, June 30, and the conditions have been unfavorable ever since June,

so the mills have been idle almost three months.

Alfred B. Shepperson, the cotton statistician, is quoted as saying: "After several years of depression, caused by overproduction of cotton, the consumption of the world has in the season just ended not only overtaken the production, but so trenched upon the reserves that the visible supply of all kinds is now equal to only about four weeks consumption of the mills of Europe and America. Cotton is again king. It would probably be safe to assume last season's consumption of American cotton as 11,000,000 to 11,200,000 bales."

Philadelphia press reports say: Cramp's shipbuilding yard is at the top-notch of activity. The largest number of men in the company's history, about eight thousand, are now employed. There are fourteen vessels at the yards—every slip, nine in all, is occupied, and five vessels are in the water. Those in slip are the Russian battleship Retszevan, the United States battleship Maine, two immense ocean greyhounds for the International Navigation Company, and five large ships for commercial companies.

An oil well has been opened in Lewis County, West Virginia, which flows at the rate of two hundred and fifty barrels an hour, or six thousand barrels a day. Only one thousand barrels a day can be handled by the pipe at present connected with the tanks at the well, so that five thousand barrels flow on the ground every twenty-four hours. This oil finds its way into a creek where it is being in part saved by means of a dam. Meanwhile the owners are making great efforts to increase their facilities.

Thomas N. Fordyce of Detroit, a well-known street railway constructor, is said to be arranging to instal a system of towing boats on the Miami and Erie canal by electricity. The proposition is to have the motor operate on rails laid on the tow path, supplying the electricity by means of overhead wires and trolleys, and to attach a string of canal boats to each motor by means of a strong cable, hauling them along like a train of cars.

The tunnel under the Cascade Mountains, which the Great Northern Railway Company has been boring, was completed last week. It is over two miles long and when tracks are laid and other incidentals finished, it will have cost \$5,000,000.

The New York Rapid Transit Commission has decided to build a street railway tunnel from City Hall in Manhattan under East River to City Hall in Brooklyn. The cost of the work is expected to be about \$6,000,000.

General News.

A recent newspaper article concerning the Great Lakes says: The five lakes with their connecting waterways have a water surface of ninety-five thousand square miles; the coast lines of the system enclose more than half the fresh water area of the globe: from Duluth on the west to Ogdensburg on the extreme east is 1,279 miles, and from the northernmost tip of Lake Superior to the south shore of Lake Michigan is 500 miles. Through this mid-continental waterway passes a commerce of greater magnitude than all the coastwise commerce of the States bordering on the Atlantic and the Gulf of Mexico.

A unique clock has been made in London for the Shah of Persia. Not only is the Teheran time shown, but the time in twelve other cities of the world. The centre dial, which is the largest, shows Teheran time, while the smaller dials show the times at Pekin, Washington, Yokohama, Bombay, Samarkand, Constantinople, Vienna, Rome, Berlin, Paris, St. Petersburg, and London.

Street cars were run on one street in Galveston, September 27, the first since the great storm. It is expected that the streets will be cleared by the end of October.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

The Wonder State of the West.

A Growing Commerce that Reaches Most of the World.

CALIFORNIA has recently celebrated the semi-centennial of her admission into the Sisterhood of States. The country was discovered by Cabrillo, a Portuguese navigator in the Spanish service, in 1542. Sir Francis Drake arrived later and called it New Albion. Two hundred years afterward the Franciscan fathers planted a mission at San Diego and for over seventy years Spanish power was supreme. In the forties of this century this power had its downfall, and in 1847 the Mexican forces were driven out of the country. A year later gold was discovered, and then began the great rush. In October, 1849, a constitution was framed by a convention and the same year ratified by the people. The state was admitted to the Union on September 9, 1850.

The celebration of this event was on the generous scale which is characteristic of the California people. A fund of \$50,000 was raised and there were great times all through the state, but mainly in San Francisco, where the Native Sons held splendid functions. Some of them arrived in special trains with their families and friends, and the "Native Sons' Special" from Los Angeles was loaded with flowers, fruits, wines, and hospitality, all of which added to the brilliancy and gayety of the week. To the great ball which was held last Tuesday more than twelve thousand persons were invited, and there were souvenir programmes which will be treasured for generations to come. Judge R. C. Rust, the Grand President of the Order of the Native Sons, was the conspicuous figure of the day. The celebration continued from Friday until the early hours of Wednesday morning. In addition to this, there were sports on land and sea—fleets of expensive yachts, contests for rich prizes, and gorgeous floats, one of which, representing the Mother Chapter of the Native Sons, was drawn by six white horses. For weeks to come this event will be commented upon in the press of the Pacific Coast, and gradually the greatness of it will be appreciated by the Eastern newspapers.

In observing a great event so splendidly California shows her leadership in modern enterprise. Every state has its special eminence, and there are many states which claim to be first. So they are in some totals and in certain directions; but it is not amiss to admit all these claims and then to say that California is the wonder state of the Union.

In the first place, California has a coast-line of more than seven hundred miles—a stretch of ocean front that would reach from Boston to Carolina. It has an average breadth of two hundred miles, which gives it an area of considerably over one hundred million acres, or about the combined extent of all New England, New York, and Pennsylvania. Within these borders there are various kinds of climate, marvelous diversities in soil and products, and conditions that excite interest and wonder. The census of this year shows that the state has increased rapidly in population; that it has taken higher rank in the value of agricultural crops;

that it is first in vine culture, and that it has made most astonishing progress in manufactures.

We of the East look upon California as a place where the people live upon the gold produced from its mines. The old impressions of the days of '49 remain. But in the wealth of the modern California gold plays a small part, although since it was discovered, in 1848, the state has yielded more than one and one third billions of it for the world. But in these modern days gold has to take a back seat. It is true that the state furnishes about twelve million dollars worth of it a year, but even hay exceeds it by ten million dollars, and agriculture in general pays nearly five dollars where it pays one. When we come to manufactures, we find that gold is almost a bagatelle compared to their figures, and it was fitting that in the semi-centennial of the state one of the features of the week should have been the launching of the battleship Wyoming from the same yards that built the Oregon and the Olympia.

The visitors who crowded the San Francisco hotels were told that the harbor—which is one of the most beautiful in the world—was already congested by its commerce. Over a hundred ships a week leave or arrive at San Francisco. The other day there was launched in Philadelphia a 9,000-ton ship for plying between San Francisco and Australia and the other Eastern ports. We have before us the latest commercial paper of San Francisco and it gives a list of exports on ships that sailed during the week. It contains over one hundred and fifty items, naming almost every article, from lead to live stock, and with rather large figures of the various forms of alcoholic drinks. To China, for instance, thirty-six different kinds of goods were exported, including beans, flour, beer, groceries, lard, wine, sauerkraut, and pianos, while to Japan were sent agricultural implements, canned goods, flour, printing materials, paper, and whiskey. In addition to these countries, goods were shipped to the following places: Singapore, Bombay, Sourabaya, Manila (the invoice included five typewriters), Calcutta, Rangoon, Bangkok, Corea, Vladivostok, Samarang, Sydney, Callao, and numerous other unfamiliar or distant places, including South American ports. In passing, it is interesting to note that to nearly all these places American canned goods and American liquors formed a large portion of the cargoes. This does not give a complete idea of the great commerce of the Pacific Coast. There are large lumber fleets. Some of the biggest sailing vessels of the world ply between San Francisco and other ports. The steamships are enormous carriers, and still larger ones are being built. Only the other day wheat was shipped to South America, and during one month of this summer nearly one hundred thousand barrels of flour were sent to Japan, Asia, and the Philippines. Taking all the figures together, we simply begin to realize not only the greatness, but the increasing greatness, of the Pacific slope.

Within the half century the value of California farms has increased nearly a billion dollars. Between 1880 and 1890 alone the percentage of increase was one hundred and sixty-

six per cent. Since then it has continued. All the gold fields, all the silver mines, and all the rest of the wealth put together do not equal the riches of the farming lands.

And yet, great as this may seem, it is only the beginning of a development that may add another billion within the space of a generation. In 1897 and 1898 there was a great drought in California. According to the President of the Business Association of San Francisco, the loss which it entailed was at least forty million dollars. "At the same time," he said, "there went to waste in this state sufficient water to irrigate every acre of this vast commonwealth."

Here we come to the wonderful story of irrigation in California. Already thirty million dollars has been expended in saving the water and carrying it to the arid areas, in order to force them into fertility. The results have been extraordinary. In Southern California, where deserts formerly rested beneath the sun and resisted all the efforts of man, are fragrant groves of oranges and other citrus fruits, with some of the most beautiful homes in any part of the world. It has all been brought about by irrigation, giving to the soil the moisture that it needed.

An instance of this is found at Riverside, and we quote from a recent volume by Mr. William E. Smythe, who was one of the officers of the National Irrigation Congress, and who, in writing upon "The Conquest of Arid America," cites this instance: "In the experience of Riverside we may see the commercial romance of irrigation in its most striking form. An original sheep pasture assessed at seventy-five cents an acre sold readily at twenty-five dollars an acre when irrigation facilities had been supplied. While this represented a handsome profit to the original investors, it was extremely moderate compared to the returns which the second purchaser realized. A few years later the improved lands sold for prices ranging from three hundred to five hundred dollars per acre. The improved orange orchards which had been evolved from the sheep pasture were valued and actually sold at from one to two thousand dollars per acre. There have been years when the best of them earned a profit of fifty per cent on the higher figure."

It need only be added that from these lands, which were formerly arid, four thousand carloads of oranges are shipped every year, realizing for their growers a million and a half dollars.

This is the evolution or the revolution which has been going on and which is going on in the great stretches of Lower California. Not in the whole world are there such records of change and growth, and it is to be doubted if anywhere on earth better, brighter, or more lovable people could be found, for, with all their increase in material things, they have maintained the graces of the best social advancement.

It stands to reason that a people who have shown such wonderful progress and such high intelligence in material things should not lag behind in education. Of all the Native Sons who took part in the great celebration this week, every one could read and write, and most of them had a college education. In its higher facilities California is equal to the best. It is one of the states in which the school buildings are prominent for their size and their excellence, and over each one of them the Stars and Stripes are hoisted every school day.

Nearly all the children attend school. Outside of the foreign population there is practically no illiteracy in the state. So well has the system been perfected that the student ascends on easy steps to university life; and when he reaches that stage of his career he has two of the very best institutions in the world to select from—either the University of California, which has come into recent affluence through the munificence of Mrs. Hearst, or the Leland

Stanford Jr. University, which, through the generosity of another California woman, Mrs. Stanford, is the richest educational institution in the world.

The Stanford University has twelve hundred students, and the University of California has over twenty-five hundred, and in each case the number is increasing. Indeed, to such a high standard have they been brought that both of them have students from the far East, while in completeness of their buildings and the ability of their faculties they stand equal to the best in the United States.

In addition to all this are numerous excellent schools, including thirteen other colleges, a school for engineering, four theological schools, three schools of law, one of medicine, a scientific institution, and ten excellent normal schools and departments.

Naturally, where the women have been so generous toward education, women have secured larger rights in educational advantages, and in no state are the privileges so equal as in California. There ability is the test, without regard to sex, and thus we have it that the modern California woman is one of the best products of the century, one of the noblest ideals in a country which has produced the best of the womankind of the world.

In the same book from which we have quoted, Mr. Smythe says that, while California has a population of only about a million and a quarter, it has a territory nearly as large as that of France, and he adds: "It is inferior to France neither in climate, soil, natural resources, nor sea-coast, and its capacity for sustaining a dense population is fully as great as that of the European republic. The latter supports more than thirty-eight millions."

In these tremendous possibilities is to be seen the future of California more clearly than any language could express.

Already she has practically everything for the support of a great empire, and she is certainly adding the fruits, the flowers, and the cereals of every part of the world. For instance, as this is being read, the first crop of Smyrna figs ever grown on the Western Hemisphere is ripening in California.

In the recent census race San Francisco boasted that it was the only city that underestimated its population. In ten years it gained nearly forty-four thousand, and never was its growth so rapid and so substantial as at present. The exciting events in the far East, the increase of American interests in the Pacific, and all the demands of the new trade magnify the importance of California's largest seaport. Great as the mining interests and the agricultural possessions of the state are, its commerce is sure to become a larger factor in the trade of the world, and it will be remembered in the future that, of all countries and states on earth, California was first to establish a College of Commerce, which is now in successful operation in the University of California.—*The Saturday Evening Post*.

Rest.

Rest is not quitting
The busy career;
Rest is the fitting
Of self to one's sphere.

'Tis the brook's motion,
Clear, without strife,
Fleeing to ocean,
After this life.

'Tis loving and serving
The highest and best;
'Tis onward, unswerving,
And this is true rest.

GOETHE.

Selected Articles.

Some Corrections.

Editor *Morning Post*.

Sir.—In an article published recently in one of the Toronto papers, the writer thereof proposes to give a few facts regarding Christian Science and its text-book, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, and states that "he trusts the honest dupes of this gross delusion will be more easily reached by argument than by abuse."

Who are the honest dupes referred to? No doubt they are those who have had some experience in Christian Science by having studied and practised it; or have been healed of some disease through treatment by a Christian Scientist.

Now if you select one hundred people from these two classes (they are not hard to find if you want them), and ask them if they have been duped by a gross delusion, or if they have been blessed and raised to better health and morals through Christian Science—if the one hundred have been of average honesty and faithfulness in their efforts to obtain the fruition of their hopes through what Christian Science promises and provides, they will be found of one mind in declaring that it has been life and joy to them; that it has brought light in the darkest hour, hope and courage in the depths of despair; strength in their weakness; health, peace, and comfort, to the exclusion of sickness, discord, and sorrow. Ask if, since they have studied Science and Health, they do not believe more fervently in the truth of the Bible, and love it better than formerly. Ask if Christian Science "denies every truth in the Bible," as has been charged, or if it corroborates the truth of the Scriptures from Genesis to Revelation. Do not be surprised if the one hundred shall with one voice declare that Christian Science causes them to love God more, brings to them a better understanding of Him as their present help in every hour of need, makes all that is good and pure and true dearer and more intimately associated with their daily lives; causing them to be better neighbors and citizens, better men and women; giving higher ideals of life and of present and future happiness through its clear and spiritual interpretation of the Bible.

Our friend has stated that "professing to take the Scriptures for a text-book, Mrs. Eddy wrests them to the destruction of common sense." The fallacy of this charge can be shown thus: Let any one select a text or number of texts from Scripture, any of the promises of God to His children, whether the words of Jesus or of the prophets and apostles; a Christian Scientist will take these promises literally, and while affirming their absolute truth and their adaptability to meet the present needs of humanity, he will, through his understanding of the spiritual and scientific meaning of the word of Truth as gained from the study of "Science and Health with Key to the Scriptures," heal a severe case of sickness, and thus prove to the satisfaction of the sufferer that the promises of God are true and efficacious, as explained in Christian Science. Surely this is not "wresting the Scriptures."

The usual method of those who have made attempts to overthrow the Bible has been by the selection of various passages, detaching them from their context, and then trying to confuse their meaning and make them appear to be "a medley of contradictions, absurdities, and incongruities," the epithet our critic applies to Science and Health. He further says no man living can understand it. True there is much more to learn in Christian Science than can be gained in one perusal of its text-book, however sincere the enquirer may be in his desire for Truth. To imbibe the

Scientific understanding of Christianity, one must begin aright, not from mere curiosity.

Humility is the first requisite to those who are seeking this understanding. Then follows a gradual life work. One must not only read, but continue in the study and faithful practice of the rules of Christian Science, in order to advance in the knowledge of its all-comprehensive Truth, which includes a final and full salvation from evil. Even the great Master, Christ Jesus, found it a stupendous task to instill his doctrines and principles into the minds of men. What would be thought of a student of mathematics who would take the text-book of geometry, read a rule here and a theorem there, and then, without having solved its first proposition, declare Euclid to be a farce and that "no living man can understand it"?

It is said that "Christian Science is neither Christian nor Scientific." But my friend will admit that it is Christian to do as Christ commanded. Christian Science teaches how to do this, carrying into effect the words of the Master, through living the life he exemplified. Inasmuch as this teaching is based on Truth, it belongs to Science. Christian Science, therefore, to those who understand in some degree how to apply its practical truths for their own benefit and the well-being of others, is both Christian and Scientific.

Does Christian Science teach that "the world has no existence"? No, not if you mean God's creation. Christian Science maintains this doctrine of the Bible, that there is but one Creator,—God, and God created all good; also that all God's creation is real and eternal; and therefore if there is or can be something beside God's creation, that something must be both temporal and unreal. But if the objector says there is something besides God's creation, or if it is held that what God created and pronounced "very good" has changed to evil, that doctrine does not harmonize with the teaching of one God, one Creator; nor does it cherish an exalted conception of the infinite perfection and holiness of the God of the Bible as revealed by our Saviour. Christian Science is not pantheistic. Our God is All-in-all, but matter holds no place in His kingdom. If one believes matter, which is temporal and vanishing, to be as real and substantial as Spirit, which is eternal and unchangeable; believes sin which is punishable by being cast into a bottomless pit, to be as real and eternal as holiness which inherits the kingdom of heaven forever; and believes that sickness and death maintain as inevitable a place in God's family as health and life; then to attempt a defence of that position would be to array mortal man against the startling declaration of St. Paul, "If a man think himself to be something when he is nothing, he deceiveth himself."

The objection is raised that "Christian Science denies the existence of sin, sickness, and death." It is quite clear, as already shown, that these are not of God. Christian Science demands that all evil must be overcome with Good; and as a consequence disease is healed, health preserved, and longevity increased. The Christian's reliance upon God is a panacea, when the divine nature is properly understood. It is a fair inference that when sin is destroyed there will be little reality left in that which produces death.

With regard to the charge that "Science and Health declares Christ never lived in the flesh and consequently never died for men," the Bible expressly states that "as in Adam all die, even so in Christ shall all be made alive." Science and Health declares that Christ Jesus did life's work aright. To accomplish this work Jesus gave his life for mankind; yet the Christ lived eternally. He said, "Before Abraham was, I am." Christ Jesus is our great exemplar. We must do the works he commanded and follow in his footsteps. Thus he will be to us "the Way, the Truth, and the Life." His life and character will mould and transform our lives till we "awake in His likeness."

An erroneous conception attributes the healing work of Christian Science to hypnotism. This is on a par with the accusation of old that Jesus cast out devils through the prince of devils, bringing forth the stern rebuke of the Master, "If I by Beelzebub cast out devils, by whom do your children cast them out?" Hypnotism is bondage, not freedom. It is a belief that one human will can hold sway and influence over another for good or evil. Christian Science, on the contrary, demonstrates only the good and healing influence of the divine Mind, and thus brings into human experience the God-given freedom, which is the true heritage of the sons and daughters of the divine Parent of all.

Another wrong statement is this: "Mrs. Eddy may be sincere, but she has method in her madness, her disciples must buy and use her books." Christian Science has stood the test of a third of a century and has not been found wanting in its application to the healing of hundreds of thousands of cases of maladies, including all the most severe types, many of which have been deemed incurable by material systems of medicine. Any one fairly informed in the history of the Christian Science movement, and who has witnessed something of the vast amount of good it has accomplished through the unwearied and self-denying labors of the author of Science and Health, would not conclude from the fact that her disciples must buy and use her books, that this is because of an inordinate desire for the wealth of this world. That the reverse is true, is continually being attested by thousands of hearts in touching tones of tender gratitude for the good they have received through Christian Science; such benefits being to them of inestimable value compared with the price of the text-book and other instructions in the glorious truth of Christian Science.

Our friend admits the influence Christian Science has had on many lives, and the cures accomplished, but he believes "it is built on the power of suggestion," and he calls it "superstition" and "hoodooism." Now it is clear to the Christian Scientist, and should be so to every reasonable, unprejudiced thinker, that the good results from the practice of a religion which attributes all good influences to one God, one Supreme Being, cannot have any relation to hoodooism or superstition, nor is it based on the power of suggestion, or the influence of the human mind over matter.

Our critic concludes with the advice to others to read Science and Health. That is well, and if the honest searcher for Truth will study and practise what is written therein his understanding of the Scriptures will be enlivened, and the Truth will be to him as "a well of water, springing up into everlasting life." W. SPAULDING.

Christian Science Defended.

To the Editor of the Sun:—Will you kindly grant me space in your columns to correct some errors in the lectures on Christian Science, recently delivered in your city, by Rev. O. H. Tracy. The facts in regard to the origin and growth of this movement, as stated by Mr. Tracy, are substantially correct, but his comments show a lack of knowledge in regard to its teachings and results.

It is true, that perhaps a large majority of its adherents have first been attracted to Christian Science, through relief from physical ills, but far more stress is placed by its teachers on the spiritual than on the physical results. As regards the verification of the cures claimed for the system, hardly a city or town of any size in this country is without living witnesses to their truth. Every issue of the weekly or monthly publications of the Christian Scientists contains many voluntary testimonials of the healing power of Truth, which may be readily investigated by any one.

These testimonials will be found to cover all diseases known to the medical profession.

The writer knows personally several people who have been healed through Christian Science, after physicians had declared their cases hopeless.

But the Christian Scientist would not question the right and privilege of others to select for themselves the system of healing or theology which seems to them to be right. They ask only that they also may be allowed to worship God according to their own convictions.

As to the charge that Christian Science is a system of mind cure. Christian Science is based on the teachings of Christ, and recognizes God as the only power, and man as made in God's image and likeness. It does not deny the seeming existence of evil, but does deny its reality as opposed to an omnipotent God. If God is omnipresent and omnipotent, and evil is real, then evil must be a part of His creation. This would be an impossibility if all He created was good.

Let us quote from the Tenets of the Christian Science Church, which are subscribed to by all who unite with that church:—

"We solemnly promise to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus, to love one another, and to be meek, merciful, just, and *pure*" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 493).

Is this pledge, if lived up to, a menace to the public welfare?

Christian Scientists are law-abiding citizens. They are, as a class, of at least average intelligence, and have not adopted their views without careful investigation of the claims and promises of this system. Is it wise to dismiss as blasphemous and un-Christian a movement which undeniably has a large and increasing following among intelligent people?

It is hard to understand the opposition manifested by many toward this new, yet old, religion. Can we not find a parallel case in the reception given Jesus during his earthly mission? True, as Mr. Tracy says, "the miracles of Jesus were open and daily verified," but the verdict of many of that day was that they were the works of the devil.

Christian Science is as far removed from hypnotism as light from darkness. It does not depend upon the influence of one mortal mind over another, but points to God as the only power, and leads man to depend on this power as a "very present help in trouble."

Christian Science must stand or fall on its merits, and if, as its followers firmly believe, it is founded upon the rock, attacks from the pulpit or press will only serve to establish it more firmly.

FRANK F. HARRIS.

In the *Lewiston (Me.) Daily Sun*.

A Serious Accident.

MR. GEORGE T. WILLIAMSON met with an accident on Saturday afternoon that threatened for the moment to result seriously. He was coming down Main Street hill at a fair rate of speed, bearing on his wheel a heavy pump. He wanted to turn into Mill Street, but several wagons were in his way. He turned around the fountain and attempted to get by on that side. Unfortunately, Charles Van Voorhis came along with a horse and wagon, and Williamson, unable to stop, ran into the hydrant in order to avoid Van Voorhis. Williamson was knocked insensible and carried into Elbert Knapp's store, close by. He came to in a few minutes and, declining all offers of assistance, rode home, his eye being closed up and face otherwise injured. He relied on Christian Science treatment alone, and on Monday was able to point to this treatment with some pride, for he was again attending to his work.

Poughkeepsie (N. Y.) Semi-Weekly Eagle.

A Story of the Siege.

TIEN-TSIN, August 27, via Shanghai, September 11.—(Special.)—Mrs. M. S. Woodward, whose husband is a Chicago fire insurance man, gives thrilling details of the siege of the legations.

"Until now I had never known anything of sorrow or death," she said. "To see how our brave boys behaved impressed me so that I can never forget their gallantry, pluck, and humanity. The American troops were so young, too, or at least so they appeared to me. I worked in the hospital. It always brought tears to my eyes to see them lying together like brothers, Russians, Germans, Americans, Austrians, French, and Italians. Mrs. Conger and Lady MacDonald gave up their fine linen embroideries, presents from the king of Corea, and their damask table cloths, and just stripped their trunks for materials for bandages, pajamas, and sheets for the hospital. We should never have come through it alive had it not been for Gamewell, the American missionary, who took hold of things and made marvelous fortifications to resist the bloodthirsty hordes outside. The Chinese Christians did all the hard manual labor and bravely assisted the Europeans and Americans. We lived on horse meat which we found enjoyable, and also got down to the third grade of rice. Minister Conger was always cheerful. He kept up our spirits with wonderful success. Six others and myself slept in a small room in the British legation after we had to abandon the American legation on account of the shells. When an American soldier was buried I stood by and saw the Russians put earth under his arms and head to make him sleep more comfortably, for they were brothers, they said. Mrs. Conger was our fairy godmother and so we called her. She always had some one thing more to give away to the needy. She has absolutely nothing left herself now for the winter if she stays in Pekin. The women doctors and nurses slaved day and night in the hospital. There were Mrs. Martin, Jerry, McKaye, Gloss, Leonard, and Sisters Lambert and Jessica. We forgot for a time our anxiety for our dear ones in watching the heroic and unselfish service of all for the mutual good, irrespective of nationality or creed. The bravery of the soldiers who held the wall and saved us was a lesson and a marvel."

Des Moines (Ia.) Daily News.

The Regeneration of Spain.

ONE effect of the Spanish-American war of 1898 has been to open the eyes of Spain to the necessity of building herself up—of seeking to regain some of her old commercial prestige. She seems to retain little animosity against the United States. The Spanish Consul-General at New York was recently quoted as saying: "We are content to do without our colonies, and I think that perhaps we are better off without them. Porto Rico and the Philippines were a great expense to us—not only an expense of blood, but of money. Cuba drew more on our blood. Now we have the Kingdom alone, and we shall be able to make it rich and powerful."

Commerce between Spain and the United States is now greater than at any time since 1884. The Spanish steamship line, which now runs two steamers a month direct from New York to Spanish ports, is unable to carry all the exports, and will, it is reported, soon put on an additional steamer. The United States is also increasing the imports from Spain.

Considerable capital seems to be going into Spain from France, Germany, and England. In Spanish cities industries are growing. Factories are being built, banks are increasing their capitalization, commerce is extending. Signs of such growth, following so closely on the disastrous war of 1898, speak well for the recuperative power of Spain.—*The Great Round World.*

Some Washington Clocks.

There are six hundred clocks in the Treasury Department and a man named Fleming is paid forty-five dollars a month for winding them and keeping them in repair. This duty is let annually to the lowest bidder and the cost has been reduced from seventy-five dollars to forty-five a month by rivalry between Mr. Fleming and another clockmaker who secured the job for two or three years through political influence during the last Cleveland administration.

Mr. Fleming had looked after the clocks in the Treasury at a salary of seventy-five dollars a month as long as anybody could remember, until he considered that privilege a vested right, and when it was taken away from him by Secretary Carlisle he was very uneasy and finally underbid his rival and offered to do it for sixty dollars a month. The contract was given him and the next year the other man underbid him and got the job for fifty dollars a month. Next time Fleming came in with an offer of forty-five dollars a month, which was really lower than anybody could afford to make, because it requires nearly all his time to perform the duties, particularly as many of the clocks are getting old and constantly need repairs. In the other departments the messengers of the different bureaus look after the clocks, except the large ones that are connected by wire with the Naval Observatory and accurately mark the sun time.

The clocks at the White House are looked after by one of the local jewelry merchants, who sends a man every week to wind them and see that they are in order. It is a curious fact that only one of the twenty-five or thirty clocks in the White House is of American manufacture, and that is a big gilt affair which stands on the mantel in the Green Room and was purchased while James Monroe was President.

The most interesting clock in the White House is in the Blue Parlor. It was made of alabaster and French gilt bronze for Napoleon Bonaparte and was presented to General Washington by Marquis de Lafayette. It still keeps excellent time and runs for a month without winding.

In Mrs. McKinley's sitting-room is a French clock which has been running without repair for over thirty-five years. It was purchased during the Lincoln Administration.

We have no famous clocks in the United States like old "Tom" in the tower of the British House of Parliament or that in the spire of the Cathedral at Strasburg or the one in St. Petersburg, which is the most wonderful in the world. It has ninety-five faces and indicates the time of day at thirty different spots on the earth's surface besides the movements of the earth and moon, the signs of the zodiac, the location of the principal planets, and the date according to the Gregorian, Greek, Moslem, and Hebrew calendars.

At Moscow there is a clock made for the Empress of Russia in 1724, upon the reverse of which is a representation of the Holy Sepulchre. At a certain hour of the day an angel appears, rolls away the stone, an image of the Saviour steps out, and a music box plays the Easter hymns of the Russian Church.—*Chicago Record.*

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Christian Science Lecture.

The semi-annual lecture of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will be given by Judge Joseph R. Clarkson, C.S.B., in Tremont Temple, on Tuesday, October 9, 1900, at 8 o'clock P.M.

Seats free. All are welcome.

An Unusual Prescription.

IN a recent issue of the *Sentinel* we republished from the *Midland* an account of a lady who went to a famous New York physician for medical advice and treatment. After giving the doctor a list of her symptoms and answering his questions, she was told that she needed to read her Bible more. When she demurred the doctor told her, kindly but firmly, to go home and read her Bible an hour each day for a month and then come to him again.

She was not a little surprised at this unexpected advice from her physician, but finally concluded that as the prescription was not an expensive one she might at least give it a trial. At the end of the month she returned to the doctor's office and declared that she felt like a different person and needed no other medicine.

When asked how he knew that was what she needed the doctor replied that if he were to omit his daily reading of the Bible he would lose his greatest source of strength and skill. He said that he never went to an operation or attended a distressing case without reading his Bible, and then he added: "Your case called not for medicine, but for sources of peace and strength outside your own mind, and I showed you where to find them unfailingly. I gave you my own prescription and I knew it would cure."

He said there were many cases in his practice where the prescription would work wonders, but only a few were willing to try it.

The prescription was certainly a most unusual one for a doctor of medicine to give, and what may seem to be another remarkable thing about it is that it was one the doctor had freely administered in his own case. Because he had learned from experience he knew whereof he spake.

Even though the one who gave it relied upon material means and methods in his practice, yet he felt the need of looking to a higher source for help. He had not reached the place where he could dispense with material remedies, but he realized that these alone could not suffice.

While it may seem that his faith was divided, yet had he lived to continue his practice he would, no doubt, have relied less and less upon the material and more upon the spiritual until he would have given up the material altogether and relied entirely upon the spiritual. Such faith in the power of God's word cannot decrease but it must increase until it is seen that God is All-in-all.

This incident illustrates the yearning of human thought to rise above its limitations and find help outside itself. Its own means and methods fail in the time of greatest need and then is most keenly felt the necessity there is for looking beyond mortal and material things for that

which can bring health and happiness. Mortals would be spared many bitter experiences if they earlier learned to turn from earth to heaven.

Mortals little realize the help that is to be derived from the faithful study of the Bible. We are told that "all Scripture is given by inspiration of God," and that "holy men of God spake as they were moved by the Holy Ghost." If this be true the Bible was written from a higher, and consequently more spiritual, point of view than the world has yet attained. The sacred writers had come nearer the Truth of Being, the eternal reality of existence, and the limitations of mortal thought had in a measure disappeared.

Words are the expression of thought, and if the reader understands the writer he partakes of the writer's mental condition. When the Bible is read understandingly, thought is spiritualized and this improves man's condition physically as well as morally.

The Christian world has been taught, and is accustomed to look to the Bible for help in time of trial and temptation, but fails to realize it is a help in time of sickness as well. This is not because the help is not there but because mortals do not seek expecting to find. God's word is spoken not less to the invalid than it is to the sinner or the Christian bowed down with care and sorrow. It only remains for the needy one to seek diligently and he will find.

• The Bible is God's word to all His children. Because it seems hard to realize this it is difficult to take Him at His word, and for this reason all the promises are not verified in human experience. But this is due to no failure on God's part, rather is it man's failure to put forth his hand and take the blessing that is already within his reach. As thought is spiritualized the limitations imposed by material interpretations of God's word are removed and greater blessings of the gospel of salvation are realized.

The Psalmist sang: "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities: who healeth all thy diseases." The prophet said: "They that wait upon the Lord shall renew their strength; they shall mount up with wings as eagles; they shall run, and not be weary; and they shall walk, and not faint." Again, "Then shall thy light break forth as the morning, and thine health shall spring forth speedily." These texts are not perverted when applied to physical as well as moral healing, for it is God's will that man should be every whit whole. While one should look for and desire moral and spiritual restoration more than physical healing, yet he should not rob himself by limiting God's power and willingness to bestow all good.

The one who goes to the Bible as a little child, earnestly desiring to understand the divine message, will find help. There is nothing God cannot do for His children, and the honest, faithful study of His word enables mortals to acquaint themselves with God and be at peace.

The great difficulty has been that while mortals realize they must trust their spiritual welfare to God's care, they believe their material prosperity depends upon their own endeavors. They need to know that of themselves they can do nothing and that all things are safe in the "hollow of His hand." The faithful study of the Bible impresses one with this fact. God is nearest and most real to the one who communes most with Him and is willing to trust all things to His keeping.

Mortals little realize what a storehouse of wealth and wisdom is to be found in the Bible. Who dare say that the world would not be better, physically as well as morally, if this unusual prescription of the famous New York physician were universally administered?

When one opens his Bible let him remember that "God is no respecter of persons," and that He is unchangeable, "the same yesterday, and to-day, and forever." Then as he reads how God cared for the children of Israel, supply-

ing all their needs, physical as well as spiritual; how His eternal goodness was likewise manifest in the days of the prophets; then coming down to the days of Jesus, recalling how he healed the sick and the sinner and declared that he "came not to destroy but to fulfil;" then remembering that he sent out his disciples into all the world to do the works that he did; remembering all this, we ask, who could fail to be impressed with the thought, that if we are all God's children and He changes not, surely He must be able and willing to bless us as He did those who lived in Bible times? When human thought is once impressed in this manner, who can limit the blessings that will be realized by the one who habitually turns to God?

As Christian Scientists we love the Bible and appreciate its worth as never before, and our hearts overflow with gratitude to God that we have our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, to elucidate His word. What a treasure we have in the Bible and Science and Health, and how great are God's tender mercies toward us! May we not ask ourselves the question, Do we appreciate the glorious opportunities afforded us to demonstrate the goodness of God which leadeth to repentance? Are we fully awake to the fact that we shall be held responsible for the right use of the talents entrusted to our keeping? If to-day we enjoy a greater light than we had yesterday a greater work is expected of us and more humbleness of mind is necessary to perform it.

Not Quite Consistent.

We occasionally read an article or a sermon wherein, by labored effort, an attempt is made to disparage the Christian Science text-book, and then, by way of conclusion, the charge is made that the price is so high as to prevent many from buying it.

These two positions are not quite consistent. If the book were really subject to denunciation and disparagement the higher the price the better, for it would reach a less number of people, and do less harm.

Our friends should observe better logic if they wish to carry conviction.

Among the Churches.

Corner-Stone Laid.

On the 31st day of July, 1900, at one o'clock P.M., the corner-stone of Third Church of Christ, Scientist, of Chicago, was laid in the presence of the First Reader, the Directors, and the Trustees of the church.

The day was an ideal one, and as we stood beside the growing manifestation of our prayers, silently lifting thought heavenward, the cloudless sky and gentle summer breeze seemed to us an earnest of the peace and protecting care of divine Principle from which all things proceed and upon which all things rest.

Like all services held under the direction of Christian Science thought, the ceremony on this occasion was simple and unostentatious.

The sermon consisted of a compilation of Scriptural texts read by the First Reader, Rev. Jesse L. Fonda, and was as follows:—

"Therefore thus saith the Lord God, Behold, I lay in Zion for a foundation stone, a tried stone, a precious corner-stone, a sure foundation: he that believeth shall not make haste. Judgment also will I lay to the line, and righteousness to the plummet: and the hail shall sweep away the refuge of lies, and the waters shall overflow the hiding place" (Isaiah, 28 : 16, 17). "O thou afflicted, tossed with tempest, and not comforted, behold, I will lay thy stones with fair colors, and lay thy foundations with sapphires. And I will make thy windows of agates, and

thy gates of carbuncles, and all thy borders of pleasant stones. And all thy children shall be taught of the Lord; and great shall be the peace of thy children" (Isaiah, 54 : 11-13). "And Jesus answered and said unto him, Blessed art thou, Simon Bar-jona: for flesh and blood hath not revealed it unto thee, but my Father which is in heaven. And I say unto thee, That thou art Peter, and upon this rock I will build my church; and the gates of hell shall not prevail against it" (Matthew, 16 : 17, 18).

A short season of silent prayer and the audible repetition of the Lord's Prayer concluded the service.

The corner-stone is a fine block of Georgia granite bearing on its face the inscription, "Third Church of Christ, Scientist. A. D. 1899."

Prayerfully put away in the heart of this stone is a Bible, one copy each of the works, now in print, of our beloved Leader, Mary Baker G. Eddy, the "Manual of the Mother Church," the "Christian Science Hymnal," a copy of each of our periodicals—the *Journal*, *Sentinel*, and *Quarterly*, a copy of the by-laws of Third Church, a blank copy of the subscription paper used in raising funds for building, a written history of Third Church, the names of the members of the Conference Committee of the Christian Science Churches of Chicago, and the names of the Readers, Directors, and Trustees of Third Church.

The building is ninety-two by one hundred and twenty feet, and is located on one of the most desirable corners in Washington Boulevard. There will be a grass plat, ten feet wide, on three sides of the building, which will make an effective and beautiful setting for the soft gray walls. The seating capacity will be fifteen hundred. Below the auditorium, on the ground or foyer floor, there will be a commodious room for the Sunday School.

Even now our "little people" are looking forward in pleasant anticipation of Sunday School services in the quiet seclusion of a room their "very own."

Work on the building is progressing finely, and we hope soon to hold our services within its stately walls.

IDA G. STEWART, Secretary of Board of Directors.

Prison Work in Joliet, Ill.

The following extract from a letter gives an account of a recent service in the State Penitentiary at Joliet, Ill.

"You will be interested to hear about a Christian Science service held in the Joliet, Ill., penitentiary, Sunday, August 12. The regular service was conducted by the readers of the Joliet church, and between eight and nine hundred of the twelve hundred and forty-five prisoners were present, and listened most attentively.

"I sang the solo that I have frequently sung at our church service, entitled 'I Heard the Voice of Jesus Say.' While I sang to that rapt throng of men, I was so conscious of Love's power and presence that my one desire was to have my hearers feel the divine Love that so filled my thought; and to have them know that as God's children they were not bound by prison walls of sinfulness, and that this same Love, through Christian Science, could free them from the illusive fetters that bound them. All this and more I thought while I sang; and from the moment that I knew that I was to have the privilege of singing in the penitentiary, I earnestly strove to see those men, not as mortals and criminals, but as the children of divine Life and Love, perfect, as God's image and likeness.

"Well, when I had sung the last note there arose a great cheer, and I knew that those men had responded to the Love that filled heart and voice, and then I understood the joy that possessed me while singing.

"After the service, the chaplain, who was also present, came to me, and said: 'Our boys and all of us enjoyed your song. You could see that by the way they cheered. They are very discriminating, and they will not applaud unless

they really like a thing.' He added that they all would gladly welcome me at any time that I would consent to sing for them, and I shall go again.

"There are eight copies of Science and Health in constant circulation in the penitentiary, and five additional copies are soon to be sent to the prisoners. One of the keepers is a Scientist, and sees to it that the men have access to all the Christian Science literature they may desire. The choir consists of prisoners who sang at this service from Christian Science Hymnals.—M. E. S."

Progress at Flint, Mich.

The Christian Science Society, of Flint, Mich., took a forward step on August 5, when they held their first service in Room 3, K. O. T. M. Building, Saginaw Street.

Our society was organized September 20, 1899, with eight members, and met Sunday morning and Wednesday evening at the home of our Readers, as we had been doing for some months previously. For some time we have felt the need of larger and more central quarters, and the above hall is the result of our demonstration. We feel that thought is reaching out for the Truth, especially in the surrounding country. The thought of our members is very united, and Love is expressed in word and deed. Our Wednesday evening meetings are enjoyed by all who attend.

The *Sentinel*, *Journal*, and tracts are placed in the depots and library reading room.

FLORENCE LOMNITZ, *Secretary*.

From Eureka, Cal.

First Church of Christ, Scientist, of Eureka, Cal., rejoices that it now worships under its own vine and fig-tree, the trustees having bought the property formerly owned by the United Brethren of this city. This purchase includes a lot sixty by one hundred and twenty feet and a neat, commodious building which we have decorated and painted. We have also purchased an organ; and, as is the rule in Science, all is paid for.

We hope to seek more and more "The kingdom of God and His righteousness" that all things may be added unto us. Our Sunday morning and Wednesday evening meetings are well attended and much interest is manifested. We have a flourishing Sunday School with a corps of excellent teachers. The reading room is doing its work in spreading the Truth. Surely God is for us. Who can be against us?—EMMA S. YOUNG, *Clerk*.

Growth in New Bedford, Mass.

Divine Love has blessed the Second Church of Christ, Scientist, in interest and growth. Beginning with an audience of thirteen a year ago, in a hall with a seating capacity of eighty, the attendance at the Wednesday evening meetings and the Sunday services has been such as to necessitate the securing of a larger hall with a seating capacity of two hundred.

The hall has been appropriately fitted and is held exclusively by this church. A large room adjoining the auditorium is to be fitted for a reading room, and will soon be opened to the public.

The opening service was held Sunday morning, September 9, and was a pronounced expression of interest and love. Every seat in the large auditorium was occupied. The service throughout was very impressive and uplifting in love and joy.—H. F. R.

Reading Room at Port Angeles, Wash.

The Christian Scientists of Port Angeles have leased the rooms formerly occupied by Mr. Ross as a photograph

gallery, and have taken out all the partitions and converted the place into a beautiful little hall which will seat about one hundred. The place has been newly papered and painted and presents a very neat appearance. The children of the Christian Science Sabbath School presented the church with a new organ and the Christian Scientists will hold services in the new hall every Sunday morning at eleven o'clock and Wednesday evening at half past seven. The Christian Science reading room will be in the same hall and will be open to the public every afternoon from 2 to 5 and in the evening from 7 to 9.—*Tribune Times*.

Change of Quarters.

The Christian Scientists have moved from the Bank Building to pleasant and more commodious quarters in the Joy Block, Inn Street, where they will continue to hold a Sunday morning service, also Wednesday evening meetings, to which every one is most cordially invited.

As in the past, this room will be open to the public, every afternoon, Sundays excepted, from 3 to 5 P.M., as a free reading room, where the works of Mrs. Eddy and the publications of The Christian Science Publishing Society may be found for perusal, and for sale.

Each afternoon a member of the Christian Science Church will be in attendance, and will cheerfully give such information on the subject as may be desired by the visitors.

Newburyport (Mass.) *Herald*.

The Bible.

Marvelous book! itself also a subject or a parallel of every miracle and deliverance recorded in its pages. Proscribed and imprisoned, the angel of deliverance illumined the darkness, stripped off the shackles, and awed into conscious obedience the self-opening doors. Exiled, it has created a new kingdom and shifted the centre and balance of power. Carried away captive, it has broken down rival altars and overthrown false gods, till the right of way has been accorded to it by friend and foe. Sold into bondage by false brethren, it has captured the hearts of its masters and ascended the throne of dominion. Driven into the sea, it has gone over dry-shod, seeing its enemies overwhelmed in the flood and itself singing the glad song of deliverance. Burned on the public square by the public executioner, it has risen phoenix-like and floated away in triumph, wearing the smoke of its own funeral pyre as a flag of victory. Scourged from city to city, it has gone through the capitals of the civilized world, leaving behind it a trail of light attesting its divine authority. Cast into the lepers' pest-house, it has purified the scales of contagion, restored the soft, pink skin of smiling infancy, quickened the energies of romping youth, and re-created the sinews of heroic manhood. Betrayed by a kiss, it has stood erect in the calm majesty of eternity, amid the swarming minions of its enemies. Nailed to a felon's cross, it has illumined the darkness by the radiance of its own glory, and transformed the summits of sacrifice into a throne of universal judgment. Sealed into the gloom of a sepulchre, it has come forth with the echoing footsteps of Almighty God, rising to dominion over all intelligences. Marvelous book! Full of divine life and power. No one can touch even the hem of its garment without being healed. No one can come near enough even to stone it without being blessed. It stands alone, without a rival—even its enemies themselves being judges.—BISHOP CHARLES FOWLER.

If we could read the secret history of our enemies, we should find in each man's life sorrow and suffering enough to disarm all hostility.—LONGFELLOW.

From Our Contributors.

Found the Truth in Christian Science.

BY H. E. W.

As a little child I was several times considered dangerously ill. As I grew older and gained more of self-possession, I passed a few years free from sickness, but was led to believe that I had more ambition than strength, and as a rule would be too tired to sleep for some time after going to bed. I was told not to play so hard. Passing on in years play changed to work, and the claim of overwork was presented and finally believed. However, energy and ambition prevailed over everything but fear of consequences; when this fear held possession the body was laid low for a time.

Pain, weakness, etc., could cause suffering, but could not hold me down, and for years my going about, work, etc., was done with limbs trembling under me. Every exertion meant exhaustion that seemed very near to death. Doctors declared I could never be strong; that it was not in me. By careful perusal of various treatises and conversation with different doctors, each giving a different theory, various forms of disease were developed and found no cure, until for years I never was free from suffering of some sort. The world seemed a place of misery and suffering, life a burden and mystery, the what and why of things a question never answered, yet faith believed all would be made clear some time. Many times one with a little different disposition would have stepped over the narrow line called death. But I never wanted to die; *I wanted to know*. I believed Christians ought to heal as Jesus did, but how?

Looking back now I can see where Bible thoughts often restored me to health, that is, to *comparative* health; raised me up from conscious danger to where I could go on for a time. Loss and sorrow were added as time went on. Looking out upon the world from this standpoint it seemed a pitiful condition that humanity was in. This led me to try to forget my sorrow and suffering, to try to be cheerful and brighten the world for others as I could.

I went into the Orthodox church, not because I found one in which I could fully believe, but because the church taught belief in God and was on His side, while the world was not. Finally I heard of Christian Science in November, 1886. What I heard was of the miraculous healing of an old lady whom I had known for years. This was talked of everywhere. I felt very glad for her, but was so *resigned* to my own condition that it never occurred to me that I, too, could be healed, until the following February.

One Sunday I had gone to my Methodist church and the sense of weakness made me look longingly at the hard, bare floor. Oh, if only I could lie down on it! Then came the thought, Why not go to the Christian Scientists? they cannot more than kill me. Instantly the resolve was made to go the next day, and the next day, February 8, 1886, I went.

It was the day of my new birth,—my birthday, it has always seemed to me since. I had a fear that it might be mesmerism, so asked a few questions, for that was a thing I would have nothing to do with. It was naturally repellant, though not understood. The answer satisfied me. I asked for and received treatment. Then a few more questions came and were answered, and I began to *see*. But friends had passed away and this way was different, so I asked, "If this is true and right, how is it with those who have lived and died in the old way?" Very quietly she said, "They were doing the best they knew, they are that far on the way."

I realized then what it meant to "remove mountains." I could not put into words the joy that came with those words. For one little space of time I stood silent, then my

joy found expression in these words, "It's the *Truth!* Whether I am ever healed or not, I *know* it's the Truth. It seems just what I've always been looking for."

I left the house in that thought,—It's the Truth! It's the Truth! When I did remember the body, I found it uncomplaining,—no pain, no weakness, no weight,—it wanted to go hip-a-to-hop, and for a long time I was really afraid of doing something of the sort, something that might make a grown-up woman look absurd, and so reflect upon Christian Science, for it was now my first love. I rode home not a bit tired,—*such a marvel*—when for years riding had been a misery and often impossible. That evening, after riding about twenty miles, I found myself sleepy for the first time in years, but not tired. I had to tell it, and I kept going to the mirror, it seemed to me I surely must look different. I got laughed at of course, but who could care for that when they had just found the Truth? Days passed on,—I was doing hard work,—every moment a joy,—I felt like a child.

Then I began to crave understanding, but how to get it? I had not then heard of any book that taught it. This longing grew so that I went again to see the Christian Scientist, only to find she had gone home. Then another came and I went inquiring and was told of "Science and Health with Key to the Scriptures," which later on I purchased.

I looked at it with such a helpless feeling, and asked, "How shall I begin?" The Christian Scientist said, "Just read it." I did very little but read. Housework never was done so quickly, and the best of the reading was I began to see how to use it. Before the book was half read I had proven its teachings true in several ways. Very much to my own surprise I found that *I* could heal. I expected that *sometime*,—when I had gained *much* understanding,—I might hope to use it for others, but that the little I knew could so demonstrate it was wonderful. I simply declared what Science and Health said was true of disease, and realized what it said about God. I did what I was asked to do because I recalled the parable of the talents, how the one who buried his talent lost it. I always said, "I will try. It cannot hurt you," and it took away the hurt.

In all these years Christian Science has been Truth to me, and has kept me through many places that seemed hard, places that evil had conspired to make hard, and in all these fourteen years there has never been a day that I have not been able to do all that duty required. I have done the hardest, heaviest work, such work as is usually considered far beyond a woman's strength and my day's work away from home has sometimes been seventeen hours long, besides morning and evening work at home. Gradually the hard places have been made easier, and the realization of what constitutes life has made all things more harmonious. The healing, mentally and physically, has gone on for myself and others. Moral and physical strength has increased, and a *new* heaven and earth have appeared, all from the teachings of this one "little book," Science and Health, until now, looking back, I give thanks for what Christian Science did for me, and what it is doing for many more.

Liberalism.

BY GRACE WHITE.

WE have been taught that true liberalism is the loosing of the bands that have held us in bondage to tradition, with its time-honored thought-grooves, wherein man has seemingly lost himself. In the blessed loosing of his bands, man is gradually finding his true individuality as a child of God, and is finding the moral courage to sustain and maintain this great fact. He is finding that he need no longer fear and obey "vain repetitions," but may work out his own salvation, moving in accord with the Father, serving and being served, loving and being loved.

This happy mental condition of comparative freedom makes the man of to-day debtor to the courageous, noble men and women of all ages and climes who, by their unflinching devotion to that measure of Truth which they severally possessed, have made it possible for all who follow them, to "press toward the mark for the prize of the high calling of God in Christ Jesus."

Should the liberal man have thoughts about God that are different from those of his neighbor? is a question of interest. The liberal man is tolerant, generous, and fair toward those who hold opinions that differ from his own; he is willing and glad to leave old thoughts and accept new, using these as steps by which he may mount skyward. To him "there is neither Jew nor Greek, there is neither bond nor free, there is neither male nor female: for ye are all one in Christ Jesus."

All systems of religion and philosophy have contained within themselves some bright rays of Truth, but when man has wandered through their halls and has supped at their tables, he finds himself still unsatisfied and heart-hungry. All have admitted the necessity of better thinking and living, but none have lived so close to Good as to be able to tell the heart-hungry ones how to live and how to work, until, in the fulness of time, Mrs. Eddy, in her inspired book, "Science and Health with Key to the Scriptures," the result of a life spent in close communion with Truth, tells us how to live and how to work, that we may inherit the promises.

Christian Science comes with its insistent command, "be ye perfect," requiring man to work out his own salvation by giving proof of his "calling in Christ Jesus." It comes with its precepts and lines so clear and sure, so plain and straight, that one cannot fail to see the way; and if one be a searcher after righteousness he will surely find and follow the path which leads to the "house not made with hands, eternal in the Heavens."

It is written in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 98, "The Scientific unity which exists between God and man must be wrought out in life-practice, and God's will must be universally done."

The only way to arrive at true freedom, is by daily and hourly striving to gain a knowledge of Good, which reveals what the real man is and which, transversely, reveals what he is not. True freedom is in willing, generous submission to God's law, and means freedom from mortal limitations, but held and controlled by divine Law. It is obtained by pure, orderly thinking and living. It frees man from his self-imposed slavery to appetite and passion by giving in place thereof raiment "white and glistening" and "fine linen, clean and white: for the fine linen is the righteousness of saints."

Who shall say what the end shall be; who shall place within bounds and limits the man wholly governed by Christian Science?

Deny Thyself.

BY E. M. B. S.

JESUS said, "It is easier for a camel to go through the eye of a needle, than for a rich man to enter into the kingdom of God," and "Strait is the gate, and narrow is the way, which leadeth unto life, and few there be that find it." Our Leader, Mary Baker G. Eddy, has told us in "Science and Health with Key to the Scriptures," p. 138, "There is but one way to Heaven and harmony, and Christ shows us this way."

These sound at first hard sayings, but are they so? Are they not simple statements of fact, given to us in love, that we may face and recognize them? We cannot take any mortal, material, possession with us into Life—there is no room for it in the narrow way. The "rich man" is not

only the wealthy man, but the man who is satisfied with himself, and therefore unwilling to part with his sense of self.

"Deny thyself" was the constant command of the Master.

Those who are willing to lay down all, find the strait gate wide enough, and pass rejoicing into their inheritance of all good. But few indeed there are who find this easy passage into Life. Science is open to us all, but if we refuse obedience to its rules, we must suffer the consequences. Let us not murmur, or envy those who passed through so easily. The suffering can injure nothing but error, it can only take from us what alone can cause, or feel, suffering. Let us therefore rejoice all the way, and take care never to lose sight of the Light at the end of the passage, and never to turn aside for a moment into the broad ways of ease and personal sense, fitted with every device of human ingenuity and skill, and bright with many lights, but leading only to darkness and uncertainty, as one by one the lights go out, having nothing to sustain them.

Our Light can never change or fade, and we know the way to it. Let us press on, then, rejoicing, till the goal is reached, and, having put off all sense of personal possessions, limited and imperfect, we enter upon the full inheritance of our Being in God.

Work out your Own Salvation.

BY H.

A CERTAIN rich man had a large, beautiful estate, covering many acres of ground. It was laid out with nice walks, and planted with choice flowers and fine shrubs; not a weed was to be seen; all was as perfect as money and labor could make it. The house was built of best material and furnished throughout with costly and tasteful fittings. He was called away on business. He discharged all his servants, locked up his house, closed the grounds against all intrusion, and departed. He was gone several years; when he returned he found his once beautiful place overgrown with weeds and wild brush. The flowers and shrubs seemingly choked out by them, the house was decayed and the furnishings mouldy and rotten. He viewed the ruins thoughtfully and then said, "This house and grounds are mine, but this condition of things is not mine and does not belong to me, and I deny their right to be here;" but would this denial remove them? No. Would the fact that they did not belong there remove them? No. Would the people of the town or city come forward and offer to remove them? No. He must hire labor and, at his own expense, remove and refit if he wanted his property to resume its former perfect condition.

During centuries of material thought our lives have become filled with material ideas which do not belong to our perfect condition. We must not only deny, but we must root out the material thoughts and replace them with the spiritual thought, and this will take weeks, months, and years of hard, watchful work. Destroying an error is not the work of a moment. You may push it out of sight but it re-appears; you pluck off the blossoms, but it blooms again; you break off the whole weed, but leave the roots and they grow another weed; you pull up the root, but it has many roots, and enough are left to start another plant, and so you must keep faithfully and prayerfully at work until every root is destroyed, and even then you must watch and pray lest you again enter into temptation.

God will not find water for us to turn our own water-wheels. He will do nothing to minister to our pride. He will not give us the Holy Spirit to enable us to gain celebrity, or to procure a name, or to live an easy, self-contented life.—ANON.

Testimonies.

"Joy Cometh in the Morning."

My trouble was inherited dyspepsia, and to mortal sense, a stubborn case. Many physicians in many places were tried, each saying that there was no permanent help for me, but that he could make me more comfortable. With each new remedy I would take fresh courage only to be disappointed again and again. Thus years rolled by, leaving me a feeble, emaciated, despondent, and hopeless woman. How often I cried, "Is there no help for me? How long must I endure this agony?" Life was indeed a burden. I was tired of the struggle, but knew not how to escape its misery. Like Job, I longed to be where "the wicked cease from troubling; and there the weary be at rest." When the supposed efficacy of material remedies was exhausted I heard of Christian Science. I had no knowledge of its methods. I only asked if it were spiritualism or mesmerism. I was told it was neither, but its followers claimed that God did the healing.

In a little village in New York State, lived an old friend, who in former days was a Methodist, but through the healing of her daughter, had become a Christian Science practitioner. I went to her; she gave me a few thoughts that carried me away from self.

Through many years of giving thought to what I should eat, believing that food kept me alive, and at the same time eating caused me untold agony, I was now nearly starved. I asked if I could eat. She said, "You can; but hold no fear about it." So, like a worn-out, helpless child, trusting in its mother, I turned to this new, strange way that promised to make me well. I placed myself under this friend's care, who told me I was *God's child*. Through the treatment I began to improve, but fear of the old pain returning retarded my healing. In a few weeks I left her, going to my home in a far Southern state, taking with me Science and Health and other works of our Leader, which I faithfully read, and was slowly but surely gaining in health and understanding, when one visited me, who claimed she was a Christian Scientist, but proved to be a spiritualist. Her visit undid all the healing I had received, but my faith in Christian Science remained. Being young in the way, I failed to discriminate and guard against the wrong thought. I struggled alone until a loyal Scientist came to my aid. Weeks went by, error constantly tried to be heard, but she faithfully voiced the Truth and I was helped. Thus one year passed, when it was my privilege to go North and take class instruction from one of the Mother's loyal students, and through his patient, faithful teaching "the beauty of holiness" was made clear to me. I was convinced I would have to bring out my own case. Again I returned to my far-away home, determined that nothing should separate me from Truth. One day the terrifying sense of pain returned with great force. I was hundreds of miles from any Scientist or relative—alone with God. To sense, I nearly passed away. The words, "Yea, though I walk through the valley of the shadow of death, I will fear no evil," came to me, and I would repeat, "No; I will not fear. Why? Because Thou—Truth—art with me." This conflict went on five days, when, scarcely able to raise my head, I managed alone, to get up. Then a sense of weakness and hunger came. Several years before, mortal mind had decreed that I could eat no fruit without intense suffering. I sent out for some, took my Bible, it opened to Luke 10 : 17: "And the seventy returned again with joy, saying, Lord, even the devils are subject unto us through thy name." Jesus said, "Behold, I give unto you power to tread on serpents and scorpions, and over all the power of the enemy: and *nothing shall by any means hurt you.*" I did not remember seeing those words before,

but the thought came, "That promise is for me, and now is the time to test it." So I ate freely of the fruit, believing that Truth was giving me power to overcome the enemy. And it did, for then and there spiritual understanding set me free, I saw that God was a very present help in time of trouble. Thus ended my fifteen months warfare with that particular error, and during nine years since it has not troubled me. Truly, "weeping may endure for a night, but joy cometh in the morning." When through the realization of God's allness and ever-presence, we are able to overcome physical ills, surely we must partake somewhat of the same joy that came to the seventy.

J. L. L., Louisville, Ky.

Found Happiness in Christian Science.

My father was an independent thinker and prided himself on being unbiased, unhampered, and free in his thought, hence I knew no religious training and grew to young womanhood questioning always any religions presented to me, seeing no mercy or justice in a God who could permit poverty and misery and joyless lives, such as I saw and read of.

More especially was I set apart from any church by the oft-repeated statement that only those who accepted Jesus Christ could be saved and this earth-life was *all* the chance any one had to accept or reject. To me this seemed outrageous, as I knew hundreds were born every day to conditions which blotted out, at the very outset, any probable growth toward virtue and a state of mind where acceptance, or even knowledge, of Jesus Christ was possible.

So I went on attending one church after another, but deaf to all their teachings and with an untouched heart, and yet always with an undercurrent of longing to find something that would lead me out of the bondage to a wilful, impulsive, pleasure-loving temperament, into the thought that built up the strength and beauty of character I admired always in others. So I journeyed on in sense; married young; had three children, lost my husband when I was only twenty-six, and was then thirty-five hundred miles away from all my relations and my husband's, in a home I loved so well I did not want to leave it.

It is needless to tell you of the loneliness following, the numerous ways I took to find happiness, the firm conviction I had that only religion could make me a wise, good, strong mother who would rear her three little ones to useful, strong manhood and womanhood.

Here Christian Science found me, and can I hope to express in any measure my thanksgiving? From the first I felt it was the Truth. I opened the Bible which my husband's mother gave me six years before and which I had never opened a half dozen times, and began to learn, as a little child, its beautiful lessons,—lessons that can be applied in their highest significance only through the interpretation given in the "little book," "Science and Health with Key to the Scriptures."

I became a member of the little church organization of Pasadena, Cal., in June of this year, the same month I went to Chicago and went through the class of one of the Mother's loyal students.

I have had many demonstrations which prove to me beyond the shadow of a doubt that "where the Spirit of the Lord is, there is liberty;" that the peace of God does indeed pass all (human) understanding, that He *will* keep him in perfect peace whose mind is stayed on Him, and that Christian Science is the Comforter which leads into all peace and brings to mind all Jesus Christ taught when here on earth, enabling us to meet and overcome all that would bind us to our beliefs of life in matter.

Every time I read the *Sentinel* I feel I have clasped hands with the workers in our grand Cause, and always breathe the prayer of God-speed for the *Sentinel* and those who feed it.—L. P. M., Pasadena, Cal.

Prayer Answered.

For several years I have been a student of "Science and Health with Key to the Scriptures," but there was one point that was never settled satisfactorily. A few days ago I went to see a Christian Science friend, and about the first thing she said to me was, "Do you take the *Journal*?" I was ashamed to say no, knowing as I did that she was a poor woman with scarcely any income, while I am young and strong, with a good trade. But mortal mind had been saying to me all the time, "You cannot afford it. You have Science and Health and that is enough."

My friend brought out the July *Journal* and said I could take it. After reading it that evening the thought came to me that I had the price and could afford anything that is good, so I determined to order both the *Journal* and *Sentinel*. The next morning as I was on my way to the post-office with my order I met a man who gave me a job of work. Before night I took another, and now I have so much work on hand I have to hire a man to help me.

Jesus said if we sacrifice our material goods we shall receive a hundredfold more in this present time, and in time to come eternal life. In about one week my *Journal* came and in it came the answer to my long studied problem, by William R. Rathvon, "The Practitioner in Business." If we seek desiring to know the Truth and sacrifice according to our knowledge and our efforts are crowned with success, is not this Prayer answered?

B. P. H., New Windsor, Ill.

A Word of Encouragement.

A few weeks ago I found these words in an old *Journal*: "The hope of reward is a more subtle sin, than the fear of punishment."

I was very deeply impressed with the truth of this and I have been thinking of it in connection with Jesus' words, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you," and it seems to me that too often the kingdom is sought more for the things that are to be added than for the kingdom alone.

Perhaps some are battling with physical ills and are longing for freedom. They may say they study faithfully the Bible and "Science and Health with Key to the Scriptures," but if you observe them closely you will see they read more as if they were taking a dose of medicine, and then look for the effects on the body.

In Romans, 8 : 6, we read, "To be spiritually minded is life and peace," and in Psalm 107 we find, "He sent his word, and healed them, and delivered them from their destructions." Then if the dear ones who think their healing slow will really desire wisdom and understanding, and strive to attain it, they will not be disappointed. If they are really hungering and thirsting after righteousness, they shall be filled. By studying faithfully the Scriptures and our text-book, Science and Health, and by putting into practice what they learn, they will become spiritually-minded, and find health and peace.

L. V., Kansas City, Mo.

Testimony of a Teacher.

Over a year ago I resigned my position in the public schools on account of nervous prostration from overwork. Many weary months were spent in trying to regain my seemingly lost strength, while the errors—despair and fear—kept me company. Finally, last winter, divine Love led me to a faithful practitioner, whom I heard talk beautifully and convincingly of sure results in Christian Science, at a Wednesday evening meeting of the Mother Church in Boston. This gentle healer kindly and patiently led me on and out of darkness into the Light. Upon resuming work this spring, I found to my joyful surprise that I was

really governing the school by Truth and Love, instead of the old way, by will-power. I have made many good demonstrations over evil. Especially in the matter of discipline have harmonious and sure results been easily obtained. Many times this term, I have realized Truth, for the pupils, in cases of toothache and headache, and in nearly every case, the error has disappeared in a few minutes.

I can work more hours, and need less sleep than the other teachers in the building, and do not feel tired. I am very grateful for help received through the *Sentinel* and *Journal*.

D. MACDONALD, Readsboro, Vt.

Lost all Desire for Tobacco.

For twenty-five years I smoked, and for eighteen years chewed tobacco. I had rather smoke a good cigar than eat a meal. I had a great desire to quit the loathsome habit. I had reached that point where I averaged an expenditure of one dollar and thirty-five cents a day for cigars, and had said I would give five hundred dollars if I could be free from the desire for it.

I had tried many times to quit, just as many others have done, but only succeeded for a very short period when I would begin again with renewed effort.

Christian Science found me through my wife being healed, and almost immediately the desire for tobacco left me and has never returned. Christian Science has made me love the Bible and my brother better, and the Christian Science church is going to get the five hundred dollars I had promised.

I thank the writer of "A Few Suggestions" for having awakened me to my own duty, and may many others go and do likewise. Our best thoughts are never known. Why not jot them down as they come to us. The *Journal* or the *Sentinel* no doubt would be glad to get them. They might be a light to some one's pathway.

T. R. FRENCH, Dafter, Mich.

Evil Habits Overcome.

We study the Lesson Sermon every Sunday. We have two copies of "Science and Health with Key to the Scriptures," one each of "Miscellaneous Writings," "No and Yes," "Rudimental Divine Science," "Retrospection and Introspection," and "Unity of Good," and we take the *Sentinel*. There are no believers in Christian Science but our own little family and Miss F. We are opposed on every side (in belief); but we know that "one with God is a majority." I have in my family too often seen Christian Science proven to be the Word of God for me to give it up.

In three months' reading of Science and Health I was healed of chewing and smoking tobacco, which habits I had indulged for thirty years. I have been able to overcome other troubles, such as cold, burn, and the grip. I often think where I was before Christian Science came to our home. It was medicine and doctors all the time. The children repeat the little prayer every night, and my wife reads to them every day from the Bible and Science and Health.—J. R. M., Baltimore, Md.

God is a kind Father. He sets us all in the places where He wishes us to be employed; and that employment is truly "our Father's business." He chooses work for every creature which will be delightful to them, if they do it simply and humbly. He gives us always strength enough, and sense enough for what He wants us to do; if we either tire ourselves or puzzle ourselves, it is our own fault. And we may always be sure, whatever we are doing, that we cannot be pleasing Him, if we are not happy ourselves.

JOHN RUSKIN.

Religious Items.

Concerning the hymn "Lead, Kindly Light," a writer in the *Universalist Leader* says: "Some additional particulars concerning Cardinal Newman's hymn may be of interest to the reader. It was written before he went over to the Roman Catholic Church. It was composed while the author was becalmed in the bay near Sicily. Several days the ship remained becalmed and stationary near the island. It was during this period that he wrote the hymn. Night was coming on. So he says: 'Lead me, kindly light,' 'The night is dark and I am far from home,' 'One step enough for me.' The poet was undoubtedly homesick and 'far from home,' but he felt the need of patience and submission. 'One step enough for me.' 'I loved to choose and see my path,' 'but now lead thou me on,' till 'when the night is gone,' 'I might see those angel faces 'which I have loved and lost a while.' So the scenes that met the vision of the poet suggested various expressions in the hymn. He threw his feelings into the hymn and thus made it subjective as well as objective. This adds greatly to its beauty. He makes it subserve the passage through this world and its relation to the future. And thus its beauty is increased still further and its charm heightened."

The (Baptist) *Standard* says: "No one who takes Christ as his model will ever be discouraged. It is remarkable that, through his whole career, our Lord had no word of complaint. He said nothing that would imply any doubt of the future. He was always hopeful. This may seem to contradict the saying that Christ was the man of sorrows. But there is no contradiction. Though he was a man of sorrows and acquainted with grief, it was not the result of hopelessness. He bore the sorrows of the world, and grieved over the blindness and the sin of men. But, looking down the centuries, he could see that day when the lion should lie down with the lamb, and a little child should lead them. Jesus believed in the millennium, because he believed both in God and man."

A contributor to the (Episcopalian) *Church Standard* says: "There are men who claim to be preaching the word of God, when they are only preaching their own uncertainties and doubts. No man can be a true and helpful preacher of God's word, unless his own faith in that word be full and unshaken. The first apostles had full and unshaken certainty that the Holy Scriptures are in very truth the word of God, and therefore one great characteristic of their preaching was its boldness. They never shrank before attack. They never put themselves on the defensive. They never apologized for the Gospel."

A writer, quoted by the *Homiletic Review*, says: "In order to come to the truth, we ourselves must be true men. 'What is truth?' cried Pilate, and he found no answer, because he was himself an unjust judge. 'If thine eye be evil,' said Jesus, 'thy whole body shall be full of darkness.' Deliberately to choose to be wrong or to acquiesce in it, is so to cloud one's mental vision that the truth becomes invisible. A man who turns away from the right, at the same instant turns away from the true, and he who is false to his highest convictions is opening his mind to all sorts of delusions and deceits."

The *New-Church Messenger* says: "The whole structure of the divine government is opposed to shams and concealment of every kind, and therefore it is that hidden crime comes to grief, generally in this life, always in the life hereafter. The only hope of escape from the consequences of sin is for the sinner to repent of and turn from it, ere it be made manifest; for when, by regeneration from the Lord, he puts his sins from him and arrays himself against them, the promise is that they shall 'no more be remembered nor brought to mind.'"

The (Baptist) *Watchman* quotes a sermon by John Watson, D.D. (Ian Maclaren), which

contains the following: "I declare to you that if the people who are beneath this roof should resolve to-night before Almighty God that they will be kind this week and not unkind, and put themselves about to keep their covenant, they would lift misery from many lives, and they and their friends would come to the close of the week in the joy of peace and love of God."

The (Methodist) *Christian Advocate* says: "Marks of discontent are plainly visible in the countenances of most men. The eager haste of the busy throngs, pushing their way through the crowded streets of our great cities, clearly indicates the gnawing hunger which preys within. Did the Creator make man to struggle and suffer, and remain forever unsatisfied? Men seek good, but find it not. They knock at doors which never open. They spend their strength for naught and their labor for that which satisfieth not."

The press dispatches give the following, dated Reading, Pa., September 19: "At the annual conference of the Mennonite Brethren of Christ, held yesterday, resolutions were passed that no probationer in the ministry or in the office of the deacon who uses or deals in tobacco shall be ordained, and no person who uses tobacco shall be elected class leader or Sunday-school superintendent."

The (Unitarian) *Christian Register* says: "If only we could once try the highest form of Christianity on a large scale in our treatment of the heathen or in the relations between nations, an astonishing change might be noticed. The heathen would be astonished at a Christianity which was applied, as if, for instance, Christians believed in the beatitudes of Jesus or the chapter on charity which Paul wrote."

The *Congregationalist* says: "Christ's idea of manliness differed widely from the idea that was popular in his time. He perfectly illustrated his idea in his life. The leading men of his nation looked on him and his followers with contempt. But to his disciples he became everything that was noble, lovable, and worthy of imitation."

Notices.**Rules to be Observed.**

We request our co-workers throughout the Field carefully to observe the following rules in sending their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on New York or Boston. Individual checks cannot be received, as a charge is made by the Boston banks for their collection.

All orders for Journals, Sentinels, Quarters, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and church notices should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or vice versa.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Literature for Distribution.**SUPPLEMENTS TO THE SENTINEL.**

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science: Its Promises and their Fulfillment. By Edward A. Kimball of Chicago, Ill.

No. 6.—Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each, one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25.

TRACTS.

Practical Demonstrations. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love Are Christian Scientists Cranks. Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution, may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society.

Applications for Membership.

Applications for membership in the Mother Church to be presented at the semi-annual meeting of the First Members to be held Tuesday, November 6, 1900, must be in the hands of the Clerk of the Church on or before the 15th day of October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each \$3.18

Two to Twelve books to one address, each, prepaid . . . 3.00

Twelve or more books to one address, each, prepaid . . . 2.75

Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00

Twelve or more to one address, each, prepaid 3.75

Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/4 x 6 1/2 inches, narrow margins, each, prepaid . . . 5.00

Twelve or more to one address, each, prepaid 4.75

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00

Twelve or more to one address, each, prepaid 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS.

A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid \$2.25

Twelve or more books to one address, each, prepaid . . . 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/4 x 6 1/2 inches, narrow margins, each, prepaid . . . 4.00

Twelve or more to one address, each, prepaid 3.75

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00

Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS.

An illustrated poem.

Single book, prepaid \$3.00

Twelve or more books to one address, each, prepaid . . . 2.50

RETROSPECTION AND INTROSPECTION.

A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS.

A unique work of importance in the history and to the readers of Christian Science; containing

Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by

mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS

OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half

dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE.

An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and

answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37

cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM.

The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong

refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per

dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-

edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES.

A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by

mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.

A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per

dozen, prepaid.

PEOPLE'S IDEA OF GOD.

A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per

dozen, prepaid.

FEED MY SHEEP.

Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; \$5.00 per

dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription :

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription :

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale :

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12 1/2 cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour."

Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; \$5.00 per dozen. Words used

by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER.

A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For

soprano or tenor, C sharp to A; for lower voices, B flat to F.

Price \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL.

Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies

to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL.

Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half

Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half

dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH.

By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of

Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892.

A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE.

By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE.

83 pp. SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.

MR. KIMBALL'S LECTURE.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass. Post Office as second-class mail matter.

Items of Interest.

Political and Governmental Notes.

Reports from Honolulu say: Republicans and Democrats each held their conventions on September 24. Each party named a native Hawaiian for delegate to Congress. The Republican nominee is Hon. Samuel Parker, chairman of the Hawaiian delegation to the national Republican convention at Philadelphia. The Democrats have put up Prince David Kawanakoa, who would have been in line for succession to the Hawaiian throne if the monarchy had lasted.

The board of visitors to West Point for 1900 has submitted its report to the Secretary of War. The board considers it unfortunate that so much time during the first year is devoted to elementary subjects, and recommends that the standard of admission be raised.

President McKinley has announced his decision to appoint Hon. George von L. Meyer of Massachusetts ambassador to Italy to succeed Gen. William F. Draper, resigned. Ex-Governor Wolcott of Massachusetts was appointed but declined.

A Washington dispatch says that this government is preparing to take very decisive steps with a view to bringing Turkey to a prompt performance of its promise and obligations with respect to the claims of the United States.

A native of Guam has applied for naturalization as an American citizen at Honolulu, and the application has been allowed. It is said that natives of the Philippines residing there will make the same request.

In the Republican Massachusetts State convention, held in Boston last week, W. Murray Crane was nominated to succeed himself as Governor.

The School Board of New York City asks \$8,393,646.45 for school expenses for the year 1900-1901.

Foreign News.

The Emperor of China has issued a decree ordering that Prince Tuan, Kanyi, and other high officials be degraded and punished by the Imperial clan court for their participation in the Boxer Insurrection. The Chinese Emperor has also sent an apology to Emperor William for the murder of the German minister and promised to make amends in accordance with the religious rites of the Chinese. Emperor William replied that such a crime demanded severe punishment and he expressed the hope that the Emperor of China would co-operate with the foreign powers in securing the adequate punishment of the responsible leaders.

Germany's note to the powers a short time ago, suggesting that punishment of the

Boxer chiefs be insisted upon as a condition precedent to opening peace negotiations, was not approved by the United States and it did not meet with the favor it was supposed it would in other countries. Last week Germany modified its proposal to such an extent that it is believed the powers can agree on it and proceed to consider the problem of restoring peaceful relations between China and the world.

It was officially announced in London on September 30 that Lord Roberts had been appointed to succeed Lord Wolseley as commander-in-chief of the British army. The appointment of Lord Roberts to supreme command insures a radical reform in the British army, for which there has been a persistent demand by the press and public since the defects in organization were exposed during the first few months of the South African war. Lord Roberts is the most popular man in England and his promotion has pleased the British nation.

Lord Roberts has issued a proclamation declaring that all matters concerning the provisional government of the Vaal River Colony (Transvaal) must be referred to General Maxwell. The proclamation authorizes General Maxwell to appoint such officers as are necessary for enforcing the laws in the various districts, and authorizes them to make such changes in the laws as will make them conform to the present conditions.

Spain has finally recovered sufficiently from the disastrous effects of her war with the United States two years ago to begin to think of rebuilding her navy. According to a Madrid dispatch, when the Cortes re-assembles premier Silvela will submit credits for building eight battleships of twelve thousand tons each in foreign yards, and six cruisers and one hundred torpedo gunboats in Spanish yards.

The general election in Great Britain last week resulted in largely increased majorities for the conservative candidates, and insures the continuance of the present ministry in power.

A Lorenzo Marquez dispatch says: "Mr. Kruger has deposited \$7,000,000 in the local bank and at least sixty erstwhile important officials are here."

Industry and Commerce.

The independent offer of a ten per cent increase in wages made by the Philadelphia and Reading Coal and Iron Company, was followed by similar proposals from other great operating companies in the Pennsylvania anthracite coal regions last week, but the miners ignored all such offers. The ranks of the strikers held firm, there being no secessions, while a few additional mines were closed. What President Mitchell of the Mine Workers' Union stands out for is concerted action on the part of the operators, all joining in a proposition to the miners as a body. To accept the offer of any one company, however favorable it might be, he says, would weaken the strength of the remaining strikers and defeat the purposes of the strike.

The quarterly statement of the commissioner of navigation shows that 308 sail vessels of 88,790 gross tons were built in the United States and officially numbered during the quarter ended September 30, 1900. Of the vessels constructed of wood 160 were sail and 127 steam. Of the steel vessels four were sail and seventeen steam. Of the whole number 190 were built on the Atlantic and Gulf coasts, 28 on the Pacific, 32 on the Great Lakes, and 58 on the Western rivers.

A press dispatch from New Orleans, dated October 4, says: "The British army headquarters in this city are to be closed within the next few days. Since the English officers were sent here in August, 1899, to purchase supplies, fifteen thousand horses and forty-two thousand mules have been shipped from this port to Cape Town, as well as large quantities of forage and other supplies, the

pay therefor being about ten million dollars in English gold.

Returns recently made to the Bureau of Statistics of Pennsylvania show that the State produced in 1899 6,446,159 gross tons of steel of all kinds, an increase of 22.2 per cent over 1898 and 92.7 per cent over 1896. Last year Pennsylvania made over 60 per cent of the production of steel in the United States.

A railway scheme is reported from Buenos Ayres for a line 10,220 miles long costing \$220,000,000, and reaching from New York to the Argentine capital, having 2,094 mileage in the United States, 1,065 in Colombia, 1,785 in Peru, and 1,050 in Argentina. The correspondent declares the scheme to be gradually taking definite form.

Dr. Nansen and the Duke of Abruzzi, according to a dispatch from Christiania, have agreed to undertake a joint expedition into north polar regions.

General News.

Governor Sayers of Texas has made public the following statement in regard to the contributions made by the people of the United States for the relief of the Texas coast sufferers: "The amount of money received by me up to 12 o'clock noon of September 30, 1900, for the benefit of the storm sufferers of Texas coast is \$672,476. This sum includes \$3,802 that remained in my hands of the fund contributed for the relief of the Brazos River valley sufferers last year. It also includes all drafts and authorizations to draw and which are in transit and are yet uncollected."

A curious natural phenomenon observable in different parts of Brooklyn recently has been the reblossoming of some of the numerous horse chestnut trees that ornament the parks and thoroughfares. The old leaves fall prematurely and the sticky buds that were not to unfold until next spring burst open their scaly armor and develop with undue speed into the familiar cluster of pale green leaves surmounted by a spike of creamy flowers.

The example of the State of Indiana, last year, in returning to the State of Texas a captured Confederate battle flag, has just been followed by Ohio. The colors of the Thirtieth Louisiana Regiment, captured by the Forty-Sixth Ohio, were returned to a committee of survivors of the Louisiana organization.

A firm of cocoa manufacturers of Birmingham, England, has just declined to bid for a contract of thirty tons of cocoa for the British troops in South Africa. This action was taken from religious motives, the members of the firm being Friends, who do not countenance war.

The corner-stone of the new Québec bridge over the St. Lawrence River was laid October 2, in the presence of Sir Wilfrid Laurier and several thousand invited guests. This bridge will have one span that will be the biggest in the world. It will cost five million dollars and is to be finished in 1904.

A. A. Putnam, an electrical engineer of Rochester, made an oral will the other day by talking into a phonograph. He signed his name on the wax roll of the machine with a hot copper wire, and the witnesses did likewise. Legal authorities say that the will is valid.

The inhabitants of Oberammergau made a rich harvest during the passion play from American and English enthusiasts. The theatre receipts alone amounted to four hundred thousand dollars, beside the money made by boarding visitors and selling souvenirs.

A monument to Stephen C. Foster, the composer of "Old Folks at Home," "Old Uncle Ned," "My Old Kentucky Home," etc., was unveiled at Pittsburg, Pa., September 12.

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Siege of the Foreign Legations.

Interesting Letter from Mrs. Conger, wife of United States Minister in Pekin.

MRS. SARAH PIKE CONGER, wife of United States Minister Conger, has written a detailed and interesting account of the siege of the foreign legations in Pekin, in the form of a letter to an intimate friend in Des Moines. The personal character of this letter enhances its interest to the public, because in it Mrs. Conger writes of her impressions of the Chinese and of their character. She has studied this mysterious people—a people which sociologists have long been unable to solve—closely, and has formed some conclusions regarding them, although she confesses that she does not yet understand them and expresses a wish that she could get nearer their hearts.

Throughout this letter, as in letters written before the outbreak of trouble, Mrs. Conger speaks with the utmost kindness of the Chinese and with charity for their (to us) strange views and superstitions.

Mr. and Mrs. Conger had a narrow escape from a shell bursting in the room of the American legation they had occupied, a few minutes after they left. The letter tells the story.

It fell to Mrs. Conger as an American woman to break to Baroness von Ketteler, wife of the German minister, the news of her husband's death.

Mrs. Conger tells of the work of the women as well as of the men, how they gave up their dresses and other wearing apparel to refugees and made thousands of sandbags, some of them from valuable draperies. She says little of her own work, but from other sources it is known that she was one of the most inveterate workers, and by her hopefulness and cheerfulness kept up the spirits of the besieged. She came to be known, Mrs. Woodward, who was with her, stated in an interview at Tien Tsin, as "Our fairy godmother."

There were many days during the siege when bullets whistled, and many fierce night attacks, and Mrs. Conger described them all.

HOPE HELD OUT BY BIBLE.

Mrs. Conger, as is generally known, is a Christian Scientist. She speaks repeatedly of the support which her religion gave her during the trying days and nights. Never once did she become discouraged or give up hope. This hope was greatly strengthened when, on Sunday, July 3, she opened her Bible at random and her eyes rested upon 2 Corinthians, I : 8-10, and she read:—

"For we would not, brethren, have you ignorant of our trouble which came to us in Asia, that we were pressed out of measure, above strength, insomuch that we despaired even of life: but we had the sentence of death in ourselves, that we should not trust in ourselves, but in God which raiseth the dead: who delivered us from so great a death, and doth deliver: in whom we trust that he will yet deliver us."

The letter was written in sections, under different dates,

she supposing at the time each was written it would soon be possible to send out mail. As the dreary days drew out into weeks, the letters assumed the form of a diary, and when they all came together to Des Moines, they constituted a graphic description of the siege and a valuable historical document. Almost the entire letter follows:—

June 4.—China does not like foreigners, and would like to be left to herself. Foreigners are determined not to let her alone. They make inroads and demands in many ways. What will be the outcome remains to be seen. The whole of north China is in unrest. The Chinese are a strange people to foreigners, and cannot as yet be understood. The more I see of them and the more I study them, the more I see that they have methods in their doings. Their methods are unknown to the foreigners as yet, and it seems to me they always will be unknown to them, because mortal mind holds a very different phase, or side to these people. The whole line of thinking seems to be locked from the foreigners. The Chinese character is a sealed book, with many secret fastenings. Strange, strange, but no less strange is the foreigner and his ways to the Chinese.

ASKED FOR GUARDS.

The government seems to be tottering at the throne. There seems to be discord there. In fact, it is known to be there. The foreign ministers go to the tsung li yamen (highest officials) and ask, urge, coax, reason with, and threaten them to do something to protect the foreigners, missionaries, and native converts. They seemingly did so little that the ministers came to the conclusion that they must ask for guards of their own government. The ministers did not wish to do this, but were forced to do it. The American troops were the first to land at Tien Tsin, and were first in the march to Pekin, from the station, five miles away. It took courage, for danger threatened. The English, French, Russians, Italians, and Americans united in bringing their troops together. The Germans and Austrians came two days later. There are about five hundred men here all told. Most fortunately for us, Mr. Conger could get a compound joining ours for our own guard of fifty men, and a gate was cut through the wall opening the two compounds into one. The guard came prepared for a stormy day in entering the city gates, but they met no resistance. In fact, the Chinese government sent an escort of its troops to bring them from the station to the different legations. The foreign ministers had been asking the privilege of the Chinese government to let them bring in their guards, as the government was not protecting their people. The Chinese government refused. Finally the ministers went to the tsung li yamen, and after urging the matter without result, said:—

"We will give you until six o'clock to-morrow morning to give us a favorable answer. If it does not come, we will bring them anyway."

The ministers were very sure that it would come out as they had asked. None of the nations want to get into war with China now. The yamen protested, and said:—

"Impossible under three days to give the answer. One

day to take it to the summer palace; one day to consider it; one day to get a reply."

The ministers stood together and said: "It must be done by six o'clock to-morrow morning." At 2 A.M. a favorable answer came to the dean of the diplomatic corps, and before six o'clock each minister had read the permit. They were all glad, and telegrams flew, and the guards came, escorted by the Chinese soldiers, into the city of Peking, their capital. These guards have a moral influence rather than a fighting influence on the people. We hope and trust that no fighting will come.

DAYS OF INTENSE ANXIETY.

June 10.—Several days of deep interest and intense anxiety have passed since I began this letter. Rumors upon rumors have been coming in. All foreign nations here represented stand as one family in these times. Men of all classes are showing their strength of character. Mr. Conger is calm and seems to act cautiously and wisely. He bears up bravely under the almost numberless pressures that are brought upon him. He must not make mistakes. The railroad telegraph wires were cut several days ago. The tracks are up and stations and bridges are burned. The postal telegraph was open to foreigners up to June 9, hence telegrams could be sent to the state department and to Tien Tsin until that time. The office will not take or send any more foreigners' messages. They say the wires are down. We cannot know the truth of it just now, but we do know that messages are not received or sent. You see, there was just one railroad and two telegraph lines from here to Tien Tsin, and none elsewhere. Messages are now sent with mail overland, but much doubt is sent with them.

The missionaries have left their missions and fled to Peking or Tien Tsin. The missions are being burned by the natives, and native Christians have been murdered in some cases. The United States missionaries have gone to the Methodist mission compound for safety, as it is very large, and some have come to this legation. Mr. Conger has sent twenty of our guard to the Methodist mission, with Captain Hall, to help protect them. The English let them have two men and ten guns, as there were missionaries from the London mission to be protected there. Mr. Squires, first United States secretary, moved his family back to the city from the western hills. Sir Claude MacDonald has brought his family to the city from their beautiful new summer legation in the hills, and yesterday it was burned to the ground.

There are fourteen at our table now. Our family is pleasant, and of little trouble to us. In fact, we feel it no trouble. Our servants are just fine—grand. None of them have left us, and they serve us faithfully. Many have lost all their servants, and some nearly all. The missionaries leave some and take some of their servants and flee. They send their schoolchildren to their homes, if they have any, and if they have none, they make provision for them. The converts are terrified, for they are badly treated by the natives.

POWER OF RELIGION.

I would love to say to you many things that pen and paper never can say. I love my precious religion as I never before knew how to love it. It does prove to be a power of strength in time of need. As the clouds of mortal mind thickened, I called my first boy, Wong, and first cook to me, and told them to buy twelve bags of flour and one bag of beans, one bag of rice, lard, butter, twenty-five chickens, and an extra amount of coal; to get two more large jars for water (we buy all our drinking water outside the legation), and to keep them filled daily, besides all the others. I assured them that I feared no danger, but if it came, we would be ready. Mr. Conger asked the state department

for a larger guard, and the other ministers did the same. They started, nine hundred strong from Tien Tsin this morning, and are expected to be at the railroad station at ten o'clock to-night. Twenty carts are engaged to go to the station at four o'clock to-morrow morning. They cannot go to-night, as the city gates will be closed. To be sure of the carts, they were left outside the legation, but the mules were brought inside the walls.

TROOPS DID NOT APPEAR.

Tuesday, June 12.—The carts and United States guards to protect them, Mr. Squires, Mr. Cheshire, and others went to the station to get our troops. Other legationers did likewise. There were no troops there, and no troops had been heard from. All returned disappointed. We are holding the carts, paying them extra to stay. You see, we must have them to bring ammunition, baggage, etc. Couriers have been sent out along the line for thirty miles. They find no trace of the troops. Tien Tsin is one hundred miles from Peking, and they must have much to do on the railroads before running the trains. We are entirely cut off from the outer world. Not only are the railroads and telegraphs gone, but foreigners are not considered safe at all going through the country. You see we are at the mercy of the faithfulness and truthfulness of the Chinese couriers. We do not know what reports go from here, nor the truth of what comes to us. We do not know what is taking place outside of Peking, nor do we know what is taking place in the Imperial city. That there is great trouble, we do know, in their own camps. Yesterday there was a change in the tsung li yamen of four members. Prince Ching is president no more. The father of the heir-apparent has been appointed by the empress dowager.

Yesterday two members of the tsung li yamen called to see Mr. Conger, also the other ministers. They asked him to stop his additional troops coming into Peking, really urged the matter. But Mr. Conger said: "No, we cannot do it. Our people must be protected, and as you cannot, or will not, do it, we must. We do it only to protect them and ourselves." To-day four members of the tsung li yamen came, asking that, if the troops come, they remain in the legation compound and at the Methodist mission, not in the streets, as that might excite the Boxers. They seemed very friendly to-day. Such a request seems all right.

BEGINNING OF TROUBLE.

June 13.—No soldiers yet. Where are they? A letter came from the United States consul at Tien Tsin overland. He said the troops were all right on their way to Peking Monday. We have great hopes of seeing them to-day. A Japanese from the Japanese legation was going to the station yesterday, and he was stoned. To-day flags are flying at half-mast from all legations. We had a rather laughable fright this morning. It may, however, have a good effect. The Chinese soldiers do almost nothing against the Boxers, but much to encourage them. Mr. Cheshire of this legation was going in our cart to the tsung li yamen and two Boxers in uniforms with weapons came out from a by street and screamed at him, they ran down Legation Street, screaming and waving their spears, striving to rally others in large numbers. They passed by some German soldiers and the German minister. They ran after them and caught one. The two soldiers, one on either side, took him to the German legation. The minister sent word to the tsung li yamen to come for him. When they ran by this legation our guards were on hand. We women and children were told to go into the house. We obeyed. A large crowd was in the street. The Chinese soldiers did nothing but stand still. Our men wheeled our gun outside the gate, and the Chinese flew. It was finished, all over, and we could give thanks and laugh.

One week ago yesterday Mrs. Woodward and daughter

started for home. They got as far as the station, could go no further, and returned. Just as soon as the trains run they will go. Also Laura, Mary, and Miss Payne will go to Japan and remain until things look better. How to get away is the question. All the women and children will leave the compound for other parts, except Mrs. Squires, Mrs. Brainbridge, and myself, just as soon as the trains run to Tien Tsin to let them out.

O, listen! Good news from our troops! They are safe. Sixteen hundred strong and are coming as fast as they can repair the track. We do not know just when to expect them. Well, I am not going to write any more this time, without it is to add a postscript.

We are well and do not expect any attack upon the legations, nor upon any of us so long as we remain in our legations. But this is not enough.

The foreign open mail came to-day—no pouch and its precious letters. Another threatened attack by Boxers! Just over! We are safe. Details cannot write.

CLOUDS ARE DARKENING.

June 14, Thursday.—Clouds darken. Last night the Boxers kept the gates open between the native city and this and entered in force. Our foreign guards cleared Legation Street and the street south (back of our legation) of all Chinese and stationed their guns and men to guard them. The Boxers departed to other parts of the city and set fire to foreign property—missions, etc. This means much to those who have given their life work to these missions. The native converts, by the hundreds, are reported to have lost their lives by the Boxers. Captain Myers is a fine officer, calm and active. The guns are in the streets and men also. There have been breastworks built across the streets. All the soldiers and our men watched the night through. Our servants are acting bravely—the house servants. The first and second mafoos took their beds and fled last night. They came back this morning and attended to the horses. Wong, first boy, is calm and cool. This morning so many Chinese were filling the streets and pressing forward that we were told to pack a few things and be ready to go across the street to the Russian legation if the fight should run high here. Our legation is small and not as securely fortified as the Russian and English, and there are twenty-nine women and children in our compound. We are packed, but are sure, very sure, that we will not even have a slight attack.

Mr. Conger went to the Chinese officers at the end of our guard line and had a talk with them. He told them if they would keep their people away from us none would be harmed. But just as sure as they pressed down the streets they would be fired upon and great harm would come to them. He said: "All we desire is safety, and if the Chinese government could not do it the foreigners must." They said: "We will do our best." We believe that these officers will do their best. The government does not wish to get into trouble with other nations and they realize if they touch the legations it means war. This morning more than before it looks as though the Chinese government is to meet its doom and by its own people. A change of dynasty seems to be coming fast. This morning more large fires are kindled. These Boxers seem to burn foreign property and all property of Chinese who have anything to do with foreigners.

We hope to see our troops to-day. Carts have fled. Could not hold them longer, and our soldiers must come from station unguarded by us and unaided, or at least it looks that way now. Mr. Conger says we will have a guard on the wall to help open the gates.

My Christian Science is helping wonderfully and I believe we get and feel the good thoughts of the dear home folks. Christian Science is becoming dearer and dearer to me every day. What could I do without it?

CATHOLIC MISSIONS DESTROYED.

June 18.—My letter has not gone and I am going to add more. I will not go into details. I wrote you of the Boxers firing the mission. The destruction of property and lives was dreadful. The next morning they fired, persecuted, etc., a large Catholic mission (Nan Tong), burning a cathedral built in 1600. This is a grand, wealthy mission with its hundreds of people. This mission cared for our small-pox soldiers a year ago. The good work of this large mission was considered wonderful and far-reaching. The Catholics have a still larger mission (the Pa Tong) and a small one in the east city which was burned the night before. The Nan Tong and Pa Tong the French minister tried to guard, but he found that he was weakening his force by dividing his troops up in three places. The guard was taken from the Nan Tong and sent to the Pa Tong. He could do no more, and was nearly wild over it. The Nan Tong was fired and of the dreadful work done there I have no desire to tell. The morning following twenty Russian and ten American soldiers, with Mr. Pethic (an American) and Mr. Drysburg (a Dutchman) who speaks the Chinese language, went out with a guard to rescue the people at the Nan Tong. The Boxers fled and the commander of the party went to the gate and asked for the gate keys. The gate was locked and the gate key taken to Captain Hall of the United States guard at the Methodist mission. The next morning the key was returned, but that night it was locked again and by another key and lock. This time the United States guards went. The first night there was a terrific din in the native city. The wall was between us. It sounded as though madness itself was set free. About twelve o'clock all was still, and we wondered what could follow. Nothing more that night. Watch was the word, and all did watch. The next morning large fires were set in the native city.

Every store that had foreign goods or sold goods to foreigners or that foreigners visited was set on fire. The wind was blowing and the fire spread over acres of the very best, most thrifty parts of the city. Beautiful shops of their most beautiful things were burned. There is no way whatever for these people to fight fire. They just have to let it burn until there is no more fuel to feed the flames. Mr. Conger, with guards, took us women upon the city wall to see the burning city.

The fire burned all day, spreading to the west. In the evening, about eleven o'clock, we went again upon the city walls. The city was still burning to the west. It was not coming toward us nor toward any of the legations. We were north of the eastern part of the burning city. The fire had gone north to the Chenman gate—the one we pass through in going to the railroad station—and the large tower building over one of the four gates was burning. It made a beautiful sight and was filled with Chinese guns. They all burned.

This gateway is to the south and no one passes through it except the emperor when he goes to worship at the temple of heaven and temple of earth. Anything or any misfortune befalling that gate or gateway is a "very bad omen." "Some great misfortune is coming to the throne."

My thoughts went out to our brave men who are striving to come to our rescue. They, without doubt, could see the large fire and the burning tower and would fear for our safety. We are all right, and still feel that no harm will come to the legations. The Chinese government will try to protect us, and our brave men are worth more than ten thousand Boxers in a battle. Boxers are afraid of fire-arms. We have been fenced in a little more and a little more, until now none of us go outside the guarded streets. It is even difficult to get Chinese to go outside, even with a message to the tsung li yamen.

Mr. Conger has found it most difficult to get Chinese messengers to carry word to and bring word back from

our coming troops. No other legation but ours has succeeded. Mr. Squires' western hill, ice coolie (a most ugly looking old fellow) said that he would go. He did, twice, and now he is off again. Poor old fellow! Where is he? He should have been in yesterday. Either he has met with misfortune from the Boxers or Captain McCalla is keeping him to show them the way into the city. We truly hope the latter.

We are shut in and our "coming troops," who started sixteen hundred strong last Sunday week, must now get in the city as best they can. Twice last week members of the tsung li yamen called on Mr. Conger, both times to ask him to stop the coming of his troops and turn them back; also making the same requests of the other ministers. A most positive "No!" was the answer from all. Where would the legations be to-day had we listened to their pleadings and promises? Last night while we were at dinner Mr. Conger was called out and asked if he would see members of the tsung li yamen (strange hour, surely; never heard of before). Mr. Conger sent word, "Yes." Mr. Cheshire, United States secretary-interpreter, and a guard went to meet them and escort them through our fortified city. We are fortified. All the buildings next to the legations have been torn down and everything that will burn has been hauled away and dumped into the canal, and the brick and stones are built into fortifications across the streets. The men are at work to strengthen them in their protective work, if an attack should come. We believe that this very work has already saved much suffering, for the Boxers dare not come. About 10 P.M. the members (four) of the tsung li yamen entered our gate. It was no easy matter for them to get through the lines with their chairs. They were very friendly.

EMPEROR TO CONGER.

They said at five o'clock they were at the palace and that the empress dowager and the emperor wished them to come to the United States legation, as it was friendly to China, and to say that they deeply regretted what has happened in fires, etc., and promise that it shall stop. Mr. Conger told them that they were repeating the same old story—they do not stop it. Their people have been murdering our people, destroying and burning property, and danger threatens everywhere, and if our troops had not been here the legation would have been sacrificed. They asked and urged that the coming troops go into camp outside the city gates. Mr. Conger most positively said "No. They will come to the legation, and if they are not enough plenty more will come, and if one member of this legation is harmed, my government will swoop down upon you and wipe you off the face of the earth." They replied, "It shall not be. We know the foreign soldiers are far better than ours." Mr. Conger told them: "All we desire is peace, protection, and a harmonious relation with your people. You do not give it to us. We foreign nations are obliged to call upon our countries for the protection that you should give us. You promise protection, but do not give it. We must bring our soldiers to our legations, and if necessary bring more, and still more. Your people are so afraid of the Boxers that it is with difficulty that we can send a messenger with a message to the tsung li yamen."

Think of it! Things have gone from bad to worse, and they do not stop it. How can the minister trust them or believe one of their promises? While they were here the guards fired some volleys. It made the members of the tsung li yamen quake. I am glad they came, for it shows them better the situation of things and the feeling of the United States minister. Mr. Conger assured them that his government wished China no harm, and would not harm one of them except in self-defence or for protection. He told them that they could see all foreigners and foreign property not protected by foreign troops had been destroyed,

and people persecuted and cruelly killed. These people are powerless, and evidently the government does not know how to act. They renewed their good promises and were safely escorted out of "our guarded city."

The first rain for weeks has fallen to-day. No word from our "coming troops" as yet, but word comes (rumor) that the telegraph is down between Tien Tsin and Shanghai. But all the port cities can help themselves—there is a way out. Tien Tsin has been greatly threatened. The native city there is alive with Boxers. We cannot hear very often and sure how they are prospering in Tien Tsin or elsewhere. We are now about like being on board ship, on a great sea, in a storm.

MINISTERS ORDERED TO LEAVE.

July 7, 1900.—Pekin, China, British Legation.—What can I write? What a prolonged, dreadful dream! Who can tell it? It cannot be told or even imagined!

Well, I will write something of our seeming experiences. We kept getting into closer and closer quarters, and the darkness kept thickening, and we hoping, looking, and praying for our "coming troops" to appear. On the afternoon of June 19 we were taking our afternoon tea when a letter from the tsung li yamen came to Mr. Conger. Mr. Cheshire took it and read it, as it was in Chinese. He arose and said to Mr. Conger, "Let us go to the office." They went. We women asked no questions. Shortly, I saw Mr. Conger hasten out of the legation. Later I saw Mr. Cheshire, and he read the message to me which had been sent by the tsung li yamen. The following is the substance of the message:—

"We learn that foreign troops are to fire upon our forts near Tien Tsin, hence we break off all diplomatic relations with your government and ask you to leave Pekin in twenty-four hours. No further protection will be given by us."

Every minister had received the same message, and all hastened to the dean to hold a diplomatic meeting. It was out of the question to go in that time, and to attempt to leave our fortifications here and go across the country was sure death. A message was sent to the tsung li yamen. "Impossible to leave in that time," etc., and they requested an audience with the tsung li yamen; either the ministers go to them or they come to the ministers.

MURDER OF BARON VON KETTELER.

No reply that night. The ministers wished to go the following morning at nine o'clock. Still no reply. The German minister determined to go alone as the others thought best to wait for the reply. He did start with his interpreter and mafoo, two chairs and one pony. They had not gone more than three-quarters of a mile before they were attacked. The mafoo on pony rushed back to the German legation. The interpreter was badly wounded, but was taken into the Methodist mission. He is still alive. The minister, Baron Von Ketteler, was shot through the head. Word was sent at once to the tsung li yamen and they only found the two chairs, badly crushed. The interpreter saw the minister shot and saw him fall. It fell upon me to bear the word to his sweet young American wife. They had been married only three years. She said: "I have lost all, and in a strange land. He was my husband, my mother, my brother, my children, my all, and he is swept from me." The order came while I was with her to go at once to the British legation. I helped her pack some things and we went together to the British legation. Lady MacDonald took her in charge. I returned to the United States legation at about half past three and found that our legation people were moving to the British legation. Everybody was busy, busy. The missionaries at the Methodist mission and our marines with their hundreds of people had come for protection. The Chinese were taken to the Fu with the other Christian refugees. The foreign

guards have ever since been holding the streets, Legation Street and Wall Street, and the legations on these streets. The Austrian, Dutch, and Belgian legations have been burned; also the customs and large Methodist compound mission. After we came into this legation the Dutch legation west of the United States legation was set on fire and the wind took the flames clear up to our walls, even burning the United States soldiers' quarters, then went out, leaving a vast bed of live coals. Think of it; our legation saved. Another day, fire was set to the east of the United States legation and the flames did their work of destruction up to our very own walls and went out. It was again saved. All rejoice, because the situation of this legation means much to all. Three times our men (foreign soldiers) had to leave the city wall south of Legation Street.

HOLDING THE CITY WALL.

The Germans, with other helpers, protected and held the wall near the Hodiman gate to the east, and the United States soldiers with other helpers held the city wall at the west near the Chenman gate. There was a big gun (Chinese) placed near the Chenman gate and they would play it on our men. If the wall would be forsaken by our men the Chinese would come down to the east and throw their shells right into this British legation where we have come for safety until our "coming troops" arrive. The position on this "wall" has been most dangerous. Six of our United States men have been killed and twelve wounded. Among these (the wounded) are our brave first captain, Myers, and our much needed and excellent man, Dr. Lippett. Captain Myers we hope to have with his men on duty ere many days. Dr. Lippett, not so soon.

The hospital is filling up too full, as our men must take more and more risks in capturing big guns and barricades and driving back the enemy, building breastworks, fortifying, etc. On the wall the breastworks have to be built at night. The Chinese kept getting closer and closer upon our men. They had built a barricade about forty feet from ours, and a strong one. It was too near and must be taken, or the wall abandoned. Plans were made and time set for the attempt. Mr. Conger talked with the ministers and had a private talk with Sir Claude MacDonald (the dean) as to troops and then with our captain and Mr. Squires. There were sixty men, marines, who went upon the wall that night to meet hundreds of Chinese.

TAKING THE BARRICADE.

Captain Myers said to his men: "Men, when I say go, every one of you go. Remember, there are three hundred women and children whose lives depend upon our success to-night. If we succeed they live; if we fail, not only are our lives sacrificed, but their lives too. Now, go." They did "go." No obstacle stayed them. In five minutes the Chinese were routed and the grand barricade built by them was taken by our men. But our grand Captain Myers was wounded. The enemy had planted old spears in their barricades and the captain ran against one and made a bad wound on his leg. The deed was a brave one and all sing the praises of our brave men. Not all came out as well as Captain Myers. Two of our United States men were killed and one Russian. The Russian legation is across the street from the United States legation, and our six brave marines are buried there, as the firing was too great in the United States legation to bury them there. We are all one here now. The foreigners are one people.

Every communication to the outer world has been cut off from us since June 14. We have looked and looked for our "coming troops," but have not for an hour ceased our work of fortifying, during the day. We are not allowed to have strong lights at night. I wish that you could only see. This beautiful legation is a strange looking place. There have been thousands of sand bags made. Everything has

been made up that can be into bags that can hold sand. Then, when we must have more to protect our men on the walls and housetops, more material would be found. Between the legations there were many Chinese shops with many things in them that we could use, and there were three foreign stores well filled. All were emptied into this legation and used. The Chinese had fled from their shops and the foreigners gave their goods. We not only found thousands and thousands of yards of cloth for bags and for clothing for those who fled from their homes with just what they were wearing, but kitchen things, buckets to carry water in to put out fires, stores of quantities of coal and a shop of two thousand bushels of wheat, with seven grist mills, and a large flock of sheep.

TRIED TO BURN BRITISH LEGATION.

This legation is large, about seven acres and most excellent water in abundance. Sir Claude and Lady MacDonald and their legation helpers have been most charming in their untiring work for the comfort of all these people who have come upon them. The first week that we were here the Chinese seemed to try to burn us out. Our men and women worked heroically and the fires would only come to our legation walls. The fire bell would sound for all to come at once. I do not know what we would have done if it had not been for the Chinese refugees. They have worked with a will and the missionaries have proven to be a mighty host in their able work. In fact, all have been workers to their best ability. Nothing is more trying to me than to hear a word of complaint. There is little of it done, but some think others do not quite do their duty. The most of these people have not had time to see what others are doing.

Word has just come in that the French minister at his legation surely heard distant cannon and it must be our "coming troops." We have been hearing sounds and seeing lights for so many days and nights that we listen very little to rumors or reports. We all offer up secret prayers each moment for their coming. Perhaps we have not yet been tested enough to be relieved. Some nights and days the firing has been most frightful. At first it was Boxers who would attack us; now it is the armed soldiers with their foreign small and large guns. There were hundreds and thousands of the Boxers and now it is hundreds and thousands of soldiers that are fighting us and striving to drive us out. The blowing of their horns and their yells and the firing of their guns is the most frightful thing I ever heard. It seems as though they were right upon one. The balls are continually whizzing by. When a general attack is made the bell in the tower tolls, telling all the men to be ready and do their best.

GREW ACCUSTOMED TO DANGER.

This was exciting at first, but night after night of this firing, horn blowing, and yelling, and whizzing of bullets and one gets rather hardened to it, or perhaps learns to trust more in a greater and more loving Power. It makes our hearts ache for the brave men who are fighting day and night for our safety until the "coming troops" can reach us. We have sometimes thought that they may not have left Tien Tsin yet, or that some greater calamity has befallen them than has us. You see, to us there is no outer world that we have heard from since June 14, and now it is July 7. We did nothing on the Fourth except to wear our little flags and think of the dear home folks. Mr. Conger and I went over to the United States legation and got a silk flag and placed it over the six United States soldiers' graves. Many of the foreigners called and congratulated us, in fact, all the diplomatic corps. They are always very nice about these things. Mr. Conger spends the most of his time at the United States legation

(Continued on page 90.)

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Judge Clarkson's Lecture.

NOTWITHSTANDING a pouring rain, Judge Clarkson was greeted by a large audience on the occasion of his lecture in Tremont Temple, Boston, on Tuesday evening, October 9, 1900.

Judge Clarkson was called to deliver the semi-annual lecture under the auspices of the Mother Church. Although the great Temple was not entirely filled, there being some vacant seats in the gallery, yet, in view of the unpleasant weather the audience was a remarkable one both in size and character. A large number preferred to stand rather than sit in the gallery. In all there must have been twenty-five hundred present.

The attention given the lecturer throughout was earnest and rapt, a deep silence pervading the great audience chamber.

The lecture, of about one and one half hour's duration, was an able, logical, and convincingly simple presentation of the great healing gospel of which the lecturer is so zealous and consecrated a demonstrator and exponent. His premises were based wholly on Scripture, and his deductions the necessary outcome of his premises. No one can refute such simple logic without denying the authority of Holy Writ, the verity of Jesus' deeds and words, and every fair intendment thereof.

With deep earnestness the speaker declared that he never knew God until, through the teachings of the Christian Science text-book, "Science and Health with Key to the Scriptures," he learned of Him as all-present Spirit, Life, Truth, and Love.

His references to this wonderful book carried with them unmistakable evidence of the depth of his conviction, while his eloquent recognition of the author thereof—the Rev. Mary Baker Eddy—was touching in its simple sincerity.

Convincingly was it shown that an all-present, all-powerful, all-wise, all-loving, and eternal God, of necessity, implied a Kingdom of Heaven ever at hand.

Let not our readers regard this as in any sense a synopsis of the lecture. It is not even an attempt to review it, but a brief, simple tribute from a heart which is thankful for the privilege of having heard it. It is published in full in the *Boston Daily Globe*, and will be read with deep interest and profit.

Judge Clarkson was introduced to the audience by the First Reader of the Mother Church, who spoke as follows:

My Friends:—Again it shall be your pleasure to hear a lecture on Christian Science in this great Temple,—a temple in itself rich in historical interest, devoted as it and the temples that preceded it have been to sacred purposes, yet even more interesting because of its historical setting.

Not far from the ground whereon it stands much vital history has been made.

Here Puritanism, mistaken in some of its conceptions and practices, yet, as a whole, beneficent in its scope, achievements, and prophecies, was nurtured into a sturdy growth.

Here were sown the seeds of liberty which flowered in

the War of Independence and the establishment of our great Republic.

Here Garrison and Phillips and Whittier and their co-laborers set in motion the wave of public sentiment that ultimately swept slavery from our land and emancipated millions of our fellow-beings.

Here William Ellery Channing preached a better gospel than early Puritanism had grasped, for he proclaimed a God of love.

Here Emerson and Parker preached a yet broader gospel than Channing.

Here Alcott, Emerson, the Channings, and others taught on a plane so high above the general comprehension of their time, that they were accounted Transcendentalists.

Here, indeed, have scores of brave and noble spirits, in different epochs, labored for higher ideals, and better conceptions of the fatherhood of God and the brotherhood of man.

It is fitting, then, is it not, that in this Temple, and on this hallowed ground, should stand and speak those who are teaching Puritanism, Liberty and Independence, Emancipation, the Gospel of Love, and Transcendentalism, in their best sense, for those who stand here and speak of Christian Science, teach the Puritanism of godly living, the liberty and independence which follow the overcoming of base passions and appetites, emancipation from sin, sickness, and sorrow, the Gospel of God as infinite Love and boundless compassion, the Transcendentalism preached and practised by the Nazarene,—that Transcendentalism which recognized God as the one and only Power, and man as his eternal image and likeness.

Our friend and brother who is to address you, will tell you of this. He has proved well his fitness for this duty. Leaving the bench and bar with their supposed allurements bright before him, when yet a comparatively young man, he plunged earnestly into the work of spreading this healing gospel, first as a quiet healer, and later in the lecture field.

We who are Christian Scientists know him well. I had the honor of a personal acquaintance with his father—a noble man, an eminent member of the Chicago bar, and a devout Episcopalian. I also knew well, by reputation, our lecturer's uncle, the distinguished Bishop Clarkson of Nebraska, a zealous and consecrated worker in God's great vineyard.

Our brother comes with good credentials and a heart overflowing with love.

He will tell you of this, and of the love, honor, and gratitude he cherishes for that other zealous and consecrated laborer in God's great vineyard to whom, through God, he owes the fact that he is now practising and preaching that healing Gospel, which has been named Christian Science by her who discovered and founded it, the Rev. Mary Baker Eddy.

It is now my pleasure to introduce to you Judge Joseph R. Clarkson, C.S.B., of Omaha.

Mr. Kimball at Kansas City.

A most gratifying occasion was that of the lecture of Edward A. Kimball, C.S.D., at Kansas City, on Sunday, September 30, 1900, under the auspices of the First and Second Churches of Christ, Scientist, of that city.

The lecture was delivered in Convention Hall, wherein Mr. Bryan was nominated as the Democratic candidate for President, and there were present, according to the newspaper accounts, ten thousand people. Private letters fix the number at eight thousand. Either number is sufficiently remarkable, and evidences, in an almost startling manner, the growing and intense interest in Christian Science in Kansas City and the adjacent country.

A pleasing feature of the demonstration was the fact that the two churches in that city joined harmoniously in the

plan of giving the lecture in the great Convention Hall, and in the expense connected with it.

One who was present thus writes:—

"As I attended the lecture given at Kansas City, September 30, by Edward A. Kimball, before an audience of ten thousand people, I looked on in wonder and admiration, and thought, Is there any other religion on earth that would bring together such a throng of people upon such short notice? The speaker seemed inspired, and indeed the multitude were fed, and many went away healed, returning to their homes rejoicing that their burdens had fallen away."

Our brethren in Kansas City, and all interested, are indeed to be congratulated on this great gathering and its present benefits, as well as those which the unfolding future will reveal.

Let us more and more rejoice that we are, in any way, however humble, associated with this mighty movement for the glory of God and the disenthralment of mankind.

An account of this great meeting appears under the usual heading.

Aprôpos to the above we publish the following interesting letter of Mr. Kimball to the Rev. Mary Baker Eddy:—

Chicago, Ill., October 2, 1900.

Dear Mother:—I lectured in the great Convention Hall in Kansas City on Sunday.

This is the hall where Mr. Bryan was nominated, and the audience was *enormous*. The newspapers stated that there were ten thousand people there but the number really was eight thousand.

Think of that out of a population of only one hundred and seventy-five thousand. You can get some idea of this audience when I tell you that it was three times as large as the seating capacity of Tremont Temple in Boston. The total capacity of the hall is twelve thousand.

The two churches joined very harmoniously to bring this event to pass, and by doing so have made history, because there never was such an audience assembled by Christian Scientists before.

The *Kansas City Star*, with a circulation of ninety thousand, published the lecture in full.

We expect to have a similar affair here next week. I am to lecture for all the churches in the Coliseum, and it is probable that there will be an audience of ten thousand people.

The lecture at Kansas City was my two hundredth, and because you are interested in this lecture work I will say that I never have missed an appointment nor postponed a date.

One hundred and ninety-seven of these lectures have been *without* rain. In the other three the rain did not materially affect the audience with one exception.

With much love,

EDWARD A. KIMBALL.

The Lectures.

At Kansas City, Mo.

Edward A. Kimball, C.S.D., of Chicago, lectured to an audience of ten thousand persons in Convention Hall yesterday afternoon (Sunday, September 30). Mr. Kimball is a member of the Board of Lectureship of the Mother Church of Christian Science, of Boston. The lecture was held under the auspices of the First and Second Churches of Christ, Scientist, of this city. Each church, out of a fund provided for such purposes, bears the expense of the lectures in its own field. In this case the two Kansas City churches combined.

Mr. Kimball said it was the largest audience he had ever addressed. The arena floor was packed long before three o'clock, the hour set for opening the meeting. The east

and west arena balconies were filled, several hundreds occupied the colonnade balconies, and there was a large overflow into the tiers of seats in the south end of the building, where it was difficult to hear. The decorations left over from the Home Products show and utilized for the Roosevelt demonstration, served to ornament and enliven the hall for this occasion.

The joint committee which arranged the lecture was composed as follows:—

First Church.—John H. Wheeler, C.S.; Charles E. Finlay, C.S.; Adam H. Dickey, C.S.; Dr. Charles L. Van Fossen, C.S., secretary of committee.

Second Church.—Mrs. Amanda J. Baird, C.S.D., chairman of committee; Mrs. Adelaide S. Hall, C.S.; Eugene G. E. Jaccard, C.S.; William E. Benson, C.S.

The lecturer was introduced by Mr. Charles E. Finlay, as follows:—

Ladies and Gentlemen:—This is pre-eminently an age of investigation. The mortal man, held in bondage of sickness, has found little to satisfy him, but must, of necessity, view with alarm the increased and multiplied forms of disease. If he is wise, he will investigate Christian Science, and when he learns he can be freed permanently from all his ailments, he is rejoiced to know of God's goodness and power. Christian Science is truly a wonderful religion. It fulfils literally Jesus' admonition to preach the gospel and heal the sick. It is a religion of deeds and not a form of lip service. It demands of its followers absolute consecration to God: "Ye cannot serve God and Mammon." Christian Science needs not the indorsement of any man, but no man can afford not to investigate Christian Science. More than a million have been healed by Christian Science, in less than thirty-five years, and to-day we have a membership under its organization approximating half a million. We believe the prophecy contained in the Revelation, wherein it says, "God shall wipe away all tears from their eyes, and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away," is a present possibility. The Board of Lectureship of the Mother Church of Christian Science, of Boston, Mass., has appointed lecturers, and the good they have accomplished can be proven beyond peradventure of a doubt. It is my pleasure to introduce this afternoon a gentleman and Christian Scientist, and there is no one more worthy to lecture on this subject than the lecturer who will address you, Mr. Edward A. Kimball, C.S.D., of Chicago.

The subject of Mr. Kimball's lecture was "The Cause and Scientific Cure of Disease."—*Kansas City Star*.

At Grand Forks, N. D.

The lecture on Christian Science by Edward A. Kimball, C.S.D., at the Metropolitan Theatre Thursday night (September 20) called out a good audience, but nothing like what it would have been had people known what was coming. Mr. Kimball met the demand of the people to tell them something of the Christian Scientists' views in regard to cause and cure of disease, and furnished some testimonials of healing.

Judge Corliss introduced Mr. Kimball in a few friendly words. He said that every system of philosophy and religion was worthy of a fair, impartial hearing, and Christian Science was no exception to the rule. He was not a Christian Scientist but desired it to have its rightful latitude, and was pleased to present Mr. Kimball, who would address the people on that subject.—*Grand Forks Daily Herald*.

Lectures at Other Places.

Siege of the Foreign Legations.

(Continued from page 87.)

encouraging and consulting with the officers. The night of the taking of the barricade and the holding of the position he remained over there the night through. He was proud of his men. Their work that night was a brave, mighty one. How did they do it? The Germans have lost eight of their brave men and several are in the hospital. They were compelled to abandon the wall at the east and our United States men and Russians guard both ways now. The big gun west does not play in direct line on the wall, as they would fire into their own men, but it has been turned on the legations.

Yesterday Mr. Conger and I went over a back way to the United States legation to pack up some of the things that we left just as when we were living there. Mr. Conger told me that as the soldiers' quarters were burned that our house had been opened to them. In fact, the whole house had been opened to the missionaries to take anything they wished and could use. Everything that could be made into sand bags—our satin draperies, everything, sheets, pillow cases, new cloth table linen, dresses, skirts, everything—was taken and made up. The beds and everything that would do for hospital use went there. Shoes and extra clothing were given to those who had left all behind. It was to go and see about my Chinese things and pack them so that they can be shipped if we can get away with baggage. Mr. Conger helped me all the morning. Then we went about the legation to see what had been happening since I left. The office building is a sight—shot full of holes with small guns and big guns. We picked up bullets from Mr. Conger's office. I took some pictures of the wreck. The living house, our beautiful home, and the beautiful trees are a wreck.

SHELL FELL WHERE THEY WERE.

The dining room has been turned into a drying laundry room and our other rooms into sleeping rooms for soldiers. Our kitchen is their cook room. While we were taking a picture of the gateway and buildings a shell from the wall struck the west end of the gateway, making quite a hole. We passed out and came back here. Not one hour later a friend came in and said: "Here are the pieces of a shell that went through the roof and into the room where you and Mr. Conger were working this morning." Later the flag pole was shot, and still later a shell struck the roof of the gateway building and the pole and flag fell together through the roof. The men snatched the flag and up it went again. The British flag has been shot down once, but it was soon up again. The German flag fell yesterday and the firing is too great for them to hoist it. All day to-day the Chinese have had a big gun turned on the French legation, without much damage as yet. They shoot too high as a usual thing. There is firing about us nearly every moment. That we do not mind. It is the terrific attacks that make us get up and walk. We have horse and mule meat to eat. With the many stores we had on hand and the quantities of flour, meal, rice, beans, etc., that we bought in case of need, we get along very nicely. Our family has had horse meat once and it was nice, sweet, and tender. We also had mule meat once. I did not like it as well as the horse meat; still many people think it better. Our horses and mules have not yet been killed. They are fat and we are willing to let them go.

I hourly give thanks. There is very much to give thanks for. My Christian Science is everything to me, and yet I wish I could do far more with it. There seems so much to be done in dispelling the darkness and letting the light shine. My heart often turns homeward to the dear Christian Science loved ones. I feel sure that you are giving us strong, protecting health thoughts.

Laura and Mary are our two dear girls, always striving to help others, and they succeed well.

A SCRIPTURE READING.

Sunday, July 8.—We have passed safely through another stormy night. Much firing of small and big guns. We are getting used to this firing and sleep more than we did at first. This morning I made my rounds, and then went off in a little niche by myself to read. I opened my Bible and began to read to see what lesson was there for me. It was 2 Corinthians, first chapter. Please read the eighth, ninth, and tenth verses. What think you? I read aloud to Mrs. Woodward. We looked at one another and wept together. Many thought it wonderful. My Sunday study of the Bible and Science and Health has been a great blessing to me.

August 6.—Still besieged in the British legation. No "coming troops" yet. Many things have happened since I left this letter. We were under increasing fire. Battles day and night that were terrifying up to July 16. After the forts and Tien Tsin were taken on the fourteenth the tsung li yamen and the foreign ministers had a sort of an understanding that there should be for a time a ceasing of firing. Since the dreadful night of the sixteenth, while we have been under fire day and night, we have not had a fierce battle until last night. It was very quiet during the bright moonlight evening, but at two o'clock the volleys came thick and fast and continued about thirty minutes. Our men got much rest during these days of almost quiet.

August 12.—We heard from our "coming troops." They came within thirty miles of Peking and were obliged to return to Tien Tsin and increase their force. The Boxers and soldiers combined made a large, strong army. The determined thought to wipe out foreigners and their ideas has become wild and angry. The foreigners who know the Chinese longest and best say that they have never before seen anything like it in their character.

They made attacks in the dark and in the rain, which they would not do before in their warfares. They are reckless and fierce, and cruel and determined. But it must be that God knew our needs and has given or shown them to us in many ways during these days of test. My dear sister, I never saw anything like it. God's loving hand alone has saved us. I will try some time to write the many, many ways that we have recognized it. The booming cannons would send their shells right at us. They would sometimes burst over us, but not a fragment touch us. Sometimes they would go beyond us. When they, after trying for many days to get in range to harm us, and a few shells would harm our buildings, the hands of these Chinese seemed to be stayed, and not once have they continued to the destruction of one of these buildings or walls. How could it be so if God did not protect us? Every fire has proven a blessing to us where the Chinese have tried to burn us out, given us a greater range and safety to our walls. But our little band has watched and worked and prayed. When they burned their native city the wind took the flames from our city to the west. Only think of the food that was stored by the Chinese within "our fortified city." We have been eating horse meat each day for weeks and thankful for it. Our stores are getting a little low and yesterday dogs were killed for the Chinese coolies to eat. Our rice is getting a little low, but flour will hold out for some time. We do not think that anything will give out until our "coming troops"—fifty thousand strong—get here. God, our loving Father-Mother, has been with us, is with us, and will continue to be with us and we will know it, too, and realize this truth.

August 14, Tuesday.—THEY ARE HERE! OUR "COMING TROOPS." REJOICE! REJOICE! Warm grasps of hands and eyes full of tears tell better the language of the heart than words can. Last night was the

fiercest firing that we have yet known. The enemy seemed determined to destroy us. Our "coming troops" thought that we were no more, for they heard the firing and quiet followed. They had a trying time in their long coming.

I will write you later. My heart is too full now and hands too. God be praised.—SARAH PIKE CONGER.

In the *Des Moines (Ia.) Daily Leader*.

Selected Articles.

Absolves Christian Science.

SOME days since a dispatch was published in the *Boston Post* to the effect that Dr. Lillian Abbott of Concord, N. H., had become insane through Christian Science. It was well known to the Scientists of Concord, at the time, that this was untrue. Alfred Farlow, C.S.D., of Boston, at once investigated the matter and the following letter, which was published in the *Boston Post* of October 8, 1900, is the result of such investigation.

To the Editor of the *Post*.

Sir:—In a recent issue of your paper you published a story of Dr. Lillian Abbott of Concord, N. H., under the heading, "Crazed Over Christian Science."

I have made a thorough investigation of this case, and have learned that Miss Abbott has never taken any interest in Christian Science, even up to the day she lost her reason, though she visited the church a few times with her mother. She gave up her medical practice because circumstances demanded it, not because of Christian Science. It is to be regretted that she did not interest herself in this Science sufficiently to have been benefited by it.

The following statement is from Mrs. Abbott, mother of the young woman in question:—

"This is to certify that the condition of my daughter, Dr. Lillian Abbott, cannot in any way be laid at the door of Christian Science.

"She appears to be mentally afflicted, as was her father, who has been mentally unbalanced for thirty years and an inmate of the New Hampshire asylum for about two years. I believe that the hereditary tendency in her case was aggravated by over-study and over-anxiety to succeed in her chosen calling of medicine. I observed signs of a breakdown one year ago, and she has failed in health just as her father failed.

"Christian Science has nothing whatever to do with my daughter's present condition, but it has been, and is to me, a comfort and a help. (Signed) Lydia Abbott."

October 3, 1900.

ALFRED FARLOW.

Recognition at Last.

Editor of the Buffalo Commercial:—It is a matter of no little gratification to notice that at last is coming the recognition of Mrs. Mary Baker Eddy's efforts and life work. This is instanced in a recent issue of your valuable paper, in which you refer to her visit to the Concord State Fair. Mrs. Eddy is indeed a busy woman, and improves every opportunity to benefit mankind.

Jesus said: "Wist ye not that I must be about my Father's business?" Mrs. Eddy has been about her Father's business for many years, and an appreciation, though tardy, of her noble, selfless life, is pleasant. Loyal Christian Scientists are trying to follow this Leader, and they, too, are striving to emulate Jesus, who knew what was His Father's business. This "business" the world is coming to understand, as do the Christian Scientists. It is to heal the sick; cast out sin and evil of every kind; make pure the individual life, and thereby benefit the whole human race. For a long time, people have thought that their chief business was

to pamper and indulge the body, and then, after abusing it, to nurse and feed it with drugs. Jesus taught differently. While he was doing the will of God, he was cleansing man from self and sin, the cause of all disease.

Mrs. Eddy has been about her Father's business, and in giving to the world "Science and Health with Key to the Scriptures," she has enabled many thousands to walk more meekly in the steps of the lowly Nazarene, who healed all manner of disease, and left this word as a comfort and a promise, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do."

Yours truly,

WILLARD S. MATTOX.

New York, September 15.

In the *Buffalo (N. Y.) Commercial*.

Live in the Kingdom of Hope.

Hon. John P. Rogers, Governor of the State of Washington, writing in *Success* for September, says:—

"Life is a struggle, a school, a test of fitness: no struggle, no school; no school, no fitness; no fitness, no future, either in this world or in any that may follow. If a man keeps constantly in mind, no matter what discouragements, what hindrances may bar his way, the end had in view in his creation, sooner or later his time will come. To be prepared, to be honest, to be true,—this it is to merit success; and, when really and truly merited, it is given.

"Let no man despair because of the prejudiced frown of his neighbor. If he has within the witness of his own spirit, let him believe in himself and live. For, if he accepts the judgment of those who enter into competition with him, he is condemned already. They will damn him with faint praise, or, perchance, if more honest, give him the *coup de grace* at once and forever. No man of mark ever yet accepted as final the judgment of other men regarding himself. Of some completed work of his he may, and often will, do well to heed the opinion of the world; but in himself he will keep his faith to the end, sure that somehow, somewhere, the brightest visions of his youth will yet come true. He must live in the Kingdom of Hope. The very air of that land is inspiring. All truly great men have breathed it. But if one attempts to follow their example, let him be sure of himself,—this, first of all. Let him not accept the honeyed words of friends and relatives, who may possibly regard him as very near perfection already. No loyal wife or doting mother can be trusted here. We must know ourselves, as we are."

A full Line of Bibles.

The Christian Science Publishing Society carries a full line of Bibles. Catalogues will be mailed on request. We desire to call attention to a new Bible which will appear in our forthcoming catalogue. This Bible is on India Oxford paper, bourgeois type, self-pronouncing, Alaska seal, limp, leather lined to edge, silk sewed, round corners, gilt edges; a special binding to match the pocket edition of Science and Health. Catalogue number 01435x; price \$4.00 prepaid.

Wanted.

A good florist, who is a Christian Scientist, and will present a written recommendation from a loyal student. Address G. F. W., care of Thomas W. Hatten, 68 Westland Ave., Boston, Mass.

Character is higher than intellect. A great soul will be stronger to live, as well as to think. EMERSON.

From Our Contributors.

True Gain.

BY M. P. H.

WHEN another injures you,
 "Let it pass!"
 If you hate because you're hurt,
 Then alas!
 It hurts to hate, while to forgive is gain
 To all who quickly act
 And make the Golden Rule a living fact.

My Experience in Christian Science.

BY JULIA M. BURNHAM.

CHRISTIAN SCIENCE came to me about sixteen years ago at a time when I had nearly abandoned hope of any physical aid, and was mentally wretched from a sense of rebellion at what I called a hard, hard fate. From birth I was considered very weakly, having begun coughing when two weeks old, and passing through one or more sieges of lung fever every year thereafter until ten years old. Several times I was supposed to be at the point of death. I was never able to attend school long at a time or join in the sports of other children to any extent, because of the frequency of attacks of illness, and once, after a few weeks of unusual exemption, greatly amused the family by exclaiming with great exultation, "Why, mother! I haven't been sick for a long time." Later on I was obliged to leave school entirely because of the most intense headaches, which seemed utterly to incapacitate me from any labor, physical or mental, and from which, for several years, I had never been quite free. This trouble finally culminated in inflammation of the brain, and the inevitable nervous prostration following in the train of so much suffering. Then, as if to add the last feather's weight to sufferings already almost unbearable, an accident so increased them that many times I almost wished for death to release me from this bondage. Nearly all this time I was doctoring in some way, employing many physicians and various methods of medicine: homœopathy, allopathy, hydropathy, electrical baths, massage, etc. Reviewing in thought the number of practitioners under whose care I was placed, I recall no less than fourteen. I had also the best of care, but all to no purpose, except, as it seemed to me, to deplete the family pocket-book and drain the energies of a devoted mother and sister.

They were always striving to do something for my relief, and, upon hearing of a new process called Metaphysical Healing, or Christian Science, immediately put me under the care of a healer, although, as it seemed to us all, it was hoping against hope, and would probably result, like all previous attempts, in failure. Before beginning the treatment I read a few pages in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, which a friend loaned me, and I will here add that it has ever since been my constant companion. Oh, the delightful change that the reading of that book and the treatment brought to me. It was as if I had been translated into a new world. The most wonderful and convincing proof of the healing influence of this new treatment was the new-found ability to walk, something to which I had become so unaccustomed that when I began, as I did after the first treatment, I felt as if I were literally treading on air. Every day I experienced increasing strength and corresponding lightness of heart, so foreign to my old self that I was often constrained to say, "Is this really I, or am I dreaming?" It had hardly dawned upon my consciousness then that the sickness,

weariness, and wretchedness of these many years were in themselves the dream, while perfect health and happiness were my real birthright and inheritance. The impression made upon others was similar to my own amazement.

One, an intimate friend, when she heard of my recovery, wrote me, "I keep saying to myself, How strange she *must* feel to feel *well*!" and this was indeed true, as in all my life I had hardly known a day when I could say I felt well. As I continued to read the "little book," I saw that I must put into practice what I understood of its teachings if I would gain more understanding, and felt richly rewarded when beliefs of various kinds to which our family had always been a prey disappeared, before the realization that but One Mind had formed and was governing and caring for everything in His universe. I shall never forget the first time I was called on to give a treatment. I was aroused in the night to help a sister who was suffering from a severe attack of heart trouble. How thankful I felt, when in less than five minutes, under the influence of the silent utterances of Truth, the intense pain had disappeared and she was quietly sleeping. I began then to realize that it *was* more blessed to give than to receive, for, great as had been my joy at my own emancipation, to know that I could be made the instrument to convey this blessing to others, and especially those to whom I owed so much for their care and patient forbearance, was an unlooked-for happiness to one who had long felt herself worse than useless. In those days the Massachusetts Metaphysical College had not yet closed its doors to students, and my thoughts and aspirations were very soon turned in that direction. There were many obstacles in the way and the expenses attending tuition at this college appeared very formidable, as I felt I had already incurred, by my long and almost constant illness, a greater debt than I could ever repay. However, my family being as desirous as I that I should have the best instruction, we all worked together for its accomplishment, and in a year from the time of my healing I enjoyed the inestimable privilege of class instruction by Mrs. Eddy herself, a privilege whose worth is being more and more understood and valued by her students every year as they realize what they owe to her brave, self-denying, and God-directed labors.

False Suggestions.

BY E. L.

Resist the devil [evil], and he will flee from you.—James, 4: 7.

ERROR is nothing but a coward, for God is *All power*, and that understood and realized reduces its every pretense to nothingness. It is because of this that when silenced in one way it seeks another means of expressing itself. This has through various experiences proved itself to me more clearly of late, and as I find great help in reading the experiences of others in the *Journal* and *Sentinel*, I speak of this as it has come to me, hoping it may be helpful to some brother or sister struggling earnestly up the mountain path to the understanding of Truth, the clear beacon light which shines out far and wide from the mountain top.

Evil suggestions are like poisonous seeds seeking to find some unguarded spot where they may settle and grow. Usually they seem to ask questions, and if these questions are entertained and allowed to have weight they lead to doubt, suspicion, fear, and an attendant train of evils which bring their consequences—darkness and perplexity. Why? Wherefore? etc., can be only the product of mortal mind (alias error), for how can the child of Divine Love have a question or a doubt? With him, Truth gives understanding, so he does not need to question, and Love is ever-present so how can he fear? and if conscious of this, his true inheritance, he cannot be disturbed. My eyes were first opened to this by the kind and helpful words

of a fellow-Scientist. Since then I have for myself experienced the good effects of an immediate and steadfast denial of this error, and had occasion to prove it in demonstration for myself and others. This sense of error seeks to express itself in restlessness, discontent with surrounding conditions, and a sense of martyrdom, a feeling that one is being unjustly treated, whereas the false whisperer says, "I am, you know, doing my best. Why, oh why, should I have such a hard road?" This, if admitted, leads to criticism of others, and is one of the subtlest weapons of the adversary. It is a wolf in sheep's clothing. We must wake, and in the consciousness of a Divine might repel the intruder which seeks only to affright and separate, so that it may destroy. But what comfort is ours in this passage from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 80, "The only power of evil is to destroy itself. It can never destroy one iota of good." I have found this a great stronghold in many a seeming struggle, and the beautiful promises of the Bible, now so living and full of meaning through the spiritual interpretation given us in Science and Health, come so clearly to our consciousness in time of need that we only need to grasp these weapons of Love more firmly and we shall find never-failing strength and so overcome evil with good, for "if God be for us, who can be against us?"

A Friendly Word.

BY M.

How many forms error assumes in the mist of mortal mind! and it is ours to realize their nothingness till they become more and more shadowy, and finally fade away. The mission of Christian Scientists is to lessen the ills of mortal existence, and we need examine ourselves sometimes, perhaps often, to see that error does not use us to the detriment of our brother. For instance, we see some error manifested. Do we hold this error as part of another; discuss it with others, criticize, probably misjudge and condemn, and thus add to his burden?

To "judge righteous judgment" surely gives us freedom always to judge between Truth and error, Good and evil, the real and its counterfeit, and the right to exclude all evil from our own consciousness. If this were done would there not then be somewhat less for our brother to meet? Jesus judged the error but not the man, as we see from Luke, 12 : 14.

We were formerly traveling a different path, but now we are trying to walk in the way revealed to us in our text-book, "Science and Health with Key to the Scriptures." But much of the dust still clings to our feet, and must not each get rid of his own dust? Our loving Mother, standing sentinel for a world, discerns the foe, and we get the word. Were all Scientists *watching*, faithful hearers and doers, standing together, working in unity, overcoming personality, obeying Principle, and recognizing as the voice of the adversary all which argues against Scientific methods and order, what deliverance there would be! The closer we conform to the ways and means given for our benefit by those wise through experience, the sooner shall we get beyond the necessity of those ways and means.

I can with unshaken confidence appeal to the Divine Arbitrator for the truth of the declaration, that I have been actuated by no impure purpose, no personal aggrandizement, but that in all my public acts I have had a sole and single eye, and a warm, devoted heart, directed and dedicated to what in my best judgment I believed to be the true interests of my country.

Inscription on Henry Clay's monument, Lexington, Ky.

Testimonies.

Found All in Christian Science.

My parents were devoted, earnest Christians in the Presbyterian Church. As a child, I thought this a happy world if God would only stop the sickness and death, instead of permitting them. I was told He saw, in His infinite wisdom that it was for our good. We had sickness and death all the time and I used to watch the family to see if they did grow good.

That God was Love, yet Justice; that some must be lost and others saved; that the atonement was the only way out, and true repentance brought a certainty of Heaven, and then one was all right, was the religion taught. There was no explanation of God that harmonized with what it seemed to me God was, I gave just as little thought to it as I could, for it all was so full of incongruities. I would never have thought, had I not feared eternal punishment, as I saw no other reason for trying to love God.

My mother's life of love and happiness was a mystery, her God was Love. At last I was led to try not to think of all the things I could not understand, but let them go.—"Repent and be saved," and believe God was Love any way. I felt that was a little better; was converted, united with the church, and my desire was so strong to have others learn as much of God and the Christ as I had, I devoted my life to city missionary work for years.

I soon learned that the old problems returned in others' lives with redoubled fury, and as I had no sure remedy from sin and suffering, I had little to offer except material aid, and Love as I understood it.

My mental struggles, overwork, an inherited weak constitution, with a severe injury to my spine, put me on a bed of suffering. The following four years I spent trying to be resigned, under the most excruciating pain day and night. Partial paralysis; head, heart, and spine, all diseased; a dark, quiet room, with morphine and loving care was all I knew. Oh, how I prayed to die and be free from pain.

After one year I was taken to a hospital, and returned to my home at the close of another year, pronounced incurable. The wretchedness I lived in was as nothing compared to what I saw my family enduring, their lives saddened and changed. Nearly two years longer I suffered, though not in bed all the time, as I was able to be about some.

The old questions would ever return: Jesus could heal once, why not now? Where is a God of Truth and Justice? Why must I suffer so?

I turned to faith-healing with no result. I asked my doctor if Christian Science would help me. He replied, "If you had no organic trouble Christian Science would help you, but you have, and it will do nothing for you."

When all hope had fled times without number, divine Love led me to Christian Science through my first physician, as he insisted upon my trying it, not thinking I would be healed but that I would be encouraged.

As the Truth was unfolded to me I loved it, though at first I declared I would *not* be made to think I was well when I was sick. Love for my family, and a faint hope that I might be better made me willing to take treatment. I was determined to give Christian Science as fair a trial as I had given medicine.

More than anything else I wanted to know what God was. The perfectly clear, logical, truthful, and honest way every one of the old questions were met, brought a peace the world can neither give nor take away. By the revelation of Christian Science, I had found a God of Truth at last.

Do I need to say the healing began? The organic troubles left first, and I was healed through and through. The healing was slow but sure. I was able to go anywhere in about two weeks, but learned I must live the

Truth and deny the error according to the teachings of the Bible and "Science and Health with Key to the Scriptures."

This was ten years ago. I have never been sick in bed since, have done all kinds of work in housekeeping, studied for a kindergarten, had a private school of my own for five years, besides having charge of the home, as well as taking charge of a Children's Home and teaching there during the summer. I am always well and strong.

We all have to "work out our own salvation," and I have listened to error too many times only to be, "beaten with many stripes," until I am beginning to know what it means to give up all for Christ, and to love more and more a religion that we can understand. God neither makes nor permits sickness and death, for He can create only that which is like Himself. Jesus proved sin, sickness, and death to be not of God.

Christian Science is more to me than anything else, and it must be, for there is but *one* Life, Truth, and Love.

This spring I had the blessed privilege of taking class instruction from one of Mrs. Eddy's loyal students.

The Communion season at Boston, with the visit to Concord and the sight of our dear Mother, who expresses so much of Spirit, were heavenly feasts.

The Truth has enabled me to heal not only myself, but others, and I long to reflect the divine Love more and more. There are problems to meet all the way, but Christian Science is a religion that gives to man his true knowledge of God, as both Truth and Justice, of Jesus the Christ as the example and embodiment of divine Love. I have found all I longed for and infinitely more.—a God of Love and Truth.—MISS ELLEN S. ROBBINS, Sharon, Conn.

Benefits Received from the Study of Science and Health.

It is just three years since I first heard of Christian Science. From 1888 to 1897 my health had been very poor. During this time I had been searching for a religion more in harmony with my view of the teachings of the New Testament than the religion of my birth, and had with this end in view investigated the creeds and tenets of many churches, sects, and religious societies. In pursuing this search I borrowed, in August, 1897, a copy of "Science and Health with Key to the Scriptures." In October, I bought a copy and began studying it in connection with the Bible. While studying it, my health gradually but certainly improved; attacks of inflammation of the lungs, bronchitis, and catarrh, to which I had been subject every winter, ceased, and have never returned.

Having spent some time in the study of pharmacy and *materia medica*, you may imagine with what surprise I read in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 443, "The perusal of the author's publications heals sickness constantly." I had been taught by years of schooling that drugs were man's God-appointed healing and curative agents. Although doctors and drugs had failed to restore me to health, and although I had seen that medicine as practised was in no sense scientific, yet my faith in material means had not been destroyed, for I still believed that there was some *thing* (perhaps as yet undiscovered) possessing the necessary therapeutic properties to effect a cure.

Three years' immunity from such diseases tends to prove that the proper remedy has been applied. This remedy, applied understandingly, has healed and will heal these diseases in others as certainly as it has in me. It has healed and will heal all other diseases as surely as it has these.

So deeply was the Truth buried under the rubbish of man-made doctrines, human theories, and material beliefs, that we sometimes wonder that its discovery was possible. Under *materia medica* we believed man's health was largely dependent upon food, climate, drugs, physicians,

etc., but Christian Science is freeing mankind from this absolute dependence upon the material and personal by establishing his confidence and trust in God as "a present help in trouble."

Were the intent or effect of the teachings of Christian Science, to free mankind from drugs and doctors and make him as dependent upon Christian Science practitioners, Christian Science would not be the blessing it is. It is not merely a new school physician. In Science and Health we are taught that man is absolutely dependent upon God; we are thereby encouraged to depend less and less upon our fellow-men and more and more upon God for the prevention of disease and restoration to health.

As a beneficiary of this Science—this *Christian Science*—I owe a debt of gratitude to its Discoverer and Founder, who, by her self-sacrifice and superhuman love was enabled, First, to attain to an understanding of this Truth, then, to reduce to human comprehension this Science of Spirit, couch its exposition in simple language, embody its complete statement in one volume, and place it within the reach of all who desire it.—G. ALLAN, Toronto, Can.

Morphine Habit Destroyed.

I have been so wonderfully saved through Christian Science, that I want the world to know what Christian Science will do for poor suffering humanity. Ever since I was eighteen years of age (and I am now forty) I was a slave to the liquor habit, and by reason of that habit, was led to taking morphine. Any one who knows anything of that habit, knows how it holds and degrades a man, and how it is almost impossible to free oneself from it. I tried in many ways to overcome it. I tried the gold cure for the morphine and liquor habits, but without avail. I believe I was the most wretched and unhappy mortal in existence. I had lost all hope for this world or the next. I was taking thirty grains of morphine in a day, and of course was a physical wreck.

I now look back at my past life with grief and horror. Christian Science has saved me from all the shame and suffering through which I have passed. I feel that I am free, and am very thankful to the kind friends who induced me to seek help in this glorious way. I now feel that life is worth living and shall pass the remainder of my days in trying to bring other earth-bound hearts to the knowledge of this blessed Truth, which delivers and saves.

FRED H. WILBER, East Troy, Pa.

Thankful for Christian Science.

In 1886, we had for twenty years experienced much sickness and suffering in the home with no aid but drugs. Years of experience with a family physician had come to mean a change of doctor with every new thing that presented itself. If we were sick we believed we must take medicine to be made well, and when we were well we must take medicine for fear we should get sick.

The last to be presented to us was Christian Science, and it is still with us, for which we are truly thankful. It has enabled us to overcome severe attacks of sickness which, if conquered at all, would have meant weeks, yes, months, of drugging and anxiety under the practice of *materia medica*, but which yielded quickly and completely to the treatment in Christian Science.

MAUD VROOMAN, Plymouth, Mich.

We are helpers, fellow-creatures,
Of the right against the wrong,
We are earnest-hearted teachers
Of the truth which maketh strong.

MRS. BROWNING.

Religious Items.

In an editorial headed "A Word to the Brethren," the (Baptist) *Examiner* says: "We have no sympathy with the pessimistic spirit, and do not permit ourselves to believe that present conditions will be of long duration; but optimism must not blind us to the fact that the spiritual state of the churches is the reverse of encouraging, and that there is much justification for grave concern in the temper and tendencies of the period. This stricture is not made in a spirit of fault-finding. Facts carry their own comment. For some time past the record of conversions has been extremely meagre, and an average acquaintance with the conversation and modes of life of professing Christians would induce the belief that the cultivation of personal piety is, at present, far from being an absorbing concern."

Rev. George C. Lorimer, D.D., the eminent Boston preacher, said in a recent sermon published in the *Watchman*: "Religion is also an excitant to unrest and conflict, and we must not shrink from recognizing its possible disturbing influence. There is a sense in which Christ sent a sword on the earth. Not that the truth was to be advanced by violence, but rather that it would provoke violence. At the first, Christianity had to propagate itself in the face of persecution, and now, as ever, the blood of the martyr is the seed of the church. When religion has reached that bloodless character that it arouses no antagonism in such a world as this there will be reason to expect that it has ceased to be what it was when it was first proclaimed."

The *Boston Transcript* says: "A somewhat unusual case will come up in the Supreme Court of Connecticut within a few weeks. A Hartford man named Hall, left a will bequeathing \$10,000 for the purpose of combatting the fundamental Christian doctrine of the immortality of the soul. His natural heirs have opposed probate on the ground that it would be contrary to public policy to permit such a will to stand. There will probably be no claim made that the testator was not in his ordinary sound mind when he made the will, for it was in line with his usual operations when living, inasmuch as he had spent thousands of dollars publishing tracts attacking this same doctrine."

The problem is neither more nor less than to learn the ways of God and come into practical acquaintance with Him. And how can this be done without large experience of defeat and disasters endlessly varied? We lose ground, fall out of place, subside and waver, just because we are after something transcendent, something above us; climbing up unto God, to rest our eternity in Him, a being whom, as yet, we do not sufficiently know, and whom to know is life eternal."

HORACE.

The (Unitarian) *Christian Register* says: "We have learned that not only in society and politics progress, but that, above all, the church must keep pace with the age, and comprehend the demands of the age, and must adjust its programme to vital needs. Suppose this to end in sweeping away much that is good: we need not regret it if the old be replaced by a better. Above all, let us realize that as religious beings we cannot afford to exhaust moral strength contending with progress."

The (Episcopalian) *Church Standard* says: "Do yachts and palaces, and sumptuous feasts satisfy? Let those answer who have tried the experiment. 'Vanity of vanities' is their wearisome cry. He who ministers to others, who is willing to lose his life, if necessary, for country and for God, he is the man who has made the wisest choice. Godliness is profitable unto all things, having promise of the life that now is, and of that which is to come."

The *Independent* says: "Love is a condition, not a mere emotion; it is a divine arrange-

ment of our spiritual structure under the influence of Christian aspiration and endeavor. God is Love; when His spirit enters, love flames up in the human heart and warms it toward all mankind. It is then that enemy and friend become indistinguishable, melted together into brotherhood, and glorified in the splendor of infinite Christian sympathy."

The *Universalist Leader* says: "The old forms, fabrics of faith constructed centuries ago at Geneva, at Dort, at Augsburg, at Heidelberg, at Westminster, at Oxford, at Seybrook, were produced amid a condition of things that did not afford as much light as the world has since gained for itself. It was impossible to see things then as we see them in our day. In everything man has advanced, why not in religious opinions?"

In the Sunday School department of the (Methodist) *Christian Advocate* we find the following: "There is nothing gracious or commendable in emphasizing sectarian distinctions. One may differ from us in many things, and still be acceptable to the common Master. The only vital issue is, Do we love and follow the Good Shepherd? Are we true to the guidance of him who laid down his life for us?"

In its column of "Notes and Comments" the (Baptist) *Watchman* says: "It can never be the duty of a religious man to throw his influence on the side of what he deems to be evil. The alternative does not exist. It is always possible for one to stand up in his own manhood and resolve that as for him he will do right."

The *Congregationalist* says: "Marked changes in the direction of popular religious interest are evident. Nice theological distinctions receive little attention. The transformation of individual character, the purifying of society, and the Christianizing of nations are the objects most earnestly sought."

The (Baptist) *Examiner* says: "Fulfilled doctrine is mighty doctrine. When religious words are backed by religious character they become potent. Happy is it for Christians when they are not only witnesses for Christ with the lips, but witnesses in deed as to Christ's workmanship."

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or New York or Boston. Individual orders will not be received, as a charge to Boston banks for their col-

All orders for Journals, Sentinels, Quarters, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to the Christian Science Publishing Society with those for the publications of our Leader or vice versa.

Articles for publication and communications relating thereto, belong to the Editorial

Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science. Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

No. 6.—Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25.

TRACTS.

Practical Demonstrations. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution, may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society.

Applications for Membership.

Applications for membership in the Mother Church to be presented at the semi-annual meeting of the First Members to be held Tuesday, November 6, 1900, must be in the hands of the Clerk of the Church on or before the 15th day of October.

Applications must be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

- Price (cloth) each \$3.18
Two to Twelve books to one address, each, prepaid . . 3.00
Twelve or more books to one address, each, prepaid . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/2 x 6 1/2 inches, narrow margins, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
Twelve or more to one address, each, prepaid 5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS.

- A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth) each, prepaid \$2.25
Twelve or more books to one address, each, prepaid . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/2 x 6 1/2 inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS.

- An illustrated poem.
Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid . . 2.50

RETROSPECTION AND INTROSPECTION.

- A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS.

A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE.

An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM.

The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers: 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES.

A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.

A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD.

A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP.

Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription :

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription :

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale :

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12 1/2 cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$9.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp. **SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.**

MR. KIMBALL'S LECTURE. 33 pp.

HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.

THE BUSWELL TRIAL. 24 pp.

THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.

HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna. One copy or more, each, 6 cents; 12 copies, to one address, 60 cts. Twenty-five copies to one address \$1.25; 50 copies to one address, \$2.25.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass. Post Office as second-class mail matter.

Items of Interest.

Political and Governmental Notes.

A Washington press dispatch of October 9 says: The gold supply of the United States Treasury is now competing for the position of the largest single stock in the world. The total is now near the great stores of the Bank of France and the combined fund of the Imperial Bank of Russia and the imperial treasury. The total held by the treasury on all accounts was \$443,462,226. Of this amount \$236,492,442 is the property of the Government in the reserve fund and the general cash-balance, while the remainder is held against outstanding gold certificates.

The United States is fitting out its first cable ship for the exclusive use of the Government. The vessel selected for this service is the former transport Burnside, which has just been reconstructed and equipped at the Morse Iron Works, Brooklyn. The Burnside is preparing to sail soon with five hundred miles or more of deep-sea cable, to be laid in the Philippines.

At a meeting of the white teachers of the Galveston public schools, at which fifty-one teachers were present, an agreement was signed giving one month's service free of charge. There are sufficient funds on hand to run the schools four months and the action of the teachers in giving one month's service insures a five months school term.

The report of the capture of about sixty men of the Twenty-Ninth United States Infantry under Captain Shields on Marinduque Island in the Philippines, is confirmed through communications received by MacArthur and Kempf from Marinduque Island; but details are lacking.

The United States has had more than fifty thousand tons of coal distributed at various points throughout the world for the use of its warships, and this amount will be increased by additions to be made by schooners on the way. The largest coal pile is at Manila.

It is now estimated that the urban population of the country, as shown by the new census—the population, that is, of places containing eight thousand inhabitants or over—will reach 33 per cent of the total, as against 29 per cent in 1890.

Major Livingston Mims was elected mayor of Atlanta, Ga., on October 5. The Atlanta Constitution says that it was the first mayoralty contest in the history of Atlanta that brought out four candidates. Major Mims was a reform candidate.

The United States battleship Alabama was completed last week at Cramp's shipyard in Philadelphia and went into commission October 15.

Foreign News.

Silver coinage in Mexico reached its maximum in 1892 with 30,000,000 pesos. This decreased in 1897 to 22,000,000, and last year to 19,000,000. The mints this year are coining 1,500,000 pesos monthly. On the other hand, silver exports are increasing. The maximum in exports of silver reached in 1892 was 46,000,000 pesos, coincidental with the date of the first sterling loan contracted by Mexico. Since that time the exports have increased. In 1899 the silver exports were as follows: Ores, 13,000,000; bullion, 34,000,000; coin, 15,000,000.

Lord Windsor, speaking at Sheffield, England, before the first congress of the Ruskin Union, of which he is president, expressed the "intense gratification" of British admirers of Ruskin at the announcement from America that sufficient money had been obtained to insure the establishment of the projected Ruskin Hall at Oxford.

The frequent interchange of notes by the great powers, in regard to Chinese questions, has resulted in a very good understanding as to the preliminary arrangements for restoring peace. It is probable that negotiations will be opened between China and the treaty powers soon.

Lord Curzon, viceroy of India, made the following report to the British government last week: The general condition of the crops is excellent, and except in a part of Bombay, famine conditions are disappearing. The total number on the relief list has fallen to 2,746,000.

The latest statistics from the International Peace Bureau, in Berne, Switzerland, give the number of members as thirty-five thousand. There are 91 societies, 347 groups, and the membership is scattered among eighteen European and other countries.

Three thousand Spanish immigrants arrived in Havana between October 1 and October 10, and the Bureau of Immigration estimates the number will reach twelve thousand before the end of the month.

A Berlin dispatch of the tenth inst. says that all the powers have agreed to the proposals of the second German note regarding the primary conditions for peace negotiations with China.

Thirty years ago French was still the most prevalent language. To-day it is spoken only by 46,000,000, while German is spoken by 80,000,000, and English by 115,000,000.

It is announced that Melbourne will be the capital of confederated Australia.

Industry and Commerce.

Consul-General Osborne, at London, in his report regarding American coal in Great Britain, says: "During the past few weeks the continually increasing prices asked per ton for coal in Great Britain have caused considerable agitation among householders and manufacturers. Contracts have had to be entered into by the different railway companies, gas companies, and large manufacturers for a supply of coal at prices in some cases nearly double, and in others more than double those ruling a twelve-month ago. The coal owners openly admit that they intend forcing prices higher and higher, and claim that they are in a position enabling them to dictate terms."

In answer to reports that he had attempted to secure a corner in pork in the Chicago market, Sir Thomas Lipton gave out the following statement: "I have never yet tried to corner food. On the contrary, my object has always been to lower, rather than to raise, food prices. What happened was simply this: I received a large government order, compelling me to keep a big stock in reserve. My buyers in Chicago bought extensively, and, consequently, I hold a rather bigger stock than usual. It is legitimate business to execute my contracts,

and their execution will not affect the American public at all. I object to corners on principle."

Sixty of the highest paid workmen in the world are on a strike in Tiffany & Co.'s factory at Forest Hill, N. J., and the entire wedding invitation business of the big jewelry firm is tied up. The strikers are copper plate engravers. The managers of the Tiffany factory declare that half of them regularly earned from \$90 to \$100 a week, others \$75 a week, and none of them less than \$50 a week. These highly paid workmen lately became members of the International Brotherhood of Copper Plate Engravers, and are on strike for the recognition of their union, demanding that Tiffany & Co. adopt the Union's regulations as to apprenticeship.

About one thousand delegates, representing the various branches of the Mine Workers' Union, assembled in Scranton, Pa., October 11, to consider the proposal of ten per cent increase in wages offered by the anthracite coal operators. It was predicted that the offer would be declined.

The *Midland Farmer* says that over one hundred thousand acres of government land were taken up in Missouri during 1899, and it is thought it will all be gone within the next seven years.

General News.

At the meeting of the National Prison Congress an expert statistician and penologist, Mr. Eugene Smith, estimated that out of a revenue of \$90,000,000 in 1899, New York City spent \$20,000,000 as the result of crime, its detection and punishment. The same authority estimates that in a recent given year the United States spent \$200,000,000 for the same reason—\$105,000,000 being raised by city taxation, \$45,000,000 by county taxation, and \$50,000,000 by federal and state taxation. Estimating the income lost to the country by the choice of a criminal career by the 250,000 criminals in the country as \$400,000,000, he thus makes the total loss to the country through crime of \$600,000,000 per year.

In his address to the Harvard freshman class last week, President Eliot said: Many people believe that there are a number of students in Harvard who live in rooms decorated with costly ornaments, filled with Oriental carpets, and equipped with marble-coated bathrooms. There are a few of these students here who have expensive rooms, but they form an insignificant minority. On the other hand there are a much larger number of students who are downright poor, and who cannot depend upon their parents for support. These fight their way through the university with uprightness and perseverance which are deserving of the greatest praise.

Prof. James H. Gore of Columbia University, juror-in-chief at the Paris Exposition, says: The exhibits of the United States at the Exposition covered the classification more nearly than those of any other country, and the awards received, 2,475, exceeded those made to any other competitors. Germany received 1,826 awards, Great Britain 1,727, and Russia 1,493. The United States exhibited in 101 out of 120 classes, a record not exceeded by any other country. The jury work was most thoroughly organized, and was most intelligently performed.

The Greek corvette Navarchos Miaoullis, said to be the first Grecian man-of-war that ever crossed the Atlantic, is visiting the important American seaports of the Atlantic coast. The ship arrived in Boston harbor October 10, and fired a national salute of twenty-one guns and a salute to Admiral Sampson of thirteen guns, as commandant of the naval station. The Navy Yard battery returned the salute with thirteen guns to Commander Coundoouriotis, ranking officer of the ship.

Middletown, Conn., celebrated the 250th anniversary of its settlement on October 10.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Close Study of the Moon.

Harvard College to Establish a Station at Jamaica.

OUR great satellite, the moon, will be studied as never before this coming winter. The astronomical observatory of Harvard College is about to establish a station on the island of Jamaica, in the British West Indies. Members of the staff of the observatory are now engaged in packing the instruments and preparing for speedy departure. The principal instrument which will be used in Jamaica will be a long-focus horizontal refractor with a twelve-inch aperture and a focus length of one hundred and thirty-five feet. This type of telescope is stationary, with a mirror at the end reflecting any portion of the sky which it is desired to observe, through the tube to the eyepiece. The telescope will be used visually and for photographic purposes.

Assistant Professor W. H. Pickering, who will be in charge of the Jamaica station for the present, has lately succeeded in securing with this instrument the smallest object, angularly measured, ever obtained on a photographic plate. This was a perfectly clear image only one second in diameter of a star. How small this is may be partially conceived when one realizes that a spot an inch in diameter held at the distance of twenty inches from the eye has a diameter of ten thousand seconds.

Professor Pickering will endeavor to complete the visual observations of the moon which have already brought him so much fame, he having demonstrated that there are active volcanoes and some form of vegetation there, and having devoted much time to the important question of the existence of an atmosphere on our satellite. Professor W. H. Pickering will continue his work on the elliptical forms of the disks of Jupiter's satellites which has attracted great attention.

The announcement of the establishment of this Jamaica station has called attention to the great observatory of Harvard, which is doing a work that no other private observatory attempts and which is only comparable with the government observatories. Harvard spends on astronomical work about forty-six thousand dollars annually, while Washington spends eighty-five thousand dollars a year, Paris fifty-three thousand dollars, Greenwich forty-nine thousand dollars, Pulkowa, Russia, forty-eight thousand dollars, and the Cape of Good Hope thirty-three thousand dollars a year.

While other observatories connected with colleges devote their energies almost exclusively to teaching, the astronomical observatory of Harvard College is almost wholly a research department. The policy of the present director, Professor Edward C. Pickering, has been original in that he has not striven to secure for the observatory in the city of Cambridge a collection of instruments of large size, irrespective of their practical use. Instead, he has used the money of the observatory to produce the best results, placing the instruments wherever they can be used to the best advantage, and in pursuance of this plan he has sent his

instruments and observers to all quarters of the globe. From thence the observations have been sent to Cambridge to be discussed, as it is called technically, that is to say, the results of the observations examined and deductions reached from the measurements and computations.

The Harvard Observatory's great work is in photometry, which is the measuring of the light of the stars, and in photographic work, which includes the determination of the position of the stars as well as the study of their movements, variations in light, and composition.

The northern sky is photographed several times every year at Cambridge with an eight-inch doublet, and the southern sky at Arequipa, with a similar instrument, each of which has taken over twenty-five thousand photographs. The entire collection of Harvard photographs includes, on the average, a hundred photographs of each portion of the sky on a hundred different nights.

The Harvard Observatory grounds in Cambridge cover seven acres, having an estimated value of fifty thousand dollars. Nearly fifty skilled people are employed at the different stations. As the climate at Cambridge is not suitable for astronomical observations of the highest grade, Harvard has established its secondary station at Arequipa, Peru, at a height of over 8,060 feet. The Harvard buildings at Arequipa are valued at twelve thousand dollars. Seven meteorological stations are associated with the Arequipa observatory, one of them being the highest observatory of any kind in the world.

The Harvard Observatory is also closely related with the Blue Hill Meteorological Observatory and its various stations.

The magnitude of the work done at Cambridge may be appreciated when it is known that the one millionth photometric observation has recently been made. It was at Harvard by means of photographic plates that the ninth satellite of Saturn, which has been given the name of Phœbe, was discovered by Professor W. H. Pickering.

By use of these photographic plates all but one of the seven new stars discovered in the past ten years has been found by Mrs. Fleming at Harvard. The number of variables located by this observatory both in Cambridge and Arequipa now reaches many hundred. Fifty of the latest found have not yet been announced to the world.

Boston Herald.

The Bible saints were not the heroes of romance, for then they might have been painted spotless. They were the men of real life, and the details of that life sometimes guilty enough. But then, life was an earnest thing with them. It was transgression, if you will, but then it was sore, buffeting struggle after that. It was the penitence of men bent manfully on turning back to God. And so they fought their way back till they struggled out of the thick darkness into the clear light of day and peace. Let us lay this to heart. It is not the having been "far off" that makes peace impossible, it is anything which keeps a man away from Christ.—ROBERTSON.

Selected Articles.

Another Reply to Dr. Williams.

Editor of *Hawk-Eye*.

Dear Sir:—I have just received the Rev. A. C. Williams' second attack on Christian Science, published in your issue of August 5.

He writes: "Mr. Farlow denies the possibility of giving an exposition of Christian Science by one not a believer nor a practitioner." I can only reiterate what I have said before on this subject: it is as impossible for one to be certain that he understands the teachings of Christian Science, without having practised them well, as it is for the mathematician to be sure that he understands mathematics without having demonstrated the rules which he has studied, and having actually solved problems and demonstrated propositions through this understanding.

He asks: "Cannot an intelligent person, from the study of their books, understand the teachings of Christian Science?" I answer yes; but I ask the question, how does such a student know that he comprehends it until he has tested his understanding by healing the sick and overcoming sin through what he has learned from his study?

The practical mathematician who has advanced to some degree of proficiency by having first studied the rules, and then used the examples for practice, listening to the explanation of mathematics by one who has never solved even a simple problem, recognizes at once any lack of understanding on the part of the pretended teacher. Yet this would-be tutor objects to any criticism of his exposition, declaring: "I can read the English language, I have studied the text-book on mathematics, I have superior intelligence and unusual ability of comprehension, and yet you insist that I do not understand the system." The real mathematician declares: "If you cannot prove your knowledge by the solution of problems you have no ground upon which to base your assumption of understanding."

Now we must insist that Christian Science is really a Science, and we emphasize that our critic has no right whatever to claim that he understands what he is not able to prove by actual results. Not that it is impossible to gain the true idea of this subject from the first reading of its text-book; but in making this practical, even in the smallest degree, he would prove to himself the truth of Christian Science, and would then be unable to declare its propositions untrue. One who is too ignorant of this Science to demonstrate it has no right to criticise it. One who understands sufficiently to demonstrate it has no desire to criticise it.

Mr. Williams writes: "Mark, the healer must convey to the consciousness of the patient, so that patient may understand; and do this before he, the healer, understands the facts to be conveyed." My statement does not imply that the experienced practitioner of Christian Science does not understand what he imparts to his patient but that the first effort to heal on the part of the inexperienced student is more or less experimental. We might say this of all sciences. While it is true that any science must be understood before it can be applied with its promised results, it is equally true that said results are the only proofs which the scientist can have of the correctness of his theory.

Paul expresses this idea in the words: "We walk by faith, not by sight." Every step in progress is an untried step which is taken for the purpose of putting into practice some new theory. After the step has been taken and the promised results obtained, we have our proof; first, that the theory is correct; secondly, that we understand it. Now, our critic claims that he understands Christian Science. Let him prove this by showing his ability to heal. If meanwhile he finds himself able to heal the sick, reform the sinner, and make his neighbors purer and better through

his practice of the ideas of Christian Science, doubtless he will have little reason to complain of its teachings. He may ask the question, "How do you know that I do not understand it?" I would answer, because you do not state it as it appears to me, and I know that my comprehension of it is correct, because I have proven my understanding by many years of actual practice. I claim the right, based upon the only test which can be demanded by a righteous judge, to assert that your views are mistaken.

Our critic further states: "He does not say that practice makes perfect, but rests the 'possibility' of stating the doctrines to patient or public on actual healing." Though I have not used the words "practice makes perfect" in my reply to his attack on Christian Science, I herein state emphatically that what I have said in my letters on this subject implies that practice alone makes perfect in the understanding of Christian Science. Healing the sick and sinful constitute the practice of the Science.

It is stated: "They [Christian Scientists] also claim to heal infants, idiots, and insane people. Christian Science staggers at nothing." It is true that Christian Scientists claim that the power of God will destroy idiocy, imbecility, and insanity, even as the light dispels the darkness. They believe that all things are possible with God, though claiming nothing for themselves. It is the realization of the divine power brought to the consciousness of the patient which does the work, and the practitioner's ability to heal is dependent upon his spirituality.

The question is asked: "How do they get out of the world, or do they lose God's presence in the dying hour, and let the disease triumph?" Death is called in the Scriptures, the last enemy to be destroyed. Mark you the statement, "an enemy," and one that is to be destroyed. Limited in our understanding and our ability to utilize the divine power, which is in reality the only life, we fall as on the battlefield, struggling to live, and yet our Master said: "If a man keep my saying, he shall never see death." We are also taught in the Scriptures that the time will come when there will be no more death. To keep this saying of Jesus is to put it into practice to the utmost. We must understand and live—not simply in part, but perfectly, all truth as Jesus understood it, in order to be lifted to such a degree of spirituality that mortality would be swallowed up of life, and wherein we would be able to say; "Oh grave, where is thy victory?" Enoch furnishes an example of one who "walked with God; and he was not, for God took him." Paul narrates this circumstance in these words: "By faith Enoch was translated that he should not see death; and was not found, because God had translated him: for before his translation he had this testimony, that he pleased God." That which pleased God in the time of Enoch, pleases God to-day, and if practised by mortals would bring the same results. Enoch seems to have lived a perfect life without any special understanding of the spiritual Science of Being; even as the natural musician executes music without understanding much of its theory. I do not claim that Christian Scientists at this period are equal to the demonstration of Enoch. Indeed it may be centuries before there is one individual who is able to accomplish what he did; but we assert that the Scriptural promise is true, and will be fulfilled. Some time the world will have grown to such spiritual heights that mortality will be impotent, and there will be no more death.

The question is asked: "Can any one have anything but a 'human conception' of things?" By human conception, I mean that conception which we have in our present unspiritual condition. A child views an object; his conception of it may in a degree be correct. As he grows intellectually his ability of comprehension improves, and he

has truer views of the object. Continue this intellectual growth to the point of infinity, and the conception of the object becomes perfect. True growth in intelligence is growth in spirituality, and in the knowledge and practice of good. "When he, the Spirit of Truth, is come, he will guide you into all Truth." When the spiritual understanding, in contradistinction to the materialistic sense of things, is gained, we shall have the exact and perfect sense of all things. Science is exact knowledge of that which exists, including cause and effect. There is but one cause and that is God, but one effect and that is the creation of God. Even while our human concept of things still exists, our spiritual understanding reaches out beyond it to grasp the idea contrary to the senses, that God is Spirit and His creation is spiritual. We deport ourselves as fast as possible in accordance with this understanding, and some time, though ages may pass before it arrives, we shall have fulfilled the demand of Jesus: "Be ye therefore perfect, even as your Father which is in heaven is perfect." Then shall we see as God sees, and our human or mortal concept will have been supplanted with spiritual perception.

It is stated in respect to the ascension of Jesus, "He calls this his ascension. Not an escape from matter or a change in his body, but an escape from the sense-delusion of materiality." A change in the spirituality of the individual necessarily changes the physical condition. It is said that as a child, Jesus "grew and waxed strong in Spirit." He improved bodily as he advanced spiritually, up to that experience which is called the ascension, when he had reached the perfection of spiritual growth, and as a result the corporal body disappeared. "Flesh and blood cannot inherit the kingdom of God." Neither was his fleshly body left behind to be buried. Like that of Enoch, it "was not, for God took him," "That no flesh should glory in his presence." Jesus had progressed until he had reached a perfect state of being; hence, the glorified likeness of God appeared and the fleshly, material concept of body disappeared. Those who were in this mortal existence could not behold him in his spiritual condition; to their sense he had ascended, and yet he said: "Lo, I am with you alway, even unto the end of the world."

He asks the question: "Will our intelligent Christian Scientist admit the existence of matter as commonly understood?" As I have before stated, Christian Science does not deny the existence of any part of God's creation, but does deny that the creation of God is substance which is subject to discord, change, and decay. It is the false, material concept of creation which is denied by Christian Scientists. When mortals believe the false concept of God's creation, and live accordingly, the result is misrule, discord, and suffering. God, who is Spirit, sees His creation as the manifestation of Spirit; and the material concept, called matter, is unknown to Spirit. Until we attain the infinite degree of spirituality we are confronted with the claims of materiality—sin, sickness, and death. These claims must be seen and recognized in order that we may exercise ourselves according to spiritual understanding to overcome them. The Christian Scientist sees these evils in all their hideousness, but in his theory he understands that they are not the creation of God, and are not real in His presence, and he labors with greater ability to overcome them, knowing that God is the only power and that evil is utterly powerless. To know the omnipotence of God, and the powerlessness of sin gives hope, courage, and strength to the sinner, whereby he is enabled to overcome evil and prove its powerlessness.

Our critic refers to my Scriptural quotations: "Things which are not, to bring to naught things that are." "No flesh should glory in his presence." I also made the quotation: "That which is born of the flesh is flesh; that which

is born of the Spirit is Spirit." I desire to call the attention of our readers to the fact that our learned divine has made no attempt to explain these Scriptural statements. If they do not mean what they declare, will he please explain them? We will add also the following: "They which are the children of the flesh, these are not the children of God." "Cease ye from man, whose breath is in his nostrils; for wherein is he to be accounted of?"

It is also stated: "He tells us that in Genesis we have two statements of God's creation of man; one, the truth, by some spiritual man; the other, false, by some one from the material sense." Now, I have serious objection to this perversion of my explanation. I have no objection to my critic's honest comments upon what I say, but to prelude my statements with a misquotation, thereby prejudicing the minds of readers before they have reached my real statement, is unjust, and in Christian Science parlance would be named dishonest. I did not state that one statement in Genesis is false, and the other is true. I herein quote my former statement: "The first chapter is a true statement of man as he really is. The second is a true statement of man as he seems to the physical senses. Both statements are honest, but one is more spiritual than the other." Now will our critic please answer the following questions? If these statements are both made by the same individual and are both clear statements of the same creation, why in one statement is man named as the last of the creation, and represented as the image and likeness of God; while in the other, man is designated the first of the creation, and made of the dust of the ground, after which the lesser things are made and brought to him to see what he would call them? Our friend appears to be criticising Christian Science because he does not consider it Christian or Scriptural, and yet he has ignored my Scriptural quotations, and has made no attempt to explain them otherwise than according to the teachings of Christian Science.

He says: "One writer of a Christian Science book gives us an account of how the Bible came to be. He says: 'Divine energy, the uncreated God, never had anything more to do with the making of the Bible than it had to do with the making of any other book.'"

Our critic certainly knew he was not quoting from good authority. This statement is contrary to the teachings of Christian Science. I do not believe this assertion, and I am sure no other Christian Scientist would endorse it. The statement was never made by a Christian Scientist, and I challenge our critic to produce proofs of such authority. Why did he not quote from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 493, "As adherents of Truth, we take the Scriptures for our guide to eternal Life"?

It is further stated: "This accredited teaching of Christian Science thus boldly disposes of the Ten Commandments which have such a materialistic flavor in condemning murder, adultery, etc., by showing that the whole Bible is the work of man, and the Ten Commandments by a mesmerized man." Our critic who pretends to have studied Mrs. Eddy's work should mark how carefully she urges the necessity of keeping the Ten Commandments. Mrs. Eddy states in Science and Health, p. 266, "The commandment, 'Thou shalt not commit adultery,' is no less imperative than the other, 'Thou shalt not kill.'"

If he will attend a Christian Science Sunday School he will find that the first lessons which are taught to the children are the Ten Commandments, the Sermon on the Mount, and the Lord's Prayer. Christian Scientists teach and observe the Ten Commandments, and I affirm that they are not practising what they do not believe.

He writes: "The story of the woman who sent in a letter a five-dollar bill to a healer for absent treatment, and be-

ing gloriously cured, notwithstanding her letter went to the dead letter office and was returned to her, is a very good explanation of the success of Christian Science cures and how they cure." Suppose this story referred to is a falsehood, and this circumstance never occurred, what does it prove? The story never had any foundation except as a newspaper joke; nevertheless I will admit that people have been seemingly benefited by a mere change of belief, by means of which the fear of the patient, which is the prime factor in his disease, disappeared. The patient thinks he is safe because he has complied with the necessary requirements of getting rid of his trouble, and he is thus relieved. However, I have had abundant testimony in my experience to prove that my patients improve more rapidly when I am treating them than when they simply think I am treating them. Sometimes letters asking for help have been miscarried, or in some way delayed, under which circumstances I have noticed that almost invariably the improvement of the patient dated from the time when I commenced the treatment—not from the time when they thought I commenced. No one knows so well how the sick are healed as the Christian Scientist who has exercised himself in accordance with certain understood methods to bring out healing results.

It requires a great deal of assumption, to say the least, for an outside party to declare to a Christian Scientist, "You do not heal as you say, by evoking divine aid, but you heal through hypnotism." This effort on the part of some clergy (and I am pleased to say only a small number of them) to establish the claim that such a thing as healing the sick through divine power is impractical, foolish, and unscriptural, may have its day, but this very healing which is condemned will eventually refute the error.

Some would even deny the authenticity of our Master's pointed statements, which declare that the believer in him should be able to do the works which he did. This effort to discredit the practice of healing through divine power alone in order to save the credit of some people whose Christian practice does not heal, tends to a denial of the word of God, and "laughs to scorn" the rich promises of our Master.

I admit that one may be Christian to a considerable degree, and yet not understand God's ways and means—His nature and essence—sufficiently to heal the sick. Nevertheless I assert that the Bible, and especially the teachings of Jesus, plainly point to the healing of the sick and the sinful as a possible, yes, a dutiful, part of Christian practice.

ALFRED FARLOW.

In the Burlington (Ia.) Hawk-Eye.

Reply to an Editor.

Editor Astorian:—The *Astorian's* recent editorial comment on the article, "Christian Science Defended," as published September 6, while of sincere and kindly tone contains a number of misleading statements regarding the teachings and practice of Christian Science, which are believed to have been made with no desire to misrepresent and which, in the spirit of simple justice, I seek opportunity to correct.

The editorial asserts that Christian Science teaches that disease exists only in the imagination, and that this statement coupled with the admission that the practitioner does not claim for himself infallibility, precludes Christian Science from rightful claim to the title of Christian.

As to this statement let me quote from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 457. "Sickness is neither imaginary nor unreal,—that is to the false sense of the patient. It is more than fancy, for it is solid conviction. It is therefore to be dealt with through right apprehension of the Truth of Being." The Christian Scientist does not

say to the sufferer with a boil, "You have no boil," or "Nothing ails you," but he does insist that disease of every nature is of mental origin, and he proves his position by restoring a healthy physical condition through prayerful realization of the omnipotence of the one Mind—even that Mind "which was also in Christ Jesus."

Jesus classed sin and sickness together as cause and effect, and healed the one by destroying the other. To those he healed of physical distress, the Gospels record such utterances as: "Satan hath bound thee," "Sin no more lest a worse thing come unto thee," "Thy sins be forgiven thee, rise . . . and walk." He healed the bodily sick through his perfect understanding of the law of God and man's relation thereto. Sin is understood in Christian Science to mean opposition to the law of God; and even as human justice punishes ignorant and wilful disobedience alike, thus with immutable divine law, unconscious sin, or erroneous thought, brings its painful consequences as certainly as does deliberate error. Sin in this sense may not be termed imagination yet it must be admitted to be mental and capable of correction and destruction, and consequently not real or lasting, and it is in this light that both sin and disease are regarded in Christian Science.

The first efforts of the early Christians in healing the sick were not always successful, as witness the healing of the demoniac boy by Jesus after his disciples had failed. However, more consecrated effort in following their master's sinless example of prayer and fasting, in due time enabled them to preach the word everywhere "with signs following."

Thus, with the Christian student of to-day (for disciple is but another name for student), as he patterns his life more closely to that of Jesus the Christ, striving, as the earnest investigator of any science might, better to understand the underlying Principle of the Master's work, he will prove himself better able to bring out the results promised to "them that believe." The healing according to Christian Science is not a gift but is possible to every earnest student through the faithful investigation and application of the word of God.

The editorial assertion that the ranks of Christian Science "do not contain one person of prominence in the scientific world," would indicate a very limited sphere of observation and investigation of the subject, and is at best poor argument against its truth. Every reform the world has known has had in its establishment, to withstand opposition from "the men of prominence" of its day, whether that reform were in religion, medicine, or science, as witness the early struggles of Protestantism, homœopathy, and astronomy. However, men of prominence in every profession and walk of life are to be found throughout this country and Europe in the ranks of Christian Science. The Christian Science Board of Lectureship numbers among its members eminent jurists, clergymen, and physicians. The two lecturers for this section of the country are physicians of long standing and reputation in California, and their investigations have led them to abandon their former practice for this work in Christian Science.

This Science, however, substantiates its claims to truth by that which is more convincing than mere verbal argument, individual endorsement, or personal attachment, in the countless cases of healing throughout the land, through the application of its Principle, and while the statements made as to its healing of organic disease may appear to the uninformed "extravagant," they are none the less true.

It is stated that Christian Science has healed every known disease, and testimonials to this effect may be readily had by reference to authentic publications of The Christian Science Publishing Society of Boston, Mass., by attend-

ance at any Wednesday evening testimonial service of the Church of Christ, Scientist, or by inquiry of any individual Christian Scientist.

DAVID B. OGDEN.

In the *Astorian*, Astoria, Ore.

What Science Really Means.

To the Journal:—There appeared in your paper of recent date, an article entitled, "After the Scientists."

The occasion for the above article was the enforcement of the law requiring clairvoyants, palmists, magnetic healers, astrologers, trance mediums, and phrenologists, to pay a license of one hundred dollars for the privilege of practising their profession in this city. It appears that the two individuals who were notified by the proper officer to take out a license chose to declare themselves Christian Scientists, and, therefore, not under the license law.

This might appear misleading, and convey the impression that Christian Science, clairvoyance, palmistry, magnetic healing, etc., were one and the same; while the fact remains, that no two methods could be further removed from each other than these. One is the quintessence of Christianity, and is Immanuel—God with us—the ever-present Christ casting out sin, and healing the wounds of the erring one. The other systems are but different phases of mesmerism, that have been practised from the time of Pharaoh by astrologers and soothsayers, until now, and as the astrologers of Pharaoh withstood Moses and sought to imitate the Christ power, which this brave old patriarch demonstrated, so they to-day seek by mental phenomena to imitate those mighty works, possible only to God and those who understand His healing law.

Let me define the position of Christian Science as it stands before the world to-day.

To Christian Scientists, there is but one healer, and this one is God; as the Psalmist said: "Who forgiveth all thine iniquities; who healeth all thy diseases."

Christian Scientists do not advertise; their work is the Christ ministry. They do not profess to heal, or guarantee a cure; but simply to aid the sufferer to find the Great Physician, "a very present help in trouble," and thus the Scriptures are fulfilled in the lives of these people; for, "the effectual fervent prayer of a righteous man availeth much," and "by their fruits ye shall know them."

The modest fee that they accept from those able to pay them for their labor of love would compare favorably with the amount received by the ordinary evangelist or missionary of any religious denomination, which is deemed necessary for his support, that he may pursue his ministry uninterrupted. None are ever turned away that are unable to pay; indeed, what the Scientist receives for his labor of love, as a fee, is virtually a free-will offering; and a grateful acknowledgment from the heart, from those not rich in this world's goods, is a most substantial remuneration to him.

In this city the Christian Scientist Church—First Church of Christ, Scientist—has a membership of about seven hundred communicants with an attendance of from eight hundred to one thousand. Its handsome stone structure at the corner of Ninth and Forest Avenue is one of the finest church buildings in the city. The Second Church of Christ, Scientist, occupies the Pepper Auditorium, with a growing congregation in the hundreds, and Christian Science services have been held as a missionary service at Bethany night school in the West Bottoms. As a religious body it numbers more in members than some of the old denominations.

What analogy could possibly exist then between the stately purpose of Christian Science and the vocation of those in question, whose means of operating in healing, al-

though mental, are entirely material, as much so as the commonly practised drugging systems of the day.

We do not question their right to their pursuit, but we do most seriously question their right to take the spotless name of Christian Science, as a convenient cover for a practice diametrically opposed to its method.

Respectfully yours,

JOHN H. WHEELER.

In the *Kansas City Journal*.

Remittances.

The Field is requested when ordering goods either from The Christian Science Publishing Society or Mr. Joseph Armstrong, to remit by express order, post-office money order, or exchange on *Boston* or *New York*, but not on *Chicago*. Individual checks cannot be received, as a charge is made by the Boston Banks for their collection. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request when sending their remittances.

A Full Line of Bibles.

The Christian Science Publishing Society carries a full line of Bibles. Catalogues will be mailed on request. We desire to call attention to a new Bible which will appear in our forthcoming catalogue. This Bible is on India Oxford paper, bourgeois type, self-pronouncing, Alaska seal, limp, leather lined to edge, silk sewed, round corners, gilt edges; a special binding to match the pocket edition of Science and Health. Catalogue number 01435x; price \$4.00 prepaid.

Wanted.

A good florist, who is a Christian Scientist, and will present a written recommendation from a loyal student. Address G. F. W., care of Thomas W. Hatten, 68 Westland Ave., Boston, Mass.

Bound Sentinels.

Volume II. of the *Christian Science Sentinel*, bound in cloth, can be had at \$2.50 per volume, prepaid. Bound in half-calf or half-morocco at \$3.00 per volume, prepaid.

SEEK not the same steps with the crowd; stick thou
To thy sure trot; a constant, humble mind
Is both his own joy, and his Maker's too;
Let folly dust it on, or lag behind.
A sweet self-privacy in a right soul
Outruns the earth, and lines the utmost pole.

When night comes, list thy deeds; make plain the way
'Twixt heaven and thee; block it not with delays,
But perfect all before thou sleep'st: then say,
"There's one sun more strung on my bead of days."
What's good score up for joy; the bad, well scanned,
Wash off with tears, and get thy Master's hand.

Being laid, and dressed for sleep, close not thy eyes.
Up with thy curtains; give thy soul the wing
In some good thoughts; so when the day shall ride,
And thou unrak'st thy fire, those sparks will bring
New flames; besides where those lodge, vain heats mourn
And die; that bush, where God is, shall not burn.

HENRY VAUGHAN, 1621-1695.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Mr. Kimball at Chicago.

IN our last issue we made mention of the remarkable demonstration at Kansas City on the occasion of Mr. Kimball's lecture there. Now come to us reports of another remarkable demonstration in Chicago on the occasion of Mr. Kimball's lecture in that city, in the Coliseum, before an audience variously estimated at from seven to fifteen thousand people. Whatever number was really there, the fact seems to be clear that the large Coliseum was filled to overflowing by an eager and attentive audience.

Mr. Kimball was introduced to the great audience by John H. Miller, Esq., one of the leading attorneys of Chicago and the Illinois bar. These great gatherings, to hear from the lips of our lecturers something of what Christian Science is and what it is not, are among the astonishing events of this astonishing age, and bear striking witness to the fact that Christian Science in its various phases is striking deep into the current thought of the times, awakening people to the fact that along with the marvelous material advancement there is moving a mighty spiritual force.

Christian Scientists cannot do otherwise than rejoice, with the fulness of a laudable joy, at these happy evidences of present prosperity and unmistakable prophecies for the future.

A full press notice of this lecture appears under the usual heading.

To our Co-workers.

THE workers at headquarters cannot be your *Conscience*. They cannot settle matters which only you can settle. They cannot make *atonement* for you. Christian Science does not teach the doctrine of a substituted salvation, but it teaches the true Scriptural doctrine that each must work out his own salvation,—aided as he is by helps innumerable, if he will only recognize and avail himself thereof.

Will you not realize, dear brethren, that in appealing to persons at headquarters you are placing reliance upon person instead of divine Principle? on man instead of on God?

It is true, that there are certain things you may properly submit, but it is also true that there are scores of things written to headquarters which the workers here can do nothing about. They have neither the knowledge nor the authority to act; and if they had, it would, in the great majority of cases, be unwise and inexpedient to undertake to act, for they relate to matters that only those immediately concerned, can possibly adjust.

If our readers will be more careful to read the standing notice on the last page of the *Sentinel*, they will save themselves, and those at headquarters, much inconvenience, trouble, and sometimes delay, as to the ordinary business part of the work; and if our co-laborers will more carefully study the teachings of the text-book, "Science and Health with Key to the Scriptures," in its direct application to the working out of individual problems, and will also keep well up with the Church Manual, carefully regarding

it, they will be enabled to walk the strait and narrow way under divine guidance rather than human.

In connection with the above we will again say that the editor of our periodicals has nothing to do with cards, church notices, or other matters connected with the Publisher's Department, except as specially provided in the Church Manual. His duty and authority relate only to the reading matter proper.

He is led to say this because he is in constant receipt of letters based on the assumption that he is familiar with every detail of business connected with our publications. Our friends must remember that the Publisher and the Board of Trustees have duties to perform, peculiarly their own, and entirely apart from the Editorial Department.

Three lengthy letters from a western city have just been received, addressed to the editor personally, relating to matters of which he had never heard and knew nothing whatever. Every moment of his time is needed in his own departments of labor.

Emerson's Statement of Faith.

RALPH WALDO EMERSON delivered the address to the graduating class of the Harvard Divinity School, June 15, 1838, in which he is said to have made an explicit statement of his faith, for the first time.

Much controversy was aroused by it, both the press and the pulpit opened a savage denunciatory fire upon him, and the result was his separation from the Unitarians.

In the light of religious history since that time it seems incredible that any one should have been denounced and persecuted for uttering such plain spiritual truth; yet the fact that Emerson was so denounced and persecuted is evidence that such utterances were then needed.

Emerson was chief among that noble band who stood for a broader and more spiritual religion, a deeper religious philosophy. These noble spirits,—Emerson, William Henry and Ellery Channing, Theodore Parker, James Freeman Clarke, A. Bronson Alcott, and others,—were truly John the Baptists crying in the wilderness of dogmatic beliefs for a brighter torch of Truth. Their cries were heard, and they were thereby enabled to lead many struggling hearts up to a higher plane of thought and living, whence a wider spiritual vista met their gaze.

Emerson looked out in prophetic vision, even thus early in his career.

He said:—

"Yourself a new-born bard of the Holy Ghost,—cast behind you all conformity, and acquaint men at first hand with Deity. Look to it first and only, that fashion, custom, authority, pleasure, and money are nothing to you,—are not bandages over your eyes, that you cannot see,—but live with the privilege of the immeasurable Mind. Not too anxious to visit periodically all families and each family in your parish connection,—when you meet one of these men or women, be to them a divine man; be to them thought or virtue; let their timid aspirations find in you a friend; let their trampled instincts be genially tempted out in your atmosphere; let their doubts know that you have doubted, and their wonder feel that you have wondered. By trusting your own heart, you shall gain more confidence in other men. For all our penny-wisdom, for all our soul-destroying slavery to habit, it is not to be doubted that all men have sublime thoughts; that all men value the few real hours of life; they love to be heard; they love to be caught up into the vision of principles. We mark with light in the memory the few interviews we have had, in the dreary years of routine and of sin, with souls that made our souls wiser; that spoke what we thought; that told us what we knew; that gave us leave to be what we inly were. Discharge to men the priestly office, and, present or absent, you shall be followed with their love as by an angel.

"And to this end let us not aim at common degrees of merit. Can we not leave to such as love it the virtue that glitters for the commendation of society, and ourselves pierce the deep solitudes of absolute ability and worth? We easily come up to the standard of goodness in society. Society's praise can be cheaply secured, and almost all men are content with those easy merits; but the instant effect of conversing with God will be to put them away. There are persons who are not actors, not speakers, but influences; persons too great for fame, for display; who disdain eloquence; to whom all we call art and artist seems too nearly allied to show and by-ends, to the exaggeration of the finite and selfish, and loss of the universal. The orators, the poets, the commanders encroach on us only as fair women do, by our allowance and homage. Slight them by pre-occupation of mind, slight them as you can well afford to do, by high and universal aims, and they instantly feel that you have right, and that it is in lower places that they must shine. They also feel your right; for they with you are open to the influx of the all-knowing Spirit, which annihilates before its broad noon the little shades and gradations of intelligence in the compositions we call wiser and wisest.

"In such high communion let us study the grand strokes of rectitude; a bold benevolence, an independence of friends, so that not the unjust wishes of those who love us shall impair our freedom, but we shall resist for truth's sake the freest flow of kindness, and appeal to sympathies far in advance; and—what is the highest form in which we know this beautiful element—a certain solidity of merit, that has nothing to do with opinion, and which is so essentially and manifestly virtue, that it is taken for granted that the right, the brave, the generous step will be taken by it, and nobody thinks of commending it. You would compliment a coxcomb doing a good act, but you would not praise an angel. The silence that accepts merit as the most natural thing in the world is the highest applause. Such souls, when they appear, are the Imperial Guard of Virtue, the perpetual reserve, the dictators of fortune. One needs not praise their courage,—they are the heart and soul of nature. Oh, my friends, there are resources in us on which we have not drawn. There are men who rise refreshed on hearing a threat; men to whom a crisis which intimidates and paralyzes the majority—demanding not the faculties of prudence and thrift, but comprehension, immovableness, the readiness of sacrifice—comes graceful and beloved as a bride. Napoleon said of Massena, that he was not himself until the battle began to go against him; then, when the dead began to fall in ranks around him, awoke his powers of combination, and he put on terror and victory as a robe. So it is in rugged crises, in unweariable endurance, and in aims which put sympathy out of question, that the angel is shown. But these are heights that we can scarce remember and look up to without contrition and shame. Let us thank God that such things exist.

"I look for the hour when that supreme Beauty which ravished the souls of those Eastern men, and chiefly of those Hebrews, and through their lips spoke oracles to all time, shall speak in the West also. The Hebrew and Greek Scriptures contain immortal sentences that have been bread of life to millions. But they have no epical integrity; are fragmentary; are not shown in their order to the intellect. I look for the new Teacher, that shall follow so far those shining laws, that he shall see them come full circle; shall see their rounding complete grace; shall see the world to be the mirror of the soul; shall see the identity of the law of gravitation with purity of heart; and shall show that the Ought, that Duty, is one thing with Science, with Beauty, and with Joy."

Here is a clear discernment of a Science of the Ought,

the Science of Duty, the Science of Beauty, the Science of Joy; and as these are all components of Wholeness, we press Emerson's reasoning to its inevitable conclusion, and add that completeness is reached in a *Science of Health*.

Among the Churches.

New Quarters at Decatur, Ill.

First Church of Christ, Scientist, have moved from the Review Building, where they have been seven years, to the Powers Building where they had their first meeting Wednesday, September 12. They have three rooms: one for church services, one a reading room, and one for consultation with those who come for Christian Science treatment. The rooms have been newly fitted up. The color scheme is green and gold, and white and gold. It is well lighted by electricity and nicely furnished. The platform is at the side and of circular form. A large United States flag is draped back of the desks, pictures suitable for such a place hang on the walls, and potted plants and flowers were in profusion at the opening service.

After the usual opening exercises the First Reader said: "We have made no special plans for our opening services in our new place of worship. We have enlarged our borders somewhat, and know it is Truth's leading by the ease with which it has been accomplished. Although improvement of thought not change of location, in Christian Science, produces advancement, yet as thought is purified, the sense of limitation and bondage disappears naturally and we manifest that freedom by expansion in material ways.

We owe endless homage and gratitude to our Mother in Israel, Mary Baker Eddy for giving to the world our textbook, "Science and Health with Key to the Scriptures." In this book the church is defined as "the structure of Truth and Love; whatever rests upon and proceeds from divine Principle.

"The church is that institution which affords proof of its utility, and is found elevating the race, rousing the dormant understanding from material beliefs, to the apprehension of spiritual ideas and the demonstration of Divine Science, thereby casting out devils, or error, and healing the sick." This church we are building and we hope its visible manifestation, "a prayer in stone," may soon be the fulfillment of our hopes.

To all the dear workers in this Cause we are indebted for their cheerful, willing, and generous help in making this demonstration, understanding well,—

That we must share, if we would keep
That blessing from above:
Ceasing to give, we cease to have,
Such is the law of love.

An original poem, "Farewell to the Old Home," by one of the congregation was then read. The remainder of the evening was devoted to relating demonstrations of healing sin and sickness, and other subjects of interest in Christian Science.—Mrs. S. R. D., Decatur, Ill.

First Stone Laid at Baltimore, Md.

Shortly after seven o'clock on the morning of September 26 the Trustees and Building Committee of Second Church of Christ, Scientist, gathered around the excavations which have been made for the building of the chapel, in order to witness the laying of the first foundation stone. As the corner-stone will not be laid until the church edifice proper is erected, we felt that we wanted to have some exercises in connection with the building of the chapel, and therefore selected the laying of the first stone as an appropriate occasion. Ground was broken a week ago, and it took months of hard but joyous work to bring this about.

Miss Ellen E. Cross, C.S.D., our First Reader, conducted the exercises, which consisted of silent prayer followed by the audible repetition of the Lord's Prayer with its spiritual interpretation; some appropriate selections were read from the Bible and "Miscellaneous Writings" by Mary Baker G. Eddy; then the "Scientific Statement of Being" was recited in unison, after which the Second Reader laid the stone, a large piece of Falls Road stone of which the chapel is to be built.

The morning was calm and sweet, just after sunrise, and all were deeply impressed with the services and the meaning of this occasion to the people of this city, even the builders and workmen who were about reflected the peace and love that was present.

The selections from the Bible were from the fourth chapter of Joshua, which tells how Joshua, Israel's leader, had been commanded to take twelve stones from the bottom of the river Jordan when the waters parted to allow the children of Israel to pass through, and to lay these stones for a sign and a memorial of what the Lord had done for Israel. It seemed to us that we were laying the stones of this dear chapel for a memorial of what divine Love, through our beloved Leader, Rev. Mary Baker G. Eddy, has done for us through Christian Science.

The reading from "Miscellaneous Writings" by Mrs. Eddy was from pages 141 and 146 as follows:—

"Built on the rock, our church will stand the storms of ages: though the material superstructure should crumble into dust, the fittest would survive,—the spiritual idea would live a perpetual type of the divine Principle it reflects. . . . This building begun, will go up, and no one can suffer from it, for no one can resist the power that is behind it; and against this Church temple 'the gates of hell cannot prevail.'" "May her walls be vocal with salvation; and her gates with praise!"

HERMANN S. HERING.
Secretary of the Building Committee.

A Word from Janesville, Wis.

We have just enjoyed the great privilege of a lecture by Judge Ewing, and I feel that I must give expression to the gratitude which wells up in my heart continually although it seems almost too deep for words. When asked what it was that had helped me most in the lecture, I could only reply, "I do not know." If I were to point to any one thought it would be that of charity, the need of sympathizing more with the one who honestly doubts, and a desire to be more gentle and patient in presenting the Truth,—in other words, to live it. Now, after more thought upon the subject, I can see that this loving presentation of the subject disclosed to me many hidden prejudices in my own consciousness, and at the same time showed their utter nothingness. Also such a sense of humility, and realization of the nothingness of human thought and work, and such an ardent desire to live the life which is the reflection of all that is good and true.

May we not hope and know that such is the effect upon unbelievers who come to hear of our doctrine, and shall we not by our *lives* show that we appreciate this inestimable blessing which our dear Mother has bestowed upon her children? I earnestly pray that it may have this effect upon all hearers. Then will our Christianity or religion be as natural as the blossoming of the flowers.

HELEN C. SHERER, Janesville, Wis.

The lives which seem so poor, so low,
The hearts which are so cramped and dull,
The baffled hopes, the impulse slow,
Thou takest, touchest all, and lo!
They blossom to the beautiful.

SUSAN COOLIDGE.

The Lectures.

At Battle Creek, Mich.

A large and representative audience filled the Independent Congregational Church, Sunday afternoon (September 23), to listen to the eminent lecturer, the Hon. William G. Ewing of Chicago, who spoke under the auspices of First Church of Christ, Scientist.

Rev. S. J. Stewart, pastor of the Independent Congregational Church, introduced the speaker in the following language:—

In being honored with the invitation to introduce a distinguished speaker, I am naturally anxious to comply at once with a request coming from neighbors and personal friends. As a public teacher myself, however, of course what I say in public cannot be measured alone by the tests of personal friendship or courtesy. I may say at once that my introduction of the distinguished speaker of the day is an indorsement of the character and sincerity of the man rather than the cause. It would be a false modesty if I were to say that I know nothing about Christian Science.

Having spent a third of a century, perhaps, in the direct study of Christianity, not only as literature and as a religious force, but from the critical standpoint, it would be strange if I did not have decided opinions as to what it is. Having also studied for some twenty years, at least, as my time and ability would allow, the great problems of modern science as taught by its most distinguished writers, I should know something also on that question. I have even read the speeches of the speaker of to-day so far as reported in the leading journals of Boston and Chicago. Having been something of a student in this direction, I could not ignore the growth of this movement itself, and do know in general in regard to its claims. It is sufficient for me to say here, in order that my own position may be understood, that I do not indorse it. This simple statement is all that it is necessary for me to make. This is a meeting of those who have secured this audience room for themselves and for their speaker and they are entitled to the time and the occasion.

But there are good reasons why I accede to the request to introduce the speaker. I am glad to do this specifically in the interests of free discussion and free thought. It is useless to ignore the fact that the cause represented here to-day is one of great influence in our land. It is a characteristic of a progressive city and community to encourage the discussion of important problems by men of ability and good moral character. Battle Creek has always been distinguished for its breadth of thought. It has in the past furnished the platform for the discussion of causes which at first were unpopular. It has believed in free discussion. Although this audience room for the hour is controlled by this meeting, and the organization which owns the building has no claims on the meeting and no responsibility in regard to it, yet in one sense it is appropriate that the meeting should be held here. We believe in a free platform, within the proper limitations. We believe that those who are discussing current moral questions have a right to their discussion, and as a citizen of this growing city, in which are people of catholic minds, it affords me pleasure to introduce to them a leading advocate of questions which are occupying the attention of thousands of people.

It is with pleasure that I can introduce to you a man whose heredity, family associations, education, ability, and moral character are of a superior quality. Judge Ewing belongs to a family which stands among the best in the city of Chicago and in Illinois. He was at one time a leading attorney in Quincy, Ill., and conducted important cases with such ability that he won the attention of Chicago citizens. He was induced to settle in that great city, and

in 1884 was made United States district attorney. He retired from that office with honor in 1889, and in 1892 was elected to the bench of the Superior Court of Cook County, in which is the great city of Chicago. He served in this position with distinguished ability and with absolute integrity, until 1898.

As such questions are being discussed in our community, it is a privilege which we have to-day in having them explained to us by a man of unquestioned sincerity, of distinguished intellectual ability, and of moral character. Such a man I now introduce to you in the person of Judge Ewing, and ask for him your careful attention and fair judgment. It is best for the cause of truth to have men address us who are the authorized exponents and the best representatives of the cause which they espouse. I have the honor to introduce to you the Hon. William G. Ewing, who will explain to you the principles he advocates.

Judge Ewing was greeted with hearty applause.

Battle Creek Daily Moon.

At Chicago, Ill.

Every seat on the main floor and galleries of the Coliseum was occupied last night (Tuesday, October 9), when Edward A. Kimball took the platform to deliver his Christian Science lecture on "Cause and Scientific Cure for Disease." For half an hour before the time set for the lecture an orderly crowd poured through the north and south doors on the west side of the building. Inside the structure there was the greatest quiet, and the speaker had little difficulty in making himself heard in the remotest corner of the vast auditorium.

Mr. Kimball was introduced by John S. Miller in the following words:—

The purpose of this great meeting to-night is not to bring together believers in Christian Science to hear again the principles and arguments in its support, with which they are already familiar and in accord. If it were, and if I, by my participation here, were to be understood as standing for the doctrine of Christian Science, I should not have been asked to take the part which it is my pleasure to take to-night.

But the people of this faith, who have invited us here to-night, feel that they have something to say to those who are not of their belief. They invite the attention and investigation of fair-minded people. They ask no more than that the truth be made known, and that their doctrines stand or fall as they are true or false. God grant that they may. Phillips Brooks once said: "It is truth that we want in every department of our life—in State and Church we need it, at home and on the street, in the smallest fashions and in the most sacred mysteries—that men should say what they think, should act out what they believe, should be themselves continually without concealment and without pretense."

Ladies and gentlemen, I need say no more of the qualifications of the speaker whom you will have the privilege of hearing to-night, than that he is a member of the Board of Lectureship of the Mother Church of Christian Science of Boston, and I now have the honor to introduce him to you, Edward A. Kimball of Chicago.—*Times-Herald.*

At Stephen, Minn.

Edward A. Kimball, C.S.D., of Chicago, addressed an immense audience at the Opera House last Friday night (September 21). The local Scientists had issued invitations to their friends to be present, and the result was that the house was crowded and standing room was at a premium. The interest thus manifested in Christian Science shows what a hold it is gaining. A few years ago, nothing was known of Christian Science, and to-day it is a topic of general conversation in every home.

Mr. Kimball is one of the most fluent and pleasant speakers we have heard in many a day. Appearing before an audience, in the main prejudiced against all things pertaining to Christian Science, he presented the case in a manner that left his sincerity unquestioned.

The speaker made many good points in his argument. He claimed that fear caused much of the sickness mankind is subject to. He gave this point a thorough discussion and proved his assertion by citing cases and anecdotes. The address was both interesting and instructive.

Marshall County Leader.

Letter to Mrs. Eddy.

Minneapolis, Minn., September 30, 1900.

Beloved Mother:—We all thank you most sincerely for permitting Mr. Smith to accept Dr. Shutter's invitation to speak on Christian Science in the series of addresses which will be delivered at the Church of the Redeemer. We enclose a clipping from the *Minneapolis Tribune* describing Dr. Shutter's plan. Sunday evening, November 25, is the date for the address on Christian Science.

We cannot close without grateful mention of the growth of Second Church, which has always been to us a special gift from you. Our present church building has long been insufficient for our congregation, and we have therefore secured the Lyceum Theatre for our Sunday services after to-day, until such time as we shall have completed a church edifice of our own. This is the second building outgrown by us since we began to hold services, three years ago last February. The Lyceum Theatre is one of the largest in the city, and in that auditorium our lectures by the Board of Lectureship have been given.

Last communion, we welcomed one hundred and twenty-eight new members, making a present church membership of over five hundred. Our people all realize that they can best express their loving loyalty to her who has sacrificed all for Truth, by striving to live the life that she has lived and taught.

Lovingly and gratefully your students,

EMMA A. THOMPSON,
ABIGAIL D. THOMPSON,
ABBOT E. SMITH.

The following is the clipping from the *Minneapolis Tribune*:—

Some time ago the pastor of the Church of the Redeemer sent out to representatives of the different denominations in the city a letter, of which the following is the substance:

"It is my purpose to invite representatives of the old and new denominations to address my people, at the Church of the Redeemer, on the Sunday evenings of October and November—possibly also of the early part of December. My object is to have a series on the present position and aims of the denominations represented. The lines along which I should expect the addresses to proceed would be somewhat as follows: What were the circumstances in which your denomination took its rise? What is your present theological position? What are the distinctive features which justify your separate denominational existence to-day; that is, what marks you out from other religious bodies? What is your specific message to the world to-day? And how far can you co-operate with others? I do not insist that this outline be rigidly followed, but it will serve to indicate what I have in mind. As the object of these addresses is educational, you are to have and feel the utmost liberty in your statement, saying what you have to say as if speaking in your own pulpit."

The responses have been prompt and cordial. The course will begin Sunday evening, October 7. It is the hope of the projector, Mr. Shutter, that the result will be a better understanding and wider sympathy among the various religious bodies.

From Our Contributors.

Where is Heaven?

BY JACOB CLEMENS.

WHERE mercy reigns with grace divine
And justice rules with square and line,
Then query not, but do thy part,
And seek, and find it, in thy heart.
Thus Jesus taught, you must begin
To know that Heaven is within
And knowing thus begin.
You will know the Father and the son
Not as passing strangers. He dwells within
To sup with thee and thee with Him.
This blessing now to man is given
So where God is, there is Heaven—
And so with joy. We can declare,
In Heaven below, and Heaven above,
The ruling Principle is Love,
And they in Heaven discard all hate,
Pure Love they always cultivate.
May justice rule in every heart
And mercy reign in every part.
We soon shall know of heavenly joy
And taste the sweet without alloy.

Reflecting Divine Love.

BY GEORGE W. DE LANO.

It was only a glad "Good morning,"
As she passed along the way;
But it spread the morning's glory
Over the livelong day.—CARLOTTA PERRY.

ONE bright, sunny Sabbath morning, while far away on a summer vacation, two Christian Scientists were walking down the country road on their way to meet with one or more fellow-Scientists, for the purpose of holding the regular Sunday morning service.

It was a beautiful morning. Not a cloud obscured the broad, blue expanse. The trees were heavy with foliage; the grass rich in its greenness, and the flowers bright in color, and the fragrance thereof delicious to the senses. The waters of the adjacent bay were having a rest of Sabbath quietness, and reflecting on its bosom the bright, clear azure above. The whole universe was bespeaking the fact, that God is Love, and the heart went out in gratitude to that Infinite One who made man in His own image and likeness,—spiritual, not material,—and brought one to a fuller realization that,

There is a power, a mighty power,
That sustains Immortal Man;
Which he feels is Life eternal,
For he knows man ne'er began.

The Scientists were bright, cheery, and full of love from the effects of the beautiful morning, and the beauties of nature all about them, together with the added happiness in store of participating in the study of the lesson of the morning. This inward delight was, without doubt, reflecting itself on their countenances, when a carriage appeared just before them containing two persons, a father and daughter, on the way to visit some friends. As they drew near, the Scientists greeted them with a glad "Good morning," and such other cheery words as bubbled forth from their fountain of love; and each party passed on its way.

You may not see, I may not know,
The deeds to which our kind words grow,
But they are never lost, I know.

And what was the result of that meeting on the country road? Shortly after, the lady and the Scientists met in a friendly call, and this, in substance, was her story:—

On that bright, sunny Sabbath morning, she arose heavily burdened with cares and sorrows. The beautiful morning had no brightness for her; and in the hope that it would "drive dull care away," and banish sorrow from the heart, the drive was planned. In just this melancholy condition she met the two Scientists, who must have reflected on their faces the sunlight of God's love, and the thought of peace, good-will, health, and holiness; for, to the lady, the meeting came as a sweet benediction; the heavy burden gradually lifted; peace came to the troubled breast, and the day changed from gloom to gladness, and to one of almost beatific happiness. She had received the "oil of joy for mourning; the garment of praise for the spirit of heaviness." She wondered at the marvelous change, and dwelt upon the incident of the meeting, and longed to tell the wondrous story, and learn if the effect thus produced had been the result of the beauty and the power of Christian Science.

Is not this an incident from which a valuable lesson may be learned? Does it not make plain how careful one must be of the thought reflected—whether it be sunshine or shadow? Truth, or error?

We know that it is not an infrequent occurrence to have a stranger, riding in a car, touched to an audible expression of his thought, by the something, he knows not what, which he sees reflected in a face before him: that of a Christian Scientist; it being different from the expression he sees in the other "mirrors of thought" about him. And that one face may linger in his memory the livelong day, and possibly have helped him over one or more obstacles, which before seemed almost insurmountable! And so it happens in the office of the professional man, and the business man, as well as in the homes of Scientists; and even in the church itself; for even here, a pleasant smile, a cordial greeting, and warm pressure of the hand, have oft been the starting point of a stranger becoming a Christian Scientist in thought and deed.

Our beloved Mother and Leader, Mary Baker G. Eddy, has made plain to all what is meant by, and what actually is, "the true reflection of God," strongly and beautifully emphasizing the sentiment, in this article expressed, in her poem, entitled, "Love;" wherein she says:—

Fed by Thy love divine we live,
For Love alone is Life;—
And life most sweet, as heart to heart
Speaks kindly when we meet and part.

River-Thoughts.

BY W. S. H. ROBINSON.

FROM behind an intervening hill sweeps into view the broad river; its bosom sparkling in the sunlight; its vivifying mission shown in fringing grass and flowers, and spreading oaks and towering chestnut trees which give an added beauty to the stream in return for its cool waters, while drooping willow branches with loving fingers caress its wavelets.

What countless hidden springs and tinkling rills have blent their modest stores to form thy mighty stream, O River, that flowest down thy path to join the all-receiving sea! Thy rippling flow types the fair stream that watered Eden's garden.

A rush-grown nook makes the Nile story new,—of tyrant king, of babe and bulrush ark; of pitying princess and the sister's care. The fruitful fields beyond call to remembrance the promised land, and that day when Israel's host came down to Jordan's brink, and mitred priests with ark upborne stood on the pebbly brim and saw the flood recede and leave a firm pathway. So thought speeds on, and sees the waters parting once again before Elijah's word; and yet again Elisha's answered call shows to the

watchful prophet-students a certain proof of spiritual power and understanding.

Now Naaman seven times dipped, stares dripping and incredulous, as smooth and healthful freshness succeeds the ghastly leprosy.

The sombre shadow of a passing cloud robbing the waters of their sheen, recalls a minor strain,—of Hebrew captives weeping by an alien stream,—“They that carried us away captive required of us a song; and they that wasted us required of us mirth. . . . How shall we sing the Lord’s song in a strange land?”

The shadows pass as sounds the Psalmist’s fuller strain: “There is a river, the streams whereof shall make glad the city of God,” “and thou shalt make them drink of the river of thy pleasures.”

Then rises Ezekiel’s vision of the waters issuing from beneath the temple threshold, gathering depth and volume as they flowed on healing mission, typing the increasing kingdom of him who in later years, in Jordan’s stream was seen meekly stooping to “fulfil all righteousness” in a baptism which yielded but a faint symbol of his purity. And now a setting sun, glorifying with softened light and changing hues the clouds and hills and a stream, speaks of what St. John saw: “A pure river of water of life, . . . proceeding out of the throne of God and of the Lamb.”

To the present no less than to the future, belongs this latter vision. Pure, deep, and broad, from Love enthroned, outpours the life-giving current of Divine Science. Fed by its exhaustless flow, there stand on either side the trees of life—demonstrated Christianity—whose leaves and twelve-fold fruit forever heal and feed mankind, and “Who-soever will, let him take the water of life freely.”

Change of Motive Power.

BY S. C. D.

IN the change of motive power from cable to electricity on the Broadway surface line in New York City, what is probably one of the greatest of modern engineering feats is being finished with a rapidity that is wonderful, considering the obstacles that have to be overcome. This would be, in any event, a work of considerable magnitude, owing to the length of the road, but when one stops to think that the entire change is being made without the stoppage of a single car, in the midst of an enormous traffic, some idea may be formed of the difficulties encountered. It seems as though the workmen can hardly strike more than three blows of a hammer before they have to get out of the way of an approaching car.

To the casual pedestrian it all probably seems nothing but noise and confusion. The Christian Scientist, however, sees every outward phenomenon as typical of some mental condition, and so, in passing day by day, the busy scene seemed, to my thought, to illustrate the process of reconstruction through which we go while being changed from the material to the spiritual motive power. To our sense it often appears as though it would be more desirable if while undergoing this transformation we might go away from everything and everybody, but this is, of course, impossible, for the work extends over the entire length and breadth of our nature. As Goethe says: “Talent develops itself in solitude; character in the stream of life.” It is in the stress and struggle of every-day life, while all its problems go over us, that the change is made, and those busy workmen, our thoughts, have to learn many a lesson in patience by standing aside while some material experience goes by. But if the work progresses steadily, at last we shall see “the way of holiness” appearing, and we shall find that we have been entirely changed from the old to the new.

Testimonies.

A Lesson in Overcoming.

I feel I must not longer lag in my duty to our *Journal* and *Sentinel*, for surely I have received many blessings through their columns. I have very little, if anything, to say, that will interest those older in Science than myself, but there are so many younger than I, that I hope I may give forth a glimmer of light.

“To him that overcometh,” etc. This seems to be an ever-present thought with me. I had the privilege of class instruction from one of our dear Leader’s loyal students some nine months since. On taking up my daily work thereafter the last admonition given seemed to give me the keynote to commence my living (living before was existence only): “Whatever you do, if only sweeping a room, do it the best you can.”

I did not stop to listen to error, which whispered, “Didn’t you always do that?” I simply went to work disciplining self to do all things better. My heart goes out in gratitude, for this practical suggestion, which followed as faithfully as I knew how, led me to see the Light. It was, I saw, the commencing of the overcoming of which Jesus spoke. Only a little thing, but how great the results only those who have practised it know. I want to tell of just one little overcoming. I have always been self-indulgent as to my duties, so it was with struggles (to sense) that many trifling things were overcome. I had not found it necessary to deny myself the pleasure and privilege of reading the *Sentinel* as soon as it came, even though other things needed immediate attention. The thought came to me that I was sometimes neglecting work that should be finished before indulging in the pleasure of reading this much appreciated and enjoyable visitor. After this I laid it (the *Sentinel*) aside till work that needed my attention was completed. I must acknowledge in such a simple task as this, it was with difficulty that I conquered, so great was my desire to read and enjoy its contents. Out of such little things come the issues of life. I find the blessings appear proportionately as I really overcome (conquer the counterfeit self).

I have had but little to meet in the way of physical discord. My first demonstration was so remarkable to myself and child at the time it was made that I want to tell it, hoping it may help some who feel they lack sufficient understanding. I had read Science and Health for some time, but thought I did not understand it. I had never had a treatment and had talked very little with others about Christian Science.

My son (a youth of fifteen years) called to me from his bed one morning, saying he had a terrible earache. I said, “I do not know what to do for it, only to read Science and Health (medicine was *not* considered for a moment, for had I not turned to God?). The child got up and took the book and read, but impatiently said, “It does no good. Science may be good for some things but not for earache.” He put cotton in his ear, and continued to groan. I finally said, “Come to me and I will see what I can do for you.” I said, “Take the cotton out of your ear, and give me the book.” He obeyed—no relief. The pain now had commenced to go down to the jaw and the suffering increased. I finally said, “You take the wheel and a dollar and go to Mrs. W. for a treatment.” No, he would not consent to this. “Well, see here,” I said, “God is just as near to me as He is to Mrs. W., and I want you to read this *Christian Science Journal* and give me the book.” In less than twenty minutes he had perfect relief from pain, and furthermore has never had a return (now two and a half years), while before he had such attacks frequently, being supposedly the after effect of measles. One proof is worth a million speculations. I thankfully express my gratitude to Mrs. Eddy for the overcoming of all she has

had to conquer of the mortal self that she might give us the understanding of Truth to live by, and I do not forget the helpful words of *all* who have endeavored to help me to a better understanding.—L. R. E., Chicago, Ill.

A Traveling Man in Christian Science.

It is no more than my duty to tell of a few of the blessings I have received since taking up the study of Christian Science. I have received many physical benefits for which I am truly thankful, but there are other things for which I am far more grateful. When we were led to try Christian Science for my wife, we were both in a pitiable condition physically, mentally, and spiritually. We believed we had no religion and no God, but now we are grateful to divine Love for leading us into the Truth, for it is indeed a great blessing and comforter. Through it we have received many physical benefits, and we are happy that we have found a religion whereby we can follow the command "acquaint now thyself with him [God], and be at peace." Never before have I known such peace of mind and body.

No one knows what a pleasure it is to a traveling man to attend the beautiful and helpful services, and to know that he can find such services in almost every city to which he may go. Not only can he find the meetings, which of themselves are a great blessing, but he is always among *friends*. I should be very ungrateful not to mention the help, the kind treatment, and the *real* pleasures which I have received through the friends who have made my stay in the different cities so pleasant.

When I was starting out on the road, my brother advised me to join the Masons, but I told him I had a far better thing than Masonry, and I have not yet been lacking friends, who have manifested that thought so common with all Scientists—brotherly love. When I hear the traveling men complaining that they have so little to take up their time evenings, I am more than ever thankful to our beloved Leader and *all* Christian Scientists that I have this Truth which gives me something to do, some new pleasure every moment.—C. J. G., Pittsburg, Pa.

A Help in Time of Need.

A few days since I had a demonstration which may be a help to others.

We are burning natural gas in the cooking range, and in some way the burners in the oven were slightly turned. I detected the odor of gas but could not seem to find the escape. This was while getting dinner at evening. I always turn the gas quite off from the pipe when through with it, therefore it did not escape through the night. When I came to get my breakfast the following morning the same trouble was apparent. At last I tried each burner and found the oven burners slightly turned; my stove was lighted and when I had made sure that my oven burners were quite turned off, without thinking of danger I opened the oven door; as I did so, there came a blinding flash which filled the stove, and as I was quite in front I received the flame in my face. My eyebrows and eyelashes and great handful of my hair were singed off. For a moment I did not know or think of a burn. The beautiful part was this, as with the flash these words seemed to be my protection, "He shall give his angels charge over thee." Then feeling the smarting I denied the belief of sensation in matter and kept on getting my breakfast, but continued to declare the Truth as best I could.

It may have been an hour before all sense of the belief of pain left me, but none of the family at breakfast discovered that the flame had touched my face, therefore it could not have been red on account of the burn. In two

days the skin came off from one side of my face, as a proof of the severeness of the explosion.

I have for a long time been trying to realize the all-protecting care as promised in the Ninety-first Psalm, and it seemed an assurance that I had caught a glimpse of the understanding of the Truth for which I so hunger and thirst.—H. T. R., Chicago, Ill.

Physical and Spiritual Benefits Received.

After having had recourse to what are termed the best medical methods, and long-continued treatment, from the medical fraternity, the finale was reached, and their diagnosis concluded with the decision which strikes terror to every one, that a surgical operation, with all that term implies, was the only thing that could give me a single chance to live. Before this conclusion was reached by my physicians, I had, through my sister, who is a Scientist, been induced to read Science and Health. I reluctantly purchased a copy, and in the same spirit commenced to read it. I had no faith, and maintained a very antagonistic attitude toward Christian Science. At last my sufferings became unbearable and medicine had entirely failed to give me even temporary relief. In this terrible condition, my sister advised me to employ a healer. I did so and at the same time began to read earnestly and faithfully in Science and Health.

As soon as I was willing to acknowledge my selfishness, pride, and egotism, my healing was rapid. I could fully understand the words of our blessed Master, "Seek ye first the kingdom of God." In proportion as I was willing to sacrifice the pleasures of the senses, I was benefited. To-day I am healed physically and changed spiritually.

My disease was fibroid tumor, and a very severe case of headache of twenty-five years standing. Through the teachings of Science and Health and the loving and patient work of my dear healer, I am to-day, *free*.

F. E. C., Oshkosh, Wis.

A Speedy Recovery.

I received a letter from a lady whom I had never seen (I mention this because many people think it is necessary for the healer to go to the patient) asking me to treat her. She had met with a severe accident, had slipped on a polished floor, falling heavily, wrenching her ankle, and receiving a serious shock. The servants were alarmed, and sent for a doctor, who came, and pronounced that the tendons of the ankle were torn and some broken. The foot meanwhile had swollen terribly, and become quite black. The doctor said that it would be a case of resting for weeks, and then she would most likely have to use crutches.

The lady knew enough of the Truth not to trust in *materia medica*, and refused to have any bandages or liniment applied. I received a very joyous letter from her five days afterwards, saying that she had suffered no pain in the ankle since treatment had begun, that she had just come in from a five mile walk, and that all traces of the injury had disappeared. The lady is studying Science and Health, and is deeply interested in Christian Science.

F. C. F., London, England.

A Testimony for Science and Health.

My wife, Mrs. Daniel F. Beatty, bought Mrs. Eddy's book and read it, and is healed. She no longer has sick headaches. She threw away her glasses, having no use for them, and no further trouble with dyspepsia. In fact, is in perfect health. You may print this if you like.

DANIEL F. BEATTY, Washington, N. J.

Religious Items.

In an article on "Faith" in the (Baptist) *Standard* we find the following: "Many apologize for faith as if it were merely a temporary expedient to brook over our present lack of knowledge. Faith on the contrary is a higher method than knowledge. It is not that by which we accept what cannot be known about the past, nor that by which we look forward to what cannot be proved concerning the future, nor that which enables us to walk blindly in the present; but it is that grace which brings us into unison with God and keeps us there. Hence it is 'the victory that overcometh the world.'"

A contributor to the *New-Church Messenger* says: "When we perceive from our affections, inclinations, thoughts, and conduct, that we are cross, petulant, irritable, that for these qualities of life we generally see the cause in other persons and things, and not in ourselves; when we delight in constantly comparing ourselves with others to our credit and the discredit of the others, then let us remember that the Son of man suffered for and died to these and all other sins that he might be able to demonstrate to the world his divine human perfection, and ask the children of men to follow him in the regeneration."

The (Episcopalian) *Church Standard* has the following: "A dispatch from Pittsburg tells of a remarkable scene when Charles V. Culver, a bankrupt, presented himself before the United States District Court to file the necessary papers. He was accompanied by Jacob J. Wyckoff, one of his largest creditors, to whom he owed \$222,257. As the papers were signed Culver said to his companion, 'There goes thy \$200,000.' Wyckoff responded, 'It is all right, Friend Culver; I know thee would have paid me had thee been able.' This is Christianity, not in word only, but in deed and in truth."

"Catonism" is the odd title of an article in the *Christian Register* of which the following is an extract: "The art of finding fault is not one to cultivate. It is not an ornament to character. It is as great an enemy to virtue as to vice; for it discourages those who try to be right and yet fall. Cato was the professional fault-finder of the Roman Republic. He succeeded admirably in his quest, and secured a reputation for remarkable virtue. History suggests that he enjoyed his reputation, and at last went daft with moral arrogance."

A writer in the *New Church Independent* says: "The self-denial, the humility, the willingness to become as a little child, to forego our prejudices, and to submit ourselves entirely to the guidance of the Divine Word as good itself and truth itself, are the portions only of those who have advanced in the regenerate life, and who have become willing receivers of that knowledge from on high which is able to make them wise unto salvation."

The (Baptist) *Examiner* says: "Senator Depew has recently furnished some statistics which prove that drunkenness is decreasing among railroad men at least. Twenty years ago, he said, the New York Central was obliged to discharge annually twenty per cent of its employees for drunkenness. Now, with thirty thousand men on the rolls, less than one per cent is dropped for that offence."

An editorial article in the *Universalist Leader* contains the following: "Every person who is making sincere and continuous effort to improve his own life, to overcome perverse tendencies, and to grow in grace, and who also is working on Gospel lines for the betterment of others, should try to strengthen within his mind the thought, and within his heart the feeling, that he is working with God."

The (Baptist) *Examiner* says: "The Church is one, but the Church is great in power

and large in relationships. Truth is complete and comprehensive; but because it is so comprehensive it will minister to diversity of condition and variety of need. The Christ is unchanging, and the unchanging Christ is to be preached to changing man under constantly changing conditions."

Rev. Dr. Cuyler in the (Baptist) *Watchman* says: "We have our duties to perform, sometimes very difficult duties; God does not release us from them, but He sustains us in the doing of them. The load laid upon us does not crush us, for He gives us strength equal to our day: we lay the load upon the strength which our loving Father imparts to us."

The *Boston Transcript* says: "Presbyterian leaders admit that the action taken by about one-third of the whole number of Presbyteries, which have now voted, shows so strongly in favor of some creed changes that the committee which propounded the questions will be compelled to report to the General Assembly that it ought to take up the matter."

James M. Ludlow, D.D., says in the *Homiletic Review*: "Let us forget not only our sorrows, but also our sins; not only defective circumstances as we conceive them, but also defects in character; our mistakes, our blunders, our bad yieldings, and our bad doings. If we have repented of them they do not belong to us now."

The *Congregationalist* says: "One may delude himself for a little while with the idea that some big obstacle for which he is not responsible lies right athwart his path into the kingdom of God, but others know and God knows that it's nothing but his own pride and self-sufficiency."

Obliterate everything disagreeable from yesterday; start out with a clean sheet to-day, and write upon it for sweet memory's sake, only those things which are lovely and lovable. Thus you will make life better worth living.—*Household*.

The *Congregationalist* says: "Any church sustained as it ought to be and carrying out its mission is worth far more to the community than it costs, and to its members who collectively compose it it is the temple where God dwells."

The British and Foreign Bible Society is providing all Boer prisoners with Bibles printed in Dutch.—*Exchange*.

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on New York or Boston. Individual checks cannot be received, as a charge is made by the Boston banks for their collection.

All orders for Journals, Sentinels, Quarters, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or vice versa.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science. Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

No. 6.—Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution, may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each \$3.18

Two to Twelve books to one address, each, prepaid . . . 3.00

Twelve or more books to one address, each, prepaid . . . 2.75

Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00

Twelve or more to one address, each, prepaid 3.75

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid . . . 5.00

Twelve or more to one address, each, prepaid 4.75

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00

Twelve or more to one address, each, prepaid 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid \$2.25

Twelve or more books to one address, each, prepaid . . . 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid . . . 4.00

Twelve or more to one address, each, prepaid 3.75

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00

Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid \$3.00

Twelve or more books to one address, each, prepaid . . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription :

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription :

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale :

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp. **SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.**

Entered at the Boston, Mass. Post Office as second-class mail matter.

Items of Interest.

Political and Governmental Notes.

In the course of his annual report, General Merriam speaks with commendation of the excellent progress being made toward civilization by the Apache under the management of Captain Nicholson, Seventh Cavalry. He says: "I found them largely and successfully engaged in agriculture, and saw large numbers of men as well as women at work in the fields, most unusual for Indians. I was also told by railroad officials that they could not employ better men for railroad labor than these Apache Indians. In view of these facts, and of the assurance by Captain Nicholson of the absolute loyalty and efficiency of his Indian police, I recommend the withdrawal of all the troops from San Carlos agency, instead of repairing that post."

Press reports tell of a novel innovation in political campaigning. They say that the Democratic National committee is arranging to have rallies for the Democratic ticket in every city, town, and village in the United States on October 27. The most prominent speakers which the scope of the plan will allow, are to expound the Kansas City platform at these meetings.

According to the postal receipts of the fifty largest cities in the country, Boston makes the remarkable average of a trifle less than \$6 to each inhabitant.

The membership of the Vermont Legislature includes only thirteen lawyers, while there are one hundred and eight farmers among the lawmakers.

The population of the territory of Arizona, as officially announced, is 122,212, against 59,620 in 1890. This is an increase of 62,592, or 104.9 per cent.

Former Governor W. P. Dillingham was elected United States Senator by the Vermont Legislature October 18.

Foreign News.

Disorder has broken out afresh in China, the main trouble now being in the southern provinces. Large revolutionary forces, seemingly not allied to the Boxers, are dominating the lower part of the empire, and several cities have fallen into their hands. The new outbreak of anarchy may interfere with arrangements for peace for some time, but according to Peking dispatches, the Chinese plenipotentiaries, Li Hung Chang and Prince Ching, and the foreign diplomats had a conference last week and decided to meet Saturday, October 20, for a preliminary discussion of terms of peace.

A press dispatch from Freidschafen, dated October 17, says: "This afternoon Count Zeppelin's airship ascended, was steered

against the wind, and put through various tacks and manœuvres successfully. It was then sailed in the direction of Immenstadt, and, after a short flight, remained poised in the air forty-five minutes at a height of six hundred metres, and then safely descended to the lake."

A magnificent palm tree, planted by the Empress Eugenie in the garden of the little hotel owned by her in the Avenue de la Bourdonais, Paris, over the monument to the prince imperial, was mysteriously abstracted recently by burglars. The criminals, who still remain unknown, climbed over the railing of the hotel, and having uprooted the palm tree carried it off.

Lord Roberts, in an army order announcing the return of General Buller to England, thanks Sir Redvers for his great services while he was commander-in-chief of the British forces in South Africa, and for the ability with which he carried out the operations while serving under Lord Roberts.

Germany and England have formed an alliance to maintain the territorial integrity of China and to keep the ports open. The terms of this important agreement were arrived at October 16 between Lord Salisbury and Count von Hatzfeldt, German ambassador to England.

Prince von Hohenlohe has retired from the post of chancellor of the German Empire, and it is announced that Count von Bulow has been appointed to succeed him. This post was first filled by Bismarck, who was an intimate friend of Count von Bulow's father.

"Dickens Avenue" is suggested as the name for the new broad street that is being cut between Holborn and the Strand in London. It runs through a part of the town in which Dickens placed episodes of many of his stories.

The Sultan of Turkey has leased to Germany, for thirty years, the island of Uroan, in the Red Sea, forty miles north of Kaman, for a coaling station.

Industry and Commerce.

The convention of mine workers, which was held in Scranton week before last, adopted resolutions accepting the ten per cent advance in wages previously offered by the operators, provided the operators would agree to continue paying the advance rate of wages until April 1, 1901, and abolish the sliding scale. These conditions were agreed to by the Philadelphia and Reading Coal and Iron Company and the Lehigh Valley Coal Company on October 17, and it was expected that the other companies would fall in line and that the strike would soon be at an end, but on October 18, the Lehigh Valley Coal Company published a statement that the ten per cent advance in wages had been agreed to, but "that powder will be sold at \$1.50 per keg, and that the difference between this rate and the rate of \$2.75 shall be taken into account in the figuring of the net advance of ten per cent." The powder question was one which the mine workers understood to be reserved for adjustment later, under agreement of the operators that the several companies would take up minor grievances with their own men. On learning of the modified acceptance of the miners' proposals, the strikers declared that they would not return to work on such basis.

The strike began on September 17. In ten days 140,000 men and boys were out. Soon afterward practically every mine in the anthracite region was closed. The coal basins extended over an area of 470 square miles. The cause of the strike was the refusal of the operators to recognize the miners' union, abolish company stores, and advance wages at least ten per cent. It is estimated that the financial loss to the miners, the operators, and the railroads had been ten million dollars up to October 18.

The first considerable consignment of South African gold since the outbreak of the

Boer war is now in transit for the National City Bank of New York, and the amount is \$2,500,000. For more than a year the world has been cut off from one-fourth of its annual gold supply, which in 1899 was \$321,805,456, and for 1900, under normal conditions, would have reached \$400,000,000. Africa's proportion of the output for 1899 was 3,849,589 ounces, equal to \$79,577,410.

The introduction of trolley roads has not seriously disturbed the business of steam roads, as was predicted. Trolley lines are especially numerous in Connecticut, and the *Hartford Courant* makes a study of their workings. It finds by an analysis of official reports that while the trolley relieves the steam roads of some local travel it adds to the growth of cities and towns and largely increases the freight traffic.

The potato crop of the United States, according to the *New England Homestead's* final report in its issue of October 20, at the practical completion of harvest, approximates 239,000,000 bushels, or nearly 5,000,000 bushels less than last year, and a fairly good yield compared with the average of the past ten years.

A conservative estimate of the world's wheat this year is 2,500,000,000 bushels. The *Bulletin des Halles*, a commercial daily paper published in Paris, says that it will be slightly below this figure. Last year's yield of wheat was 2,625,440,040 bushels.

Authoritative opinion shows that France will this year be short ten million tons of coal. The *Figaro* remarks that the price has just gone up from \$11.20 to \$13.60 per 1000 Kilogrammes (2,205 pounds), and may exceed \$14.

The pine industry of Cadillac, Mich., once so vastly important in that vicinity, has disappeared entirely, the last pine tree in Wexford County having just been cut down at a camp northwest of the city named.

The wheat crop in the United States is to be almost as large as it was last year, when the figures were 543,419,550 bushels. This year's yield will be with a 30,000,000 bushels of these figures.

General News.

In the "Hall of Fame" of the University of New York, tablets are to be placed on the walls in memory of America's greatest statesmen, soldiers, authors, preachers, jurists, publicists, etc. A jury of one hundred prominent men, including former President Cleveland, has been entrusted with the duty of making the selections. Ninety-seven members of the jury assembled, and the result of the voting shows that George Washington was the first choice of all, for his name was the only one receiving 97 votes. Lincoln and Webster each received 96; Franklin, 94; Longfellow, 94; Grant, 92; Jefferson, 90; Emerson, 86; John Adams, 61. All the names receiving fifty one or more votes were accepted.

By a vote of thirteen to six the trustees of the Chicago Board of Education, on October 17, resolved not to permit in the schools of Chicago the use of a book of selected Bible readings. The selected readings were offered as a substitute for the Bible, which has been barred out by the board for a number of years.

It has been observed that artesian wells have a daily period of ebb and flow, as well as the ocean tides, only the process is reversed. The time of greatest flow of an artesian well is at the period of low tide in the ocean.

The crew of the cruiser *Baltimore*, which was mustered out of service recently, when it was paid off, deposited over \$20,000 at the Naval Branch Young Men's Christian Association in Brooklyn for safe keeping.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Rural Delivery.

Concord (N. H.) System Largest in the United States.

POSTMASTER ROBINSON is in receipt of an order from George M. Allen, acting first assistant post-master general, authorizing an extensive enlargement of rural free delivery in Merrimack County. Carrier service will immediately be instituted on routes from Loudon, Penacook, West Concord, and Hopkinton stations of the Concord post-office, and also from the central office, the rural free delivery system of which already covers the principal highways throughout four hundred square miles of territory, and will, when completed, be by far the largest local rural system in the United States, emanating from a single post-office and its stations.

The Concord postal plant, inclusive of the central office, now comprises nine different offices, stations, and sub-stations, and the systematic, spoke-like development of its rural free delivery facilities has conduced to make it an exemplary and illustrative one for the Post-office Department throughout the country.

Immediately upon the appointment of Colonel E. H. Hathaway to the head of the eastern division of rural free delivery, which comprises the New England states, Pennsylvania, New York, and New Jersey, his special attention was called to the remarkable success that this new feature of postal development has attained under the supervision of Postmaster Robinson and Assistant Postmaster Leighton at Concord. As soon as he could spare the time from his exacting office duties, he made a visit to New Hampshire, and personally inspected the work that is being done here, commending it very highly. The opportunities for increasing and enlarging the rural mail facilities were fully and earnestly presented to him and the assistant agents who accompanied him—Messrs. Sawyer of Vermont and Boutelle and Norton of Maine—and upon authorization of Superintendent Machen of the free-delivery system of the Post-office Department, they took up the subjects involved in the various petitions from this section of the state, making careful surveys and estimates, inclusive of the preparation of plans and maps. Special Agent Everett B. Norton, under assignment from Colonel Hathaway, was given special charge of the mission, and with some few interruptions incident to the demands made upon his time by work elsewhere, he has devoted himself to New Hampshire with great ability and diligence.

Colonel Hathaway was moved by the enthusiasm shown by the grangers and others in New Hampshire, and the interest taken by the local postal officers was such that he has felt great pride in carrying forward the enterprise, and Agent Norton has gone forward with the mission with the skill and diplomacy worthy of the popular cause, and the practical results of their application are beginning to manifest themselves to general advantage.

The attention not only of the authorities at Washington, but of the friends of rural free-delivery everywhere, has been called to the accomplishments in New Hampshire, and

the outlook here for even further progress in this rapidly advancing branch of the government service is very auspicious.

In the neighborhood of twelve thousand people will be reached by the additional service in this county, and various other petitions are awaiting action by the Post-office Department.

Not only will these additional rural facilities increase postal receipts, inasmuch as more letters will be written and more newspapers and magazines subscribed for, but an enhancement in value of farm land will be noticeable, without increased taxation, a moderate estimate of advance in value being from two to three dollars per acre and in some states five dollars. General improvement of the condition of the roads traversed by the rural carriers is an incidental advantage. In some states the construction of good roads is made a prerequisite to the establishment of rural free-delivery service. In one county in Indiana, a special agent reports that the farmers incurred an expense of more than \$2,600 to grade and gravel a road, in order to obtain rural free delivery. It is also claimed that better prices may be obtained for farm products, the producers being brought into daily touch with the state of the market, thus being able to take advantage of information previously not readily obtainable. The educational benefits conferred are inestimable, the monotony of farm life is relieved through ready access to wholesome literature, and the keeping of all rural residents, the young people as well as their elders, fully informed as to the stirring events of the day, being one of the best objects to be attained.

Manchester (N. H.) Union.

Electricity to be Carried in Ice.

METHODS of transmitting electrical currents will be revolutionized if the results anticipated by Nikola Tesla from his most recent invention for the insulation of wires meet with the success in practice indicated by his experiments. There will then be no danger of deaths or injury by contact with live wires. It will be possible to transmit a current of high voltage hundreds of miles with no appreciable loss.

By cheapening the cost of electricity at the place where it is to be used all industries dependent upon electricity for their motive power may be carried on at a vastly less expense. These results will be accomplished by using an insulation of ice or other frozen material.

Mr. Tesla has been informed that his application for a patent covering this ground had been granted.

When seen at the Waldorf-Astoria, Mr. Tesla said that he was greatly pleased with the outcome of the experiments, upon which he had been working for seven years.

"Professor Dewar, of the Royal Institute, gave me the suggestion," said he, "which set me thinking along this line. That was in 1893. Realizing the great practical value of such an invention, I thought much about the subject, until a few weeks ago, when the complete system by

which the desired end might be attained suddenly flashed across my mind as I was pondering upon the problem in my laboratory. Then the simplicity of the plan amazed me.

"Let me describe this method of insulation to you in its most comprehensive form. All wires will, of course, be placed under ground before my cold air insulation can be used.

"Image, now, a great trough extending, if you wish, across the continent. It must contain a quantity of water or some other substance which will freeze. From my experiments I judge that sawdust and water will prove most effective. For the purpose of transmitting the current long distances I shall use a thin metal tube, capable of resisting three hundred pounds' pressure to the square inch. This tube will be submerged in the substance which I intend to freeze.

"In the whole discovery the most interesting feature is the method I have devised for freezing the material in the trough. Five or six feet below the surface the ground itself is very cold. Here the trough would be buried. Through the tube there will then be forced a current of gas—probably hydrogen—reduced to a temperature of minus two hundred degrees or thereabouts.

"This, under ordinary circumstances, will be sufficient to freeze the material surrounding the tube in the trough, and also to neutralize the heat which would be generated by the electricity.

"It has been known since the days of Faraday that an electrical current cannot break through an insulation of ice. My success lies in discovering how to apply this truth practically. To show of what gigantic worth it may be needs but a moment. Grant that the invention has, as I believe, given to the world an almost perfect insulator, immediately there follow results which will directly or indirectly affect every manufacturing industry which in any way uses electricity.

"This will follow from the fact that no electricity will be lost in transmission. The cost of the new insulation will in the end be cheaper than that now used, and so it follows that the electricity which is to be utilized in a thousand different ways can be produced at a less cost. To telephone and telegraph companies, therefore, you see that my invention will be indispensable.

"Water power converted into electricity can by the new method of insulation be carried thousands of miles. At present the loss of electricity due to unsatisfactory insulation makes this impossible. I have been considering the possibility of carrying the power of Niagara to this city, and find that it can be done with a loss of not more than one half per cent to one per cent.

"For the first time in history a power will be used for insulation instead of a property. Deaths from contact with exposed wires will be prevented by the new method. The increase in the speed of exchange of telephone and telegraph messages will be pronounced after the adoption of my discovery.

"These are the important changes in the electrical world which will be wrought by this invention. There will be also innumerable indirect results."

Mr. Tesla said that he hoped to apply his new discovery to electric surface railways. He said that he was working upon a plan by which the cars could be propelled without direct contact with the wire. This plan is still in an embryotic condition, and for this reason Mr Tesla declined to discuss it in detail.—*New York Herald*.

A character is like an acrostic or Alexandrian stanza: read it forward, backward, or across, it spells the same thing.—EMERSON.

God's Creation Real.

Boston, Mass., August 20, 1900.

To the Editor:—In your magazine of July, commenting upon Mrs. Whitney's criticism of Christian Science, you made the statement that Christian Science "is absolutely devoid of a single vestige of anything that **could** honestly pose as Science."

Science, briefly stated, is a demonstrable understanding of that which exists, including cause and effect. Christian Science proposes to give, first, a comprehensive, true definition of God; secondly, a definition of His creation. Then it proposes to measure the things of human comprehension with this exact knowledge of the things of God, and thereby determine between the true and the false. If there is any knowledge which can be properly called scientific it is the understanding of God and His creation, and the relationship between God and His manifestation. The teaching of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, interprets the Bible to the Christian Scientist; thereby presenting it to him as a scientific work, and the most marvelous and wonderful book in the world. The pupil of Christian Science accepts its theory as true; then by the demonstration of its propositions establishes its truth, so that beyond this point of experience Christian Science is no longer a belief, but has become a demonstrable fact, and is justly entitled to the name "Science" in the highest sense of that term.

Mrs. Whitney asks the question in respect to Christian Scientists: "Do they no longer take joy in blue skies, clouds, sunsets, mountain glories, the flowers of the field, the green richness of forests?" I can truthfully say that no class of Christians or philosophers love nature more than Christian Scientists, who see therein the handiwork of God. It is only the perishable, temporal, mutable, human concept of the universe which is denied by Christian Scientists, and this denial is made without loss to them, for "If that which is done away was glorious, much more that which remaineth is glorious." Paul said, "Now we see through a glass, darkly; but then face to face." Even in our present material condition, God's universe appears beautiful to us. As we grow spiritually our ability for true comprehension will increase and the world become more and more fair until we awake in His likeness. Then shall we see as God sees, and behold His creation in all its glory, a new heaven and new earth wherein dwelleth righteousness and nothing that "worketh abomination, or maketh a lie."

Christian Scientists do not deny the existence of God's creation as it really is, but they claim that in our present material condition we are more or less deceived in our perception of it. A wrong concept is not the creation itself, but a false sense of it, and this false sense is what the Christian Scientist declares to be unreal. The Christian Science text-book takes for its basic statement of the "Science of Being" the Scriptural idea, "God is Spirit." Man is made in the image and likeness of Spirit and is therefore spiritual, and the universe, including man, is the creation of Spirit. Spirit is the only real substance. The universe is the reflection of Substance. Matter is the erroneous belief that this reflection is itself substance. The teachings of the Scriptures coincide with the instructions of Science and Health on the definition of creation. Jesus said, "That which is born of the flesh is flesh, and that which is born of the Spirit is spirit." This statement implies that the emanation of Spirit is not flesh, but is spiritual. The flesh or matter is the human concept of the spiritual creation.

Mrs. Whitney further asks, "And why, O prophets and teachers of a twentieth-century revelation, take money for healing or instruction?" It is amusing, to say the least, that one who is in the habit of taking pay for honest labor should make a remark of this kind. Does the writer mean to assert that Christian Scientists are the only people on earth who are doing God's service, and for that reason the only class who are not entitled to remuneration? Are not the merchant, the mechanic, the good minister, and the authoress doing God's service if their various vocations are carried on in an honest manner, and do they not all accept pay? The Christian Scientist does not pretend to do the healing. He only serves as a means through which the Truth which heals is brought to the consciousness of the patient, and expects a remuneration for his effort for exactly the same reason that the minister of the gospel receives a salary, and the authoress a price for her books. What new thing is this which demands that people in the ordinary vocations in life should be recompensed for their labor; while those who render more spiritual service to mankind should not be rewarded? Paul said: "If we have sown unto you spiritual things, is it a great thing if we shall reap your carnal things?" And Jesus said: "The laborer is worthy of his hire."

ALFRED FARLOW.

In *Cram's Magazine* for September.

Physical and Spiritual Health.

PHYSICAL and Spiritual Health, is a subject that vitally concerns all mankind. The word "health" is from the Anglo-Saxon, "health" or "wholth," and means wholeness, that state in which all the natural functions perform freely without pain or disease. The definition of the word is somewhat limited in the dictionary, as it implies that health is simply a condition of the physical organism, whereas it is not that alone, but relates to the mental or spiritual organization as well—a person with a healthy physical body and a diseased mind is not healthy in the true sense of the term.

When we look around on every side and see the sick, the lame, the deaf, the blind, the dumb, all seeking relief from their woes, generally from a material basis, and as a rule, unsuccessfully, we are constrained to think there is something radically wrong with the medical practice of the day. In the "History of Medicine," we see a graphic picture of a system of guesswork that has held sway with the amen of press, pulpit, and people, for over forty centuries. While we entertain a deep respect for the better (and we might say larger) class of physicians, those who are educated, conscientious, and go to the bedside of their patients with hearts filled with love and sympathy, living up to their highest sense of good, yet we can but condemn their system.

If drugs are good, why are they not efficacious? Men have by their aid searched for health all these centuries. Nearly every conceivable product of the three great kingdoms, mineral, animal, and vegetable, has been swallowed in the vain hope of health. Climate, air, exercise, travel, rubbing, pounding, freezing, heating, electricity, and rest cures, have been tried, and their results have been, to say the least, far short of their promise. Have they not had sufficient time to prove their efficacy? If drugs are good, why is there not some infallible remedy for each and every disease, which permanently cures it? Why has mankind suffered so long under their *regime* if they are, as many claim, divinely ordered? Does God send sickness on man, and then approve of material means to cure it? Does the same fountain send forth both sweet and bitter waters? Is there no balm in Gilead? Let us see.

Jesus the Christ, the great Healer and Teacher, was a Physician who healed multitudes and never lost a case.

All his teachings were in and of the divine order. He did the will of the Father, and claimed sonship by his wonderful understanding and demonstration of the Science of Being. He was continually about his Father's business, and said, "My Father worketh hitherto, and I work." He came that we might have life and health and love, and have them more abundantly. He came to destroy the material law and fulfil the divine law, and to save mankind from his false sense of sin, even the belief that there are two powers, good and evil.

His healing was done entirely by a mental process. He never used drugs, never recommended dieting, tonics, or exercise, never diagnosed cases, but healed instantly by the spoken word of Truth, the realization of God's allness, error's nothingness, and the real man's perfectibility as the spiritual image and likeness of God. He recognized only the laws of God, and declared their superiority to man-made laws. He never taught that his healing was the result of any special gift bestowed upon him by God, but rather the result of a scientific system, which any seeker might learn and demonstrate as did he. He said, "He that believeth on me [understands this Principle which I teach] the works that I do shall he do also; and greater works than these shall he do, because I go to my Father [because my personality will soon be taken away and then you must turn from it and rely upon your understanding of impersonal Truth]."

His disciples (students) did practically the same works. They preached the Gospel and healed the sick in obedience to their Master's command. This was a direct proof that his system was scientific and divine, for it brought forth fruits. He and his followers practised what they preached. They taught that sickness was the result of sin, of ignorance of God's laws, or fear, pride, hate, lust, and all the evils which go to make up erring, mortal man, the carnal mind which is at enmity with God, and that the only remedy was an understanding of the Truth of Being, and a practical demonstration of it in one's life by living the Truth as he lived it. He limited no one, but said, "Be ye therefore perfect, even as your Father which is in Heaven is perfect," and also told them, "Ye shall know the Truth, and the Truth shall make you free."

If Jesus presented to the world the right way to gain physical and spiritual health, can there be any other right way? If he taught the Truth, the exact Science of Life, the way in which man can and must work out his salvation, is it possible there can be another way which will also save? Let us not be misunderstood. We believe that all will eventually acquaint themselves with God and be at peace, work out their salvation, because evil is temporal and Good eternal, but this will be done only after much tribulation and purification of thought, but that it must and will be done in the way Jesus taught and demonstrated, because it is the true way. Two plus two equals four, and it makes no difference if billions of well-meaning people believe they make five, the fact remains they are four. So then the Science of Being must be understood and demonstrated, and in the way our Master taught the Truth.

We not only need healthy bodies, but healthy minds, and the latter must come first. If the cause is good, the effect must be the same, and *vice versa*. Christian Science teaches that the cause of disease is erring, mortal thought, and the one infallible remedy is the divine Mind. God is still God. He is supreme, the only Power, Intelligence, and Love of the universe, and all will eventually learn this and put it into practice. He is on earth to-day as much as He ever was, for He is changeless goodness,

and His power is given to His children in as great a degree as it ever was, if they but seek and find it.

If one desired to learn mathematics, he would study carefully the principle of numbers, and constantly work problems out from a higher basis, eliminating all mistakes, which were only in his own concept, and due to an ignorance of numbers; if one wanted to learn music, he would study harmony, the elements of music, and constantly practise on his instrument, until all discords (due to ignorance) were eliminated. It would occur to neither student to pray to the principle of music or mathematics for a solution, but only by learning and demonstrating the rules and laws could he become a musician or mathematician. So, on the other hand, if one desires to become a real Christian, to do God's will, he must study God's laws, he must learn the Principle of goodness which is God Himself, he must go on and perfect himself in God's laws and rules, in being meek, and kind, and loving, and honest, and pure, constantly eliminating the errors, or sins, which are due to ignorance and exist only in his own concept, until he will finally awake in God's image and likeness, because he is reflecting all the attributes of the Father.

Christian Science healing is efficacious and far-reaching in its effects, for it not only heals the sick body, but heals the diseased mind; the sinner is reformed, his thought purified, his mental status strengthened, his trust in God awakened, and he is taught to realize that he is beginning to be a new man in Christ Jesus. Drugs will not do this. No medicine, however powerful and seemingly efficient in curing physical ills, ever yet reached one mentally. Christian Science has healed the insane, the paralytic, cancers, tumors, and hopeless cases given up by physicians, and while it was being done the patient was "renewed in the spirit of his mind" until he felt indeed and in truth that God was the great and only Physician.

The writer knows of many who were healed of severe diseases, many considered incurable by physicians, by simply reading the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. This book should be studied by all who desire to investigate Christian Science, as it contains a full statement of its teachings, and will correct the false views held by some. Many seem to have an entirely wrong conception of Christian Science, and it is amusing to hear and read some of the opinions of those who do not understand it. We believe material things are real to the senses, just as any one else does; we speak of them as others do; we call sin, sin; murder, murder; accidents, accidents, and incredible as it may seem to some, we do not say "you just imagine you are sick." Disease is far more than imagination. It is as real to the sick man as anything can possibly be, but we do say the cause is mental, and the effect also to a certain degree, and the remedy is the divine Mind, not by any means of thought transference, suggestion, or hypnotism, and that it is an efficient remedy, many thousands can testify who have been healed by it. We are a quiet folk. Believe in minding our own business, and never seek patients or followers, knowing when they are ready, they will come of their own accord. But we are always glad to talk of our religion, but only to those who desire to hear, and we think that we have something that is practical, provable, and satisfying, and are glad we have been so fortunate as to find it.

Friends, let us reason together. If Baal, matter, with all its false laws, with all its discords, diseases, and woes, be God, then follow him. But if the one Principle of all Love with sunshine, brightness, health, and peace, be God, then, in His name, let us follow Him, and do it by living the life He would have us live, by loving everybody, by being honest, meek, just, and pure, and gradually we

shall understand that He is the only Physician, the only Healer, the one sovereign panacea for every ill, who cures sickness and cures sin, who gives us sound bodies and pure minds, who leads us in green pastures beside still waters and who will at last bring us to His "house, not made with hands, eternal in the heavens." EDWARD E. NORWOOD.

In the *Chattanooga* (Tenn.) *News*.

The Example for All.

THE life of Jesus Christ furnishes the example which includes every good toward which mankind is striving. What is that for which men are directly or indirectly aiming? It is to be free from evil, to put aside limitations,—sin, sickness, and death. All that men count undesirable and fear is included in these three words.

What all men desire, Jesus attained. The example of Jesus teaches how to conquer sickness, sin, and death. His work was wholly practical. He taught no forms, mysteries, ceremonies, or speculative doctrines. His plan of salvation was not to teach men a theory of life, but to free them from sin, sickness, and death. And his own life-work was an illustration showing how this freedom is to be attained.

How then—by what method—did Jesus overcome sin, sickness, and death? By perceiving their nature. His insight revealed them as errors and not truths belonging to God's creation. This understanding exposed their illusory character and they disappeared as a lie disappears when it is seen to be false. In this connection the Master also disregarded and exposed the falsity of the so-called laws of the physical realm, for he finally rose above them all. He healed sickness and sin at one and the same time, those absent as well as those present. "I have given you an example," he said, "that ye should do as I have done to you." He did not aim to reconcile men to their hard fate in sickness and death, nor did he try to make them feel comfortable therein.

"He healed them." Yet the Master did not try to give the impression that he was acting under mysteries or supernatural power, he was not setting aside law and order, he said he came to fulfil the law, and Paul tells us that "the law is spiritual."

Nor did the Master try to represent that he alone possessed this understanding and none should possess the secret after him, for he said plainly, "He that believeth on me, the works that I do shall he do also."

Thus it was that Jesus became the Christ, the Way-shower, the Saviour of men. Of all men he was the most practical, he proved what he said. If Jesus had not done as he did, he would not have shown us the way. He proved his sonship with God, not by argument and theory, but by demonstration.

To bestow upon Jesus religious sentiment and vague emotion is not what he asks of us. His call to us as his professed followers is to do as he did, obey his teachings, and follow his demonstrations. In this way we rise above blind faith into true discipleship. We are able to perceive and appreciate the grandeur of Jesus' mission only as we become partakers of the Truth he taught and proved, and rise daily above sin and sickness.

Lancaster (N. H.) *Gazette*.

Indians will be a Feature.

THE Pan-American Exposition would scarcely be worthy of its name did it neglect to illustrate so important a subject as the aboriginal inhabitants of the new world, their customs, institutions, and daily life. The great Exposition to be held at Buffalo next summer will, therefore, give especial attention to this subject and aim to present it on a more extensive, scientific, and popular scale than has ever been attempted before.

Object lessons in the life, customs, and history of the aborigines of the various portions of the continent will be given chiefly in four departments of the Exposition, in the exhibits of the building devoted to ethnology and archaeology, in the Indian congress on the midway, in the Six Nations village, and by means of the mounds intended to reproduce some of the best known and most typical of the works of the mound builders of North America.

The building devoted to exhibits in ethnology and archaeology will be filled with relics of the occupancy by the red men of the continent of America. The museums of the United States, Canada, Mexico, and South America will contribute generously of their priceless treasures to make this exhibit the most complete ever collected for a similar purpose, and to the student, and, indeed, every thoughtful person, the remains of the aborigines here gathered will be full of interest and significance.

In the Ethnology Building the collections will be such as to attract and instruct both the student of ethnology and archaeology and the average visitor who knows little of such study. That is to say, they will be scientific in character, but popular in their manner of presentation. For instance, there will be an art gallery in which will be paintings representing with as great a degree as possible of historical accuracy the life of the pre-historic peoples of America and the scenes which Columbus and his contemporaries witnessed when they visited the shores of North America and beheld in Central and South America the cities of the Aztecs and ancient Peruvians. Another feature of a popular character will be the large model on the ground floor portraying the historic Niagara frontier and showing the sites of some sixty aboriginal villages. Real water will flow through the Niagara River and the campfires will be represented at night by red incandescent lights. By graphophones and possibly the kinetoscope vivid reproduction of many rites and ceremonies of Indians of the present day may be given. The collections on the main floor will consist chiefly of exhibits from large museums of the United States and from those of Canada and Latin-American countries portraying the archaeology of the United States, including Alaska, of British America, Mexico, and Central America and the South American countries which are prolific in the relics of the semi-civilization of pre-historic times.

The co-operation has been secured of such bodies as the Smithsonian Institution, the American Museum of Natural History, the Peabody Museum, the University of Pennsylvania, the University of Chicago, and the Buffalo Society of Natural Sciences. The ministers of the various South American countries are co-operating with the director-general of the Exposition and the superintendent of ethnology, and it is now certain that a large amount of valuable archaeological material will thus be secured. Through the co-operation of the departments of agriculture and horticulture exhibits will also be made of the plants cultivated in both North and South America before the great discovery.

It may surprise many readers to learn that within thirty miles of the grounds of the Pan-American Exposition in Buffalo the dances and other pagan ceremonies of the Indians of the Iroquois confederacy are practised much as they were when what is now known as the Niagara frontier was, so far as the white man was concerned, a wilderness unknown and unexplored.

There is much misapprehension as to the dances of the Indians. Comparatively few understand that they are of the nature of religious ceremonies and are observed in somewhat the same spirit as the different festivals of the church among Christians. The Six Nations dance was observed by the Seneca Indians of the Tonawanda reservation during the week of September 16. There will be many Indians

from this reservation in the Six Nations village on the grounds of the Pan-American Exposition, and the various ceremonies of this festival, as well as of others, will be there reproduced.

The most extensive Indian exhibit on the grounds and the most interesting and comprehensive exhibit of its kind ever shown will be the Indian congress on the Midway, which, by the way, has no connection with the Six Nations exhibit, which is made by the Exposition and is no concession.

Boston Herald.

Sent the First Telegram.

Mrs. Roswell Smith, seventy-three years old, widow of the founder of the Century Company, died at her home in the Tolosa, at New York City, on January 21, 1900. It was Mrs. Roswell Smith who, as Miss Annie Ellsworth, then a girl of seventeen, sent the famous first telegraphic message, "What hath God wrought!" Her father, Henry L. Ellsworth, a son of Chief Justice Oliver Ellsworth, was the first Commissioner of Patents, and has been called "the father of the Patent Office." He had been a college friend of Professor S. F. B. Morse. Together they had endeavored to induce Congress to pass a bill granting \$30,000 for the construction of a trial line between Washington and Baltimore. Morse had been seeking the help of Congress since 1838, but it was not until the last hours of the session of 1842-43 that the bill was passed, by the close vote of eighty-nine to eighty-three, and then went to the Senate. At twilight on the last evening of the session there were 119 bills ahead of it, and, as it seemed impossible that his measure would be reached, Professor Morse, disheartened, went to his hotel and prepared to return to New York by an early morning train. His friend, the Commissioner of Patents, kept doggedly working for the bill, and at five minutes before adjournment it was passed, only one measure going through after it. It was Miss Ellsworth who carried the news of the passage of the bill to Professor Morse the next morning. It was then that he assured her that she should send the first message, and a little more than a year after, at her mother's suggestion, Miss Ellsworth wrote down the words, "What hath God wrought!" and they were sent in triplicate in the dot and line alphabet from Washington to Baltimore. The original message was given to Miss Ellsworth, and has always been in her keeping. The duplicate, which was returned from Baltimore to Washington, is in the Connecticut Historical Rooms at Hartford. In 1852, Miss Ellsworth married Roswell Smith in Lafayette, Ind. In 1870 they moved to New York, where Roswell Smith, in connection with the late Dr. J. G. Holland and the house of Charles Scribner & Co., founded *Scribner's Monthly*, the name of which was changed to *The Century Magazine*, published by the Century Company, in 1881. Roswell Smith, who was the publisher of the magazine from the start, continued as president of the Century Company until his death, in 1892.

Wanted.

A good florist, who is a Christian Scientist, and will present a written recommendation from a loyal student. Address G. F. W., care of Thomas W. Hatten, 68 Westland Ave., Boston, Mass.

Do not be discouraged at your faults; bear with yourself in correcting them, as you would with your neighbor! Lay aside this ardor of mind, which exhausts your body, and leads you to commit errors.

FENELON.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Testimony Meetings.

THE Wednesday evening testimony or experience meetings, rightly conducted, are a most valuable means of bringing the practical results of Christian Science to public attention.

Strangers in scores attend these meetings to learn if it indeed is true that people are daily being healed through a power above the ordinary material or physical methods, and that, too, not in isolated cases, as if by accident, but in multiplied hundreds of cases, as if by a fixed and certainly applicable law.

No sincere, unprejudiced listener can long attend these meetings without becoming convinced that there is being daily proven a fixed and certain law of healing that can only be accounted for on the ground that it is above and beyond the ordinary; that it is, in fact, a law or method which may well be called Divine. Christian Scientists consider every effect as flowing from a Cause—a Law—which, although above the comprehension of those not conversant therewith, is nevertheless a natural Cause, or Law, in the sense that the Spiritual is the only truly natural.

We should bear in mind that many attend these testimony meetings for the first time; that, maybe, they hear their first word of Christian Science there; that they have come to learn whether they can consistently give their assent to what is said; that they may be favorably or unfavorably impressed by what is said and the manner of its saying; and that this impression may remain with them indefinitely.

Those who speak, then, should be thoughtful of their expressions. They should, as it were, put themselves in the place of the stranger who comes to hear for the first time, and while fearlessly speaking the truth, should so temper their speech as neither to shock nor offend. Is it not well, also, to avoid the use of terms which are unfamiliar to strangers, and may be misunderstood by them, while the more familiar or commonly used expressions will answer as well and be as fully understood by Scientists?

They should avoid extravagance or the making of over-drawn pictures, but should let a simple, unostentatious recital of the facts tell their story. They should avoid stating things in such a way as to tax unnecessarily the credulity of the stranger. Indeed, the barest recital of the simple facts often does this, so marvelous, from the ordinary standpoint, are many of the cases of healing.

While the physical healing should be well brought out, the spiritual benefits, with all their attendant joys and upliftings, should not be neglected.

Let the wisdom of the serpent and the harmlessness of the dove especially govern in these meetings, and let us know assuredly that there is but one Power and one Wisdom that can have sway or presence there,—the divine Power and Wisdom.

The Lectures.

THE large audiences that have recently assembled to hear lectures on Christian Science, tend to emphasize the

great work which is being accomplished by this branch of the movement.

The attendance at the lectures, from the start, has been most gratifyingly large. The crowds that greeted the lecturers in greater New York last year are yet fresh in our memory.

Thousands listened intently to the different lectures there. In the less important cities, numerically, the proportionate attendance has not been less than in the greater ones, while in the smaller places, even the villages, the relative numbers attending and the interest manifested, have been such as to indicate, in a striking manner, the depth of interest of the general public in the healing Truth.

To the outside world the claims of Christian Science are so extraordinary as, naturally, to cause astonishment mingled with incredulity. To re-assure themselves, and learn if its claims be true, is, no doubt, the controlling motive as to many who attend. A sincere desire to know more of God, more of spirituality, and to have explained, from a broadly rationalistic point of view, the mysteries of life and death, attracts many. The love for good platform-speaking also plays its part. The causes which combine to make up the great audiences are doubtless somewhat varied, but mere idle curiosity seems to be reduced to a minimum.

So far as our knowledge goes, or so far as we have ever heard, no more orderly, sincere, or respectfully attentive audiences have ever assembled, than those that it has been the privilege of our lecturers to address. Let us rejoice that this is so. It speaks well, not only for the ability of the lecturers themselves, but evinces unmistakably the fact that they have a deep and helpful message to give. Nay more, it proves that there is in these gatherings an atmosphere peculiarly their own, an atmosphere of sacredness which drives flippancy and frivolity away.

We do not claim too much for these meetings, and other Christian Science meetings, as a rule, when we say, that there is truly felt there a deep and heartfelt presence of God as the Holy Spirit, the all-present Mind that is Love. This accounts for the cases of healing of persons of whom we hear, as the result simply of being present and, as it were, absorbing *the Presence*.

Here, indeed, we may say with Whittier, we feel

The spirit, over-brooding all,
Eternal Love, remains.

More and more is being proved the wisdom that provided this helpful means of propagating the Gospel which, in its ultimate reach, truly heals and wholly saves.

"Light Without Heat or Waste."

UNDER the above caption we published in the *Sentinel* of September 27, 1900, an article setting forth the wonderful discovery, by a woman, of a substance called "Radium."

It seems that the article, which was taken from the *Enquirer* of Cincinnati, Ohio, very considerably overdrew the picture, as inquiry at the Smithsonian Institution has revealed. Among those who made inquiry was Professor Hermann S. Hering of Baltimore, Md. He received in reply the following letter from W. W. Karr, Acting Aid in Charge:—

Smithsonian Institution, Washington, D. C.,

October 10, 1900.

Dear Sir:—In reply to your letter of October 6, I am authorized by the Secretary to inform you that the statements you refer to are much exaggerated. The substance, radium, while interesting, by no means emits light in any degree comparable with sunlight, or even with candle-light. The light is indeed more nearly of the intensity of that given by the firefly. Information regarding this substance has appeared at different times for several years in

physical and chemical scientific periodicals; one having been printed in the *Popular Science Monthly* for July of the present year.

Very respectfully yours,
W. W. KARR,
Acting Aid in Charge.

Mr. Hermann S. Hering, The St. Paul, Mt. Royal Avenue,
Baltimore, Maryland.

In further modification of the claims as published, we herewith republish the following from *The Great Round World*:—

"When this discovery was brought to our attention, we had our doubts of its full truth. It seemed incredible that a piece of radium the size of a half dollar could, without waste, light a room, 'even though left to itself for centuries.' Accordingly we wrote to the Smithsonian Institution at Washington, asking the government scientists whether the accounts were true.

[The reply received was very similar to the above letter to Professor Hering.]

"The scientific interest of radium is therefore great, but the practical interest is at present slight. The discovery of such unthought-of properties may, however, lead to ultimate further discoveries which will prove of definite value. Scientific discoveries must be judged dispassionately on their merits. No mere speculative enthusiasm should be permitted to carry away the sober thought of the student."

We are glad to publish the above corrections, and in doing so feel that we are not detracting in any degree from the real merit of the discovery, for it seems that, even according to the modified statements, it is an important one. As stated, it may yet develop into something very practical in the way of illumination.

Among the Churches.

Reading Room at Baltimore, Md.

A Christian Science reading room has been opened at 322 North Charles Street under the auspices of First Church of Christ, Scientist. A large number of members of the First and Second Churches were present, and after some religious exercises Mr. Edward H. Hammond, First Reader of First Church, made a brief address, in which he alluded to the growth of Christian Science in this city, as well as in the whole world. He said:—

"Christian Science will be found to be the foundation of all reforms, as its leaven of Truth is at work in all directions. Christian Science is the healing religion of our Saviour, the Science of which was discovered by Rev. Mary Baker G. Eddy and given to the world by her. One object of this reading room is to make the authentic literature of Christian Science more accessible to the public."

The rooms are in the best portion of the city. They consist of the second floor suite. From without, a large window, almost half of the entire front, radiates in gold letters: "Christian Science Reading Rooms. Open to all. First Church of Christ, Scientist." The entrance door also bears the same words. In full view of all passers-by will be a glass case containing Christian Science literature. The rooms are very beautiful, the walls hung in crimson silk tapestry, with ornate ceilings. The handsome portieres, the Turkish rugs, tables, easy chairs, and pictures were all contributed by the congregation. Back of the main reading room is a large room equally beautiful for distributing literature. There will be a circulating library of "Science and Health with Key to the Scriptures" and all the other works of the Rev. Mary Baker G. Eddy, together with other Christian Science publications. Pamphlets, lectures, etc., will be generally distributed free. An

attendant will be always in charge and the rooms will be open several evenings in the week.

Morning Herald, Baltimore, Md.

A few days after the opening of the reading room the following letter was received from one who evidently knows from experience what Christian Science can and will do for humanity, and desires to have a part in the grand work of presenting it to the world.

Baltimore, October 5, 1900.

Superintendent of the Christian Science Reading Rooms,
322 N. Charles Street, Baltimore.

Dear Madam:—I am more than gratified to learn that First Church of Christ, Scientist, of Baltimore has opened a reading room in the centre of the city, where all citizens and also visitors to the city may have an opportunity to acquire a correct understanding of Christianity as taught and applied to the life of man, here and now, by Christian Science. Humanity *needs* and *wants* a Christianity that will enable man to assume and realize his dominion and sovereignty over error, evil, and sin, and all their train of baleful effects,—sickness, sorrow, pain, suffering, poverty, death,—so that man may *know* that the kingdom of God—Love—is come on earth as it is in Heaven.

This Christianity is revealed in the Bible, as clearly seen, when read in the light of "Science and Health with Key to the Scriptures," the text-book of Christian Science, by Mary Baker G. Eddy.

Her book, "Miscellaneous Writings," is also a book of Light and Life, and your reading rooms should be well furnished with them.

I deem it a great privilege to hand you fifty dollars, which please use in procuring several volumes of the two books, Science and Health and "Miscellaneous Writings," as a foundation for your library, and may 322 North Charles Street be indeed a candle lighted and set on a candlestick, so that the light of it may be seen of all.

Very truly,
BUSINESS MAN.

The Work in Sacramento, Cal.

First Church of Christ, Scientist, of Sacramento, Cal., was organized October 25, 1899, with a charter membership of thirty-four. Since that time its growth has been steady and encouraging, showing such progress as is most gratifying to those, who through twelve years of struggling experiences, as a small band of faithful adherents to Truth, kept their lamps trimmed and burning, determined that the light of Christian Science should prove a beacon of hope and courage to others. "How beautiful upon the mountains are the feet of him that bringeth good tidings, that publisheth peace."

We are filled with a joyful pride, as we look back over this year's record of our advancement, our demonstrations over the thought of fear and its limitations. Since our organization every expense, necessary and incidental, has been met, with a balance always in the treasury. A lecture by Hon. William G. Ewing was an important event, and now we have a crowning feature of our success to report: the establishing of a free reading room, in the most pretentious building of our city, adjacent to the post-office. Our room is on the third floor, and an elevator carries the visitors to it. The bow window looks out upon the post-office lawn. Its furnishing is neat and tasteful, and beautiful plants in jardinières and the bouquets of flowers daily contributed, have a most inviting and pleasing appearance.

New copies of the late editions of "Science and Health with Key to the Scriptures" and other literature by Rev. Mary Baker G. Eddy, were received from one of our members. Two copies of "Miscellaneous Writings," were given by others. Bibles, the *Journal*, *Sentinel*, supplements,

pamphlets, and tracts are supplied. Many necessary articles aside from the literature have been given.

A fine portrait of our beloved Leader is conspicuous on the wall, and its smiling, loving countenance, is the first thing one sees as he enters the door.

MRS. EMMA DUNCKHORST, *Clerk.*

From Highland Park, Ill.

After years of seeming opposition to the beautiful Christ teaching, the work is fairly started here, and the Christian Science Society of Highland Park is an organization, with nine charter members. We hold services Sundays and Wednesdays at the usual hours in the new and beautiful Hotel Moraine. We have furnished a little hall which is used exclusively for that purpose. It seats seventy-five people, the largest attendance thus far was forty-five.

The service was started last winter in the home of a student who with three or four other loyal and true ones, stood bravely and stemmed the tide of opposition. The reward for their fidelity is now being realized in increased interest and numbers. Love, full-orbed and radiant, has dawned and is shining into the heart ready to receive.

In the hotel a number of the guests and many of the employees are Christian Scientists, and an atmosphere of love and harmony pervades, which is frequently noticed by those who know not whence it emanates.

E. J. C., Highland Park, Ill.

The Lectures.

At Oshkosh, Wis.

"Christian Science, the religion of Jesus Christ," was the subject of a very interesting lecture given by Hon. William G. Ewing of Chicago at the Opera House (Monday, October 1), and so enthusiastic were those believing in this comparatively new religion, and so curious were the unbelievers to know something about it, that the theatre was not large enough to seat the entire assemblage, and extra chairs were brought into service in the rear of the house. While the Christian Science sect in this city is a growing one, it is comparatively small as yet, and it therefore can be said that a majority of those who listened to the remarks of the eminent speaker did so not with faith but with a desire to learn. Many went away perhaps as much prejudiced against Christian Science as ever, but with vastly more respect for its teachings and its followers.

Judge Ewing was formerly conspicuous as a member of the Superior Court of Chicago, but he gave up active work in his profession to expound the doctrines of Christian Science to those who hitherto have scoffed at it. He proved himself a forceful and deliberate speaker, delivering his lecture in a quiet but perfectly distinct way, and his eloquence and earnestness held the closest attention of his audience throughout the evening.

The audience was one that must have gratified the speaker, as it was a representative one, composed of thinking people, to most of whom Christian Science, as Judge Ewing said, had been shrouded in mist and myth. In the audience were many of the leading followers of the religion in this city, who were instrumental in securing the lecture. Judge Ewing was introduced by Judge C. D. Cleveland, who in a brief speech, told of the life of Christ and of the birth and growth of the new religion of Christian Science. Judge Ewing was greeted with applause.

Oshkosh Daily Northwestern.

Judge Cleveland's introductory remarks were as follows:

Ladies and Gentlemen:—Nineteen hundred years ago there came into this world one who said of himself, "I am

the way, the truth, and the life," and from that day to this, men have sought to know that way. Many of the brightest intellects, many of the best thinkers and most profound scholars, as well as millions of the poor and lowly, have sought to know the way, and, believing that they have found it, have walked therein confidently, with a faith and courage that shrank not from martyrdom. Many millions have found it to be their peace and comfort in this life, and have passed over what we call the river of death, cheered and comforted by the belief and assurance that they were in the right way, and entering into a blessed and joyous immortality.

But to the eye of mortal man, these have not all walked in the same path. Sects and beliefs almost innumerable mark the pathway of the human race during these nineteen centuries; but notwithstanding these diversities, Christianity has been a mighty, moving, and dominant force throughout the world.

There are others who have not found the way, some, apparently, have no desire to find it, while others—and their name is legion—have cried out and are still saying, as of old, "Lord, show us the way that we may walk therein."

In these later years a new sect or faith, or belief has arisen. As the disciples were first called Christians at Antioch, so in the latter part of this nineteenth century this belief or faith was first called Christian Science.

I shall not attempt to explain it, as I know very little about it. We are all seekers after truth and desire to know of this belief, and we are exceedingly fortunate in having here a man educated, eminent, and well versed in law and literature, an acknowledged exponent of this belief, who will now address you.

I have the great pleasure and honor of introducing Judge William G. Ewing of Chicago.—*Correspondence.*

At Independence, Ia.

Judge Ewing, formerly of the Superior Court of Chicago, addressed an audience of three hundred at the Gedney Opera House Sunday afternoon (October 7), in the interest of Christian Science. He was introduced by Mayor W. F. Miller, who spoke briefly in a comprehensive way of the great progress of the American people during the nineteenth century. Judge Ewing is a living witness to the truths of the teachings of the Science, as, according to his own statement, he owes his life and health during the past fifteen years to this religion. Judge Ewing is a most pleasing speaker; his gentle yet forceful manner carries conviction with every sentence. He was thoroughly conversant with his topic, and his strong and concise terms commanded the undivided attention of his hearers. He endeavored to show that Christ is as ready and willing to heal the sick as when he was upon earth nineteen hundred years ago.

Independence Bulletin-Journal.

At Ogden, Utah.

Mrs. Annie M. Knott of Detroit, Mich., one of the foremost lecturers on Christian Science, delivered an address to a large audience at the Grand Opera House yesterday afternoon (Sunday, October 7), and her remarks were listened to very closely by the people present. Mrs. Knott was brought here by the membership of the local church, and her lecture was free, the purpose being to clear the public mind of the false conceptions of Christian Science and the prejudice arising therefrom.

The speaker was introduced by County Attorney George Halverson.—*Ogden Standard.*

Lectures at Other Places.

Kankakee, Ill.—William G. Ewing, September 30.

Salt Lake City, Utah.—Mrs. Annie M. Knott, October 7.

Testimonial Meeting at Fort Worth, Tex.

AFTER the usual opening exercises the First Reader said in part:—

"We as Christian Scientists are so accustomed to the daily, yes, hourly, demonstrations of Love which come to us through the understanding of Christian Science that we almost forget how great the claims of sin and sickness once seemed to us.

"The past week a boy of fifteen, working in the yard, was stung by a scorpion, about four inches long. He came in crying, suffering terribly. Two Christian Scientists were sitting there, and immediately realized the Truth, and instantly the boy was healed, and went back to his work.

"A few days later as I was going away from the house in a hurry, he came again crying, saying he had cut his hand very deep in two places. I said, 'You are all right; go in the house and wash the blood off.' I drove away treating him as I went. Error said, 'If any one should see that boy's hand they would call you heartless and cruel,' and I was tempted to turn back, but Truth whispered, 'The boy is all right, he is in God's hands; he does not need you,' and he was healed immediately."

Another lady told of her child who had fallen, striking her head on the corner of the step. The father called to the mother to come, as the child was insensible. The mother treated her, and in a few minutes she was all right.

A girl of eleven told of cutting her foot badly. Her mother treated her and next day she was able to wear her shoe and walk without pain.

A child of twelve told of stepping in a yellow jacket's nest. She ran crying to her mother to treat her and in a short time all pain was gone.

A boy of nine, told of being stung in a dozen places by yellow jackets, and was healed by Christian Science.

A lady then told of her child who had gotten a grain of popcorn in his windpipe. Her first thought was to get help, she being very much frightened. As she could not leave the child, she commenced to declare God's allness. The child, who was literally black in the face, was then relieved. She also said that she was healed of consumption six years ago in three treatments.

Another lady spoke of her gratitude to God for giving us this great blessing of Christian Science which enabled her to make many demonstrations.

A visiting boy of nine told of being badly hurt by being thrown from a merry-go-round; he also was healed through Christian Science.

A lady said she had been healed of a severe sore throat by a child twelve years old, and was thankful that this Principle was so plain that it could be demonstrated by children. The demonstration recalled the words of Jesus, "I thank Thee, O Father, Lord of heaven and earth, because Thou hast hid these things from the wise and prudent, and hast revealed them unto babes."

A lady told of healing a child twenty-six months old, who had been under the doctor's care for months, and was wasted almost to a skeleton. The doctors had given the child up, even the grandfather, who was a physician, said there was nothing to do but wait for the child to die. It is now well and hearty.

A man then spoke of a miner who had broken a limb about a year before the speaker commenced to treat him. The medical decision was that an operation was necessary to have the broken ends of the bone cut before it would heal. He treated him nine months, and healed him. The doctors said they never knew a case like it to get well. The man is now working in the mines.

A lady told of being cured of hereditary insanity. She also had worn glasses for years. Through this great Truth she was healed. Thus the wonders of Christian Science go on, and the half is not told. There is no end to this wonderful Truth.—MRS. L. E. McCABE.

From Our Contributors.**"Let there be Light!"**

BY SIDNEY H. HATCH.

"Let there be Light!" this great command
Comes ringing down the years;
Thundered by God, and since proclaimed
By prophets, bards, and seers.

"Let there be Light!" God's children hear;
Gladly, without delay
They trim their lamps, they gird their loins,
And hasten to obey.

With lamps well filled with Love divine,
And guided by the Word,
In every deed their light will shine,
Reflection of their Lord.

Since Life is Light, their pathway glows
Brighter to perfect day,
And leadeth where his feet have trod;
The Life, the Truth, the Way.

"Let there be Light!" throw open wide
The entrance to thine heart;
Bid source of Light therein abide
And never more depart,

And thus obey the great command
Which changes faith to sight,
And to a waiting, anxious world
Reveals that God is Light.

Casting Bread upon the Waters.

BY WILLIAM J. KUPPER.

ABOUT thirteen years ago a lady visitor from Illinois, whom we were entertaining, spoke of being well and of having become so through Christian Science treatment. We believed she owed her recovery to something else. After our visitor had gone home we had many a good laugh, thinking she had been led to accept some strange doctrine. However, my wife could not forget what was told her about Christian Science. The germination of the seed was slow but sure, for it fell on good ground. Nearly five years ago after having been told by a friend about Christian Science once more, my wife was healed of several pronounced incurable diseases.

About three years ago we had as guests at one of our hotels a man and wife who were in anything but harmony. We told them of Christian Science, but met with a cold rebuke. We never mentioned the subject again. A year or more later I received the following letter from the husband, which will show that our talk was not in vain.

Oak Cliff, Tex., May 21, 1900.

Mr. and Mrs. K—.

Dear Friends:—Mrs. C. and I have taken up the study of Christian Science. You know how bitter we were against it. We were simply wrong. We were at the Christian Science Church in Dallas yesterday. They have a fine church.

You remember us, we boarded with you a long time ago.

Respectfully yours,
H. A. C.

A little less than a year ago a family of four from Texas stopped with us, the mother being a confirmed invalid. I spoke to the husband about Christian Science. He looked at me and reasoned with himself that as I could read and

write and seemed perfectly rational, there must be something real and substantial in my method. He finally asked if my wife would go to his room and talk Christian Science to his wife. Mrs. K. accepted the opportunity with great pleasure. The wife was advised to take treatments, which she did for a short time, and was healed of severe headaches.

About two months ago the family went to several eastern seashore resorts. The wife felt that if she would return to Kansas City and talk Christian Science it would do more than an intended trip to California. So they all came here and remained two weeks, the wife taking treatments. The result was that the seed fell on good ground, and all returned home well and happy.

The following article from the *Kansas City Times* of August 8, will show their appreciation of the power of Truth.

This is a Christian Science story that was brought to light recently by a breastpin.

Mrs. W. J. Kupper, wife of one of the three proprietors of the Centropolis Hotel, possesses the breastpin. The story hinged on how she came to have it. It came about in this way:—

For ten years Mrs. Kupper was an invalid—a good part of the time confined to her bed. The best doctors that could be secured worked on her case, but nothing seemed to help her. Then some one interested her in Mrs. Eddy's book; and Mrs. Kupper read and was persuaded. She thereupon gave over all doctoring, all taking of medicine, and in no time she began to mend and was soon perfectly well and strong, as she continues to this day. Whether it was Christian Science that worked the cure or not may be a question, but that is neither here nor there, for Mrs. Kupper herself is absolutely satisfied. She "knows" she was cured by Science. Naturally she is an exceedingly zealous member of the Scientist Church.

Well, a year ago P. W. Greenwall of Fort Worth, Tex., put up at the Brunswick Hotel with his wife, who had been a nearly helpless invalid for twenty years. Mrs. Kupper took a great interest in Mrs. Greenwall's case, told her of her own experience, induced her to read Mrs. Eddy's book—and now this year Mrs. Greenwall is back in Kansas City absolutely well and strong. And as a token of grateful appreciation she brought with her a handsome breastpin for Mrs. Kupper. The pin is a cross and crown of gold, set with pearls and surrounded by a wreath bearing the monogram "C. S." It makes a very pretty emblem, and Mrs. Kupper is very proud of it—and that was how she came to tell its story.

Rejoice.

BY E.

My first months in Christian Science were joyous ones, but, of late, I seemed to lose the note of joy. A kind Scientist rebuked the error, and I turned to my Bible to find, "Ye shall rejoice in all that ye put your hand unto." "Let the heart of them rejoice that seek the Lord." "Let all those that put their trust in Thee rejoice," for "in thy presence is fulness of joy."

From cover to cover, I found one joyous song and found it sung during tribulation, not peace. As our Leader has written,—

I will follow and rejoice
All the rugged way.

Then—

Thou wilt bind the stubborn will,
Wound the callous breast,
Make self-righteousness be still,
Break earth's stupid rest.

Truth will do the work, we are to rejoice that the work is being done.

As one has well said, "When the Christ Truth first finds us it takes us on the mount of transfiguration, but like the disciples of old, we cannot stay there. We must descend in order to ascend in proof of its power," but let us not leave our joy on the mount, but keep it with us to use in climbing.

Paul is a grand example, telling of "unspeakable joy," and being "exceeding joyful in tribulation." He also tells us that the kingdom of God is "righteousness, and peace and joy in the Holy Ghost" and that "the fruit of the Spirit is love, joy, peace."

Jesus, in the parable of the talents, gives, as a reward for well doing, an entrance into the joy of the Lord. This joy needs no material cause or condition, but is that joy which no man, or material condition, can take away. As expressed in Jeremiah, 15 : 16, "Thy word was unto me the joy and rejoicing of mine heart." At all times and under all circumstances, we can meet the material seeming with the Truth of God's perfect word wherein evil has neither place nor power and in this word rejoice.

"Rejoice in the Lord alway; and again I say, Rejoice."

Reflection.

BY C.

If you take two pieces of metal, one a polished plane, the other a rough unpolished piece of the same material, and place them in the direct rays of light, coming through a small aperture in a darkened room, you will see, not the polished metal, but an image of the sun reflected from its surface with dazzling brilliancy, while the unpolished metal is plainly visible, with all its angular outline in bold relief. The reason for this phenomenon is that the polished metal is a perfect reflector, turning back every ray of light which falls upon it, thus forming a perfect image of whatever is placed before it; while the other, having a rough surface diffuses the light in such a manner as to make itself alone visible.

This is a fair illustration of individual consciousness. If through Science or suffering the rough surface of thought is made smooth, the mountains of selfishness laid low, it is thereby prepared to reflect the image of ever-present Mind, in loving thoughts and deeds. Such an one knows no self but gives all glory to God.

To mortals in the darkness of material beliefs, who know not the presence of God, such a manifestation of goodness, purity, and Truth, in the midst of sin and selfishness, seems a miracle. Though the light of God's presence was shining all about them, they knew it not until they saw its reflection in their brother man. Thus are they led to seek the Source of this light, and, in proportion to their desire to give up selfishness and sin, they in turn become reflectors of, not their own, but God's glory.

The rough, unprepared thought gives back no hint of the presence of infinite Mind, "the light which lighteth every man that cometh into the world," but asserts its own selfhood as the only real, tangible substance.

May we all, who love the Truth which has been revealed to us in "Science and Health with Key to the Scriptures," be willing to eliminate from consciousness everything that would prevent us from reflecting God, Good.

Bubbles float on the surface. Thistledown will rise to a great height because it has no substance; but gold gravitates to the earth's centre. It is so with character. Solidity penetrates the depths of divine Wisdom and excellence.

ANON.

Remember, always and everywhere, that conscience is the best success-maker on earth.—*Success.*

Testimonies.

Awakened to a New Life.

"Wherefore, if meat make my brother to offend, I will eat no flesh while the world standeth, lest I make my brother to offend."

This morning I took up my Bible and read the eighth chapter of First Corinthians. It seemed very good and inspiring to me, especially the verse quoted. It reminds me of a little incident of my life.

It was on the night of the last day of 1899, as I lay restless in my bed and could not sleep, that I began to look back over my past life and realized that after all I had not had any real pleasure, but that "all is vanity," and began to think of how I might, now for the beginning of this new year, make improvement.

I had at that time read "Science and Health with Key to the Scriptures" for about nine days, and attended a few Christian Science meetings, and attribute this incident to the influence this brought to bear on my mind. I had up to that time indulged in liquors of all sorts which had previously been prescribed for me by my physicians as medicine. I thought then of my dear wife, how sometimes she, in the past, had spent many an evening, yes late into the night, alone with our little boy of four, and I thought of the little one now growing up, perhaps to imitate his father's habits. I thought of the boys who perchance were partaking of the cup because I was, thinking if I could do it, they could, for I was previously a trustee in our Presbyterian Church.

These thoughts, and a great many like ones, began to work seriously on my mind as I lay there restless, weary, and heavy-laden, until I finally woke my wife and said to her: "Remind me in the morning of a resolve I have just made for the new year."

Little realizing how much this meant to her and myself she said she would, and went to sleep again. My promise to God was that I would never again indulge in any intoxicating liquor, if I found that it injured my fellow man, and that all substances of that kind in the house should be cast overboard in the morning. As soon as I had made this resolve, there at once came to me a rest and peace that it would be impossible for me to describe. Everything seemed bright, and in joyous tears I went to sleep to awake in the morning a little earlier than usual, but in a better frame of mind than ever before.

I arose, went out and got a barley sack, and began to gather up all the bottles in the house containing liquors, a demijohn half full of wine, and besides this all medicines went along. When my wife saw me doing this, she asked me what I was doing that for. I told her that it was carrying out my resolve of the previous night. She had really forgotten all about it. Out went all the liquors and medicines that were in the house. Although it has been but a short time since I took this stand for Christian Science I am glad to say that I have never been so happy and contented in my life.

From that time I took up the study of Science and Health and other writings of Mrs. Eddy in earnest, and can truly say, that it has proven to me a light dispelling the darkness. It is to me the Comforter leading into all Truth.

Prior to this I cared but little for the Bible, for I could not understand it, but since studying the works of Mrs. Eddy it has become a delight to me, for I now find promises innumerable and it inspires me day by day to live a higher and purer life filled with love to God and my fellow-man. I find also that the promises of our Master are daily being fulfilled in Christian Science, and that it is not a religion of mere words but that the works follow, which Jesus said should follow them that believe.

M. P. MADISON, Palo Alto, Cal.

Completely Healed by Christian Science.

Two years ago this summer, a lady called for treatment. She said she was in great trouble; had buried her husband and two sons, and at that time was living alone. In addition to this, she had lost her health. She had been a great sufferer from sciatica and had been able to walk only by stepping on the fore part of the foot. For two years she had had an internal disease that the physicians said was a cancer. They advised a surgical operation, but she would not submit to it.

Her great desire was to go to a friend who lived two hundred miles away. After listening to her story, I told her of God's love, how it healed the sick and broken-hearted. With this realization she lost her sense of suffering, for she exclaimed, "There is something here I never felt before; it is God with us, isn't it?" I said, "It surely is, and He is always with us. She promised to get Science and Health and do all she could to help herself. When she arose to go she exclaimed, "My foot is well, for I can put it down naturally and I feel sure I am healed of that trouble." She walked down the street as well as any one.

In a few days I received a letter saying that after riding two hours in an electric car she reached home feeling so well that she went to the Publishing House (five miles distant) and bought Science and Health and decided to start the next morning for the country. She slept all night and arose feeling assured that God was still with her. After traveling all day (riding several hours in a carriage over the hills), she reached her friends. To her astonishment she had felt no pain or weakness internally since her first treatment. Every letter stated, "I have not had a symptom of the old trouble. Am gaining in flesh and am perfectly happy." I treated her two weeks. She then said she would come and see me on her return. Two months later she called; I could scarcely believe it was the same person. She expressed such youth and vigor, and with it a sweet look of peace and rest.

I saw her a few weeks ago. She said she was perfectly well and happy.—JULIA E. PRESCOTT, Reading, Mass.

An Experience with Dental Work.

I had some dental work to be done, and I dreaded going, as the dentist knew I was a Christian Scientist and I feared I could not overcome the pain. There were two upper and lower bicuspid to be treated and I supposed both on one side would be crowned. The work began after first having time to read the ninety-first Psalm, praying to be able to demonstrate the power of God through Christian Science over the seeming power of pain. I also had the assistance of a dear Scientist friend. The dentist worked three mornings on the tooth, as instead of a crown he had to make a pivot tooth. Quite often he would ask if I felt any pain, explaining that it was most difficult, tedious work, as those two delicate roots were quite sensitive and he would have to drill to their end and then insert the two pieces of steel attached to the pivot tooth. The work was completed without one twinge of pain.

The tooth on the opposite side had caused me some trouble as the nerve was exposed, and it was crumbling. I determined this work must be done without assistance. So I went full of fear. Again I had time to read the ninety-first Psalm, and work mentally before he was ready; but I did not conquer my fear. As soon as he began work the entire side of the tooth crushed, touching the nerve. The pain (or fear) was intense. I cried mentally for strength and to be left alone a moment. He was called away for a few moments and when he returned I for the first time realized in part that "the eternal God is thy refuge, and underneath are the everlasting arms." Every particle of fear was gone, and the holy presence of Love even

now fills me with awe. On again beginning work, he said, "I greatly fear I shall not be able to save that tooth." It is needless to say it *was* saved and even when working around the nerve there was absolutely no pain.

M. J., Wabash, Ind.

Many Reasons for Gratitude.

A concurrence of circumstances having made it necessary for me to be without our text-book, "Science and Health with Key to the Scriptures," for a few days, I am awakened to a renewed sense of what a guide, counsellor, and friend we have in its words.

How many times this day have I turned to open it, for a little light in one way and another; each time with surprise, remembering it was gone.

I am grateful for the experience, for it has roused me to a sense of the blessings without number that have come to me since first hearing of God as Good.

First of all came freedom from sickness and the fear of being sick. Then love and kindly interest and guidance and sympathy that I had never known before.

To-day I feel I have received much and given little, and this inspires me to make a grateful acknowledgment for all I have received from reading Christian Science publications. "Miscellaneous Writings" enters directly into one's every-day affairs and seems to comprehend all difficulties. Each work of our Leader fills its own place, and it would seem a sacrifice to part with any. The *Journal*, *Sentinel*, and *Quarterly* are, as expressed by hundreds of others, eagerly looked for; the *Journal* being especially attractive in its new cover.

I am grateful for every testimony given and every article written by the Field and more grateful than I can express for our beautiful Lesson-Sermons.

And now, for the first time through the columns of the *Sentinel*, though I have known of Science nearly four years, I wish to thank our Teacher, Mary Baker G. Eddy, for having given to the world the Key that has opened to men the treasures of loving-kindness, sweet forbearance, gentleness, humility, brotherliness, truthfulness, and honesty all for their very own.—F. K. R., Spencer, Ia.

Christian Science a Present Help.

I have received so much help from Christian Science I want to tell of some of the demonstrations we have had in our family. One day last June I met with an accident. I had just finished frying cakes, and going to lift the kettle of hot fat from the stove, I spilt it over my right hand and wrist. My little girl, ten years old, was by me, and we both declared that God was All-in-all, and there was no other power. The back of my hand and wrist were all a blister, but I was better soon and finished some of my work. I felt that I ought to send to our healer and did so. The accident happened about half past ten o'clock, and at noon, I did not have the least pain. My hand is as smooth as ever, and there is no scar whatever. It was the most severe case I have witnessed since I have been in Christian Science.

My oldest boy suffered from blood poison last summer, the effect of stepping on a nail. We sent for our healer. She came at noon and that afternoon he walked about, and the next morning all swelling had gone and he wore his shoe.

How thankful I am for Christian Science and that my whole family have been led to this Truth. We have been able to overcome many troubles, such as colds, chills and fevers, sore throat, headache, stomach and bowel troubles, and many other ills. I was also healed of rheumatism by reading "Science and Health with Key to the Scriptures." Christian Science heals all our diseases and raises up the

sick and sinful as nothing else can. I enjoy the *Journal* and *Sentinel* very much. The Bible and Science and Health are my daily companions. There is no physician like Christian Science for it is always with us and all-powerful.

MRS. L. G. W., Watertown, S. D.

Study of Science and Health brings Many Blessings.

It has been three years since Christian Science was brought to my notice. I then felt that it was the Truth and would bring freedom from disease and suffering. After reading the *Journal* one afternoon and evening, I retired, knowing I had found the Truth which would set me free. After a peaceful night's sleep I awoke very much refreshed, and as usual started to put on my glasses, which I had been obliged to wear for nearly eight years. I had scarcely taken them in my hand before I realized that all supply was in Mind, and as I could not see how glasses could aid the sight God gave me I put them away and found I could see perfectly without them. Since that time I have had no further trouble with my eyes.

After reading Science and Health for nine days I found I was no longer the suffering, depressed, and heavy-laden person I had been previous to that time. I was absolutely well, being free from all the weaknesses with which many women have been bound, as with chains, these many centuries.

Many rich blessings have since followed the careful, prayerful, and systematic reading of "Science and Health with Key to the Scriptures." My Bible, first of all, is a new and open book to me. God is an ever-present help in every time of need. Financially He has been my supply, in times of seeming danger to my children He has been their protector.—F. E. R., London, Eng.

Some Proofs I have Seen.

It is not hard to believe that divine Mind can heal all the ills that flesh is heir to. I have seen a high fever stopped in ten minutes by Christian Science treatment. I have seen acute cases of grip healed in an hour by the same treatment, but better still, I have seen men and women transformed morally by daily living this Christian Science. I have seen sour-tempered people made sweet and lovable. I marvel when I visit a man, whom I knew a few years ago to be a rank infidel who would not allow the Bible mentioned in his presence, and find him reading that book and "Science and Health with Key to the Scriptures." Oh, that men would praise the Lord and give Him the glory and honor due Him!

F. S. BELLEVUE, Brooklyn, N. Y.

A Girl's Appreciation of Science and Health.

I would like to add my testimony to the healing power of Truth. I am a schoolgirl fifteen years old. This afternoon in school a bad headache came upon me. After school, at my earliest opportunity, I went to my room and studied the lesson on "Unreality" for September 23, 1900. When I finished the lesson, I suddenly realized that not a trace of the trouble was left. None of my family are Christian Scientists, so I could not turn to them for aid. I am so thankful for this beautiful Truth, and my greatest desire is that I may become worthy of the name of a true, loyal Christian Scientist. Science and Health is the dearest book I own.—H. S., Chicago, Ill.

No man or woman of the humblest sort can really be strong, pure, and good without the world being the better for it, without somebody being helped and comforted by the very existence of this goodness.—PHILLIPS BROOKS.

Religious Items.

The *Chautauquan* prints the following: "Our Puritan ancestors regarded the worthles of Scripture with such reverence that they gave to their children as Christian names Ebenezer, Nebuchadnezzar, Obadiah, Hannah, Abigail, and Mehitabel. That this custom is not entirely obsolete is shown in the fact that only a generation ago, when to a proud father of seven sons and two daughters came the crowning joy of his life in the birth of a third daughter, he chose her name from the Puritanical standpoint. A close student of Scripture history, he recognized the coincidence that in sex and numbers his family was the same as that of Job; therefore, regardless of all protests, he followed literally the words of the Old Testament. He called the name of the third, Keren-happuch."

The *Christian Register* publishes a sermon by Rev. Alexander T. Bowser from which we extract the following: "Little good will come to us to believe that Jesus shared the God-life, unless we see that we, too, as his brethren, may share the same life, and become the channels through which it shall pour into the hearts and souls of all with whom we come in contact. All are partakers with him in this life more abundant. All may become, like him, the mediators of this divine fullness. Even the prodigal, who has spent all, and is perishing with hunger, needs only come to himself to have this divine energy flow into him in cleansing, healing, renewing, life-giving current."

The (Baptist) *Watchman* says editorially: "The excommunication of Count Leo Tolstol from the Greek church is probably consistent enough from the point of view of the Holy Synod; but it is a fresh witness to the hardness and rigidity of the doctrinal system of that communion. Every year has witnessed an advance in Tolstol's mind toward the spiritual apprehension of Christianity. He is a man who is always moving onward toward the light; but the Holy Synod, like a good many ecclesiastics, is unable to sympathize with a man who is advancing toward the truth. If he has not reached it so as to stand where they stand, they will have none of him."

In an editorial article on "Unwelcome Duty," the (Baptist) *Examiner* says: "Who among us treats his fellows quite as if they were brothers? We have our standards of taste and propriety. Those who conform to these are agreeable to us. It is easy to fellowship with them. But there are disagreeable people—swinish in manner and habit, narrow, coarse, censorious people. How shall we treat them? Just as Paul did the Macedonians. He idealized them. He thought of them, not as they were, but as they would become when in them divine grace should have its perfect work."

The *Congregationalist* has the following: "Some newspaper reports have intimated that the work of the American Bible Society is decreasing, and that its headquarters in New York are offered for sale. These reports are misleading. The society is not in debt. It owns its very valuable plant, the Bible House in New York City and its appurtenances. Its invested funds amount to about \$700,000. It issued last year 1,406,801 copies of the Bible in whole or in part, of which considerably more than one-half were distributed outside of the United States."

The tablet in memory of Phillips Brooks, recently placed in the Brooks House at Harvard University, contains the following beautiful sentence written by President Eliot: "A preacher of righteousness and hope, majestic in stature, impetuous in utterance, rejoicing in truth; unhampered by bonds of church or station, he brought by his life and doctrine fresh faith to a people, fresh meaning to ancient creeds; to his university he gave constant love, large service, high example."

In an article published in the (Baptist)

Standard, J. B. Weber, D.D., says: "Every scheme for bettering ourselves without bettering our inward nature is sheer folly. Civilization comes by getting that which is better than civilization. Phœnician traders were once the most honorable in the world. They cultivated the lower and found the lowermost. Only their memory is with us to-day. They left us no literature and not an inspiring character for our uplift."

Regarding "Faith in Human Nature" the *Universalist Leader* says: "The starting-point in self-improvement in any department of one's nature is belief in the possibility of such improvement. Whether it be in the line of physical, mental, moral, or religious cultivation that advancement is desired, the progress is conditioned upon two things—belief that progress can be made and a wise use of available means."

Charles A. Church says in the (Baptist) *Standard*: "Paul tells his Galatian brethren to stand fast in the liberty wherewith Christ has made them free. Man has not come into the full possession of this heritage of liberty until duty has become transfigured into privilege. In so far as duty is a burden just to that extent does man fall short of the perfect liberty of the gospel. Every great work has been done in a sense of freedom."

"There are many friendless and lonely and discouraged people who do not need gifts of money or cast-off clothing, but they are starving for human fellowship, for wholesome recognition of the personal worth," says the (Baptist) *Watchman*. "The social life and atmosphere of a church that meet this want are the handmaids of the richest spiritual service."

An article in the (Methodist) *Christian Advocate* contains the following: "Perhaps some men have a harder struggle than others to come into harmony with God in prayer and life. One who by nature is intensely selfish, ambitious, sordid, and tricky will do well to accept the challenge of the Almighty early in life and have done with the struggle forever."

The *Universalist Leader* says: "Discouragements may come, sorrow and affliction may beset from every hand, yet those who swerve not from the plain path of right, the nations that debase not their high calling, nor abuse their just rights are ever marching onward to success."

"The people who use every moment to advantage do not consider life a drudgery, rather they enjoy the world more than all the rest," says the *New-Church Messenger*.

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on *New York* or *Boston*, but not on *Chicago*. Individual checks cannot be received, as a charge is made by the Boston banks for their collection.

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and

should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

No. 6.—Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Services and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution, may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each \$3.18

Two to Twelve books to one address, each, prepaid 3.00

Twelve or more books to one address, each, prepaid 2.75

Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00

Twelve or more to one address, each, prepaid 3.75

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00

Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid \$3.00

Twelve or more books to one address, each, prepaid 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Entered at the Boston, Mass. Post Office as second-class mail matter.

Items of Interest.

Political and Governmental Notes.

In these, the closing days of the contest for the presidency, supreme effort is being made by each of the political parties to stir up interest in the issues involved. Mr. Bryan, in behalf of the several parties he represents, has rapidly canvassed the whole country east of the Rocky Mountains and north of the certain Democratic states of the south, while Governor Roosevelt, the Republican Vice-Presidential candidate, has been making an even more sweeping canvass of the country.

There has probably never been a national political contest regarding the issues of which the people have been so thoroughly well informed, for the discussion of the money question was so thorough four years ago that practically all the voters were settled in their judgment on it before the campaign opened, and the discussion of imperialism and trusts began before the candidates were formally named, and both sides have had unbounded freedom for the publication of their important documents and speeches in the public press. The last word in the debate, which will be uttered by the people at the polls on November 6, will soon be known.

General Lieber, judge-advocate-general of the army, in his annual report to the Secretary of War, says there were 6,680 trials by general courts martial during the past fiscal year, of which number 35 were commissioned officers (11 regulars and 24 volunteers), 4 cadets, 6,618 enlisted men (5,424 regulars and 1,194 volunteers) and 23 civilians serving with the army. Of the commissioned officers, 26, and of the enlisted men, 6,020, were convicted. A total of 2,585 men were sentenced to dishonorable discharge, of whom 2,270 were in the regular army and 315 in the volunteers.

The annual report of the United States commissioner of education for the fiscal year ended June 30 last, gives the figures for the fiscal year 1898-99 as the latest statistics obtainable. It shows that the grand total of pupils in all schools, elementary, secondary, and higher, public and private, for the year ending July 1, 1899, was 16,738,362, of which the number enrolled in the common schools, elementary and secondary, was 15,138,715.

The first instalment of the volunteer army now in the Philippines will leave Manila November 1. From that time until next June the transports will bring home about twenty-five thousand men at the rate of from four to five thousand a month.

In Hawaii the total number of public and private schools is 169, with a total enrolment of 15,490, including a large proportion of foreigners, each nationality having its own teachers.

Foreign News.

The adequate punishment of the guilty Chinese officials, the condition precedent to any settlement, will first be secured by Minister Conger and the other ministers under the instructions which have been cabled them. This accomplished in such a way as to satisfy the ministers and therefore the governments they represent, they will proceed to consider the question of indemnities for the past offences, all the powers having now agreed that indemnities shall be exacted and that they shall not involve territorial concessions.

The English admiralty are experiencing the effects of the high price of coal in England. They have just signed contracts with Cardiff firms for the supply of 150,000 tons of Welch steam coal at prices varying from \$6.50 to \$7 per ton. This is the highest price the naval department has ever paid for this coal, except in the time of strikes. The whole consignment has to be delivered at the naval depots during the next four months.

Formal negotiations for the settlement of the Chinese matter will begin shortly at Peking between Minister Conger and other representatives of the powers on the one hand, and Prince Ching and Viceroy Li representing the Chinese government on the other, while the United States and the powers will carry on concurrently negotiations between themselves as to the demands proposed by France and Russia which have not been approved by all the others.

Trafalgar day was celebrated October 21 in the usual fashion throughout England. Nelson's column in Trafalgar Square, London, was decorated with beautiful wreaths. There was a municipal procession at Liverpool. Nelson's flagship, the Victory, was hung with wreaths at Portsmouth and at Rottingdean. Rudyard Kipling addressed a meeting.

The French Government has decided to prolong the Paris Exposition for an additional week. It will close Sunday, November 11. One day will be devoted to the poor, with free admissions, and the Exposition will be illuminated as on special nights. It is expected that one million visitors will be present that day.

Li Hung Chang and Prince Ching have offered the proposal that a preliminary treaty be entered into between China and the great powers, which shall be a full acknowledgment on the part of China of her great offence against the principles of international law, and of her liability for the payment of indemnity.

The new British minister to China, Sir Ernest Mason Satow, has arrived in Peking, and Sir Claude M. MacDonald, the retiring minister, who has been appointed British minister to Japan, has left.

Paul Kruger, the Boer president, sailed from Lorenzo Marquez for Europe on the Dutch cruiser Gelderland, October 20.

Industry and Commerce.

The strike in the anthracite coal regions was called off by President Mitchell of the United Mine Workers' Union on October 25, as the men had gained substantially all that they asked. In a few instances operators had not declared their willingness to comply with the demands of their employees, and in these cases the men will stay out. The ending of the strike was a source of much satisfaction to the operators as well as to the one hundred and forty thousand miners and their families. The business men in the various cities and towns in the anthracite regions were also delighted that the mines were to resume operations. In his address to the members of the union President Mitchell says: "After carefully canvassing the entire strike situation, we, your offi-

cers, district and national, have concluded that your victory is so nearly complete that no good end can be secured by continuing the strike longer. The contest has been in progress for thirty-nine days, and the companies employing you have, with few exceptions, signified their willingness to pay the scale of wages formulated by the Scranton convention of October 12 and 13."

Vice-Consul Hanauer of Frankfort writes to the State Department as follows: "Molten wood is a new invention by Mr. De Gall, inspector of forests at Lemur, France. By means of dry distillation and high pressure the escape of developing gases is prevented, thereby reducing the wood to a molten condition. After cooling off the mass assumes the character of coal, yet without showing a trace of the organic structure of that mineral. This new body is hard, but can be shaped and polished at will; is impervious to water and acids, and is a perfect electrical non-conductor. Great results are expected from this new discovery."

General News.

The state comptroller has just finished the work of consolidating the tax receipts of the colored people of Georgia. The aggregate of all property owned by negroes in Georgia is \$14,118,720, as against \$13,560,179 last year. Of this \$4,361,390 is city and town property, and \$4,274,549 is represented by farm lands. They own \$72,975 worth of merchandise, have \$93,480 in cash and solvent debts, and \$469,637 in plantation and mechanical tools. The total number of acres of land owned by negroes is 1,075,073. There are 110,985 negro voters in the State, as shown by the digest. There are fourteen negro lawyers, and five dentists in the State.

Prince Chigi, who was prosecuted by the Italian government for selling a painting by Botticelli, which is now in London, was ordered to pay, as a fine for violating the law against selling valuable works of art for exportation, the sum of \$63,000, which is believed to have been the price paid for the picture. The purchaser, who was summoned to appear before the tribunal, but was in default, was condemned conjointly with Prince Chigi. The purchaser of the Botticelli Madonna from Prince Chigi was P. A. B. Widener of Philadelphia. The picture has not yet arrived in this country.

The great trees of California, of which not more than five hundred are of remarkable size, are of uncertain age. Estimates as high as five thousand years seem to meet with eminent approval, these figures signifying that the forest monarchs must have begun life before the earliest dawn of Chinese history, and at the time of the deluge were older than the art of printing from types is to-day. Professor Charles E. Bessey, however, contends that even two thousand years is a great over-estimate, actual ring count of a tree twenty-five feet in diameter having indicated but 1,147 years.

The latest fishing craft to return to St. John's, Newfoundland, from northern Labrador, reports that nothing has been seen of the Peary exploring steamer Windward. The winter season has already begun to set in near Hudson Bay. Ice is forming, and the whole region will soon be frozen up, making it next to impossible for the Windward to get south this year.

Next spring the University of Chicago will open a school for the training of consuls and other persons who desire to enter the United States foreign public service. It will provide for the training of young men who wish to enter commercial life or to fit themselves for any kind of profitable service abroad.

A German paper says that the letters which annually pass through the world's post-offices are twelve thousand million in number. Three-fourths of these are in the English language.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

The North Pole Hunt.

How it would be Known when Reached.

PEARY'S ship, the *Windward*, should by this time, unless some untoward accident has happened, have reached the explorer's winter quarters at Etah. Peary himself, again if no accident has happened, should have returned to Etah from his last attempt to gain the goal of his ambitions, the North Pole.

If he has returned to that little cabin, perched on the barren rocks of Etah, the gallant explorer has found a joyful and unexpected surprise awaiting him, for he had no knowledge that his wife and child were again to join him in the frozen North. The *Windward*, with Mrs. Peary and her little daughter Marie, and carrying a crew of thirteen, sailed from St. John's, Newfoundland, on July 20. The ship's destination was Etah, an inlet in Smith's Sound, well up the coast of Greenland, and here it was expected that Peary would be found, or if he had not returned from his dash for the pole, here he was to leave instructions for the ship's future movements. The crew of the *Windward* has signed articles for thirty months and the ship is provisioned for the same period, for should Peary not succeed in reaching the pole he will make still another attempt next spring, unless he decides to change his plans.

There are questions continually heard upon every hand which clamor to be answered every time an Arctic expedition is fitted out, every time a bold explorer sets forth to question the mysterious sphinx of the North. These questions are: "What is the use of Arctic exploration, anyway? What is the use of finding the pole?"

The answers to these questions involve the solution of so many problems of immense advantage to the human race that but the briefest summary of what polar exploration has done for the world can be given. The discovery of the pole, in itself a magnificent geographical feat, would be but a corollary to the general work of polar exploration and of the scientific investigations carried on in the polar regions. One question is involved in the other.

There are three great lines of human endeavor to which polar exploration has made notable additions—geographical knowledge, scientific research, and commercial profit. Surrounding the North Pole there are three million square miles of the globe still to be explored, but still vaster tracts have been brought within our ken and the conquest is ever going on. As a field for scientific investigation, the polar regions have afforded material for new chapters in a history greater but less known than that of man—the history of the world, the history of the universe. The increase of our knowledge of nature, of what we call science, has brought us a vast increase of physical comforts, but there is scarcely a department of science which has not benefited from Arctic exploration.

"Arctic exploration," says General Greely, "has contributed generously to the material interests of mankind and to the sum of human knowledge. In polar lands some

of the rarest secrets of nature have been disclosed to scientific voyagers. Contributions to all sciences have been levied from the air, the earth, the ocean, and even the universe. Within the Arctic circle have been located and determined the poles of the triple magnetic forces. Study of the varying phases of barometric pressures in the far North has given the world a better understanding of the climates of northern America, Europe, and Asia.

"Soundings of the sea, aerial temperatures, and hydrographic surveys in the Arctics have given birth to that most satisfactory and important theory of a vertical inter-oceanic circulation. A handful of dried Arctic plants enabled a botanist to forecast the general character of unknown lands, and in fossil plants from the North another scientist has read the story of tremendous climatic changes that metamorphosed the face of the earth. The peculiar tides of the Arctic have added to our store of information concerning the influence exerted by the stellar worlds upon our own. To the ice-clad zones science is now turning for a solution of the problem of glaciation of our lower latitudes."

From its purely material side General Greely quotes authorities to show that in a little over two centuries the Arctic regions have furnished to the civilized world products aggregating \$1,200,000,000 in value.

"What is the use of Arctic exploration?" asks Nansen. "One might as well ask of what use is science?"

The highest results are associated with the hydrography of the great oceans; the observations needed for the further knowledge of the laws governing the origin and course of storms; and magnetism, with its relation to the compass, the telegraph, and the telephone. "We shall never accurately know," says Sir Clements Markham, "the laws of aerial and oceanic currents unless we know more about what takes place in the Arctic circle."

The perfection of theories of the earth's magnetism are requisite in conducting surveys and navigating ships. Observations in magnetism, especially near the magnetic pole, which must not be confounded with the North Pole, will make safer all ocean travel. The origin and development of terrestrial fauna and flora are revealed in the frozen regions, which afford glimpses into ages long before man existed. But we must know more in order to solve many problems. Once our continent was covered with ice, and so its past history is to be sought for amid Arctic glaciers. Prof. Frederick Wright, the well-known scientist, and author of the "Ice Age of North America," told the writer that in order to interpret certain glacial scratches upon rocks in New Jersey he was obliged to go among the glaciers of Greenland.

Thus the polar regions hold the keys to a treasure house of knowledge that has many mansions. Over ice pack and tundra, amid the storm and stress of the wonderful workings of nature, the secrets of the universe must be read.

Now as regards the discovery of the North Pole itself, it can readily be seen that this means the expansion of all that knowledge which is sought for in general Arctic ex-

ploration. Again, its attainment will be not only a great geographical feat, but will be a great triumph of man's strength and endurance over the terrible forces of nature.

Now, Lieutenant Peary is most admirably equipped for his work, through personal experience and long study of Arctic problems, as well as regards supplies and scientific equipment. He has with him the best and most modern instruments. Should he succeed in reaching the pole, or getting in its near vicinity, he will doubtless gain a multitude of facts which every student of physical science awaits with eagerness.

There, for instance, is the problem of the ellipticity of the earth's surface, which enters into every computation of earth areas or directions. Is the earth flattened at the poles or not? Until the question is settled of the exact figure of the earth, no boundary line can be run with exact precision, and shoals and dangerous rocks cannot be plotted with accuracy. For now in all measurements, whether upon land or sea, in surveying as well as plotting, there is always an error to be calculated with. A mistake in making the proper correction upon the sea sometimes runs the ship upon reefs or shoals.

Counting the equator as one end of a yard stick, the other and unknown end is at the pole. We know there is an error, but this error cannot be rectified until that unknown inch or any fraction thereof has been accurately measured.

What is this North Pole about which so much is heard? It is simply the mathematical point which marks the northern termination of the axis of the earth. It is a place where there are ninety degrees of latitude or none, and three hundred degrees of longitude, or none at all, just as one prefers to look at it. A man standing at the pole could not take Horace Greeley's advice and go West, for there is no west, nor is there north or east. He would have to go south whichever way he stepped. Should he stand at the pole for a year he would have but one night and one day. The sun would rise on March 21 and set on September 21, not to rise until the following March.

After rising the sun would circle through the heavens as if rolling along the horizon, ascending every day—that is, every twenty-four hours—a little higher, till on June 21 it would be $23\frac{1}{2}$ degrees above the horizon. Then it would gradually sink until sunset on September 21. During the night at the pole all the heavenly bodies would move in horizontal circles instead of oblique circles, as they do to an observer at the equator.

As to physical characteristics at the pole, there would not be a Symmes' hole, nor a perennial summer sea, nor a specially rounded mountain for the earth to whirl upon, such as Jules Verne has described. It must be remembered that Nansen reached 86 degrees 14 minutes north latitude, a point but two hundred and sixty miles from the pole, a distance not as great as from New York to Buffalo. As the characteristics within the Arctic circle are everywhere much the same, there is no reason to suppose that some marked and extraordinary characteristic is indicated at the North Pole. There will be either land or water at the pole, such as characterizes other Arctic land or water all about it; only this, and nothing more.

How, then, would an explorer know the pole should he have the good fortune to reach it? Well, the phenomena of the sun during the polar day or of the heavenly bodies during the polar night would be one indication. But if the pole is reached it will in all probability be during the six months of light. The explorer takes frequent observations of the sun all along his northward march to determine his latitude and longitude. By computation he should know when he has reached the earth's apex, for then the observa-

tions should show ninety degrees of latitude and three hundred and sixty degrees of longitude, or none at all.

The series of observations are afterwards corrected whenever the exploring party reaches the base of operations or wherever the standard chronometer was left. That is a chronometer indicating the local time of the place at which it was left. Peary carries with him a half-dozen chronometers, rated for different times and showing the Greenwich mean time, Washington mean time, and one rated at some convenient camp, and indicating the local time of that place. By this chronometer his more northern observations would be computed, with corrections or errors added or eliminated, this to indicate precisely the places of observation. Again, when civilization is reached, the observations would be again computed with astronomical observations made at Washington, and would then be added to the various nautical tables that are supplied to maritime nations. That an explorer had reached the pole could be proved from his observations, and would resolve itself to a matter of mathematical calculation.

Beside Peary, other intrepid explorers are now far within the Arctic circle—Captain Otto Sverdrup, Nansen's captain, with the famous *Fram*, and Prince Luigi, cousin of the King of Italy, who sailed for the north with an Italian expedition in the *Stella Polare* over a year ago. Robert Stein and his party are exploring unknown regions in Ellsmere Land, and but a few days ago Captain Bannendahl of the German imperial navy sailed from Hamburg in a small fishing schooner, and will make an attempt to reach the pole.—*Boston Herald*.

Has the Star of Bethlehem Reappeared?

HAS the Star of Bethlehem appeared again? This is a query that comes from the West. A few nights ago, according to the *Denver Republican*, Mr. Daniel E. Parks, a well-known attorney of Denver and an enthusiastic astronomer, was sweeping the heavens with his telescope, when he came upon a new celestial body for which he could not account. It appeared from its formation, to be a glowing mass of hydrogen and nitrogen, and to be heading toward the earth. It was found between the constellations of Aries and Cassiopeia—that is, in the north of the heavens—about midnight. The Star of Bethlehem is supposed to have appeared in about the position of the star described by Mr. Parks.

Now, there are two theories as regards the Star of Bethlehem. Until recent years the interpretation of this phenomenon by theologians and believers generally coincided with the obvious facts of the Biblical narrative. The Star in the East which appeared to the Magi led them to the Saviour, and which was seen by the shepherds keeping their nightly watch on the plains near Bethlehem, was apparently miraculous. The whole matter was regarded as supernatural, forming a portion of that divine prearrangement whereby the Father acknowledged the Son.

But with many people a very different opinion has gradually become prevalent. The star has been displaced from the category of the supernatural and miraculous and has been referred to the ordinary astronomical phenomenon of a conjunction of the planets Jupiter and Saturn.

This idea originated with Kepler, one of the founders of modern astronomy, as far back as the seventeenth century. He supposed that if he could identify a conjunction of the above-named planets with the Star of Bethlehem he would thereby be able to determine on the basis of certainty the exact date of the birth of the Saviour, a matter concerning which there has always been dispute.

Kepler's suggestion has been worked out in the present century by Dr. Ideler, of Berlin. It seems, then, according to the calculations of both these men, that a conjunction of

Jupiter and Saturn took place about or at the time of the birth of Christ, the conjunction occurring not far from the first point of Aries. In fact, there were three conjunctions at the time, and in the last two conjunctions the interval between the planets amounted to no more than a degree, so that to the unassisted eye the rays of the one planet were absorbed in those of the other, and the two bodies would appear as one.

The two planets went past each other three times, came very near together, and showed themselves all night long for months in conjunction with each other as if they would never separate again.

The theory is that on astrological grounds such a conjunction could not fail to excite the attention of the Magi, who were close observers of the stars; that in consequence partly of the knowledge of Balaam's prophecy, and partly from the impression then said to be prevalent that some great one was to be born in the East, the Magi commenced their journey to Jerusalem.

Their journey is supposed to have occupied several months. It is supposed that the last conjunction of the two planets took place when the Magi entered Jerusalem. In the clear atmosphere of the East the planets would present a far more brilliant appearance than they would from our point of view, Jupiter especially presenting a brilliant apparition, being at its nearest approach both to the sun and to the earth.

About an hour and a half after sunset the two planets might be seen from Jerusalem, hanging, as it were, in the meridian and suspended over Bethlehem in the distance.

According to this theory, then, Mr. Parks may have seen the Star of Bethlehem a few nights ago. For according to astronomical calculations a conjunction of Jupiter and Saturn took place during a few days in the latter part of July. This conjunction, as has been said, would not present the brilliant appearance in this atmosphere that it does in the clearer air of the East, and could not be observed here by the naked eye.—*New York Herald*.

Jefferson's Bible.

Clergy and laymen will be interested in knowing that through the diligent search of Representative Lacey of Iowa, what is known as the "Jefferson Bible" has been brought to light. This little volume was compiled by Thomas Jefferson, and it contains the moral doctrines of Christ, the portions of the Scripture of a supernatural nature being omitted. So thoroughly did Jefferson go into this work that when it was completed the moral doctrines of the Saviour were pasted in a blank book in parallel columns, being in the Greek, Latin, French, and English languages.

The story of this precious book is best told in the words of Judge Lacey, as follows:—

"There is a little volume of one hundred and sixty-four pages in the library of the National Museum, bound in red morocco by a Richmond bookbinder, which is one of the curious things in Washington that is rarely seen. Thomas Jefferson's library was purchased by the government, and is now contained in the splendid Congressional Library. Some time ago, in giving the Jefferson collection a careful examination, I found that the 'Jefferson Bible,' as it is sometimes called, was not there. No one could tell me where it was until I asked A. R. Spofford, who knows everything about books, and he told me it was in the National Museum Library. It appears that the volume was not included in the sale of Mr. Jefferson's library, but was afterwards purchased for four hundred dollars from Miss Randolph. This book is too valuable to be kept upon the shelves of the Museum Library, but Dr. Cyrus Adler keeps it under lock and key, and carries the key himself."

Chicago Tribune.

The Lectures.

At Philadelphia, Pa.

Sunday afternoon, October 21, Judge Joseph R. Clarkson, C.S.B., of Omaha, Neb., delivered a lecture on "Christian Science is the Kingdom of Heaven at Hand," to a large and appreciative audience in Horticultural Hall, Philadelphia, Pa. It was estimated that sixty-five per cent of the audience were men.

Judge Clarkson was introduced by Carol Norton, C.S.D., of New York City, who spoke in part as follows:—

The dearest theme known to the heart of universal humanity is the one chosen by the lecturer of the afternoon as the subject of his lecture. The kingdom of heaven is of necessity one of two things: the greatest and most widespread delusion of the ages, or the universal fact of true being. This kingdom, or condition, must of necessity include both a state and its phenomenal expression in place. Christian Science teaches that the kingdom of heaven signifies the reign of harmony. The entrance gates to this kingdom are at hand. The way into this kingdom is not perceived by personal sense, neither is it discerned through materialistic observation.

By Scriptural confirmation and by an analysis of the teachings of Jesus Christ, the lecturer will present logically and convincingly his reasons for stating that Christian Science reveals the kingdom of heaven at hand. The teaching of Christian Science as set forth by Mrs. Eddy leads aspiring men and prayerful women into the reasonable expectancy of a cessation of sin, sickness, and death here and now. To this great Truth the speaker bears witness. The kingdom of heaven is the legitimate longing of a weary humanity. From the Indian's idea of a happy hunting ground to the sense of heaven held by the orthodox Christian there is a united belief that the heavenly estate signifies rest and bliss and harmony. Christian Science reveals the verities and practicality of this hope. I now have the pleasure of introducing to this audience Judge Joseph R. Clarkson, C.S.B., of Omaha, Neb., member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., the Mother Church of this denomination.—*Correspondence*.

In connection with the above we publish the following report of the lecture as given in a letter to the *Sentinel*.

Philadelphia, October 26, 1900.

Dear Sentinel:—The success of the lecture given last Sunday afternoon at Horticultural Hall by Judge Joseph R. Clarkson, shows that Christian Science is steadily growing and gaining in this city of Brotherly Love.

The hall was filled to overflowing, and many were turned away. Judge Clarkson was introduced by Mr. Carol Norton of New York, and, judging from the rapt and earnest attention of the vast audience for two hours, the Truth that was voiced was appreciated.

The cry of humanity for more love, more understanding, and more realization of God is going out from thousands of hungry hearts. Christian Science is answering this cry and filling the need. The subject of the lecture, "Christian Science is the Kingdom of Heaven at Hand," is a startling one to many, yet it is true, and while many may not be attracted through Christian Science owing to their prejudices and ignorance that it is the word of God, yet so great is this desire to learn more of the kingdom outside of the regular orthodox way, they will set aside their old beliefs, and gladly listen.

Judge Clarkson's earnest, convincing manner deeply impressed his hearers. One lady was heard to say, "I have always believed that God sent sickness. I can never believe that any more." And so the good work goes on. The seed of Truth is taking root, and the kingdom of

heaven is at hand. The lecture was given under the auspices of the four Churches of Christ, Scientist, of Philadelphia.—HENRIETTA E. CHANFRAU.

At Atchison, Kan.

An audience that completely filled the Theatre, gathered last night (Friday, October 12) to hear Judge William G. Ewing's lecture on Christian Science.

This was one of the best points he made: that Christian Scientists believed in their doctrine, and were willing to convince people by their works: they did not make a lot of claims, and ask people to accept these claims without evidence. Christ preached but one sermon, he said, but he made the lame walk, and the blind see, as the Christian Scientists are doing.

Mrs. Hattie E. Graybill, who is at the head of the Christian Science movement in Atchison, introduced the speaker in a very pleasing manner. Everything was very orderly, and in good taste, and the one hundred and sixty people who came from Kansas City attracted attention because of their good manners, good looks, and good clothing.

If Christian Science is what Judge Ewing says it is, we confess we have never understood it.—*Atchison Globe*.

Mrs. Graybill's introductory remarks were as follows:—

Ladies and Gentlemen:—In this religio-scientific period there is probably no subject engaging the human mind with as much query, pro and con, as the subject of practical and applied Christianity.

Christian Science is practical Christianity. It is a religion identified not only by its holy and enlightened faith, but by its works,—the sick are healed, the sorrowful comforted, the sinful reformed, in accordance with the teaching and practice of that Divine Metaphysician, Jesus the Christ.

The ridiculous and un-Christian attacks made upon Christian Science are not based upon any scientific knowledge of the subject, but are rather the result of ignorance or malice. There was a time when I did not believe in what I thought Christian Science to be, but when I really gained an understanding of the subject, as laid down in the authentic text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, I was willing and glad to leave the old landmarks.

The gentleman who will address this intelligent and cultured audience is an able and distinguished lawyer and jurist, well known to the profession of the northwest, having held important judicial positions, both Federal and State, and from a Christian Science standpoint he comes before you as one of the ablest exponents of this subject, and speaks authoritatively as to its teachings and achievements.

This lecture is given under the auspices of First Church of Christ, Scientist, of this city, and I now have the honor to present the speaker of the evening, Judge William G. Ewing of Chicago.—*Correspondence*.

At Fairmont, Minn.

Judge Joseph R. Clarkson of Omaha, a member of the Christian Science Board of Lectureship, lectured to a large and representative audience at the Opera House last Friday evening (October 12).

Judge Clarkson is a man of learning and ability, having attained high rank as a lawyer and on the bench of the Circuit Court in Omaha. He says he was an agnostic for twenty-five years until Christian Science, through its logical explanation and practical demonstration, opened to him the beautiful truths of the Bible. His lecture shows him to have become a thorough Bible student, and he expounds the teachings of Scripture, in their present application to

the healing of the sick and salvation of the sinner in a way to carry conviction to his hearers.

Judge Clarkson was introduced to the audience by County Attorney Mathwig, who spoke as follows:—

Friends:—For such are we all. We are met here to-night for the purpose of listening to a lecture on Christian Science. I, like others among you, do not know the full meaning of this doctrine. I do not know that it will do all that is claimed for it, but from that which I believe I know about this doctrine, it is as old as the Scripture itself, enunciated and practised by the great Master.

If it means the development of the mind, giving it power over material things, I endorse that doctrine. If it makes men stronger instead of weaker—I endorse it. If man's mind is capable of greater and better things, and is led to higher ideals by embracing that faith—I subscribe to it.

This is an age of enlightenment and investigation. Every day brings to light new ideas, new truths—I say new truths because new to us, for truth always existed, exists, and is eternal.

Because you have never heard of a particular doctrine, be not hasty to denounce it as false; but keep your ear and mind open so that you may not fail to receive the truths of the Infinite, thus blessing yourself and your posterity.

I have the pleasure and the honor, this evening, of introducing to you one who knows whereof he speaks, being guided by the light of reason and personal experience, and who for his authority cites the man of Galilee. Judge Clarkson of Omaha will now address you.

Martin Co. Sentinel.

At Lansing, Mich.

Edward A. Kimball, C.S.D., of Chicago, lectured to a good-sized audience in the Church of Our Father (Universalist), Tuesday evening, October 16. The lecture was given under the auspices of First Church of Christ, Scientist, of Lansing. Many Scientists were present from the surrounding towns, thus making the lecture far-reaching in results. Mr. Kimball was introduced by Mrs. Ella H. Doty, C.S.B., of Detroit, as follows:—

Ladies and Gentlemen:—The words Christian and Science are no new words to you. Separately you probably would be able to give a very good definition of the words, but combine them into Christian Science and perhaps the majority would not be able to give a very clear idea as to what the term means.

Those of us who are believers in, and demonstrators of the doctrines of Christian Science, realize most deeply that we are entrusted with a religion which is designed to ennoble human nature, which recognizes in man the capacity for all that is great and excellent. It promotes purity of heart and life and offers every encouragement and aid to the pursuit of perfection.

Socrates said, centuries ago, "What God is I know not, but what he is *not* I know." This God whom Socrates did not know, Jesus of Nazareth *did* know, and he proved, by his words and his mighty acts, that he possessed the key to Life. He claimed to possess no power separate from God. Jesus came as a friend and brother, and recognized in those around him the capacity and promise of that which he possessed, and said that not a glory, virtue, power, or joy to which he had attained, was inaccessible to his disciples.

He worked out the problems of life with the Science of Life, which is Christian Science.

We have with us this evening a representative of Truth well fitted by years of teaching and demonstrating to inform you what Christian Science is. It gives me great pleasure to introduce Mr. Edward A. Kimball, C.S.D., of Chicago, Ill.—*Correspondence*.

At Appleton, Wis.

At the Opera House, Thursday evening (October 11), Edward A. Kimball of Chicago, an eminent lecturer in the field of Christian Science, delivered an address on "The Cause and Scientific Cure of Disease," before a large audience. Large delegations were present from Wausau, Green Bay, and other neighboring points, evidencing great interest on the part of members of that faith in this vicinity.

The lecture was interesting from any standpoint, but more especially so to a believer in Christian Science. There has been much of a misleading character spoken and written regarding Christian Science. For this reason the true statement of the nature of real Christian Science as given by the speaker was of more than ordinary interest.

Lectures at Other Places.

Terre Haute, Ind.—William G. Ewing, October 14.
 Mercur, Utah.—Mrs. Annie M. Knott, October 9.

The Typewriter as a Teacher.

Within the past twelve months nearly three million dollars' worth of American typewriters have been shipped to different parts of the world. There is scarcely a point where civilized man lives that does not hear the click of this indispensable machine. In the settlements at the extreme southern point of South America, in the mining camps of the Arctic circle, in the deserts of Africa, in the tents of the advancing armies, and all over the world, the sound is heard, and there must probably be, in the course of time, a universal language to express the universal emotions when something breaks or the ribbon gives out.

Four years ago this country did not send enough typewriters abroad to make a separate mention of them necessary, but since 1896 nearly ten million dollars' worth of them have been distributed over the face of the globe. Of course, there are a few typewriters made by other countries, but they do not count, for in no respect are they equal to the American product.

The value of the typewriter is so great and is demonstrated in so many directions that we often wonder how we got along without it. It expedites business, saves time and eyes, increases legibility and courtesy, and removes every excuse for bad spelling and punctuation.

One use of it that is sure to increase is in the education of children. The parents who give their boys and girls good typewriters present them with a year's education. In some of the things, such as spelling, punctuation, and the right use of words, it is often an entire school faculty in itself. At present the prices are rather high, but there must come a time when for twenty-five or thirty dollars durable machines may be purchased for the use of boys and girls—machines equal in essential respects to those now in use, but without the costly attachments.

In some of the advanced public schools it has been found profitable to place typewriters for the use of the pupils. That is an excellent idea and, wherever the school funds can afford it, it will be well for the example to be followed.

The typewriter is not poetic, and it may be that the poor quality of poetry nowadays is due to the universality of this machine; but it has a usefulness to which the highest poetry can never aspire. It will go on increasing with the years. One of its missions undoubtedly is to reform the languages of the benighted nations. It may reduce the multitudinous characters of the Japanese and the Chinese to reasonable numbers. After a while it may lead to that general language which will be easily understood by all the nations.

By that time, too, there may come a noiseless roller which

will allow a person to use the typewriter in the midnight hours without disturbing the neighbors.

LYNN ROBY MEEKINS.

In The Saturday Evening Post.

Cured by Applause.

Louis Blanc, the eloquent Frenchman, lost his voice, not as Falstaff did, "with halloing and singing of anthems," but through dread of an English audience. He found it again by aid of the welcome the audience gave him, which was so hearty as to cast out all fear. Mr. John Bigelow tells the story, as related to him by Monsieur Blanc, in his "Life of Samuel J. Tilden. After the fall of the government in 1848, Louis Blanc became an exile in London. When he had acquired a tolerable command of the English language, he was invited to deliver a lecture in English. On the appointed day, he dined with Hepworth Dixon, then editor of the *London Athenæum*. The prospect of meeting a distinguished London audience and attempting to talk to them in what was to him a foreign tongue, made him so nervous that during the dinner he suddenly lost his voice, and could speak only in a whisper. He was in despair. The audience would be made up of the most distinguished in London society. There seemed to be but one course to pursue—to tell the truth and dismiss them. It was decided that he should show himself on the stage and let the audience see, if they could not hear, that he was unable to speak audibly. Dixon went with him and made Blanc's excuses. When he had done, Blanc stepped forward to verify his friend's statement. Dixon's remarks had been received with sympathetic applause, but when Blanc appeared the applause was deafening. When it had subsided, he attempted to say a few words, mainly to show his voiceless condition. But to his surprise, and to the delight of the audience, his voice sounded clearer and louder than ever before in a public assembly. He went on for two hours without the least inconvenience. The applause with which he was received had expelled the nervousness which alone was responsible for his vocal feebleness.—*Youth's Companion*.

Literature for Distribution.

On page 143 of this issue of the *Sentinel* will be found a list of publications, issued by The Christian Science Publishing Society, which, on account of the low price at which they are issued, are especially adapted for free distribution.

The list includes supplements to the *Sentinel*, pamphlets, tracts, reprints from the *Journal* and *Sentinel*, and also back numbers of the *Christian Science Journal*.

Address all orders to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

A New Catalogue of the Emblems.

The J. C. Derby Company of Concord, N. H., have just gotten out a new catalogue of the Christian Science emblems and will gladly send it to any one who desires to have it. This Company have added many new articles to the line that make handsome Christmas gifts.

They also have a complete line of the stationery made up for immediate delivery.

The emblems are fully illustrated in the new catalogue.

"He shall sit as a refiner and a purifier of silver."

The refiner puts the precious metal mixed with impurities into the crucible, subjects it to a hot fire, takes his position by it, and watches the process of purgation until the refined metal collects in the centre, and, becoming a mirror, reflects his own likeness.—*Anon.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Board of Lectureship.

"THE CHRISTIAN SCIENCE BOARD OF LECTURESHIP OF THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON, MASS."

The above is the correct title to be used in referring to the Board of Lectureship of the Mother Church. The word "International" is no longer properly applied. In preparing notices and advertisements it is advisable that the authorized lecturer be designated as follows:—

"MEMBER OF THE CHRISTIAN SCIENCE BOARD OF LECTURESHIP OF THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON, MASS."

Solomon's Choice.

WHEN Solomon became king over Israel the Lord appeared unto him in a dream by night and said, "Ask what I shall give thee." And Solomon replied, "Give therefore thy servant an understanding heart to judge thy people, that I may discern between good and bad." "And the speech pleased the Lord. . . . And God said unto him, Because thou hast asked this thing, and hast not asked for thyself long life; neither hast asked riches for thyself, nor hast asked the life of thine enemies; but hast asked for thyself understanding to discern judgment; behold I have done according to thy words: lo, I have given thee a wise and an understanding heart; so that there was none like thee before thee, neither after thee shall any arise like unto thee. And I have also given thee that which thou hast not asked, both riches and honor: . . . and if thou wilt walk in my ways, to keep my statutes and my commandments, as thy father David did walk, then I will lengthen thy days."

The wisdom of Solomon's choice is apparent to all. As a king he was not to live for himself alone but for the people he governed. He was the servant of the people and it was his duty to minister rather than to be ministered unto. The kingdom was for the people and not for the king.

The purpose of civil government is to establish and maintain individual rights, give to each person the protection to which he is entitled, and, so far as it is possible for human institutions to do so, to make life happy and harmonious. It is not enough that government should meet the demands of the present. Wise laws justly administered and faithfully obeyed bring a higher and more spiritual thought of existence. This is the real purpose for which they are enacted.

Solomon realized that if he would be a king in the true sense of the word he must receive wisdom from on high. He knew that of himself he could not do what was required of him. Because he desired faithfully to perform his God-appointed task he valued wisdom and understanding above all else. His earnest desire was granted, and because of the great wisdom he expressed in administering the affairs of his kingdom he has been called the wisest

man. His reign was a successful one and the people enjoyed great prosperity. "He had peace on all sides round about him," and was enabled to build and dedicate the temple of the Lord which David his father was not permitted to build, because he was a man of war.

That Solomon greatly valued wisdom is manifest in his proverbs. Many years after he was anointed king, when he had had abundant opportunities to prove whether his choice was a wise one, he wrote, "Wisdom is the principal thing; therefore get wisdom: and with all thy getting get understanding."

This incident in the life of Solomon has a lesson for all. As Christian Scientists we need to pray for wisdom that we may be able to do the work that is ours by reason of the understanding of Truth that has been given us. The apostle James says, "If any of you lack wisdom, let him ask of God, that giveth to all men liberally, and upbraideth not; and it shall be given him."

Wisdom has been defined as "the right use of knowledge." One must not only know but he must be wise in the use of what he knows, if he would accomplish the greatest good for himself and others. Both wisdom and understanding are necessary. Unless one understands the Truth he cannot demonstrate it, and unless he is wise he will not be able to apply what he understands in a manner that will accomplish the greatest good for the greatest number.

As Christian Scientists we believe that all discord results from error, and that the understanding of Truth can and will make free indeed. We have in a measure experienced this freedom that is born of spiritual understanding, and we know that a higher understanding of Truth will deliver from the bondage of corruption into the glorious liberty of the children of God. We have learned from experience that before one can enjoy the blessings of Truth he must accept the Truth, just as one must open the window and let the sunlight into the room if he would enjoy its brightness and cheer.

Because we know that Christian Science will bring to others all the blessings that we enjoy, and even greater, we desire them to accept it. In our earnest endeavors to impart the Truth, there is great danger that we have a zeal "not according to knowledge." Right here is where wisdom is needed. We must not lose sight of the fact that we cannot drive people, but must lead them. Jesus said, "And I, if I be lifted up from the earth, will draw all men unto me." With him a favorite illustration was that of the shepherd who went before and the sheep followed him into the fold. So we must lead others into the Truth instead of attempting to drive them.

The babe must be fed with milk and not with meat. No wise teacher talks about the theorems of geometry to the child studying the multiplication table. He does not refrain from so doing because geometry is untrue or its calculations inaccurate, but because the child cannot understand it and would not be benefited in the least by having the subject presented to him. The teacher's work is not to defend geometry but to educate the child, leading him, step by step, up to the point where he can accept, because he understands, the statements of higher mathematics.

In presenting to the world the Truth as it has been revealed to us in Christian Science, great care and wisdom are needed. It is no easy matter always to know when to speak and when not to speak, what to say and what not to say. Because our hearers must be led into the Truth, only such statements should be made to them as they will be likely to accept. Jesus is our example in this respect. On one occasion he said to his disciples, "I have yet many things to say unto you, but ye cannot bear them now." These disciples had for three years been drinking in the words of wisdom as they fell from the Master's lips. They had witnessed the wonderful demonstrations of God's

presence and power, and it might seem that they were ready for any statement of Truth that could be made. But Jesus realized that they were not prepared to receive all that he was able to give them, and to assure them that all things would in due time be revealed to them, he added, "Howbeit, when he, the Spirit of Truth, is come, he will guide you into all truth."

One of the ways in which we seek to interest others in the Truth is by telling them what has been accomplished for ourselves and for others. In relating these experiences the effort should not be to tell of the things which, to mortal sense, are the most wonderful, but rather should one seek to give that which appeals to his hearers as coming within the range of possibility. Mortal man prides himself upon his common-sense view of things, and because he is painfully aware of the limitations which beset him on every hand, he is slow to admit the truth of those experiences which appear miraculous. Strange and wonderful things may arouse curiosity and excite a passing interest, but those which appeal to one as being practical, are the things that are really helpful and lift man to a higher plane of existence.

Christian Science should be presented in such a manner as to win favor rather than arouse opposition. While one should present nothing but the Truth, yet it is unwise for him to attempt to declare the whole Truth, or even as much as has been revealed to him. He must remember that he has been months, and perhaps years, in reaching the point he has attained, so he cannot reasonably expect others to accept everything that is perfectly natural to him. He has had experience which his hearers have not had, and experience is the great teacher.

There are many experiences which we as Christian Scientists should ponder in our hearts, as did Mary of old the things which she knew to be true yet realized the world was not prepared to receive. Final and complete deliverance from the bondage of error must come naturally as the result of spiritual growth. Each must work out his own salvation. Not in a day or a year, but in time, the work must be done that will reveal the glories of eternity. Many sacrifices must be made, many hard battles fought, and all the demands of divine Principle complied with, ere one will have finished his work and entered the haven of eternal rest. In the doing of this work man will not be tested above that he is able. The demands for to-day do not exceed the ability to perform. Law and order attend every step of progress.

We should ever be ready to bear witness to the Truth, but the testimonies we give should be of such a character as will help rather than hinder the progress of our fellow-man. What would help one further advanced may retard the growth of one who is just beginning to work out his problem. Here we would repeat that it requires great wisdom to know when to speak and when not to speak, what to say and what not to say, if we would really help our brother and "hasten the coming of the day of God." If this be true, should we not pray earnestly for divine guidance that we may faithfully perform our every duty and thereby aid the establishment of God's kingdom on earth?

Among the Churches.

Organization at Berlin, Germany.

At various times visiting Scientists had held services in Berlin, Germany, in their apartments, but as they were here only as students or travelers, no permanent work was established until one year ago, when a loyal student came and opened regular Sunday and week-day services and a Sunday School.

The healing work began almost at once among the

Germans; and although there is a lively and steadily growing interest in Christian Science in the American and English colonies, and the congregation is growing, the patients are, as is natural, mostly Germans. Work soon became too much for one and our teacher had to send for one of her students early in this year. To-day we have four successful healers, who are busy doing good work. The services are conducted in both English and German, as are also the mid-week services, at which our German friends begin to narrate their experiences and many beautiful demonstrations. Last winter's work was very successful and the study of the books so thorough, that this spring a class of Germans could receive instructions, and start the work in their several fields with a new gladness in their hearts, which they did not know before. The little ones also testified by their love for their Sunday School work to the truth of Christian Science. Here the attendance is nearly doubled at present, and the formation of a second class has become necessary. So it came about that on September 20, 1900, twelve of the students came together and organized this First Church with an honest desire and the watchword in their hearts, which was given us by our beloved Mother and Leader in her last Annual Message: "Work—work—work—watch and pray."

Our gratitude to God for the light and understanding which He has pleased Himself to grant us, and to our beloved Mother and Leader, who so patiently and unflinchingly has labored to spread the Truth, cannot be expressed in words.

We are also thankful to the editors and publishers of the Christian Science periodicals and other literature for the uplifting thoughts of Truth and Love which they send us so regularly, and to the many visiting Scientists, whose interest in our work is so helpful to us.

OTTO GANTZER, *Clerk*, Berlin, Germany.

From Burns, Ore.

In 1890 the foundation of our work was laid in the healing of sickness and sin. One carried on the work of healing, and another was faithful to the light he had until now we see with joy God's increase. There are many willing hands and hearts awaiting only the promptings of divine thought. We have no organization at present, but we know the church is being builded in each heart. We have passed through experiences together which are broadening and deepening Christian character. To-day finds us with greater charity for all, and I would bespeak for the students here, a deep love for our dear Mother, who has done so much more for us than we can now realize. When larger grown we shall understand in part what it means to bear the cross, and look up—away from sense—for the waiting crown.—SARAH D. HILL, Burns, Ore.

Organization at Superior, Wis.

The Christian Scientists of Superior, Wis., have organized a church to be known as First Church of Christ, Scientist. They have also established a reading room where the public can have access to genuine Christian Science literature, and have taken first steps toward providing a church home by establishing a building fund. We have taken for our mottoes, "Divine Love always has met, and always will meet, every human need" (*Science and Health with Key to the Scriptures* by Mary Baker G. Eddy, p. 490), and "Seek ye first the kingdom of God [harmony] and His righteousness."

MRS. M. G. MORRISON, *First Reader*.

Be not hasty to cast off every aspersion that is cast on you. Let them alone for a while, and then, like the mud on your clothes, they will rub off of themselves.

NICHOLAS MURRAY, D.D.

Wednesday Evening Meeting at Galveston, Tex.

At the first Wednesday evening meeting held in First Church of Christ, Scientist, Galveston, Texas, following the disaster of September 8, the First Reader requested testimonies as to the particular thought which upheld the Scientists through the hours of suspense while in the seeming "valley of the shadow." Those responding, testified in brief as follows:—

A gentleman said that the demonstration he was called upon to make during the storm, was not in battling with the elements without, but in calming the frightened sense of those around him. The twenty-third Psalm was recited in unison followed by the Lord's Prayer with its spiritual interpretation from the Christian Science text-book. The effect of this was a peaceful calmness and trust in a final deliverance.

A lady next stated that she was supported by the following verse of the ninety-third Psalm, "The Lord on high is mightier than the noise of many waters, yea, than the mighty waves of the sea." Whenever she felt overcome by a sense of the awful crashing noises and the rapidly rising waters, this verse would recur to her, and with it would come a sweet sense of peace and security, and she attributes her demonstration to the realization of this uplifting thought.

Another lady testified that her observation had been that where a just recognition of the omnipotence of God as able to care for us was realized, it was the means of instantly calming the fears of all who held this thought. This was instanced in the case of her colored servant who was prevailed upon to remain with them during the night and not attempt to reach her home. The servant taking a view of the situation said, "God alone can now save us," and with the trustfulness of a child, went to sleep. The family recognized the necessity of being watchful. The rapidly rising water carried forward with its powerful current together with the tremendous force of the wind, presented such a sense of destruction that the statement from Science and Health, "Life is reflected in life," rose uppermost in her thoughts and supported her through all her experiences. Many times was she tested, but she finally lost sight of the fearful destruction of material possessions, knowing that the same power that was able to save would also furnish the needful supply. The ninety-first Psalm was read aloud when all seemed at its worst, and had a comforting and calming influence over all. The house stood, much of its contents uninjured and all the inmates saved.

A gentleman stated that the thought which supported him throughout the experience was the fourth verse of the ninety-first Psalm, "He shall cover thee with his feathers, and under his wings shalt thou trust: his truth shall be thy shield and buckler." While sitting at his window realizing this for his household noticing the rapid encroachment of the water and the terrific force of the wind carrying all before it, this thought came to him, 'Tis God who sayeth to the proud wave, thus far and no farther, and, He holds the winds in his fist, and he thereafter ceased to be troubled with the material sense of things surrounding him.

A lady stated that she was called upon to overcome the sense of separation from her children and other members of her family during this period, as they were in another part of the city, visiting friends. A great sense of fear for the safety of her children presented itself, and until she was able to place them and leave them in God's care, and recognize them as His children, she felt no peace. The ninety-first and ninety-third Psalms, and particularly the first verse of the ninety-first Psalm, kept ring-

ing in her ears and enabled her to overcome her fear. Not only were her children saved, but they were the means of giving a helpful thought to those with whom they were visiting. Their calmness and bravery were so manifest to this family that they have since expressed their gratitude for the presence of the children that night.

A gentleman testified that the thought which helped him was, that God was not in the storm. Taking up the text-book of Christian Science he read aloud appropriate passages to his wife, and afterwards they were so calmed as to be able to lie down and fall asleep; and was only awakened by his neighbor coming in on him for refuge.

Another gentleman stated that he was living in a house of Christian Scientists, and during the early hours of the storm their house was filled with refugees, and he was enabled to calm their fears by quoting the text, "Put your trust in the Lord," He is our Saviour. The reading of Science and Health and the Bible was continued on the stairs after they were driven from the lower floor by the rising water. Their house was unroofed and partly torn to pieces, yet no one was injured, neither the Scientists who were present nor those who had sought refuge with them.

A lady testified, that although she was absent from the city at the time, yet she would be very ungrateful indeed were she not to express her gratitude for what Christian Science had done in preserving the life of a member of her family. He was not a Christian Scientist, but a patient of Christian Science, so she attributes his safety in reaching his home that night, to the scientific thought held for him. In his endeavor to reach his home, which was quite a distance from his place of business, he battled many hours with the raging elements. As an evidence of this protecting thought, others that started out on this same road, never reached their homes, but were lost.

Another gentleman stated that he did not have any fear until he and his wife were driven onto the roof of his house by the rapidly rising water. He repeated the Scientific Statement of Being, and tried to realize the unreality of evil. His wife and he did not speak a word to each other during all the exposure. After drifting several hours and landing under the lee of a residence many blocks from where their home had once stood, his wife broke the silence by asking him what he thought had saved them, and he replied, "Christian Science." He asked her what thought she had held during their hours of trial, which had supported her so beautifully. She said, "The motto on the church wall: 'Divine love always has met, and always will meet, every human need.'"

A little girl of nine years next arose and stated that some words of a hymn from the Christian Science Hymnal were the means of her overcoming fear and afterward enabled her to help her mother. The hymn she quoted was "Conquering every storm of error, with the sweet words, 'Peace, be still.'"—C. G. S.

In addition to the above testimonies we publish the following extract from a letter written by a lady to her mother relating somewhat of her experience during the storm.

"The Christian Science Church is safe, the only church in town (and there are many beautiful churches here) that was unharmed. We had services this morning. Could we have had a more appropriate subject for our lesson than 'Reality'? We have had a terrible experience, to be sure, but it has not been without accompanying blessings, because, for all the agony, it has established us more firmly in Christian Science.

"The wind was very high about 12.30 Saturday afternoon.

and when the Gulf is rough and the waves are very high it is a beautiful sight. They are accustomed to storms down here, especially at this time of the year, and no one was particularly alarmed. K. and I wanted to see the waves, so we put on old clothes and started for the beach, expecting to get a car, as there are a number of lines which run to the beach. The water was so high that the cars did not run so we decided to walk. We got out to the beach, though it was difficult. The Gulf had come in two blocks then, and the water seemed like some wild animal. The waves were tearing the two fine bath houses to pieces; the moving water would come almost to a standstill and then suddenly shoot straight up into the air. It began to look pretty serious and we hastened home; wading through water that was above our knees. The chimneys were falling off the houses even then. . . . The storm increased rapidly. We had a high fence around the yard, and at six o'clock we could not see it. The men considered it wise to cut holes in all the floors of the lower rooms to let the water come in, and thereby steady the house and keep it from floating. When they commenced to chop the floors I was full of fear. I came up to my room and walked the floor for fifteen or twenty minutes and during that time it seemed as if God had forsaken me, though I knew it was error that was talking.

"After the chopping was done they all wanted to come up to our room, though to sense it was the most dangerous room in the house, because it was on the side the wind was coming from, a corner room and wholly unprotected. There were nineteen of us in our room that night. K. and I sat on the bed and read aloud from Science and Health, and also repeated passages from it that came to us; this we did over and over again until we could realize the Allness of God. When the storm was worst, during the three darkest hours, we did not have a particle of fear."

From Mr. Howe.

St. Joseph, Mo., October 22, 1900.

Editor of the *Sentinel*.

Dear Brother:—I feel that I must write and tell you how much we appreciate our periodicals, the *Sentinel* and *Journal*. The current numbers are most excellent. Our beloved Mother's notices and communications to the Field, and then the excellent articles selected for publication, all tending to the unfoldment of this grand Truth and pointing the way. The articles "Our Problem," "A Lawyer to a Friend," then in the *Sentinel*, "False Suggestions" and your selection of "Emerson's statement of Faith" are all most helpful and uplifting.

The waves of error have seemed to roll high, and at times we would say with the Psalmist, "The floods of ungodly men made me afraid." But God has been our refuge and strength, "a present help in trouble," and we have learned to "dwell in the secret place of the most High." With Paul we can rejoice in tribulation, for "tribulation worketh patience; and patience, experience; and experience, hope." Even the highest degree of evil cannot work against God, and if we live in Him error only bites and devours itself.

We are renewing our efforts here to circulate more of our literature, and we all wish you continued success in your grand work.

Fraternally yours,

C. M. HOWE.

May light to guide us every hour
From thee, eternal Sun, descend;
And strength from thee, almighty Power,
Be with us now and to the end!

SAMUEL LONGFELLOW.

From Our Contributors.

To-Day.

BY MARY I. KEITH.

DEAR heart, yours is to-day,
Fill it with work;
Dream not the hours away,
Nor duty shirk.

Sad heart, why do you mourn
For yesterday?
Others their griefs have borne
Just for a day.

Glad heart, rejoice with me,
"Now," is the time;
To-day is but Eternity,
Oh! bliss sublime.

Love waits for thee, my heart,
Open thy door;
Let not the day depart,
Without loving more.

Criticisms of Christian Science.

BY HERBERT G. HOAG.

OCCASIONALLY we read of persons who have made but a superficial investigation of Christian Science, or perhaps have no knowledge of it except hearsay, who condemn or ridicule what they do not understand because it is different from their beliefs. They seem to think that because they do not understand it well enough to demonstrate it after but a slight, and perhaps prejudiced, investigation, it must be a delusion.

A little reflection will show how foolish it is for feeble human reason to take such a position in regard to Christian Science or anything else which they have not worked up to. There are many self-evident things which the human mind does not understand, and if they conclude that everything is a delusion which they do not understand, they must conclude, for one thing, that God is a delusion, for the hundreds of religious sects is evidence that God is not understood even by cultured intellects; for when God is understood by humanity there will be but one denomination of religionists, a universal understanding of one God.

By the same process of reasoning life must be a delusion, for does the human mind understand life? If it did, life would not be so uncertain and its opposite, death, would not be so certain; there would be more of life and less of death, or, to carry it to the highest point, when the perfect understanding of Life is reached there will be no death for Life will be sure and permanent.

Again, happiness must be a delusion, for notwithstanding the fact that the pursuit of happiness is the supreme aim of every human being, and is the motive back of every thought, word, or action, yet do not the great majority of human beings realize that they are chasing will-o'-the-wisps? Even if they gain the thing which they imagined would bring them happiness, does it not in the great majority of cases prove a mockery of happiness, bringing in its wake a much larger proportion of discord, misery, and pain? Will happiness ever be sure and permanent until its principle is understood and properly applied? Everything that is real must have a principle, so that if life and happiness are realities they must be based upon principle, which when understood and correctly applied will produce perfect life (not its opposite, death) and perfect happiness.

It would seem that the very fact that the scientific un-

understanding of these and other subjects had not been reached after all these centuries, would indicate either that they were subjects that could not be understood by a superficial investigation, or that the people had not been looking in the right direction.

Christian Science comes to this age declaring the true God, true life, true happiness, based upon a perfect, unchanging, and eternal Principle (and that Principle is God) and proving its words by its works. But because it points in a wholly different direction for the scientific understanding of these subjects than that in which mortals have been searching, they cry "Delusion," whereas the finite human opinions on these subjects have proven themselves to be delusions.

Because mortals read in the Bible that man was made after the image and likeness of God, they reason that God must be the image and likeness of mortal man; that God is an immortal mortal. They are looking into matter and its so-called laws and conditions to gain an understanding of God, life, and happiness, while Christian Science points to divine Mind as the source and controller of all that is real and permanent, and declares that man was created in the image and likeness of divine Mind, and that he reflects the perfection of being and power of his Creator.

Love's Day.

BY JENNIE BAIRD SCHOOLEY.

A MOST interesting event in the history of Christian Science in the West was the lecture delivered by Mr. Edward A. Kimball, C.S.D., at Convention Hall, in Kansas City, Mo., Sunday, September 30. About eight thousand people, the largest audience ever assembled to hear an address on Christian Science, greeted Mr. Kimball on this occasion.

The first step towards this important event was an informal talk between the presidents of First and Second Churches. This resulted in calling Mr. Kimball to our city.

The next step taken was the appointment, by the presidents, of a committee of four from each church to formulate plans for the orderly and harmonious procedure in all detail work.

The first meeting held promised much, there being present a desire to work only for the good of our cause. Each member brought out the love which "seeketh not her own," and "in honor preferring one another," all details were arranged satisfactorily.

From the inception, several arguments which were suggested had to be met.

First, that it would be impossible to get an adequate audience for the immense hall. Second, that the speaker could not be heard. Lastly, that the expense necessary to make a success of the lecture would be immoderate.

It is here interesting to note that the acoustic properties of the hall seemed perfect. Hundreds seated in the south balcony, fully a half block distant from the speaker, could hear every word. Toward the close of the lecture, and amid profound silence, Mr. Kimball read from "Science and Health with Key to the Scriptures," pp. 122, 123. The impressiveness of this moment can scarcely be described. The vast audience leaned forward and reverently listened.

The expense of the lecture was met by loving sacrifice, prompted by the desire to do all within our power, individually, to spread the "glad tidings of great joy." The money raised for this occasion was simply a manifestation of love from loyal hearts.

Our beloved Leader has pointed the way clearly to her followers. In being "kindly affectioned one toward another," we are bringing out that most essential quality,—

obedience,—and are compensating her, in a measure, for the tenderness and love she so generously bestows upon us.

The week previous to our lecture Convention Hall was decorated with flags representing every nation, and under these flags our lecture was delivered. Is this not prophetic of the coming together, into one fold, of all nations, tribes, and kindreds? Yea, "All shall know Him, from the least of them unto the greatest."

The success of our undertaking must be attributed to the unity of purpose and selflessness which governed the committee and all engaged in this work. When we see the marvelous good to be derived from working in unison, we can well afford to "lay aside every weight, and the sin which doth so easily beset us," and "press toward the mark for the prize of the high calling of God in Christ Jesus."

A Thought for Young Scientists.

BY MARY SIMPSON.

THE thought has presented itself: Do young Scientists fully realize that, in Christian Science, treatment does not change the condition of a person from illness to health, but that they simply reveal and bring out the perfection which always existed, though clouds may have hidden it from sight?

God made man in His image and likeness, perfect, and thus man must forever remain. There is absolutely no power which could ever change God's work. "All things were made by him." "And God saw everything that he had made, and behold, it was very good." "Whatsoever God doeth, it shall be forever: nothing can be put to it, nor anything taken from it." These verses from the Bible prove that, in reality, a condition of imperfection is an impossibility.

Errors may, to our mortal sense, arise, which, in our ignorance, we do not know how to overcome; they grow and increase until we are covered, surrounded, and overwhelmed, and the real man is completely hidden from view. To those who turn away from material aids, and look to God alone for help, comes the light of Truth. It pierces the veil of error, rends it from top to bottom, and the real man stands revealed, perfect, as he always was and ever will be.

Scientific research has made it possible for astronomers to calculate with the utmost accuracy, the precise minute when an eclipse of the sun is to begin and when it will end. Though at the designated time, the sun should be obscured by clouds, it does not occur to us to doubt that the eclipse is taking place because we cannot see it with our eyes, but we simply bemoan the fact that the clouds make it invisible to us. In other parts of the line of the eclipse, where there are no clouds, it is seen in its perfection.

Man's *continual* perfection is a Scientific fact. Should we doubt that the perfection exists, just because clouds may conceal it for a time? Our clouds are errors of belief, and they can be dissolved by divine Love.

Let us study diligently, and pray earnestly that we may gain more understanding, realize divine Love more clearly, and reflect it, so that we may be able to dissipate more quickly the clouds which may appear upon the horizon, and also those which may seem to be already very dense.

Each demonstration should make us recognize more fully God's power, that "there is none else beside him," and that we, of ourselves, can do nothing, always praising Him that we are permitted to be instruments in His hands to dispel the clouds of false belief.

There is no resource where there is no understanding.

ST. THERESA.

It is one thing to have a map of the way, and another to pursue it.—Anon.

Testimonies.

Christian Science Destroys every Phase of Error.

I was very bitter in my opposition to Christian Science, and thought its followers the most deluded of all mortals. Now I am sure that they alone have the fullest measure of the Truth, and come nearer to fulfilling the commands of our great Master, Jesus Christ.

I was born with a weak right ankle which caused me great suffering on account of being frequently sprained. In 1894 at Corinto, Nicaragua, Central America, I sprained it so severely that four different physicians, who attended me in the different stages of my journey home, told me I would never fully recover from it, and would always have to favor that ankle. When I reached home I was still suffering, my ankle was swollen so that I could not wear even a slipper, and my leg was black and blue half way up to my knee.

My wife had had class instruction from a loyal student of our Mother. She saw my suffering and offered to treat me. I accepted the proffered aid, not because I had any idea that it would help me, but simply because I had just returned from a long journey and wanted to be agreeable. I retired at night in great pain, went to sleep at once, and awoke the next morning absolutely free from pain. I could not believe it and slapped myself to see if I were awake or dreaming. I found I was awake, and from that moment have known that I have *not* a weak ankle. In six years I have not had a single sprain, where before that six months would have been a long time between sprains.

In 1896 I had class instruction under my wife's teacher. Soon after this I built a branch railroad in the northern part of this state. I was camped with a large force of men and teams in the woods, twenty miles from a town or doctor, and was soon called on to treat both men and horses for all kinds of ailments. I was able to demonstrate the Truth with uniform success.

One Sunday morning I was called to see one of my men who was suffering from the effects of poison ivy. To mortal sense he was in a terrible condition. His body was swollen out of all resemblance to a human being, and he was in extreme pain. I treated him and he seemed to respond at once, but later grew worse. I treated him frequently during the day. After each treatment he was better, and then grew worse. I concluded that he was using some material remedy, and quit treating him. I discovered later that the men from the other gangs had been coming over to see him, and he had been on exhibition during the day which was contrary to my orders. About midnight the boarding boss came to my tent and informed me that the man was dying. I asked how he knew. He replied, "Because I have seen it before. It has reached his intestines and is going for his heart. If you can help him you want to get at it, for nothing else can save him." I went over to his tent at once. To the senses he seemed to be in the very throes of death. I went to work at once. After some time his writhing ceased but he was still groaning and in great pain. I felt that I had not reached him, and went to my tent for my text-book, "Science and Health with Key to the Scriptures." I opened the book at page 371, and my eyes fell at once on these words: "If man is absolutely governed by God, or Spirit, then man is not subject to matter, 'neither indeed can be;' and therefore man cannot suffer, neither can he infringe his Maker's spiritual law." I was able to realize the truth of this statement at once, and knew that the man was healed. I went to his tent and as I entered he spoke in his natural voice saying, "It is all gone. It left me like a flash." In a few moments he was sleeping like a babe and never felt any more pain. The next day he was at work as usual.

This demonstration was particularly gratifying to me.

because it silenced all doubters, and every man in the camp acknowledged that Christian Science had saved the man's life. The patient himself informed me that he had never believed in God, but that he would have to acknowledge Him after that, as no lesser power could have saved him.

From these and many other cases that have come under my personal observation I know that Christian Science is the Truth, and that it does destroy every phase of error. For this understanding I am unable to find words to express my deep sense of gratitude to God, to our revered Mother, and to my faithful teacher.

GEORGE EDWARD SMITH, Detroit, Mich.

Rescued from Agnosticism.

Whence? Why? Whither? are questions that have been confronting man ever since he began to think. I wrestled with these problems for about thirty years and finally gave them up as insoluble, which they are from any but the Christian Science standpoint. I say it is impossible to reconcile the existence of evil—sin, disease, and death—with the existence of a benevolent, all-wise, and all-powerful deity. The Bible declares that God is of purer eyes than to behold iniquity; then why does He suffer it to be? We cannot say that it is because He lacks the will, the wisdom, or the power to prevent it, without denying either His benevolence, His wisdom, or His omnipotence.

It is stated that suffering is necessary as a discipline to enable man to attain to a higher and better manhood. Why was man so constituted as to make it necessary for him to suffer in order to reach this higher condition? Brought into the world without his consent, it always seemed to me that man had a right to look to his creator for happiness, and if he failed to get it his creator was to blame. Thus the universe appeared a mighty maze, and all without a plan. It sometimes seemed that this world was at the mercy of the caprice of an evil spirit. I saw iniquity prosperous and happy and those who manifested love to man, if not to God, afflicted. I would have sought refuge in atheism, but there were too many phenomena pointing to a cause of some kind to make it possible for me to rest in that negation.

About three years ago I was brought in contact with Christian Science. I should not have given it a second thought ordinarily, but my business associated me with Christian Scientists and I could not help admiring the beauty and harmony of their lives. In the course of business I had to read Science and Health, and so began to see the reasonableness of many things in Christian Science that had seemed to me the height of absurdity. Furthermore, I had never found agnosticism, in which I had finally taken refuge, a comforting or satisfactory theory of life, and had always wished for something better. Christian Science offered me this, and the better acquainted I become with it, the more I feel its influence on my life and character, the stronger becomes my conviction that it is indeed the Way, the Truth, the Life offered to us by the Master.

Under its benign influence the sorrows and troubles that have appeared so real and distressing are seen to be only the baseless fabric of a vision.

Fifty years of experience in living under a material sense of existence is not overcome in a day, and I have had many struggles with matter and material beliefs and many falls before the power of evil since embracing Christian Science, but I know that if I earnestly strive for that Mind to be in me which was also in Christ Jesus, if I seek the kingdom of God and His righteousness, I shall find that the kingdom of heaven is within *me—here and now*, and shall enter into the joy of the Lord.

J. F. M., East Lexington, Mass.

An All-important Question Answered.

Christian Science came to my notice in an hour of sorest need when all else seemed to have failed. Physically I was nearly whole; mentally, distressed; spiritually, famished. The one paramount question for years had been, "What is life?" Early taught by Christian parents to love and respect the teachings of the Bible as the word of God, at about eighteen years of age I united with the Baptist Church. But there came a time when I reached a turn in the road, or what at times seemed its very end. There was one passage of Scripture to which I clung when nearly everything else seemed to fail. It was this from our Master's parable of the Good Shepherd, "I am come that they might have life, and that they might have it more abundantly."

Manifestly this was the solution to the problem, "What is life?" but how could it be reduced to every-day experience, how made practical?

At this point Christian Science was revealed to me. It needed but little investigation to satisfy me that it was the Truth. Unquestionably those known as Christian Scientists were in possession of something of which I was in great need. I love to recall how I drank long and refreshingly at the fount of divine Love. And on the other hand, what an awful task seemed to await one in overcoming sufficiently to be creditably known as a Christian Scientist.

So much that previously had been called good was revealed as "filthy rags." It was true that as the young man who inquiringly came to the Master said, the letter of the law had been kept from youth up, yet how far indeed was one from the standard as revealed in Christian Science.

How many lessons have been learned in this short time and how valuable concepts have been changed. There is more of a sense of willingness to await the unfolding instead of rudely tearing apart the opening petals. There is such a joy in the consciousness that at last one knows to a certainty that there is indeed a Scientific relation between God and man, and man and man, and that whatever error I overcome makes it just so much easier for others to think and do what is right, even as when one entertains wrong thoughts or yields to the belief in a power opposed to God, he is adding to the burdens, sorrows, and heartaches of his fellow-men.

Thus we see what a sacred trust is imposed upon Christian Scientists. The standard is high and the student soon learns from actual experience that when he makes a statement it must either be as a result of demonstration or he must be prepared to prove it by demonstration. This makes us humble. And realizing how much remains to be done compared with what has already been accomplished, we see the urgent need of daily, hourly watchfulness and prayerfulness.—CONRAD S. CULVER, Cleveland, O.

Christian Science in the Home.

I have been impelled for some time to write and express my appreciation of the many helpful thoughts which come to me each week, through the columns of the *Sentinel*. Each paper is as good as a treatment, and they have encouraged me to go on with my work many times when the way seemed dark. The same is true of all the literature of The Publishing Society. We as a family have been trusting to Science for nearly eleven years. My three children, eldest over ten, have never had one drop of medicine, and all are healthy. They have been carried successfully through all the so-called children's diseases, never lasting over three days and often overcome immediately. Sometimes when one of the children was suffering from a contagious disease I have been able to realize there was no contagion and the other children were not touched by it. These were "home" demonstrations. A case of catarrh which the eldest had manifested always, seemed very ob-

noxious to me. It appeared to be hereditary and was ever-present, winter and summer. I denied it so much that it became almost a reality. About that time I had an uplifting of my thought and forgot all about it, when one day the child, then about six years old, said, "Mamma, I haven't the catarrh any more." I was very thankful to Truth for this healing, and it has been permanent.

The fear of the children taking cold seemed to yield slowly. Early last spring I wrote for treatment for my fear, and they have been almost entirely free since. All this means a great deal to me, and I could write pages. Christian Science has healed me of sick headaches, which I had had from childhood, also neuralgia, just by studying Science and Health and changing my basis of thinking from a material to a spiritual standpoint.

I could tell also how Science has delivered us from a severe case of poverty. When I recognized it as an error and handled it as such, a good position came to my husband, and he has held it ever since. I am thankful for all this, but it is as naught compared with the knowledge of what Life really is, and the peace of mind which it has brought to me is more than all else, for whereas I used to have my thoughts filled with hate and rebellion, I now have good thoughts and I am *truly striving* to have that Mind in me which is also in Christ Jesus.

L. W. D., Oak Park, Ill.

Saved from Despair.

Only three short months ago I was a scoffer at Christian Science with a profound pity for those deluded souls who believed that it was demonstrable. I found myself at that time engulfed in despair, with no faith or hope to cling to, and longing for death to release me from a life out of which all sweetness and fragrance had vanished. Under those circumstances, without a scintilla of faith that Christian Science could reach my case, I, like many others, turned my weary gaze toward it and found in it rest, comfort, and peace, as in the shadow of a great rock in a weary land.

"Science and Health with Key to the Scriptures," is a priceless book, explaining, clearly and logically, all the problems of life. It quickens our understanding and reveals our kinship with God and Jesus Christ. Where we have seen as through a glass darkly, the clouds of mysticism and unbelief are rolled away and we stand face to face with new and beautiful truths. It brings a calm and holy peace to sorrowing hearts; it levels all rank, and in its effulgent rays we see in every man a brother. When we shall have entered into a full understanding of it we shall as heirs of God appropriate to ourselves from His wonderful and inexhaustible storehouses all that we need to make our lives one glad, sweet song.

To follow in the footsteps of our Master means work. There must be no sluggards, for the harvest is ready and there is work for all,—a daily taking up of the cross; but when we have found the true Way the burden will be light and the yoke easy. God's love belts the universe, and a glance toward the coming years gilds my belief that love for God and our neighbor will be mightier than modern artillery in settling international questions, that nation will no longer war against nation, and that credit for such beneficent results will be largely due to Christian Science.—NELLIE B. HOYT, Georgetown, Mass.

The Bible.

This lamp through all the tedious night
Of life, shall guide our way;
Till we behold the clearer light
Of an eternal day.

Selected.

Religious Items.

The *Outlook* says, in an article on "Learning from Life:" "One often hears the remark made that life goes hard with a certain person; when that person's life is analyzed it will almost always appear that it is characterized more by stubbornness or by sheer resistance than by acceptance and willingness to be taught. To those who are not willing to learn, life is almost intolerably hard. They bear the brunt of the terrible onslaught of events as they sometimes come rolling in like the waves of the sea, but they are not lifted by them and when the flood is passed they are stripped of their possessions."

A short time prior to the convention of the Railroad Department of the Young Men's Christian Association, held in Philadelphia, October 11 to 14, the *Congregationalist* said: "The Emperor of Russia is to send two delegates. These men, Messrs. Reitlinger and Shidlovski, are connected with the administration of Russia's railways. They come, not as a part of the bureaucracy of the empire, but because the Czar is interested personally in religious and relief work, and has sent these representatives here to find out all about Association methods."

The (Methodist) *Christian Advocate* quotes F. B. Meyer as follows: "Do not try to do a great thing; you may waste all your life waiting for the opportunity which may never come. But since little things are always claiming your attention, do them as they come, from a great motive, for the glory of God, to win His smile of approval, and to do good to men. It is harder to plod on in obscurity, acting thus, than to stand on the high places of the field, within the view of all, and do deeds of valor at which rival armies stand still to gaze."

The (Baptist) *Watchman* says: "Of course the Bible is literature, but it is also a revelation and a message. You may get a telegram that is very poor literature, but of transcendent importance to you as a message, and, *vice versa*, very good literature may be worthless as a message. You cannot apply the same standards of criticism to the Bible as literature and to the Bible as revelation. Much of the current praise of the Bible as literature ignores its worth as revelation. The Bible as literature is only the vehicle for the Bible as revelation."

The *Universalist Leader* says: "Too many churches and ministers spend all their time and energy in trying to get a bigger congregation, when they have not begun to mould the few they have. . . . What would it not mean to the world if the Church in the next ten years should work over the material it now has on hand in membership alone, into really righteous men and women, and turn loose on this country twenty-seven millions of real, practical followers of Jesus Christ? They would soon bring the kingdom of heaven to hand."

The *Homiletic Review* publishes an article by D. S. Gregory, D.D., on "The Forward Movement—How to be Brought About," in which the following is found: "It cannot be reasonably denied that on the divine side everything is absolutely ready for forward movement and victory all along the line and on the scale of the world. Divine Providence has made ready the whole world and provided all the forces and agencies, means and men, required for its spiritual conquest. Divine grace is all-sufficient."

When your feelings are hurt, keep still, till you recover from your excitement, at any rate. Things look differently through the unagitated eye. . . . Wait till you can speak calmly, and then it may be you will not need to speak. Silence is the most massive thing conceivable sometimes. It is strength in very grandeur. It is like a regiment ordered to stand still in the mad fury of battle. To plunge in were twice as easy."

The World's Crisis.

A writer in the (Unitarian) *Christian Register* says: "When Jesus said of a little child, 'Of such is the kingdom of heaven,' it was a revelation. In it was the strange and heavenly lesson which the Christian world has never yet fully learned: that there is a childhood into which we have to grow, as there is a childhood which we have to leave behind before we can enter into the fulness and sweetness of a pure Christian life."

In an editorial the (Baptist) *Examiner* says: "We hear others talk of love, and we talk of it ourselves, and think we know what it is, as we think we know so many other things we talk of. But of most things concerning which men express themselves they know little, and of love least of all. It is the fathomless affection. God is love."

The *Christian Register* says: "The time has come when we ought to be able to discuss all matters of religious thought without prejudice and with the sole desire to know the truth. How can any intelligent person wish anything less than the truth? It is surely our faith that whatever is true must be also serviceable for the spiritual life."

The (Baptist) *Watchman* says: "The heathen probably did not conceive at first of idols as gods. Idols were only symbols of spiritual beings; but gradually the idol itself came to be worshiped. The flag is only a symbol, but there are some indications that there is a tendency abroad to put the symbol above what it stands for."

In an editorial paragraph the *Christian Advocate* says: "The English Dictionary of Dr. Murray presents a singular coincidence. One of the numbers begins with 'brandy' and ends with 'brute.' This is merely a coincidence, but the evolutionary process suggested by it is being wrought out every day."

The (Unitarian) *Christian Register* says: "We have a thousand modes of intellectual and religious improvement; but we no longer get very near to our fellow-beings, to the finding of the inmost fibre of truth and conviction that is in them. Cold intellectuality cannot take the place of this vital contact."

The (Baptist) *Standard* says: "Start the day right. Life is lived by days and we do not have to live through more than one at a time. How simple and trite the saying, and yet it would solve three-fourths of our worries if we could apply it. It is so often to-morrow, not to-day, that burdens us."

Bishop Pendleton, in the *New Church Life*, says: "Separation or disjunction from God is the cause of all evil, and evil closes the spiritual mind, causing ignorance, and that mind is opened only by repentance and the shunning of evils as sins. This is the only pathway."

The (Baptist) *Watchman* says: "The estimated expense for religious buildings to be erected in New York City during the next six months is \$4,000,000. The largest single amount is involved in the erection of the choir of the new Episcopal cathedral, \$750,000."

The (Baptist) *Standard* says: "The last instruction which Mary Lyon ever gave to her scholars at Mount Holyoke contained the characteristic sentence: 'There is nothing in the universe that I fear but that I shall not know all my duty, or shall fear to do it.'"

The *Congregationalist* says editorially: "The best work for the future is possible to the least of us all. It is the improvement of character. It is adding to the sum of patience, purity, charity, diligence, and fidelity to divine ideals."

The Methodists are making good progress in their efforts to raise a Twentieth Century thank-offering of \$20,000,000. Already \$5,000,000 have been subscribed toward the several enterprises included in the offering."

Exchange.

"More than half of the unhappiness in the world comes from a perverse unwillingness to look on the bright side so long as a dark side can be discovered," says the (Baptist) *Standard*.

"Tenderness and strength! Boundless charity and dauntless courage! In combination these go far towards the making of the saint," says the *Church Standard*.

"'Knowledge is power.' So runs the adage, and the saying is true if the knowledge be real," says the *Examiner*.

Notices.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selection from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

No. 6.—Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion. Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution, may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society.

Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

- Price (cloth) each \$3.18
Two to Twelve books to one address, each, prepaid . . . 3.00
Twelve or more books to one address, each, prepaid . . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid . . . 5.00
Twelve or more to one address, each, prepaid 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
Twelve or more to one address, each, prepaid 5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS.

- A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth) each, prepaid \$2.25
Twelve or more books to one address, each, prepaid . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid . . . 4.00
Twelve or more to one address, each, prepaid 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS.

An illustrated poem.

Single book, prepaid \$3.00

Twelve or more books to one address, each, prepaid . . . 2.50

RETROSPECTION AND INTROSPECTION.

A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS.

A unique work of importance in the history and to the readers of Christian Science; containing

Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE.

An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM.

The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES.

A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.

A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD.

A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP.

Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1806, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp. **SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.**

MR. KIMBALL'S LECTURE. 33 pp.

HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.

THE BUSWELL TRIAL. 24 pp.

THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.

HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna. One copy or more, each, 6 cents; 12 copies, to one address, 60 cts. Twenty-five copies to one address \$1.15; 50 copies to one address, \$2.25.

Political and Governmental Notes.

In eight weeks Governor Roosevelt visited 24 states of the Union, made 673 speeches, traveled 21,209 miles, visited 567 towns and cities, and talked to about three million persons. This record includes more speeches, more miles traveled, and more territory covered than that of all the other candidates for President or Vice-President of the United States of all other parties for the last one hundred years, with the exception of the record made by W. J. Bryan in 1896, and it exceeds Mr. Bryan's record, which was 599 speeches made and nineteen thousand miles covered.

A press dispatch from Philadelphia says that the new battleship *Maine*, which is on the ways at Cramp's shipyard, is more than one-third completed, and that she will be launched on February 15, next, the third anniversary of the explosion which sent her unfortunate namesake to the bottom of Havana harbor, with more than two hundred of her crew. The launching next February will be attended by the survivors of the old *Maine* and the widows and orphans of the victims.

The regular and volunteer army is at present distributed as follows:—

United States, 998 officers, of whom 76 are volunteer officers, and 18,898 enlisted men all regulars; Alaska, 41 officers and 1,088 enlisted men; Porto Rico, 98 officers and 2,406 enlisted men; Cuba, 260 officers and 5,468 enlisted men; Philippine Islands, 2,367 officers and 69,161 enlisted men; Hawaiian Islands, six officers and 219 enlisted men; China, 80 officers and 2,060 enlisted men.

In his annual report on the progress of the execution of the general plan of coast defenses, J. M. Wilson, chief of engineers, says that fifty per cent of the defence work is now completed. Twenty-five of the principal harbors of the United States now have a sufficient number of heavy guns to offer an effective defence against a naval attack.

The steamer *Amur* from Skagway brought the men who have been working on the Government telegraph line to Dawson. These northern linemen, who have suspended work until spring, found traces of the inter-continental wire, which was projected and actually begun, to connect North America with Europe by way of Siberia.

The application of Frank Juarbe, a native of Porto Rico, to the New York Supreme Court for a writ of mandamus to compel the board of registration to permit him to become a voter on the ground that he became an American citizen by virtue of the cession of Porto Rico to the United States, was denied last week.

Reports of renewed activity on the part of the Filipinos were received from Manila last week. The natives attacked small bodies of American troops on several occasions. They were well armed and appeared in small bands of a few hundred each.

On October 20 the gold in the United States Treasury reached the highest figure in the history of the country, making it also the greatest stock of gold held by any country in the world. The total was over \$455,000,000.

Checks amounting to \$2,994,920 and representing interest due November 1 on Government bonds, were mailed from Washington October 31. These bonds are held by 36,256 persons and associations.

The President has issued his Thanksgiving proclamation setting apart Thursday, the 29th day of November, to be observed as a day of praise and Thanksgiving.

Foreign News.

At a meeting, held October 26, of the ministers of the ten powers represented in Peking, it was unanimously decided to demand the execution of Prince Tuan and four other Manchu princes, one duke, and three ministers, the nine who were named for punishment in the imperial edict of September 25, and, in addition, Yu Hsi, the governor of Shansi province, and General Yung Tu Shan, making eleven in all. These comprise most of the highest officials who were the leading spirits in the massacres of foreigners.

A method has been adopted for settling the Chinese indemnity question which, the authorities feel confident, will prove satisfactory. This contemplates the ministers in China agreeing upon a lump sum which will cover the claims of the powers. When China has agreed to pay, the powers can decide upon the distribution of the amount. If there is difficulty in deciding this, the United States will propose that the matter be referred to the court of arbitration of The Hague.

The position of the powers on the Anglo-German agreement regarding China is as follows: Five of the powers are united in all the terms of the agreement, viz.: Great Britain, Germany, Italy, Austria, and Japan; three of the powers,—United States, France, and Russia,—accept the clauses relating to the open door and the territorial integrity of China, but withhold action on the third clause as to future procedure in case any power seizes territory.

On the return of the City Imperial Volunteers from South Africa, October 29, London gave them a tumultuous welcome. As the men marched through the streets the people became frenzied with enthusiasm. There were four thousand police and twenty-two hundred troops on duty along the line of march, but they were unable to manage the crowds, and in the mad rush to see the returned soldiers many people were trampled under foot.

Before sailing for Europe Paul Kruger sent a telegram to his wife in Pretoria saying: "Blessing. Trust in the Lord. He rules. Psalm xci." The newspapers, in publishing the item, quote the latter half of the Psalm to show what Kruger meant.

Industry and Commerce.

The German government has just closed a contract with President Booker T. Washington of Tuskegee to furnish students trained in his school who will go to the German colonies in West Africa and instruct the natives in cotton raising. November 3 a party of such teachers will start from New York, equipped with plows, wagons, and all other implements needed. Expenses and handsome salaries are guaranteed by Germany.

A torpedo boat was launched at Ayer's shipyard at Nyack-on-the-Hudson last week, which the builders have guaranteed will make forty-two miles an hour, and which is

expected to excel even that speed. It is christened the *Arrow* and will be the fastest boat in the world so far as now known. The boat was contracted for by Charles R. Flint, who is supposed to be representing a South American country in the transaction.

Notice was published by the Pennsylvania Railroad Company last week that a pension system for employes on all its numerous lines would go into effect January 1, 1901. "Employes aged seventy years or more will be given the option of retiring from service on half pay. Another provision also stipulates that if an employe has been crippled in the service of the road he can retire at the age of sixty-five years."

M. Danel, chairman of the board of directors of the important Lens mines, is authority for the following significant figures: France annually consumes 42,000,000 tons of coal. She produces only 32,000,000 tons. Formerly this deficit was made good principally by Great Britain, and also by Belgium and Germany. All three now require all and more than their own yield.

Work was resumed in most of the coal mines in the anthracite regions last week. Operators who had not agreed to the conditions offered by the mine workers when the strike was declared off have been gradually falling into line, and it is predicted that all the mines will soon be working.

General News.

The most remarkable feature in connection with the recent discoveries in Babylonia of records antedating all others by thousands of years is the fact that so far as yet appears from these hoary data men were then much as they are now and lived then somewhat as they live to-day. On one tablet a jeweler gave a guarantee that an emerald set in a ring would not fall out for twenty years; on another a couple of farmers agree to refer the question of their boundary line to a third party for arbitration, and also agree that he is to ask nothing for his services. A third bears a record of the adjustment of a claim for wages, and so on, the life then being apparently, with proper allowance for different circumstances, a close approximation of the life now.

Recently an item was published in these columns concerning a clock that was made for an oriental ruler, which gave the time in a number of the capitals of the world. A reader of the *Sentinel* sends in the interesting information that there is a clock in an insurance company's office, corner of Exchange Place and Kilby Street, Boston, which tells the time of day in fourteen cities. The central dial gives Boston time, and the surrounding dials give the time in Liverpool, London, New York, New Orleans, San Francisco, Melbourne, Hong Kong, Calcutta, St. Petersburg, Constantinople, Berlin, and Paris.

One of the curiosities of architecture in England is the house erected about three hundred years ago at Rushton, in Northamptonshire, by Sir Thomas Tresham, a Roman Catholic, who wished by his design to typify the Trinity. It is all three: has three sides, three stories, and three windows on each flat, each of them in the shape of a trefoil—the three-leaved shamrock. Where the roofs meet rises a three-sided pyramid, terminating in a large trefoil. The smoke escapes from this chimney by three round holes on each of the three sides. The building is almost covered with mottoes and carvings.

The business section of New York City was shaken as by an earthquake on October 29, when a series of explosions occurred in the building occupied by a firm of manufacturing chemists, which wrecked forty business buildings and killed a number of people.

One of the remarkable things about the late Max Muller was that he never employed a stenographer or a typewriter, and wrote all his life a clear and legible hand.

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Oliver Cromwell's Bible.

FOR Cromwell a single volume comprehended all literature, and that volume was the Bible.

JOHN MORLEY, "Life of Cromwell," in *Century*.

Mr. Lowell speaks of the mind of Cromwell in certain higher moments, as "working free from Judaic trammels." But in the age to which Cromwell was called, in the battle with unrighteousness in the land, and with the allied imperialism and ecclesiasticism of which Spain was the fruit, it was not trammels which were forged for him in the Old Testament which he knew so well, and had studied as none of England's kings before or since. Would a knowledge of what is described as Aryan civilization have been a substitute for the record of that national life, so deep and so intense and linked to the throne of God, and finding its unity in Him? . . . If we study the mind of Cromwell, every element of strength was wrought in the faith in which these words become an inspiration.

ELISHA MULFORD in *The Nation*.

"On a day in August, 1658, Oliver Cromwell, lord protector of England, called for his Bible," says Maidstone, "and desired an honorable and godly person there, with others present, to read unto him that passage in Philippians, fourth: 'Not that I speak in respect of want: for I have learned in whatsoever state I am, therewith to be content. I know both how to be abased, and I know how to abound. Everywhere, and by all things, I am instructed: both to be full and to be hungry, both to abound and to suffer need. I can do all things through Christ which strengtheneth me.'"

After the passage had been read by the "honorable and godly person," whoever he may have been, Cromwell remarked: "This scripture did once save my life; when, my eldest son, poor Oliver, died; which went as a dagger to my heart, indeed it did." He then repeated the words of Paul, and exclaimed: "It's true, Paul, you have learned this, and attained to this measure of grace, but what shall I do? Ah, poor creature, it is a hard lesson for me to take out! I find it so."

Continuing, however, to read, he brooded for a time over the words: "I can do all things through Christ which strengtheneth me"—"and so," says old Maidstone, "drew waters out of the well of salvation."

The words which quenched the thirst of the greatest human soul whose force was ever directed to a moral purpose, appear in the King James Version of the Scriptures.

Forty-seven years before, that is to say, in 1611, they were given to the English-speaking world in a new translation—the King's Bible—the Royal Bible—"made by his majesty's special command." We now know that that translation never received public sanction of Convocation, Parliament, Privy Council, or King James himself, but, being superior to all the English versions that had been made since the pre-Wycliffe days, it gradually superseded them, and acquired that mystical sanctity which, in many homes, has elevated it to a throne of divinest authority.

Bishop Vincent once said in the hall of philosophy, at Chautauqua, during a vesper service: "God made the English Bible."

The Geneva Bible—translated in Geneva by English exiles there, and dedicated to Queen Elizabeth—long disputed supremacy with the version of 1611.

Westcott, in his "History of the English Bible," says: "From the time of its first appearance the Genevan Bible became the household Bible of the English-speaking nations; and it continued to be so for about three quarters of a century. It was never sanctioned for public use in churches; but the convenience of its form and the simple clearness of its notes gained it a wide popularity with the mass of the people."

As the Genevan disputed supremacy with the Authorized Version, so it divided the field with the Bishop's Bible—a revision made by suggestion of Archbishop Parker, and published in 1571. By authority of the "Constitutions and Canons Ecclesiastical," a copy of this work was required to be placed in all churches—it probably lay on the lectern in All Saints Church, Huntingdon, where Cromwell was baptized, and St. Giles, Cripplegate, where, in 1620, he was married.

In 1653 the Long Parliament ordered a revision of sacred Scripture, but the action was never consummated. Cromwell may well have been dissatisfied with the old versions, and uncertain as to the merits of the new—for the newest version commanded him to "honor the king," a command impossible for him to obey.

We know that in January, 1635, Oliver was interested in maintaining a "lectureship" at St. Ives for the exposition of the Bible. He wrote to his "very loving friend," Mr. Storie, at the Sign of the Dog, in the Royal Exchange, London, appealing for a subscription, saying that "to withdraw the pay is to let fall the lecture." He was then hungry for disquisitions and commentary on sacred writ—listened devoutly to Bible-reading by official persons—and altogether exhibited a dominant passion for knowledge of the word of God as he knew it and believed in it.

Somewhere in 1622 or 1623—"undated by history," says Carlyle—he had arrived at his conversion. Henceforth, he was to live upon the Bible as the staff-food of his spirit; henceforth, he was to drink of that spring welling up in himself to everlasting life.

At first he read the old Genevan Bible—it was slightly tinged with Calvinistic doctrine, and, therefore, welcome to the Puritans. His master at Sidney Sussex College, Dr. Samuel Ward, however, was one of the Cambridge group of scholars who worked on the version of 1611. This may have been one of the reasons why Oliver adopted it—or, perhaps the two versions lay side by side, as nowadays the versions of 1611 and 1881 lie side by side on many a table, in many a pulpit, to be read interchangeably.

Had "the honorable and godly person" used the Geneva Bible, he would have read: "I speak not because of want, for I have learned in whatsoever state I am, therewith to be content. And I can be abased, and I can abound everywhere in all things. I am instructed both to be full and

to be hungrie, and to abound and to have want. I am able to do all things through the help of Christ which strengtheneth me." Carlyle's transcription of the passage in the Authorized, substitutes "by" for "in."

But whatever version was chosen by Cromwell, this is certain: the greatest Englishman of the modern age found sure consolation in the words of the Holy Writ—unashamed, though lord high protector, to repeat in the dark hours of his sorrow and the bitter days of his conflicts, the words of Saint Paul.

Of this John Morley must take note, for Cromwell was not an agnostic, not a philosophic deist. He believed God, and the books that are called the word of God.

PROF. G. M. HAMMELL.
In the *Epworth Herald*.

Thanksgiving Proclamation.

THE following Thanksgiving proclamation was issued by President McKinley, October 29, 1900.

It has pleased Almighty God to bring our nation in safety and honor through another year. The works of religion and charity have everywhere been manifest. Our country, through all its extent, has been blessed with abundant harvests. Labor and the great industries of the people have prospered beyond all precedent. Our commerce has spread over the world. Our power and influence in the cause of freedom and enlightenment have extended over distant seas and lands. The lives of our official representatives and many of our people in China have been marvelously preserved. We have been generally exempt from pestilence and other great calamities; and even the tragic visitation which overwhelmed the city of Galveston made evident the sentiments of sympathy and Christian charity by virtue of which we are one united people.

Now, therefore, I, William McKinley, President of the United States, do hereby appoint and set apart Thursday, the 29th of November next, to be observed by all the people of the United States, at home or abroad, as a day of thanksgiving and praise to Him who holds the nation in the hollow of His hand. I recommend that they gather in their several places of worship and devoutly give Him thanks for the prosperity wherewith He has endowed us, for seed-time and harvest, for the valor, devotion, and humanity of our armies and navies, and for all His benefits to us as individuals and as a nation; and that they humbly pray for the continuance of His divine favor, for concord and amity with other nations, and for righteousness and peace in all our ways.

In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed. Done at the city of Washington, this 29th day of October, in the year of our lord one thousand nine hundred, and of the independence of the United States the one hundred and twenty-fifth.

WILLIAM McKINLEY.

By the President:

JOHN HAY, *Secretary of State*.

The Twelfth Census.

WASHINGTON, D. C., October 30, 1900.—The total population of the United States for 1900, as announced by the census bureau to-day, is 76,295,220, of which 74,627,907 are contained in the forty-five states, representing approximately the population to be used for apportionment purposes. There is a total of 134,158 Indians not taxed.

The total population in 1890, with which the aggregate population of the present census should be compared, was 63,069,756.

Taking the 1890 population as a basis, there has been a gain of 13,225,464 during the past ten years, representing an increase of nearly twenty-one per cent.

The population of the several states and territories is as follows:—

	1900.	1890.	Indians not taxed.
Alabama	1,828,697	1,513,017
Arkansas	1,311,564	1,128,179
California	1,485,053	1,208,130	1,549
Colorado	539,700	412,198	597
Connecticut	908,355	746,258
Delaware	184,735	168,493
Florida	528,542	391,422
Georgia	2,216,329	1,837,353
Idaho	161,771	84,385	2,297
Illinois	4,821,550	3,826,351
Indiana	2,516,463	2,192,404
Iowa	2,251,829	1,911,896
Kansas	1,469,496	1,427,096
Kentucky	2,147,174	1,858,635
Louisiana	1,381,627	1,118,587
Maine	694,366	661,086
Maryland	1,189,946	1,042,390
Massachusetts	2,805,346	2,238,943
Michigan	2,419,782	2,093,889
Minnesota	1,751,395	1,301,826	1,768
Mississippi	1,551,372	1,289,600
Missouri	3,107,117	2,679,184
Montana	243,289	132,159	10,746
Nebraska	1,068,901	1,058,910
Nevada	42,334	45,761	1,665
New Hampshire	411,588	376,530
New Jersey	1,883,669	1,444,933
New York	7,268,009	5,997,853	4,711
North Carolina	1,891,992	1,617,947
North Dakota	319,040	182,719	4,692
Ohio	4,157,545	3,672,316
Oregon	413,532	313,767
Pennsylvania	6,301,365	5,258,014
Rhode Island	428,556	345,506
South Carolina	1,340,312	1,151,149
South Dakota	401,559	328,808	10,932
Tennessee	2,022,723	1,767,518
Texas	3,048,828	2,235,523
Utah	276,565	207,905	1,472
Vermont	343,641	332,422
Virginia	1,854,184	1,655,980
Washington	517,672	349,390	2,531
West Virginia	958,900	762,794
Wisconsin	2,068,963	1,686,880	1,657
Wyoming	92,531	60,705
Total for 45 states.	74,627,907	62,116,811	44,617
Territories, etc.:			
Alaska (estimate)	44,000	32,052
Arizona	122,212	59,620	24,644
District of Columbia	278,718	230,392
Hawaii	154,001	89,990
Indian Territory	391,960	180,182	56,033
New Mexico	193,777	153,593	2,937
Oklahoma	398,245	61,834	5,927
Persons in the service of the United States stationed abroad (estimated)	84,400
Indians, etc., on Indian res- ervations, except Indian territory	145,282
Total for territories, etc.	1,667,313	952,945	89,541

The Alaskan figures are derived from partial data only, and all returns for Alaska and for certain military organizations stationed abroad, principally in the Philippines, have not yet been received.

It is the aim of the officials in charge of the work to push the tabulation of the returns so as to give the complete reports to the public, in accordance with the law, by July 1, 1902.

Up to this date the number of schedules received relating to agriculture is about 5,800,000. The chief statistician in charge of the details relating to manufactures has collected over 621,000 schedules and his work is practically finished. By means of the plan adopted in this census the office has been enabled to complete the field work concerning manufactures more than a year earlier than was done ten years ago.

The enumerators' accounts, numbering over 53,000, have all been paid. In the last census it took eight or ten months to pay all the enumerators. All the supervisors have been paid with the exception of a few. The cost of the administration of the bureau up to this date, including the preliminary work, is \$6,361,961, of which over \$4,000,000 has been expended for supervision and enumeration. The bulletins thus far issued have been given to the public almost a year in advance of those given out during the last census.

We give below a statement of

THE LAST TWELVE CENSUSES.

Census.	Year.	Population.	Increase.
12.....	1900.....	76,295,220	13,672,970
11.....	1890.....	62,622,250	12,466,467
10.....	1880.....	50,155,783	11,597,412
9.....	1870.....	38,558,371	7,115,050
8.....	1860.....	31,443,321	8,251,445
7.....	1850.....	23,191,876	6,122,423
6.....	1840.....	17,069,453	4,203,433
5.....	1830.....	12,866,020	3,232,198
4.....	1820.....	9,633,822	2,393,941
3.....	1810.....	7,239,881	1,931,398
2.....	1800.....	5,308,483	1,379,269

"Bear Ye One Another's Burdens."

If any little word of ours
Can make one life the brighter,
If any little song of ours
Can make one heart the lighter,
God help us speak that little word,
And take our bit of singing,
And drop it in some lonely vale,
To set the echoes ringing.

If any little love of ours
Can make one life the sweeter,
If any little care of ours
Can make one step the fleetier,
If any little help may ease
The burden of another,
God give us love and care and strength
To help along each other.

If any watchful thought of ours
Can make some work the stronger,
If any cheery smile of ours
Can make its brightness longer,
Then let us speak that thought to-day
With tender eyes a-glowing,
So God may grant some weary one
Shall reap from our glad sowing.

Christian Science Healing.

DESPITE all the accusations that Christian Science is a "humbug," "a farce," "a delusion," "the works of the devil," yet through its beneficent influence the sick are healed and sinners reformed, as witness the testimonies given at the Wednesday evening meeting of First Church of Christ, Scientist, this city.

A lady testified that she had been in poor health. The last physician informed her husband that she had consumption. She was so weak that it was necessary for her husband to assist her in getting out of bed. At a time when almost despairing of ever being well again, and thinking she had better prepare for another world, an attorney had occasion to call there on business. He had experienced the practical benefits of Christian Science in his own family. "When he saw my critical condition," she said, "he felt it his duty to speak to me about Christian Science. What he said cast a ray of hope and I was eager to try it. He was requested to call a Scientist, who came on Saturday. Under Christian Science treatment I improved rapidly. On the following Wednesday I assisted with the washing and that evening walked to church, a distance of a mile. In less than two weeks I felt that I did not need further help. I am very grateful for the revelation of Christian Science as given to the world by Mary Baker G. Eddy."

Two instances of moral reform were spoken of. One man had traveled in Germany, France, West Indies, and the United States. He was addicted to the curse of drink and lost many good positions because of this habit. Oftentimes when short of money he would exchange his clothes for older ones, spending the amount realized by this trade for drink. About seven months ago he landed in Indianapolis, Ind. It was a cold, disagreeable day. He was disheartened. Walking along the streets in that city he noticed a sign reading, "Free Christian Science Reading Room." He thought he would walk in to get out of the cold. He tried to read but could not as he was suffering from the effects of drink. Presently the lady in charge spoke to him about prayer. He informed her that he had often prayed but could see no good results. In further conversation she assured him that there was help, and if he were willing she would help him. He consented, and through Christian Science treatment his desire for liquor was destroyed. His gratitude and joy seemed unbounded. He added that he does not allow anything to keep him from attending the public services or from reading Christian Science literature daily.

The other gentleman had been almost a fiend for cigarettes, thinking he could not retire at night without smoking one. He gave up the habit, but later saw that he had done so through will-power and the desire returned, and he indulged in smoking again. At the same time he commenced reading Christian Science literature. The Truth gained by reading, gradually destroyed his desire for the cigarette and finally the habit was entirely overcome. Christian Science not only healed him of many forms of suffering but converted him from agnosticism and revealed God to him.

A man possibly between fifty and sixty years of age told how he was indebted to this church for many blessings. He had been an infidel for years, but Christian Science had been the means of showing him God. He had been in poor health, but under Christian Science treatment he was made a happy and well man. Then he added that he believed that divine Providence governed.

Two young ladies testified. One spoke of the practi-

cability of Christian Science in overcoming a sprained ankle. The other told of some of the benefits of Christian Science in her family. Her brother, fourteen years old, was awakened one night with a severe sore throat. He asked his mother where Science and Health was. He went down stairs and commenced to read, endeavoring to demonstrate the Truth. Soon the trouble was overcome. In the morning he informed his mother that at the time he asked her for the book he could scarcely get his breath, but that the trouble had been entirely destroyed by his understanding of the Truth. She then spoke of the great benefit of Christian Science in dentistry in her own behalf, and that the dentist expressed himself amazed at what he was able to do without her experiencing suffering.

An attorney's testimony: "For the first twenty-eight years of my life I do not remember that it was necessary to call a physician for me. Born and reared on a farm, I was always very healthy and robust. After completing the course of school at home, I went away to finish my education. For out-door exercise I joined a foot-ball team, and one day while playing, met with a serious accident. However, in a few days I thought the trouble had been entirely overcome. That was thirteen years ago. I remember that my mother had a copy of 'Science and Health with Key to the Scriptures' and the *Christian Science Journal* at home. She asked me to read them, and to satisfy her I did so, but told her that I thought it was all 'bosh,' and did not think there was anything in it. But one year ago last winter, the football trouble re-appeared. Before this appeared, I weighed two hundred and twenty pounds. This gradually grew less and less until I was afraid to weigh myself. I tried nearly everything I could hear of to get relief. I took very strong medicine. I remember one time leaving some of the medicine in the spoon for about an hour, and a green scum arose thereon. At the time I consulted my last physician I was so weak that I fainted. I can now see that I was being fully prepared to receive Christian Science. By a mere coincidence, the day I first tried Christian Science was the day before last Thanksgiving. I find there are some people who oppose Christian Science, or what they think it to be. I can truly say that I have a great amount of charity for this class of thinkers, having passed through this experience myself. Instead of objecting to Christian Science, it is their concept of it—a wrong view of it—to which they are opposed.

"On the evening of 4th of July last, I attended the Wednesday evening meeting of this church. There is something in Christian Science that is fascinating. As soon as one meeting is over, my wife and I look forward to the next one. There is a calmness and sweetness simply beyond human expression for a young member like myself to describe. Christian Science has destroyed my fear of not being able to meet my bills as they come due each month. There was a time when this was not the case."

A member spoke of receiving a telegram to treat a lady suffering with chills and severe pain in her bowels. Another message brought word that she had experienced relief; in two treatments she was well.

A lady spoke of an accident that occurred while on a visit. Her friend cut her hand badly on a glass can. She was asked if she would try Christian Science. She consented to be helped in this manner. At first she thought she would faint, but this was soon overcome, the bleeding ceased, inflammation and soreness were soon destroyed. The next day she was able to use this hand in sewing.

A man told of an accident that occurred with his boy. He is engaged in delivering papers, and one day when

playing, run a nail almost through the palm of his hand. He came home and asked to have it wrapped up. We helped him according to our understanding of the Science, and soon the soreness was overcome.

A gentleman said: "One week ago a lady called, stating that her husband, who is a traveling man, was at home, and had been for ten days, suffering with intense pain, and he wanted Christian Science treatment. Before she reached home he had experienced relief. The next day he was able to attend to some business, and the following day called at the reading room, his countenance beaming with joy and happiness for the relief obtained. But the best of all, he said, 'I have found the Truth.'"

Another gentleman spoke of receiving a letter from a man in Indian Territory, in which he acknowledged great benefits received by reading "Science and Health with Key to the Scriptures." It healed him of diseases of several years' standing, but better still, it healed him of infidelity. His gratitude was a glorious tribute to the Discoverer and Founder of Christian Science. The gentleman added that this man first heard of Christian Science through the *St. Louis Republic* publishing an account of his (the speaker's) acceptance of Christian Science. He then thanked God that he had ever heard of this Truth, and had consecrated his life to this work, and trusted that he would be instrumental in leading others to this light.

An elderly lady stated that it had been twelve years since she had been healed in Christian Science. She had been an invalid for fifteen years prior to this. She then told of the practical value of Christian Science in her home. A woman working for her had been bothered with a gathering in her head for four consecutive years, always in the spring. It seemed to her that it would be necessary to give up her position. She asked the woman if she ever heard of Christian Science. The woman replied that she had heard the name of Science, but knew nothing about it. She consented to receive help. In three days she experienced quite a relief, and in one week was entirely well.

She then referred to a case of scarlet fever with one of her grandchildren, so pronounced by the physician. "We thought from the symptoms manifest that this was what it was, and to be law-abiding we reported the matter to the doctor who, years ago, had been our family physician. After naming the disease he stated that we had a very sick child. He appeared rather surprised when informed that we did not want medical treatment, but expected to have Christian Science treatment. At this time the child had a high fever. In one hour, under Christian Science treatment, the fever was overcome and her temperature was restored to a normal condition. In one week she was able to leave the room, but to comply with the law we kept her there two weeks. The case got along beautifully."

A case of a little boy with sore throat was spoken of, the trouble being overcome in a short time.

A man testified as follows: "I am not a member of the Christian Science Church, but I love it. Six or seven years ago my wife was healed in Christian Science. She had been in poor health for years, and was under the care of several physicians. Since her healing she has been able to overcome many ills that have come up in our family. With her assistance, and by reading Science and Health, I have been able to overcome the desire for tobacco, both smoking and chewing, also the desire for intoxicating drinks. I can say that I am free from such vices to-night."

A second instance of the practical benefit of Christian Science in dentistry was spoken of. A lady greatly feared, having a root extracted, and sought Christian Science treatment. It was necessary for the dentist to cut the gum before he could get the forceps on the root. After extracting it he inquired if she suffered any pain. She said she

had not. He looked at her in amazement, stating that she had no appearance of having suffered. He then added that it was as bad a tooth as he ever extracted. She informed him that she had taken Christian Science treatment. As she expected to have more work done he advised her before coming again to have the same kind of treatment.

Dayton (O.) Herald.

The Lectures.

At St. Louis, Mo.

Judge Joseph R. Clarkson of Omaha, Neb., delivered an entertaining and instructive address on Christian Science last night (Thursday, October 25) before a large and cultured audience at the Odeon. The gathering completely filled the large hall, and included many of the most prominent men and women of the city. The believers in Christian Science were out in force, and the speaker was attentively followed by all, regardless of religious beliefs and creeds. Mr. James A. Logwood introduced the speaker to the assemblage, and Judge Clarkson was given a cordial welcome.—*St. Louis Globe-Democrat*.

Mr. Logwood's remarks were in part as follows:—

Ladies and Gentlemen:—I have been accorded the pleasure of introducing the lecturer for this occasion.

Perhaps it might be well to make a few brief remarks concerning the subject which has brought together this intelligent, happy, and thoughtful audience.

In 1866, an unassuming New England Christian woman, Mary Baker Eddy, discovered the Science of Mind Healing as practised by Jesus of Nazareth and his immediate disciples, thus fulfilling the Scriptures where they say: "He that believeth on me, the works that I do shall he do also;" "Go ye into all the world, and preach the gospel to every creature;" "Heal the sick;" "And lo, I am with you alway, even unto the end of the world." During many years of research and study God was her only guide and counsellor, and the Bible her only text-book.

In 1875, after thoroughly demonstrating the practicality of this Science in healing from sickness and sin, she wrote and published the first copy of the Christian Science text-book, "Science and Health with Key to the Scriptures." This book now is in its 198th edition of one thousand copies each.

Churches of this denomination have risen throughout the land, until now there are about five hundred regularly organized Christian Science churches.

The special subject by our lecturer for this occasion is "Christian Science reveals the Kingdom of Heaven at Hand."

I now have the pleasure, ladies and gentlemen, of introducing to you Judge Joseph R. Clarkson of Omaha, Neb.—*Correspondence*.

At Galva, Ill.

Before a large and attentive audience, William G. Ewing, formerly of the Cook County bench, spoke Monday night (September 17) upon Christian Science, at the Opera House. The lecture was under the auspices of the Galva Scientists, and was an occasion of widespread interest among Scientists in this vicinity, as Judge Ewing is one of the ablest and most powerful supporters of Christian Science. Among those present were many from out of town. Burns township sent a large delegation and smaller ones came from as far as Orion and Galesburg.

Judge Ewing was introduced by Hon. J. W. Olson, the mayor, in the following words:—

It is an old saying that few judges die and none voluntarily quit the bench. We have with us this evening, however, a gentleman who, as a rising young lawyer, was an

acquaintance and friend of Abraham Lincoln, one who became an eminent attorney, was appointed by President Cleveland District Attorney for the Northern District of Illinois, and later, was elected Judge of the Superior Court of Cook County, in which positions he served with honor and distinction, but quit the bench and left his chosen profession to devote his time, talents, and pre-eminent abilities to the cause of Christian Science. And I have the honor of introducing him to you to-night as one of the ablest, most earnest, and distinguished of its advocates—Judge Ewing of Chicago, who will now address you.

Judge Ewing is a quiet, but attractive speaker. His lecture, which was of about an hour's duration, was devoted mainly to the explanation of the belief in its fundamental theories.—*Galva Weekly News*.

At St. Vincent, Minn.

Edward A. Kimball gave a lecture in Reid Hall, St. Vincent, Minnesota, on Saturday evening, September 22. There was a pretty good audience considering the size of the town and that there are no Christian Scientists living in St. Vincent. We hold service ten miles out in the country. There were Christian Scientists from Kennedy, Minnesota; from Bathgate, North Dakota, and one from Winnipeg, Manitoba. The lecturer was introduced by Professor D. McLeod, who said that he had read some of Mrs. Eddy's works, and that they contained a great deal of Truth. Mr. Kimball lectured for an hour and a half. He held the audience in rapt attention all the while he was speaking, and explained every point in such a manner that it was easy to understand the subject.—*Correspondence*.

Lectures at Other Places.

Albert Lea, Minn.—Joseph R. Clarkson, October 14.

The Christian Science Emblems.

The J. C. Derby Co. of Concord, N. H., have issued their new catalogue of Christian Science Emblems, containing illustrations of the new pieces they have added to their line and suggesting many new and lasting gifts for the holidays. The emblem is a beautiful design and shows choice and careful work on the part of the makers.

In addition to the articles shown in the book, this company carry a line of the pins made up in diamonds for immediate delivery.

A catalogue of the emblems will be sent to any one who so desires, by addressing

THE J. C. DERBY CO., CONCORD, N. H.

A Request.

We request that our co-workers carefully read and observe the directions given on page 159 of this issue of the *Sentinel*, when ordering goods from The Christian Science Publishing Society or Mr. Joseph Armstrong, or when sending matter intended for publication in the *Journal* or *Sentinel*. If communications are addressed to the proper department it greatly facilitates the work at headquarters.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless we have the name and address of the writer.

There is a time in every man's education when he arrives at the conviction that envy is ignorance; that imitation is suicide; that he must take himself for better for worse as his portion; that though the wide universe is full of good, no kernel of nourishing corn can come to him but through his toil bestowed on that plot of ground which is given him to till.

RALPH WALDO EMERSON, Essay on "Self-Reliance."

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

For God Alone.

THE spirit of the martyr is needed if one would fulfil his God-appointed mission. Nothing could cause the martyrs to forswear allegiance to their God. More than anything else, more than all else, was their Father's commendation,—the "well done, good and faithful servant." All was sacrificed that they might gain this divine recognition. Like other mortals, they longed for human sympathy and human commendation, but instead of these they suffered persecution because they dared be faithful to their high sense of Truth and right.

While they earnestly desired to impart the knowledge of the true God which would bless universal humanity as it had blessed them, and while they labored faithfully to that end, yet they realized that in all their endeavors they were working for God alone. To Him, and to Him only, were they accountable. He was their Judge, and by Him they knew they would be rewarded according to the measure of their faithfulness. So clearly did they realize that they were working for God, and that they would be judged according to God's standard, and not according to man's, that they shrank not from the world's condemnation.

The world gave them nothing in return for all their labor and sacrifice, but this does not signify that they received no present reward. The consciousness of right doing, the supporting power of divine Love which enabled them to sing psalms of rejoicing when suffering the most bitter persecutions, and even when the human sense of life was being consumed by the devouring flames, was a present reward, such as the world could neither give nor take away. This was their joy; this was their present reward, which far surpassed all the favors the world could bestow. The fact that they were servants of God, working for Him only, was the secret of their lives of love and sacrifice. This inspired and sustained them in the darkest hour of persecution as well as in the days of joy and gladness.

The lives of the martyrs teach us that to work for God is the key to a happy and successful life. Working for self, or even for others, cannot bring to humanity the full measure of success and happiness. One may labor unselfishly for another's good, sacrificing time, talents, and money, but the lack of recognition and appreciation on the part of the one for whom the labor was performed and the sacrifice made, is the bitter cup which takes away the joy of doing for others. When one's efforts are appreciated it is easy to realize that "it is more blessed to give than to receive." But when one's efforts are not appreciated, and in addition to this he is misjudged as to his motives, he is oftentimes tempted to give up in despair.

To work for God alone is the way to escape the suffering occasioned by ingratitude and lack of appreciation on the part of others. As Paul says, "Whatsoever ye do, do it heartily, as to the Lord, and not unto men." This statement is broad enough to cover every possible human experience. "*Whatsoever* ye do,"—the little things of life as well as the great ones. If these are done as a service performed unto God, they are not in vain, no matter what may seem to be the result when judged from a human point

of view. Honest work for a just Master can never go unrewarded. The joy and satisfaction of such labor is unknown to the one who looks no higher than the mortal and material sense of things. To such an one life may seem to be one round of material labor for which nothing but a material reward is expected. But if one realizes that each day is a lesson in the school of experience wherein he is working out his salvation from all error, he sees that even in the little things he can know that God is with him, and that a higher and more harmonious consciousness of existence is the reward for labor well done. The triumph of good over evil in his own consciousness is a sufficient reward, for it brings happiness, health, and life.

Mortals cannot rightly appreciate the efforts of another in their behalf, or justly estimate the worth of his labors. Perhaps this is not so much because they would not, as because they cannot. They must of necessity view all things from their standpoint of experience, and because of this their estimate of the labor and sacrifice of another usually falls far short of what it should be. Their limited sense of things causes them to withhold the gratitude and appreciation which would otherwise find expression in their lives. If one is looking for that human recognition and appreciation to which he feels he is justly entitled, he suffers a keen sense of disappointment when he fails to receive it. These disappointments teach a much-needed lesson, causing one to look beyond the material sense of things and find his reward in the spiritual fact of being where all is harmony, and love and justice reign supreme.

How different will be one's conception of life when in all that he does he looks to God alone. Divine Love is all-wise and just, and the faithful servant need have no fear that his labors will be unnoticed and unrewarded. No loving service for God, no matter how small it may seem in the eyes of the world, can fail to accomplish good results. It is bread cast upon the waters that will surely return in a manifestation of God's goodness. It is seed sown that, in due season, will bring forth fruit, thirty, sixty, or it may be, an hundred fold.

A higher motive than the hope of reward inspires the efforts of the one who is working for God. He does right because it is right, not because he expects or hopes to be rewarded for so doing. Instead of feeling that he has done a great work and is justly entitled to a rich reward, he feels that all he has done is so little, compared with the love the Father has bestowed upon him, that he has already received more than he deserves. Meekly and lovingly does he recall the words of the Master, "So likewise ye, when ye shall have done all those things which are commanded you, say, We are unprofitable servants: we have done that which was our duty to do."

The true Christian Scientist realizes that as a child of God his true selfhood is expressed only in right doing. He is constantly called upon to deny the sense of selfhood in matter, but he must not deny his true being as a child of God by withholding that which is good and right. This life becomes to him the expression of God's goodness in every thought, word, and deed of human experience. He has no fear of results, for he has within his own heart the constant assurance that God is All, and that nothing can withstand the might of Omnipotence. Thus he is content to labor and to wait for the manifestation of God's goodness. He knows that nothing can rob him of his sonship with God or deprive him of the least of the blessings which his heavenly Father has bestowed upon him.

This view of life and its work lifts him above the sense of discouragement, that great enemy to human endeavor and progress. He may or he may not see the immediate results of his labor, but he knows they are sure. He has caught a glimpse of the great Principle of life, and he has applied that Principle to all the affairs of daily experience. The immediate result may not be what he expected, but

he knows that if he is faithful to the Truth of Being, nothing but harmony can result. It is his to sow the seed and wait patiently for the harvest, for God alone can give the increase. Inspired with faith in God's power and willingness to manifest Himself through the humblest warrior on the field of battle, he loses sight of his own weakness. Thus he is girded "with strength unto the battle," and, like the shepherd boy, he goes forth to meet the Goliath of sin, sickness, and death. He realizes that in the future as in the past, he will come off more than conqueror, and that nothing shall be able to separate him from that greatest of all blessings,—the love of God. This is his reward, which the world can neither give nor take away.

Semi-annual Meeting of First Members.

The semi-annual meeting of the First Members of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., was held Thursday, November 1. The progress of our Cause throughout the world was indicated by the reception of upwards of eleven hundred new members into the Mother Church. Among these were applicants from all parts of the United States, and also Australia, Germany, and other foreign countries.

Among the Churches.

Dedication at Yankton, S. D.

The First Church of Christ, Scientist, at Yankton, South Dakota, was dedicated September 16, 1900.

It was a beautiful Sabbath morning, and upon entering the church one was impressed by the mass of blossoms and evergreens that greeted the eye. Opposite the door and just below and in front of the Readers' stands, were steps of potted plants, and rich foliage. At either end of the steps were stands, upon which were ferns. On the bracket between the Readers' stands was a handsome cut-glass rose bowl of flowers. On the wall back of the Readers, and just under the frosted glass trefoil window, was placed these words in green, "God is Love," with a green scroll underneath. The organ was a mass of green and red blossoms, and a bank of the same was on the opposite side of the church. On a stand in the corner was a large wax begonia, whose long red and green branches hung to the floor, while a high stand beside it held cut blossoms. Each window was banked with green and golden rod. The whole was brought out in pleasing contrast to the rich cream and terra cotta coloring of the walls and ceiling, softened and blended by the rays of light from the stained glass windows.

A glance over the congregation revealed the fact that many friends from neighboring towns had accepted the invitation to be present. The hour for the morning service was devoted as usual to the lesson. It seemed that the subject for that day, "Reality," was peculiarly appropriate to the occasion.

At the close of the lesson service a number of letters of congratulation from other churches and absent friends, were read. Next came a solo, "In Thee, Oh Spirit, true and tender," by Miss Alice Van Ostrand, which was beautifully rendered and appreciated by all. The Second Reader, Mrs. Elizabeth Carr, gave a historical sketch of the work in Yankton, which was, in part, as follows:—

As we have gained so much from the experience of other fields, we felt it might be helpful in turn, to give a brief outline of our work up to the present time, as we have had a rather varied experience. The beginning of the work here was the healing of two chronic invalids, who are of our number to-day, and who had been pronounced incurable.

These two families took up the study of Science and Health and the Sunday lessons, and interested many others. The way opened for the few students to rent a furnished room on the main business street, where they could have their literature, and meet for the tri-weekly study of the *Quarterly* lesson, which they had kept up, meeting from house to house. Two weeks from the time the room was secured, the Sunday and mid-week services were started, and have been continued ever since. We were helped in the demonstration of securing the room and starting the meetings, by the counsel and advice of two students who were visiting in Yankton.

In a few months we were ready to organize as a society with six members, and more signed their names soon afterward. At our first annual meeting we took steps to incorporate as a church, and did so, with fourteen charter members. So faithfully and persistently was Love declared and demonstrated that before another annual meeting it seemed wise to consider the thought of securing a more favorable and commodious location for our services.

Since coming into the church we have had a lecture by Mr. E. A. Kimball of Chicago, and secured other reading rooms, as it was necessary for us to leave the room we were in. It has been one steady, persistent, continual demonstration of the One Power to meet and destroy every claim of error, no matter by what name human sense has called it.

After the reading of this paper the dedicatory address was delivered by the First Reader, Mrs. Ernie Richey.

Her address was, in part, as follows:—

Students of Christian Science, Friends, and Neighbors:—It is with pleasure that I extend to you the greetings of First Church of Christ, Scientist, of Yankton, and welcome you to our midst to-day; not as strangers and visitors, but as co-workers in the harvest-field of Truth. Your coming to us at this time, is of more than local importance. We hope you will ever feel that this dwelling-place of Spirit, the first in our state to be dedicated by our denomination, is indeed your home, and that we may often look into your faces and hear your voices. As you go back to your fields of labor we trust it will be with renewed strength and oneness of purpose to be more constant in declaring the power of Truth over all forms of error. Your coming at this time will be of real benefit to the local workers.

Our reading room has been kept open six days in the week for more than three years, and all Christian Science literature kept on its tables. The public is cordially invited to visit these rooms and attend our church services, notices of which have appeared in the press each week for the last three years.

We feel that what has been done is little more than preparatory for the real work that is before us. I know of no state where there has been a more marked demonstration of the one Mind, as in South Dakota. It is a record that we need to guard zealously in order to maintain it in its purity. It is a matter for rejoicing that throughout our state there are so many little bands of students to answer the questions: What is Christian Science? What does it teach? What does it do? It teaches its followers to believe in the Bible. Christian Science is the application of the teachings of the Bible to the needs of humanity. It was discovered by the Rev. Mary Baker G. Eddy in 1866, who, after fully testing the power of this Divine revelation over all forms of disease, began to teach others, who in turn proved it to be a demonstrable Principle. This discovery Mrs. Eddy named Christian Science, which she has fully set forth in our text-book, "Science and Health with Key to the Scriptures." Her wisdom and foresight is apparent to all students of Christian Science, and causes them to trust her judgment more and more.

Christian Science shows the need of keeping the first commandment, the meaning and application of which is fully set forth in the most wonderful sermon ever preached—the Sermon on the Mount. The practicability of this teaching was exemplified in the life and work of the Master, who reformed the sinner, healed the sick, and comforted the sorrowing. This is the work that Christian Science is doing to-day.

To every student comes the assertion, Your literature and teaching is beautiful, ideal, but not practical for this day and age of the world." Let us see; one of Webster's definitions of the word practical is, "Capable of applying knowledge to some useful end." That Jesus made practical his Sermon on the Mount, is acknowledged by all, and he said: "All things that I have heard of my Father I have made known unto you." "And whatsoever ye shall ask in my name, that will I do, that the Father may be glorified in the Son." "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." "If any man will come after me, let him deny himself, and take up his cross daily, and follow me." "Strive to enter in at the strait gate." "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you." The apostle James says: "If any of you lack wisdom, let him ask of God, that giveth to all men liberally. . . . But let him ask in faith, nothing wavering. For he that wavereth is like a wave of the sea driven with the wind and tossed."

The living of these rules is the following that Jesus meant, and Christian Science shows us how to live and apply them. Every student of Christian Science has found the cross to be taken up daily, in the putting away of selfish care and pleasures. Those who have sought God in this way will tell you of unparalleled success in every avenue of life. The failures come when we try to make God's way fit our way; when we try to improve upon His perfect plan; when we doubt the practicability of His methods in this age of the world.

To follow Christ—Truth—does not mean merely to read Christian Science literature and associate with the students, but it means pressing through the crowds of human beliefs and touching the "hem of his garment." Touching the Christ thought we become the channels through which God may reach all who really desire the Truth. To follow Christ does not mean the putting away or neglecting of business, but it does mean the giving up of every business practice that will not stand the test of God's rule of honesty, integrity, and uprightness. It means that one shall not take advantage of his brother's need to get gain for self, even when approved by the world's standard of right. It means that one shall not say unkind things of another. Yes, more, that one shall not think unkind thoughts of others, no matter what they may say or do. It does mean that one is to love his neighbor as himself. Mrs. Eddy says in "Miscellaneous Writings," p. 11, "We must love our enemies in all the manifestations wherein and whereby we love our friends; must even try not to expose their faults, but to do them good whenever opportunity occurs." Thus you will readily see that to be a Christian Scientist means to be a better man or a better woman.

The healing of disease is too well authenticated to need special mention, although it is a vital part of Christian Science; for one cannot have a clean, pure mind, where every thought is brought into subjection to God as taught in Christian Science, and have a diseased body. So we need to follow Paul's injunction literally: "Let this mind be in you, which was also in Christ Jesus." As one lives the teaching of Christian Science which is the reiteration of Jesus' words and works to this age, pain, sorrow, and sin are destroyed; not endured with whatever degree of fortitude and patience he may acquire, but destroyed. Chris-

tian Science destroys the belief of pleasure or gain in wrong doing. It makes the thief honest; it makes the good man better; it makes happy homes; it elevates, purifies, strengthens everything that it touches. It creates in all the honest effort to "make all things according to the pattern shewed to thee in the mount."

The student of Christian Science, as a follower of Jesus, must be a law-abiding citizen. As Jesus taught and lived a higher meaning of the Hebrew decalogue, so we must not only obey the laws of our land, but live their highest interpretation. Jesus observed the Sabbath, not only in his concept of it, but by the attendance at the Temple worship, and in the synagogues. When he was not permitted to do this, he found other places for worship; but never fell below their standard of right. Another marked feature of his life was his retiring for prayer or solitary communion with God, which grew more frequent as he lived above the world's concept of such things, and with it was manifested his spirit of tenderness, compassion, and love, as expressed in the prayer: "Father, forgive them, they know not what they do."

In recognition of all that we have received from Christian Science, we have come together in loving acknowledgment of our many blessings, to dedicate this building to the cause of Christian Science.

May this church ever be a symbol to the world of Christ's invitation, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." More than three hundred years ago John Robinson wrote, "When Christ reigns, and not till then, will the world have rest."—U. C. B.

The Work in Boulder, Col.

In March, 1899, a private building was secured by the Christian Scientists of Boulder, Col., and rooms are used for services and reading room. We now have Sunday services at eleven o'clock and Sunday School at noon, with an average attendance of about twenty-five. We have about the same number at our Wednesday evening meetings.

The city has a public library in which we have one copy of Science and Health and the *Journal* and *Sentinel*. There is also a public library in the University where we have Science and Health and "Miscellaneous Writings," and expect soon to add the *Journal* and *Sentinel*.

The numbers at our services do not represent the numbers reached at this place. Boulder being located at the foot of the mountains, has become a noted health resort, and the University brings hundreds of students. During the summer the Texas-Colorado Chautauqua is held here, and many visit our services for a short time. Thus the good seed is sown in many hearts and carried away to their homes, and will bring forth fruits in due season. We desire to have our cause represented at the Chautauqua, and we think the demonstration can be made and a day be given to Christian Science, if a lecturer can be procured. We have a box at the depot for the free distribution of Christian Science literature, and the people seem very eager for it. At our reading room Christian Science literature is kept for sale.

Arrangements are being made for a permanent organization at the beginning of the new year.

MRS. MARY J. JOHNSTON, Clerk.

Organization at Manitowoc, Wis.

In September, 1900, a Christian Science Society was organized and a reading room opened at Manitowoc, Wis. The organization has twenty-seven members with a Sunday attendance of about forty.

Four or five years ago some of the people here were healed of diseases that the doctors had called incurable.

Having a desire to know more of that which had healed them, they met from Sunday to Sunday at the home of one of their number and joined in the study of the lesson. Their numbers grew until, about a year ago, they were forced to seek larger quarters. A hall was rented and they continued the study of the lesson, following, as nearly as they were able, the order of the Christian Science Churches. Being unorganized they felt the need of help, and sent to Chicago for a loyal student, who not only helped them to organize as a society, but awakened much interest throughout the town and left in the field one of Mrs. Eddy's loyal students to carry on the work.

The press without exception has spoken kindly of the work and gladly published all notices sent them. There is much to encourage, and through the lecture which we hope soon to have, we believe that still more interest will be taken in Christian Science.

MARTHA E. JERAULD, Manitowoc, Wis.

Resolutions from Galveston, Tex.

At a meeting of the members of First Church of Christ, Scientist, Galveston, Texas, held Sunday, September 23, 1900, the following resolutions were passed expressing the gratitude of this church, for inquiries and donations received:—

Whereas, on the night of September 8, 1900, this section was visited by a storm that destroyed nearly two thirds of our city, and whereas, as soon as it was known to Christian Scientists in other fields, many letters of loving inquiry, as well as many donations to the substantial relief of our members were received, therefore be it

Resolved:—that First Church of Christ, Scientist, Galveston, Texas, desires to express her sincere gratitude and heartfelt thanks for the many loving messages, tender inquiries for the safety of its members, and the substantial assistance received from the dear Christian Scientists and Christian Science Churches since the seeming awful disaster. And be it further

Resolved:—that this resolution be sent to The Christian Science Publishing Society to appear in the columns of the *Christian Science Sentinel*.

ALEX. J. SWASEY,
MRS. ADA P. SWEET,
GEORGE R. CHRISTIE,
MRS. A. L. ZERWEKH,
S. H. STERLING,

Committee.

Reading Room at St. Louis, Mo.

The reading room of First Church of Christ, Scientist, in St. Louis, has been removed from the church building to more convenient and spacious quarters, Rooms 302 and 304 in the Columbia Building, 8th and Locust Streets.

The office building in which the rooms are located is owned by Christian Scientists and situated in the business centre. The rooms present an inviting appearance and are comfortably and tastefully furnished.

All the works of Rev. Mary Baker G. Eddy, and also the publications of The Christian Science Publishing Society, are constantly on sale, and are also at the free disposal of those who desire to peruse them in the reading room.

The most cordial invitation is extended to all Christian Scientists to visit these rooms. The rooms are open daily except Sunday from 10 A.M. to 5 P.M.—W. E. M.

The *Congregationalist* says: "You cannot make the foreigners who were shut up in Peking and who went through the awful strain of siege and limited rations believe that God is not a Father as well as Creator, a particular Providence as well as a law-abiding Architect. Every letter from Peking that has been published reveals the belief in present day miracles."

From Our Contributors.

Our Warfare.

BY MARY TRAMMELL SCOTT.

But whosoever shall smite thee on thy right cheek, turn to him the other also.—*Jesus*.

CHRISTIAN, list!—the war we're waging
Is not one of shot or shell;
'Tis with *thoughts* that we are striving,
See we watch their movements well.

When we're stricken on the right cheek
That is *pride*—its stings tell—
Turn the other—which is *self-love*—
Let them go and all is well.

When all love of self is conquered
Then the war has come to naught,
For the *true self* can't be troubled
With a *single mortal thought*.

The Work among the Blind.

BY MRS. L. M. EARLE.

THINKING it might be of interest to the Field I will give an account of the work that is being done by some of the Scientists of Oakland, Cal., at the Home for Adult Blind.

Several years ago one of the Christian Scientists at whose home there was held a weekly meeting for the study of the lessons in the *Quarterly*, invited to those meetings a neighbor who was blind. She became very much interested and so eager to gain more of the Truth that several persons went to her home at different times and read to her from Science and Health and the Journals, Sentinels, and lectures, helping her to memorize texts of Scripture and passages from Science and Health. Later she became the happy possessor of the Bible in point so that she could read that for herself and study beforehand the responsive reading for each week. She also has an instrument with which she has put many passages of Science and Health into point for herself. During these years, under the patient, faithful guidance of these Christian Scientists, she, with equal patience and perseverance on her part, has made a steady growth in the understanding of Truth and has had some beautiful demonstrations.

A little over a year ago there came to the Home for Adult Blind, which is but a block from these two homes, a blind gentleman from San Jose. He had already become considerably interested in Christian Science there, and a lady from the church there wrote to the Christian Scientist at whose home these meetings had been held, asking her, as she lived so near, to interest herself in him and give him such help as she could in continuing his growth and progress in Truth.

Having some time before discontinued these meetings for all except the blind lady, she invited him to join her in hearing the lessons read. He gained in understanding and was so filled with the Spirit that his every thought, word, and deed was an expression of love. In a quiet, unobtrusive way he voiced the Truth fearlessly upon all occasions and to all with whom he came in contact, and the way soon opened for him to overcome a severe illness and violent temper in one of the inmates.

About this time one of the gentlemen Scientists began to visit him and read to him and the one who had been healed in his room. Others were invited, until there were so many to listen that the readings were held in the smoking room.

When Judge Ewing came to Oakland to lecture last spring, at the suggestion of the blind Scientist, escorts and means were provided to take as many of the inmates of

either sex as cared to go to the lecture. About ten attended.

The time and opportunity next came for one of the ladies to go there for an additional weekly reading. Also, a way for those who desired to attend the Sunday services and the Wednesday evening meetings. There are from one to five present at all these services, and they have testified to the overcoming of various phases of error.

The lesson reading at the home of the Scientist has grown from the two to an average attendance of seven, and of these two or three attend both services on Sunday also, with increasing interest and profit.

It is very beautiful to see how they are growing to depend upon Love to guide their footsteps and to get to these various meetings unaided by material guidance.

Under the benign influence of Love that is being brought to their consciousness the seeming obstacles of error—scorn, ridicule, and opposition—are yielding slowly but surely to the reign of Truth, and those who were before unreconciled to their seemingly hard, cruel fate, and embittered by their misfortune, are becoming happy, cheerful, and contented, and freely acknowledge that Christian Science has given them this changed condition of thought. They are learning to find their true sight, which is indestructible and eternal. To those engaged in the work the results are most gratifying and encouraging.

Often those to whom the Journals and Sentinels are read, being particularly impressed with some article or demonstration in them, will buy copies and send to relatives or friends, thus trying to interest them, and so becoming themselves advocates of Truth. One owns a five dollar copy of Science and Health which he always has with him, and to which he refers all who can and will read for an answer to their questions or arguments.

Purging the Temple.

BY BEATRIX ISABEL BEST.

DURING a Wednesday night meeting last winter my eyes rested for a moment on a man whose frame seemed to be wasted by great physical suffering, and on whose face was written a look of hunger and world-weariness. With increasing force came to me the great importance of the silent testimony for Truth. Think of going where such hunger was, carrying perhaps only a stone in the shape of some thought of error! From my heart rose up the prayer that I might always go conscious only of Truth, bringing with me no jarring thought, no double-mindedness, and in this verse of the hymn by our Leader, Mary Baker Eddy, my prayer found voice:—

Shepherd, show me how to go
O'er the hillside steep,
How to gather, how to sow,—
How to feed thy sheep.

Then before me spread a scene in far-off Palestine. It was the feast of the Passover and in the great temple at Jerusalem sat the money changers and "them that sold doves." The courts were filled with people. Suddenly all was uproar and confusion, for among them came a man in whose hand was "a scourge of small cords" with which "he drove them all out of the temple, and the sheep, and the oxen; and poured out the changers' money, and overthrew the tables."

When the temple was cleared there came in many bringing those that were sick and afflicted, and there, in the cleansed temple, they were made free from their infirmities, for it is recorded: "and the blind and the lame came to him in the temple; and he healed them."

And this man who used so powerfully the scourge and afterwards with such ineffable tenderness and pity had unloosed the bonds of the sorrowing, the sick, and the

sinning, how did the people call him? To most he was known as Jesus of Nazareth, the carpenter's son; but Peter, recognizing the divine Principle which governed him, had said, "The Christ of God."

Clearly here was the answer, the showing "how to go," for applying the lesson shown forth in the cleansing of the temple individually, we see that our temple, too, must be purged of all evil if we would be true witnesses, testifiers, for Truth. We must, through the power of Truth, take "the scourge of small cords" and drive out of our own thought all malice, envy, hypocrisy, idolatry, all that defileth the temple, everything that is not the image of the "one altogether lovely." As this is done Christ will enter the temple (be manifested, reflected) and the ever-present Christ will heal all who come to us. Then, the more we as individuals purge our temples, so the more will the temple, our gatherings, be like unto the true church,—which our Leader defines in "Science and Health with Key to the Scriptures," p. 574, as "the structure of Truth and Love," wherein sit no money changers, nor them that sell doves. And to these meetings more and more will come,—the world-weary, storm-tossed, lame, and blind,—for "I, if I be lifted up from the earth, will draw all men unto me." Of each meeting it will be written as of old, "and the blind and the lame came to him in the temple; and he healed them."

Why Christian Science Appeals to Me.

BY LOUISE C. PEELAR.

CHRISTIAN SCIENCE appeals to us, because of the buoyancy of its hope and the certainty of its tone, in such contrast to the dreary verdicts of physicians and our own fears. It is the little song of joy and triumph, rippling in and out its measures, that catches the ear and holds the heart.

Where can we go for comfort, peace, and happiness save to God? How can we be satisfied except as His likeness? All the dreams of mortal existence yield, one by one, to the facts of Being. Sometimes sorrow is the means of bringing us into better understanding of the joy of Life eternal, *here and now*. When sorrow comes to the one who is depending upon God, Spirit, for light, the Comforter is at hand, "a very present help in trouble." Formerly, we thought that time alone assuaged grief, but with this new-old understanding, we find that the Comforter is already with us, we do not have to wait for years to accomplish the work, but at the time when most in need of it, we have solace, peace, and the understanding of what Life is, is not denied His children.

Sometimes it is pain and suffering that drives us higher than our limited knowledge has ever taken us. It is just this struggling to get away from these dreaded nightmares of mortal mind, that lifts us to that plane, where we begin to learn life's lessons aright and know "there is none else beside Him. Many approach Science because they are longing for a better understanding of God. Isaiah says, "Ho, every one that thirsteth." All are led through the path of patient, persistent effort, to that fountain of infinite Good which gives satisfaction to each and every one.

Christian Science certainly brings cessation from the ills of flesh. It is also true that it awakens us, sometimes after years of inactivity in spiritual Life (the only Life), to an effectual method of conforming to God's laws and working out our own salvation. This awakening to the power of Good gives us a sure means of helping others.

We cannot be too grateful for the help afforded us through the *Journal* and *Sentinel* which bring the different fields in closer touch with the parent vine. Our periodicals are doing a great work in bringing God's word to His people. They are trusty friends pointing all mankind to our text-book, the contents of which, assimilated, assure salvation from sin, disease, and death.

Testimonies.

Demonstrations of the Power of Truth.

The *Journal* is such a welcome, helpful visitor that gladly do I send in my tribute to its worth. Recently a near and dear relative became an earnest student of Christian Science, after having been under the doctor's care for two months for serious kidney trouble. The *Journal* and *Sentinel* were great aids to him in his search for Truth. Every question he asked was answered in one or the other of these valuable publications, and it seemed I had but to sit still and see how beautifully Intelligence supplies that which is needed.

A few weeks' study of Science and Health and reading the *Journal* and *Sentinel*, followed by a few treatments, produced a great change, and this dear one is now restored to health. The doctor pronounced him incurable, told me that he could alleviate his trouble, but not cure him, that the first cold he took would send him back into the condition he was then in. Christian Science not only healed him physically, but mentally and spiritually, and to-day, although seventy years old, he looks twenty years younger than he did six months ago, and says he feels better than he has for that number of years. The smoking habit of forty years duration, was overcome without effort, after about two weeks reading of our text-book. When he commenced this study, he could not read a word without his glasses; now he reads pages and forgets to put them on. The thought of extreme weakness was overcome upon reading some words on "Strength," written by one of our authorized lecturers on Christian Science. How all-potent is Truth!

A gentleman, who has been opposed to the Christian Science movement, having seen this practical proof of its healing power, said to me, "I take off my hat to you, or to Christian Science, or whatever it was that made grandpa look so well." This, in itself, is to me a demonstration, for only a few months ago he said he liked to have me visit his wife, but he did wish I would leave my Christian Science at home.

It is now a little over two years since I first tried this Science for physical healing. I took a son, fourteen years old, to a practitioner after three specialists had pronounced a nervous condition to be the result of astigmatism of the eyes. "Bad enough to cause nervous prostration in a man; why should not the boy be nervous?" said one of them. The last doctor gave me to understand that, in all probability, the boy would always require glasses. When this same doctor wished to remove an enlarged third tonsil from the passage back of the nose, a painful operation, the boy rebelled. Then it was I said to him, "There is nothing else to be done, unless we try Christian Science." "Anything but to be operated on," said he. Instead of spending a Christmas vacation in submitting to the operation, as the doctor advised, we let the holiday pass by, and, early in January, made our first visit to a Christian Science practitioner. God bless her! and God bless all who are devoting their time and effort to this healing work! We asked for treatment for nervousness and enlarged tonsil. The healer asked, "Why does the boy wear glasses?" I answered, "For astigmatism," and told her that a recent examination by an oculist had confirmed the verdict of previous doctors, and that we had not come to her for the eye trouble at all. With a loving smile she said: "The same Truth that will heal the other troubles, will certainly heal the eyes, he needs no glasses. We will know the whole Truth while we are about it." That is what demonstration is, knowing the Truth; and so clearly was it known, that, after three treatments, the boy came home with glasses in his pocket, and during the two years since, he has never put them on. He does much studying

and reading at night, and has no headache or blurring of the eyes, as was the case before taking treatment. He continued in the care of this friend for some months, and has improved in many ways.

A few months later I met with an accident which resulted in a badly sprained ankle, the swelling and discoloration extending almost to the knee. I was two hundred and fifty miles from my healer, and too young a Scientist to handle this difficulty, except to overcome the fear and pain; this I did. During the week that elapsed before I could reach the practitioner, the ankle joint became stiffened, yet one treatment enabled me to walk without assistance. After the second treatment I went out of doors, getting on and off the cars with ease, and after the third treatment I was practically healed. All stiffness, soreness, and swelling vanished in one week. To prove to the dear relatives, doubting Thomases, that I was really healed, I rode a bicycle eight miles, five weeks after the accident, with as much freedom as ever, and found the ankle as supple and strong as before the sprain. Since this experience I have been witness to many demonstrations of the healing power of Christian Science, and its true disciples.

A case of grip succumbed to one treatment, the patient, a boy, passing a comfortable night and losing only a half day at school, and this when the disease was epidemic, and many friends, depending on material remedies, were in bondage for weeks. Heart trouble, the form brought on by indigestion, and accompanying pressure, was healed in one treatment. This child had suffered with the trouble for years, and over a year has passed since the Truth proved an all-sufficient remedy. Neuralgia of the stomach, headache, toothache, earache, have all been overcome by the understanding that God, Good, is the only Cause and Creator; that having made all that was made and pronounced it good, that which is not good, He never made; hence it does not exist, but is a lie masquerading as Truth. I have met with much opposition in my search for Truth, but this very opposition has spurred me on to greater effort, thus helping me to overcome spiritual laziness.

I remember one night when I seemed to have come up against an insurmountable obstruction; I fell asleep with my last thought one of infinite trust in the ability of God to adjust matters harmoniously. After an hour's sleep, I was awakened by hearing in clear tones these words: "Truth will prevail!" I opened my eyes and realized that no human voice had spoken, but that Mind alone sent the comforting message, then saying, "Of course Truth will prevail," slept on. This latter experience showed me that hearing is mental, that we hear as well as see, mentally. Mind, God, is the only Cause.

I thank The Christian Science Publishing Society for the great good it is doing for the Field. Often do the articles sent out carry healing in their loving messages, and grateful for the light I have received, may I send even one little ray to help a fellow-creature.

M. A. S., San Francisco, Cal.

A Testimony from Scotland.

It is with a very deep feeling of gratitude and love to God, and our Leader, Mrs. Eddy, I make this attempt to express what Christian Science has done for me. To express it fully is well-nigh impossible, so manifold are the blessings that have flowed to me since first this great Truth began to shine into my consciousness.

In the year 1895 I first heard of Christian Science, and became interested. A copy of "Science and Health with Key to the Scriptures" was loaned to me and I began reading. Before the end of two months I found that by reading, I had caught a glimpse of the Truth contained in that wonderful book, and had been healed of insomnia of five years' standing.

It is difficult now to remember the number and variety of physical ills which constantly afflicted me, but I remember that every sort of medicine found its way into my home, and that doctor's and chemist's bills were important items in the family expenditure. Since that time, five years ago, these have been conspicuous by their absence. We have had, amongst the little circle interested here, many beautiful demonstrations, proving to us that the protecting power of Truth is with all those who are truly recognizing the omnipresence and supremacy of Spirit.

Among the cases which have yielded to Truth, I may mention, blood-poisoning, anemia, toothaches (in one instance, the extraction of a "live nerve" of a tooth without pain), burns, severe chronic nervous and bilious headaches, neuralgia, feverish colds, influenza, inflammation of the eyes, epilepsy, chronic rheumatism, sciatica, and rheumatic gout. Short sight has also been restored and the eye-glasses laid completely aside. But it is in the more radical healing from sin,—in the destruction of selfishness, and of all that claims to make man unlovely and unlike his perfect origin,—that the great work of Christian Science really lies, where the grand hope of its work for the race is to be found. For, in showing man *how* to free himself from sin and its consequent sickness by revealing to man his perfect unity with his divine Principle, God, Christian Science flings open the gates towards the realization of that condition which our Lord said was to be found within us, *here and now*,—the Kingdom of Heaven.

C. F. R., Scotland.

Healed after Material Means had Failed.

In the fall of 1895 I first heard of Christian Science. I was at that time confined to my bed with no expectation of ever recovering, as my physician, who was one of the leading physicians in Philadelphia where I then resided, had told me he could do no more for me. I had undergone a serious operation in the hospital, where I remained four months without receiving any benefit. I was then brought home in a much weaker condition than when I went. I kept my room and most of the time was confined to my bed, eight months longer, until Christian Science was brought to me. The operation at the hospital had greatly aggravated the nervous prostration from which I was suffering in addition to many other troubles. The stomach could not retain food. I was wasted to a skeleton. The eyesight was badly impaired from a painful form of astigmatism. There were times when I could not bear the light, and other times when I could not endure the darkness and had to keep a light burning all night. I was fitted to glasses, but was unable to wear any of them. Words cannot describe the agony of those months, both mental and physical, but Christian Science has changed it all giving me a new heaven and a new earth; the heaven and earth of the Scientific understanding of God as Love, who heals all our diseases.

From a condition of extreme suffering and emaciation. I have come to a realization of perfect health, strength, and happiness, for which I give God the praise and glory through Christian Science, which has thrown such a light upon the Scriptures through the teaching of the Christian Science text-book, "Science and Health with Key to the Scriptures." The Bible, which I formerly read from a sense of duty, I now read with a sense of delight and helpfulness, because in the light of Christian Science I understand its spiritual meaning.

My heart goes out in love and gratitude to Mrs. Eddy for her life of sacrifice, purity, and unselfish labor for others, which has been the means of bringing the understanding of Love to me in such a measure of realization as not only enables me to bring my own daily life nearer to the Christ-life, but to help others in the way in which I have been so blessed.—I. F. L., Baltimore, Md.

A Musician's Testimony.

I am a public singer, and during all the time I have had the help of Christian Science I have never been obliged to cancel an engagement on account of any of the many ills which are so common among singers in the old mortal mind thought.

I have learned to depend on Principle for my help and strength, and now know that it is the only remedy for all ills. Some months ago I had a very severe attack of grip. I had had the trouble twice before, and both times was confined to the house for over a week, part of the time in bed. On the last occasion it presented itself on Sunday night; on Monday and Tuesday I seemed to suffer extremely and had a high fever. I had help from my teacher and by Wednesday the trouble had partly disappeared. I was to sing at a very important concert on Thursday and the trouble had not entirely disappeared up to that time. However, from the moment I began I was completely healed and never was in better voice. Christian Science is indeed a very present help in time of trouble. How different from the old experience when I should either have been compelled to give up or to make apologies and vain attempts at singing.

This is only one little experience of many which I have encountered. Science has manifested its great potency in my family, in my business, and among my friends. We should be most thankful that our children are growing up with only this thought and without the error which was our childhood's heritage and which now we are struggling to destroy.—GEORGE J. HAMLIN, Chicago, Ill.

Chronic Diseases Healed.

I first heard of Christian Science through a lady who had been healed. I wrote to her healer, and received absent treatment. I was much benefited, and went to Boston to my healer for present treatment, as I had been confined to my bed for four winters with rheumatism, and I feared that I might become helpless. After being treated I was not confined to my bed that winter. Christian Science has healed me of eczema of forty-five years' standing, indigestion, and rheumatism. My healing was slow, but I am thankful to our Mother in Israel for showing me the way to the Christ-healing. When I returned to my home in Kingston, New York, I brought Science and Health with me, and subscribed for the *Journal*. In the spring of 1886 I went to Boston and studied with a student of our Leader.

My desire is that I may be faithful to the Truth, for God sent Christian Science to me when it was sorely needed.

LYDIA OTIS, Greenwich, Conn.

Another Musician's Testimony.

I came to Christian Science in dire distress. I was forced to give up my profession, having lost my voice. After being operated on many times by the greatest specialists in this country, students of Sir Morell Mackenzie, London, Eng., I was told that I could never sing again. Hearing of a Christian Scientist, who is also a vocal teacher, I began lessons. My voice did not respond immediately, but I became interested in Christian Science, and one by one old troubles have been proven unreal. I greatly rejoice that I have touched the hem of this Christ garment, Christian Science.—SIDNEY J. DURHAM, New York, N. Y.

By friendship I suppose you mean the greatest love, and the greatest usefulness, and the most open communication, and the noblest sufferings, and the most exemplary faithfulness, and the severest truth, and the heartiest counsel, and the greatest union of minds of which brave men and women are capable.—JEREMY TAYLOR.

Religious Items.

Under the head of "The Secret of Happiness," the *Christian Advocate* quotes the answers of the Emperors of Germany, Austria, and Russia, and the Prince of Wales to the question as to whom each of them envies. All professed weariness of their distinction, and the editor adds this comment of his own: "A life governed by a noble principle, a heart at peace with God, a nature in which no passion rules, but all unite to subserve the higher purposes of our being, a love for humanity as such, a few real friends, an occupation pleasing in itself or made so by a lively appreciation of good results, a happy combination of mental and physical activity with days polluted by no sin, vice, or crime, and nights given to earned sleep,—these are the elements of happiness. A true philosophy and a true religious experience can make a virtuous king happy."

E. T. Hiscox, D.D., writing on the subject "Clergy and Laity not Primitive," says in the (Baptist) *Standard*: "When persecution scattered the early disciples, they went everywhere preaching Christ. They all preached the gospel. That is, they proclaimed Christ, as the Messiah and the Saviour of men. They told the simple story of what Jesus had done for them, as the Samaritan woman told her neighbors, and the demoniac of Gadara published it through all that region, and even as those whom Jesus commanded to silence, published his wonderful works so much the more. Will the time ever come when all whom Christ has saved shall preach him to the world as they did at the first? If it does, we shall have not only more preaching, but better preaching. It will be out of personal experience."

Discussing the question of the present influence of the pulpit, the (Episcopalian) *Church Standard* says: "The preaching to which our Lord sent his disciples was a preaching of the Kingdom of God; their teaching was to be such teaching of the Kingdom as they had heard from his own lips. Now, if any man will compare the 'powerful preaching' of last century and of the first part of the present century, with the preaching of Christ, he will find a marvelous difference between the two. Our Lord proclaimed the Good News of the Kingdom; the 'great preachers,' with hardly an exception, dwelt ten times as much on the bad news of hell as our Lord ever did."

The *Congregationalist* says: "Why is it so hard to induce efficient men and women to fill positions of responsibility in our churches? From all sides we hear complaint regarding the disposition of Christians to evade the call to duty in this field. Whether there be any real scarcity of material or not, vacancies in the superintendency and teaching force of the Sunday School, in the diaconate, in the clerkships and treasuryships of the church, and in the administrative boards are not readily filled, and these important offices even go begging for occupants."

The (Unitarian) *Christian Register* says: "Nobody now is concerned to prove that Channing was always right, that Parker was infallible, that Emerson was plenarily inspired, or that Martineau had said the last word in ethics or theology. But in loyalty to these men who have set us in a large place, and because it is the simple truth, we have to affirm that we hear their voices in all the churches, and especially wherever with new emphasis the love of God is preached or the dignity of man is affirmed."

The (Baptist) *Examiner* reports the following as a part of a recent address by the Rev. Dr. Lyman Abbott: "Virtue is a victory of character, while sin is a failure of character. Sin is lawlessness, and lawlessness is sin. Those who live without attention to the law of God are lawless. Lawlessness is living as though there were no laws of God. Virtue is living in conformity with the law of God."

The (Unitarian) *Christian Register* says: "After a lifelong acquaintance with business men of many kinds we are convinced that the Golden Rule was never operative in business life to the extent that it now is. In every generation new forms of commercial dishonesty appear and attract attention. But more and more the regular every-day methods of business are becoming sound and honest."

In an article in the (Baptist) *Standard*, answering the question "What Can I do to Help my Church?" a contributor says: "Most important of all in helping your church is the character of your Christian life. It was the life behind Christ's words which gave them power. It is the life behind every man's words which gives them power and which clothes them with authority."

A writer in the (Unitarian) *Christian Register* says: "Religion has been defined as the life we share with God. It is the consciousness of the human soul that we are related to God as children to a father, and that the divine life is forever flowing into our hearts, vitalizing and inspiring and uplifting us just as fast and as far as we seek its power and yield to its influence."

The (Baptist) *Watchman* says: "Every year the well-to-do people of our city congregations make the duration of their summer visits to the country a little longer. It is well on in October before the people are all back. This custom of living longer in the country is profoundly modifying the conditions of church work in the larger cities."

Rev. H. A. Bridgman says in the *Congregationalist*: "If I can once thoroughly grasp and hold Christ's doctrine of the Fatherhood of God, can realize that my creator watches continually and tenderly over me, if I can feel the pressure of his life and love upon me, moment by moment, then I have an invulnerable shield against worry."

In an editorial on "The Eloquence of Christ," the (Baptist) *Examiner* says: "Jesus was not learned in the lore of his day. It was heart culture that made him a minister of consolation. And this culture will be every man's who is taught of God, and can be no man's who is a stranger to God."

Among the "Notes and Comments" in the (Baptist) *Watchman* we find the following: "It is wonderful how a new truth breaks out of the Scriptures in the course of reading their familiar words. We come upon it as the man in the parable came upon the treasure hid in the field."

The *Universalist Leader* says: "There are many millions in our own country, and many millions in other lands, who are committed to the way of life called the Christian life. They constitute a mighty host on the right side,—on the side of pure living and righteous doing."

The *New-Church Messenger* says: "In the light of Christian teaching we can now go to God directly and receive help, strength, and consolation. It is worth remembering that in temptation and trouble God is nearer than at other times. Only let us let Him into the heart and He will richly bless us."

"Ian Maclaren has been revisiting Drumtochty, which he has given world-wide fame as the scene of the Bonnie Brier Bush stories, and when he preached there a few Sundays ago the people flocked to hear him from all the countryside," says the *Congregationalist*.

In an article dealing with the attitude of Christian nations toward China, the *Watchman* says: "Probably there are few Christian principles that are so imperfectly apprehended as those that relate to the forgiveness of injuries."

The *Christian Register* says: "Let us not be blind pessimists, but upward-lookers. Society is making vast progress Godward. The

century goes out eminent for material discovery, but pre-eminent for ethical awakening."

Lincoln said he was not so anxious to get the Lord on his side as he was to find out what side the Lord was on, and get there himself. There never was a time when that example was more in order than it is to-day, *Christian Register*.

"You cannot change a fact by argument; you cannot get rid of it by assuming that it does not exist, and the sooner you adjust yourself to it the better," says the (Baptist) *Watchman*.

"One of the quickest ways to find out that the Bible is true, is to try to live according to its teachings," says the *Universalist Leader*.

Mr. Henry M. Field has withdrawn from the editorial board of the *Evangelist*, of which he had been a member for more than forty years.

"There never was a time when the Church was called to a higher plane of spiritual service than to-day," says the (Baptist) *Watchman*.

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on *New York or Boston*, but not on Chicago. Individual checks cannot be received, as a charge is made by the Boston banks for their collection.

All orders for Journals, Sentinels, Quarters, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address of writer is given.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

- Price (cloth) each \$3.18
- Two to Twelve books to one address, each, prepaid . . . 3.00
- Twelve or more books to one address, each, prepaid . . . 2.75
- Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
- Twelve or more to one address, each, prepaid 3.75
- Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/2 x 6 1/2 inches, narrow margins, each, prepaid . . . 5.00
- Twelve or more to one address, each, prepaid 4.75
- Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
- Twelve or more to one address, each, prepaid 5.75
- Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

- Price (cloth) each, prepaid \$2.25
- Twelve or more books to one address, each, prepaid . . . 2.00
- Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/2 x 6 1/2 inches, narrow margins, each, prepaid . . . 4.00
- Twelve or more to one address, each, prepaid 3.75
- Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
- Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

- Single book, prepaid \$3.00
- Twelve or more books to one address, each, prepaid . . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription :

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription :

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale :

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12 1/2 cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp. SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.

MR. KIMBALL'S LECTURE. 33 pp.

HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.

THE BUSWELL TRIAL. 24 pp.

THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.

HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna. One copy or more, each, 6 cents; 12 copies, to one address, 60 cts. Twenty-five copies to one address \$1.15; 50 copies to one address, \$2.25.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass. Post Office as second-class mail matter.

Items of Interest.

Political and Governmental Notes.

It is unlikely that any reader of the *Sentinel*, in whatever part of the world he may be, will not have learned the result of the presidential election in the United States long before this item is read. Under conditions that were unusually fair to all sides engaged in the great contest, the Republican party elected its national candidates by an overwhelming majority in the electoral college, and by a large majority of the popular vote as well. With Kentucky classed as doubtful, President McKinley received 292 electoral votes to Mr. Bryan's 142. The votes for members of the lower house of Congress gave the Republicans a majority of 47, and as a secondary result of this election the Republicans will have a majority of 16 in the Senate. Nebraska, which was in doubt for several days after the election, has been finally put in the Republican column.

Senor Sexto Lopez, the representative of the Filipinos, who has been in the United States for some weeks was interviewed after the election and asked the question what would induce his countrymen to stop the war. His reply was as follows:—

"First, the granting of independence. Second, a definite promise of independence. Third, a declaration of policy by the administration placing the Philippines in a similar position to Cuba. Any one of these would result in an immediate cessation of hostilities, and everything else, including foreign obligations, protection to life and property, coaling stations, military and naval bases, etc., could be arranged by friendly negotiation."

After the second decisive defeat under Mr. Bryan's leadership, prominent Democrats are now talking about reorganizing their party on more conservative lines. Mr. Bryan is believed to have lost his influence to such a degree by his second defeat, that he will not be looked to as a national leader four years from now. He has not very clearly announced his intentions, but he adheres to the belief that the Democratic party ought to continue the agitation begun in the last campaign until victory is won. Mr. Bryan seems to view the wreck of his ambitions calmly.

The Cuban constitutional convention assembled in Havana on November 5. It was composed of delegates elected by the people, and its work will be to draft and adopt a constitution which will form the basis of government in the island and to determine what ought to be the relations between Cuba and the United States. Governor General Wood opened the convention.

It is estimated that seventy-five thousand Republicans voted at the election in Porto Rico, November 6, for a commissioner to Congress and members of the House of

Delegates. The Republican majority was 32,759. The federals remained away from the polls. The election passed off without any rioting. The newly elected Legislature will probably meet December 3.

With the population of all the towns and cities in the metropolitan district around Boston added to the population of Boston proper, the Hub would be the fourth city in size in the United States, with a population of 1,162,197.

Only one pensioner who served in the war of 1812 is still living. His name is Hiram Cronk. He is one hundred years old and lives in Oneida County, N. Y. About two thousand widows of 1812 are yet on the pension rolls.

The wreck of the battleship *Maine* is to be removed from Havana harbor, as it is considered an obstruction to navigation.

Foreign News.

In a letter to his countrymen protesting against turning the welcome of the homecoming troops into a drunken orgie, Lord Roberts says: "I beg earnestly that the public will refrain from tempting my gallant comrades, but will rather aid them to uphold the splendid reputation they have won for the imperial army. I am very proud to be able to record with the most absolute truth that the conduct of this army from first to last has been exemplary. Not a single case of serious crime has been brought to my notice, indeed, nothing deserving the name of crime. I have trusted to the men's own soldierly feeling and good sense; and they have borne themselves like heroes on the battlefield and like gentlemen on all other occasions."

The Paris Municipal Council has adopted a motion expressing warm sympathy and admiration for the Boers "in their heroic defence of their independence," and resolving that the president and other officers of the council shall welcome Mr. Kruger at the station upon his arrival in Paris and invite him to an official reception at the Hotel de Ville. The Nationalist group in the Chamber of Deputies has appointed a delegation to meet Mr. Kruger at the station.

According to a Berlin correspondent of the *London Standard*, an article in the official *Reichsanzeiger*, based on the official statistics of the German empire, convincingly proves that German agriculture is incapable of meeting the home consumption of corn, meat, etc., and that 29.6 per cent of wheat, 8.1 per cent of rye, 30.9 per cent of barley, and 6.2 of oats must be imported into Germany for that purpose, as well as 5 per cent of the meat required.

General Maximo Gomez has written a letter to the Cuban newspapers declaring that he will accept no public office in Cuba under the republic. He adds that his mission as a revolutionist terminated the moment the revolution triumphed. What remains to be done must be done by the people, with calmness, and not by the military.

Two hundred thousand persons saw the Passion Play at Oberammergau this year, and it is estimated that nearly a million dollars were brought by them to the village and spent there. The surplus of income over expenditures is to go toward paying for a comprehensive system of water supply and drainage.

A general election was held in Canada, November 7, which resulted in a sweeping victory for the Liberal party and the return of Sir Wilfrid Laurier to power as premier for the next five years. Nearly all the prominent Conservative candidates were defeated.

In General Gaslee's reports to the British government of the operations in China, he makes complimentary mention of Major Quinton and Captain J. R. M. Taylor of the

Fourteenth United States Infantry, who, he says, "gallantly supported our fighting line."

The telephone systems of the Russian cities, hitherto operated by the State, will be sold by auction November 20. It is understood the St. Petersburg municipal government will bid for the local franchise.

Industry and Commerce.

A number of Austrian manufacturers have formed an association for insurance against strikes, according to United States Consul Hossfeld at Trieste.

It is the object of the association to indemnify its several members for all losses sustained by them from unjust strikes which may break out in their respective establishments. Each member is to pay a weekly premium equal to from three to four per cent of the amount of his pay roll. When a strike occurs, a committee will be appointed to investigate all the circumstances, and if the cause of the strikers be found just no indemnity shall be paid.

With a view to determining whether lower freight rates can be granted to shippers of seed cotton, President John M. Egan of the Central of Georgia Railroad Company, and C. C. Hanson, who has charge of the company's compresses, have concluded the experiment of attempting to burn a carload of seed cotton. They first tried it with a cigar, but the cotton put the cigar out. Then a match was applied, but only the top surface of the lint was burned off, after which the fire went out. A second time the match was applied, with the same result—the seed cotton in bulk simply refused to be consumed.

More than \$100,000,000 worth of India rubber has been imported into the United States during the past four years, and more than \$60,000,000 worth in the last two years. A decade ago the annual importations of India rubber amounted to about \$15,000,000; now they exceed \$30,000,000, and are steadily increasing. Practically all the importations of rubber come in crude form for use of manufacturers, who are constantly extending its application to various new lines of industry.

General News.

At the automobile show in Madison Square Garden, New York City, last week, an automobile for war purposes was on exhibition. It made the trip to New York from Kingsland Point, 32 miles, in 65 minutes. It was exhibited on the track with four men in campaigning uniforms on the front and rear seats. It is a low, strongly built vehicle, with a seat for two in front and a similar one behind. Between the two seats is the driving gear and large lockers for provisions, ammunition, tools, and soldiers' kits.

Admiral Dewey has removed his famous collection of gifts, which occupied the most prominent place in the hall of American history in the National Museum, to his home. The collection has assumed very large proportions, representing many thousands of dollars in value, and is almost daily added to by some admirer of the great sailor. It was placed in the National Museum for the double purpose of sharing its beauty with the public, and as a compliment to the donors.

A new gas obtained from petroleum, which burns with a brighter light than calcium or an electric arc, is reported to have been discovered by a scientist of Salt Lake City. With a pint of kerosene a 700-candle power light, and power enough to run a four horse-power engine or automobile is produced, it is alleged. The process and the name of the inventor are being kept secret.

According to registration figures made public there are 2,474 students in all departments of Yale University, 43 fewer than a year ago.

It is estimated that no more than one-fifth of all the English words are used by any one writer.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Cable's Golden Jubilee.

Progress Made During the Last Fifty Years.

FIFTY years ago, August 28, the first submarine cable that the world had ever seen was laid between Dover and Cape Grisner, and the first message to be sent under the sea was despatched from the white cliffs of England to the promontory on the French coast. Such a commonplace of every-day life has the submarine telegraph become that few of us realize that fifty years ago its possibility was rejected by all except a few enthusiastic men of science, who, fortunately, lived to see their dreams realized. Mr. John Watkins Brett, in a lecture delivered before the Royal Institution on Friday evening, March 20, 1857, gave an account of the part he had taken in the promotion of submarine telegraphs, and narrated the history of the enterprise. Mr. J. W. Brett's first idea of submarine telegraphs arose out of a conversation with his brother, Mr. Jacob Brett, early in 1845, when discussing the system of electric telegraphy which, as all the world knows, was first put into practical operation in England on the Great Western Railway, from Paddington to West Drayton, in 1838-9.

The question arose: "If possible underground, why not under water?" and "If under water, why not along the bed of the ocean?" The possibility of a submarine telegraph then seized upon Mr. J. W. Brett's mind with a positive conviction, and he states that he was ignorant until many years later that a line across the English Channel had actually been previously projected by Professor Wheatstone. In the month of June, 1845, the brothers Brett entered in their joint names at the government registration office a project for uniting America with Europe by the very route since adopted, and in July of the same year, submitted to the government a proposition for uniting the colonies with Great Britain, offering, as a first experiment, to place Dublin Castle in instantaneous communication with Downing Street, provided one hundred thousand dollars was advanced by the state towards the expense. As the state did not see its way to advance the sum, Mr. Brett turned his attention to the Continent, and in 1847 he succeeded in obtaining permission from Louis Philippe to unite England with France by a submarine line, but failed to obtain the support of the public, who considered the project too hazardous. When Louis Napoleon became head of the French nation, he looked favorably on the undertaking, and eventually the sum of ten thousand dollars was raised for the first experiment, which took place on the 28th of August, 1850. About twenty-seven miles of copper wire enclosed in gutta percha were conveyed on board the Goliath, steam tug, and wound round a large iron cylinder or drum, to facilitate the paying it out.

The end of the wire attached to land was carried into a horse-box at the Southeastern Railway terminus at Dover, and electrical communication from the vessel to the shore was kept up hourly during the progress of paying out the cable. Naturally those who were conducting the experiment

were in constant fear lest the frail experimental thread should snap, and thus involve the whole undertaking in ridicule. As a matter of fact, the trial was successful, much to the surprise of the worthy folk who had indulged in jokes at the proposals of these electrical pioneers. The place chosen on the French coast for landing the wire was Cape Grisnez, under a cliff among the rocks, this spot being purposely selected because it afforded no anchorage to vessels, being difficult of approach.

Mr. J. W. Brett, by the aid of a glass, watched the Goliath slowly steaming across the Channel, and at length he observed that she had come to anchor. "We gave them," says Mr. Brett, "half an hour to convey the end of the wire to shore, and attach the printing instrument, and then I sent the first electric message across the Channel. This was reserved for Louis Napoleon. I was afterwards informed that some French soldiers who saw the slip of printed paper running from the little telegraph instrument, bearing a message from England, inquired how it could possibly have crossed the Channel. And when it was explained that it was the electricity which passed along the wire and performed the printing operation, they were still incredulous. After several other communications, the words, 'All well' and 'Good night' were printed, and closed the evening."

In attempting to resume communications early next morning, no response could be obtained, and it soon became evident that the insulation had been destroyed, either by a leakage of the current, or by the cable having snapped asunder. This latter surmise proved correct, the cause being the conger line of a French fisherman. In spite of this annoying circumstance, the main fact that it was possible to send under-water messages between the two countries was proved, and arrangements were at once made for the laying of a more permanent cable. This was accomplished in September, 1851, between the South Foreland and Sangate, on the French coast, and the world marveled for a day at the wonderful event. Business men began to realize the advantages of the new submarine cable, and those who had been ready enough to pour cold water on the enterprise in the earliest stages were now ready enough to avail themselves of the benefits it conferred. In May, 1853, another cable from Dover to Ostend was laid.

Since then what mighty strides we have made. That cable measured some five-and-twenty nautical miles in length and weighed a fifth of a ton per mile, the greatest depth at which it was laid being thirty fathoms. It was made of gutta percha, covered with wire, and was kept down by leaden weights placed at every sixteenth of a mile. To-day the various governments own 20,356 nautical miles of cables, representing 1,334 distinct cables; while private companies own 157,631 nautical miles, representing over 408 cables and a capital of over £38,000,000. These figures are instructive, inasmuch as they show clearly that all the big submarine cable enterprises have been undertaken by private companies. How the world became girdled about may be

Copyright, 1900, by Mary Baker G. Eddy.

seen by a glance at the following table, which shows when the first cables were laid:—

England—France	1850
England—Ireland	1852
United States	1858
1865 Atlantic cable recovered and repaired.....	1866
England—India	1870
England—China	1871
England—Australia	1871
England—South America	1874
England—South Africa	1879

Thus, in a brief thirty years, feelers were put forth from London in every direction, and the great metropolis became in very fact the heart of the world.

There are some interesting facts concerning some of the world's great cables. For instance, the one laid to Ceylon in 1857, measuring 3,298 miles, weighed two and three-fourths tons per mile. The entire cable, therefore, weighs over nine thousand tons. The 1866 Atlantic cable measures 1,896 miles and has a total weight of over 3,300 tons; while the cable which connects Hong Kong with Shanghai, which was laid in the year 1871 and measures 1,100 miles, weighs close on four thousand tons. Thus we see that cables are of various weights, according to the depth at which they have to be laid and the number of cores to each cable. Tasmania was connected with Australia in 1869 by a cable weighing altogether 342 tons. It sounds a strange thing to say, yet it is a fact, that cable messages can be transmitted much more quickly now than formerly. Of course, this does not mean that the actual time taken by the electric current to pass along the wires has been lessened, but merely that the arrangements for receiving and transmitting messages have been brought to a higher state of perfection, with the result that much time has been saved, as will be seen by a glance at the following table, which shows how long it takes to wire places mentioned both when the cables were first laid and how long it takes to-day:—

	Opening of line.	Present day.
Portugal.....	5 to 6 hours	30 minutes
Spain	9 to 10 "	15 "
Egypt	3 to 4 "	20 "
India	5 "	35 "
China.....	8 "	80 "
Australia.....	10 "	100 "
Brazil.....	8 "	25 "
Argentina.....	10 "	60 "
Chile.....	10 "	70 "
Peru.....	16 "	80 "

A quarter of a century ago code messages had not been invented, the average length of the messages carried by the great companies was thirty-five words each, whereas nowadays it is only eleven. Against this, however, it should be borne in mind that 2,100,000 messages are transferred annually by cable to the Far East, as against 425,000 five-and-twenty years ago. The general system of tariffs in vogue in the early days was a charge based upon a message of twenty words, with a proportionate increase for every ten words. This system lasted until 1876, when alterations agreed to at the St. Petersburg conference were brought into operation, and all messages exchanged with places outside Europe were charged at so much a word.

A good idea of the changes which have taken place in the matter of cost may be had from the following table of charges made for ordinary messages by the Eastern Extension Company from the opening of the line to Australia in 1871 to the present day:—

1871	\$47.25 for 20 words
July 1, 1872.....	46.62 "
Jan. 1, 1876.....	2.62 per word
1877	2.66 "
1886	2.33 "
1891	1.00 "
1893	1.18 "
1900	1.00 "

Thus it will be seen that rates had to be raised at certain periods; but on the whole the process of reduction has been rapid. To-day you can cable from London to Madagascar for \$1.16 a word, while \$1.25 a word is the average rate to the East Coast of Africa; while the charges to the West Coast range from twenty-nine cents to \$2.50. Rates in Asia vary widely. They range from seventeen cents a word to Turkey to \$2.60 to Korea. British Guiana is the most expensive of our possessions to communicate with by cablegram, the charge being \$3.70 a word.

All things considered, it is marvelous how cheaply we can communicate with our fellows in far-off lands by means of the submarine cables. The most important of the great cables which encircle the earth to-day have been laid during the last thirty years; for in 1870 there was no cable to China, Australia, South Africa, or South America. It seems hard to believe that such a short while ago these places could only be communicated with by letter; for the man in the street has grown so accustomed to read in his morning's paper of events which happened on the "other side" of the world only a few hours ago, that he seldom reflects on the ingenuity which enables him to do so. Yet a glance at any day's issue will acquaint him with the remarkable fact that distance makes no difference to the promptness with which events are recorded, for by means of cablegrams we publish accounts of what happened ten thousand miles away at midnight side by side with the speeches delivered in his own city.—*Boston Transcript*.

Rural Mail Delivery.

Before the end of next June the Post-office Department hopes that it will have extended the system of mail delivery in the country districts so that it will accommodate a total of two million farm families. Since last June 776 new routes have been established, and before the year is over it is planned to have forty-three hundred in operation. The benefit of a free delivery to the farmers is more than the mere saving of time and trouble it gives them, for it brings them into closer touch with the world. In one county of Maryland, since the inauguration of the rural delivery, the quantity of fourth-class matter handled has increased ninety per cent. This means that the people have taken advantage of the innovation to purchase merchandise through the mails, a fact which is also indicated by an increase of fifty-four per cent in the quantity of circulars and advertising matter sent into the country from the large cities.

In different parts of the country the rural delivery has increased the newspaper mail from fifty to three hundred per cent. Before the delivery system the average farmer could hardly spare the time to go to the post-office every day, and accordingly contented himself with the weekly newspapers of his county, but the new system is making it possible for him to get the newspapers soon after they reach his post-office.

The large increase of the postal business due to the daily delivery will, it is thought, more than cover the cost of the system.—*The Great Round World*.

If your eye is on the eternal, your intellect will grow and your opinions and actions will have a beauty which no learning or combined advantage of other men can rival.

Selected Articles.

Christian Science brings Happiness.

CHRISTIAN SCIENCE is the philosophy of joy and peace. Because it teaches how we may be perpetually harmonious, it must commend itself to those who have followed the *ignis fatuus* of pleasure, and have come to the end of human things, unsatisfied. The longing to be happy supersedes every other desire in the human mind. Happiness, from the view-point of mortal man, consists of health, contentment, wealth, and agreeable environment. Every system of pagan or Christian philosophy had for its ultimate, happiness. Because every such scheme had a humanly constructed basis, it failed to realize its desires. No matter what the era, no matter what the race characteristics, the struggle, the straining at the leash, has ever been an expression of the desire to arrive at abstract happiness. Utopias have been mapped out, in theory, but never occupied, in fact.

It is instructive to read the words of the man who "gave his heart to know wisdom," and who searched the depths of mortal existence for happiness. What saith the Preacher?

"I have seen all the works that are done under the sun; and, behold, all is vanity and vexation of spirit."

"For what hath man of all his labor, and of the vexation of his heart, wherein he hath labored under the sun? For all his days are sorrows, and his travail grief; yea, his heart taketh not rest in the night. This is also vanity."

Keeping such conditions well in mind, what shall be said of any religion which does more than hold out an ephemeral hope of harmony? Christian Science is practical and simple. It offers proof, in the daily lives of those who live it constantly, that its practice brings joy and an affluence of spiritual understanding, which surpasses the treasures laid up "where moth and rust doth corrupt." Christian Science has earned its title. Because it is exact, practical, and capable of demonstration, it is Scientific. Because it imposes upon its followers the command to have but one God, and to love our fellow-man, it is Christian.

We do not understand a thing, unless we can impart the knowledge we have to another. It is the knowledge of God and His universe, including man, imparted by Christian Science, which brings happiness. In Christian Science we learn that the only reason we are sick and sinful, and discordant in our bodies, in our homes, and in our business, is because we have "other gods." Anything which comes between man and his Maker is idolatry. Believing that life can be self-existent, inherent in matter, and subject to laws which God did not make, is having "other gods." Self-love, ambition, pride of power or place, intellectual imperialism, all these are "other gods." "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven."

Christian Science points to the kingdom as being "within you." That means, then, that unless our thought is pure, spiritual, and simple, as a little child, we cannot be happy. The man who envies, or hates, or nurtures jealous thoughts, is of all men the most miserable, rendered so, not by objective states or conditions, but by something in his own thought.

Christian Science strikes a vigorous blow at all that is unlike God. Happiness is not selfishness, but he who "does the will of his Father," in meekness and in the gentle Christ spirit, has the kingdom of heaven within him. It is indeed so simple, the wonder is that all mankind are not following in the footsteps of the lowly Nazarene, who, by his knowledge of the spiritual facts of existence, rose above the pleasures of material sense, and by the same power, destroyed the pains of material sense. He taught that to be free from sin was to be happy; and in healing sickness, he

rebuked sin and cast out devils. Healing disease and destroying sin are synonymous in Christian Science.

There was a time when ignorance of what Christian Science teaches was so general that it passed for knowledge, but that day is no more. One cannot refuse to know Christian Science to-day, with the many opportunities offered for study and research. To condemn at first sight, without investigation, is pharisaical. Every unfavorable criticism of Christian Science is begotten of a lack of information as to just what Christian Science is.

The understanding of this scientific Truth brings happiness, changes the thought, and transforms the body. It is applicable to every moment of the day, to business, the home, society, every condition and circumstance. Shall we blindly believe a proposition in geometry, and reject the Truth, which "to know aright is life eternal"?

Possibilities of Christian Science.

Editor of State Journal.—In a recent number of your excellent paper I find the following statement:—

"If Christian Science is all its votaries claim it to be, it should restore decayed teeth without requiring one to go to the dentist and have them plugged."

I am yielding to the temptation to write you a few lines on this subject. First, I want to say that I heartily endorse your statement. If Christian Science is true it is equal to the demonstration in question. Either God is all, is infinite, Omnipotence and Omnipresence, or He is nothing. What your statement implies concerning Christian Science is also true concerning any other science; the science of mathematics for example. Mathematics will solve the most difficult problems; otherwise there is nothing in it. But the rule of mathematics will not work out the problem until it is applied by some one. So, the system of Christian Science will not heal even the most simple malady until it is put into practice, and it is dependent on the demonstrator for its demonstration. The pupil in addition cannot, and is not expected to, solve the most difficult problems in arithmetic. The present understanding of the pupil in Christian Science may be insufficient to insure to him perfect immunity from all ills of the flesh, or infallible success in overcoming all possible evils for others, but this does not indicate any fault in the Principle or rules of the Science itself. To the master in mathematics there is no such thing as a hard problem. So, to our Master in Christian healing there were no hard problems; though his disciples sometimes failed, asking about the obstinate devil, "Why could not we cast him out?"

What you say concerning Christian Science is applicable to all Christians who believe the promises of the Scriptures. In the ninety-first Psalm we read: "He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty." Also, "There shall no evil befall thee, neither shall any plague come nigh thy dwelling." These are very pointed and liberal promises of divine protection, and yet how few people can claim their verification. Nevertheless, we do not say that God does not mean what He declares in His word, but we acknowledge our inability, through lack of faith, to realize the divine presence sufficiently to avail ourselves of the grace therein named. The failure of the Christian Scientist to heal the most difficult case, while he succeeds in curing the more simple disease, does not prove the inconsistency of Christian Science, but simply the lack of ability to understand and demonstrate it on the part of the practitioner. A theory must always precede its demonstration. I venture the assertion that in their claims in respect to the benefits that will accrue to the Christian, Christian Scientists are no more extravagant

than other followers of Christ, neither is their theory any farther in advance of their practice. All things are possible with God, and the divine possibility enters into the experience of mortals as they learn to utilize the divine grace which is constantly waiting for them. It should be remembered that even a perfect way will not bring perfect results until perfectly used.

The Day of Miracles.

THE acquittal of Dr. Brimm of the Presbyterian Church, has brought to light through the press a statement of the beliefs for which the doctor thought he should be tried as a heretic.

Among other things, he said:—

"I believe that miracles belong to this whole dispensation, and not merely to the first century of it; that they were given to sustain the truth of Christianity and not merely to guarantee the deity of Christ and the inspiration of the canonical writers; that they are needed for their apologetic value as much now as they were in the apostolic age; that miracles of healing are a special characteristic of this dispensation, and are the special privilege of God's children; that God means and wishes to make a difference between His children and those that are not, salvation being much more a real and present possession than we ordinarily make it."

The thought contained in this statement will give joy to all Christians who are proving that the days of miracles or wonders are not past. It shows that there is an awakening in the older churches to the important fact that the Scriptures do contain an imperative command that true followers of Christ must practise Christian healing according to Jesus' methods.

Christian Scientists especially rejoice at this, as a recognition of this Scriptural teaching leads thoughtful Christians to a desire for the spiritual understanding that will enable them to perform the Christ cures.

What is a miracle? Webster says "it is a deviation from known or natural law," a "wonder;" it is a "wonder" only to those ignorant of the method used to produce the wonder. To Jesus there were no miracles, no wonders. He understood how they were performed. To him the real law was spiritual. The so-called natural laws, that the human mind regards with so much fear and awe, were not observed by Jesus. He did not regard them as God's laws, for his demonstrations of power over storm, wind, wave, sickness, disease, and death were in bold defiance of them all. If they had been God's laws would he have annulled them? So it is with so-called health laws and hygienic laws. Jesus has as little regard for them, for he said: "Take no thought for your body, what ye shall eat or what ye shall put on."

The Scientific Christian or Christian Scientist has an understanding of how, through the One Mind, Jesus demonstrated the reality of good and the unreality of evil, sin, and disease. The belief that "Satan sometimes sends disease and suffering with God's permission" is charging God with having entered into a compact with his Satanic majesty to torture man, instead of being a loving Creator.

This false sense of God drives men away from any desire to know God or to worship Him, and has for ages estranged them from good. God is not the author of evil, neither has He created evil or entered in any way into an agreement with the evil one, or Satan.

The Scriptures affirm "God is love," "God is spirit," and from Him cometh every good and perfect gift. God is of purer eyes than to behold iniquity.

If God is cognizant of, or in any way permits evil, dis-

ease, or death, man would have no right to interfere in any event, but to endure suffering would be living in obedience to God's law.

In his reflection upon this ever-interesting subject Paul says, "O wretched man that I am! who shall deliver me from the body of this death?" The light of wisdom broke in upon his consciousness and he saw the Christ-truth as his Redeemer, for he said, "I thank God, through Jesus Christ our Lord. So then with the mind I myself serve the law of God; but with the flesh the law of sin."

It is clear that Paul realized that the real ego or selfhood was spiritual or mental, and that this real man of Spirit was under this law of God or Good, and under this law only could he be Christlike. He had learned this from the Master, who had said deny (or contradict) self, that is, deny the mortal self or the human belief that there is Life, Truth, Substance, or Intelligence in the fleshly man. Following this realization of his reality, his oneness with Life, Truth, and Love, he said, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death."

Dr. Brimm calls the healing and reforming work of the Christian Scientists "Satanic miracles." This is the same error of thought that accused Jesus of casting out devils by Beelzebub.

What right has any one to condemn a system about which he knows nothing? If his method of healing is simply through blind belief about God and Satan, and he has never applied the scientific understanding or tested its method, he is ignorant of that method and therefore is not a competent judge.

Christian Scientists are daily and hourly proving that Christian Science does reform the inebriate, changes the "don't know" of the agnostic to knowledge of Christ as the way, teaches the impure in thought to understand that pure thoughts make a pure body; it reforms the sinner, heals the sick, and binds up the broken heart. They say as Jesus said, "For which of those works do ye stone me?"

The Christian Scientists are not doing their work in a corner. Their lives and acts are open to the scrutinizing gaze of the world.

Those who are practising Christian Science are instant in prayer that they may have the Mind that was in Christ Jesus, that they may so understand Love, that they will radiate health, harmony, and purity to all with whom they come in contact. Praying to do good without knowing it; clinging steadfastly to God and man as His idea, created in His image and likeness with power and dominion; with honesty of purpose in selflessness and love, they are battling against the beliefs of evil, sin, disease, and death. Through Scientific demonstration they are proving that the power of spiritual understanding thins the veil and dispels the mist of pantheistic belief, and reveals the Kingdom of Heaven here and now. "Science and Health with Key to the Scriptures," has unlocked the hidden treasures of the Sacred Book.

While they are stoned, maligned, and persecuted, they are able to say, "Father, forgive them: they know not what they do."

EDWARD H. CARMAN.

In *The Constitution*, Atlanta, Ga.

New occasions teach new duties: time makes ancient good uncouth;

They must upward still, and onward, who would keep abreast of Truth:

Lo, before us gleams her camp-fires! we ourselves must Pilgrims be.

Launch our Mayflower, and steer boldly through the desperate winter sea.

Nor attempt the Future's portal with the Past's blood-rusted key.

LOWELL.

The Lectures.

At Rodney, Ia.

October 9, 1900, was a happy day for the little band of Christian Scientists of Rodney and vicinity, for Judge William G. Ewing gave a lecture on Christian Science. Our little society, composed of parts of six families, has been trying for some time to have a lecture, and all our hopes were more than realized on this occasion, when the large Congregational Church was crowded with listeners. Rev. Mr. Brown, pastor of this church, introduced the lecturer in a very original and interesting manner. His remarks proved him to be a liberal, broad-minded, large-hearted man, and must have been a strong rebuke to some who have been very bitter toward their conception of Christian Science. Every one has spoken very highly of the lecture. One lady, who knew nothing of Science before, said to me: "Do you know there was one thing I did not like about that lecture? It wasn't half *long* enough."

Twenty-three Scientists from Sioux City favored us with their presence, and two came from Onawa.

Correspondence.

At Norfolk, Va.

A large and intelligent audience, that filled the Academy of Music, assembled last night (Tuesday, October 30) to hear an address by Mrs. Livingston Mims, C.S.B., of Atlanta, Ga., on the subject of "Jesus in Christian Science—the Simplicity of his Methol." Mrs. Mims, who is the wife of the mayor-elect of Atlanta, Ga., was introduced by Judge D. Tucker Brooke.

She has a very pleasing manner and voice, and was listened to with the closest attention.

Her opening words were:—

"When I received the invitation to come to this dear old state, so loved and honored, it came to my apprehension that perhaps this was the first public lecture on Christian Science given on this soil; as this recognition grew on my thought, it seemed very meet that I, a Southron, with old Virginia blood in my veins, should be one of the first to bring this glad message to you."

Norfolk Virginia-Pilot.

At Toronto, Can.

First Church of Christ, Scientist, corner of Simcoe and Caer Howell Streets, was crowded last night (Thursday, October 25) on the occasion of a lecture on Christian Science by the Rev. A. R. Vosburgh. The attendance was in fact so much in excess of the seating accommodation that numbers had to be content with standing room, while several score listened to the lecture from the staircases. The lecturer, who was introduced by Mrs. Isabella M. Stewart, devoted his address to an exposition of the fundamental principles of Christian Science, with the view to show that it is legitimately and scientifically Christian, and emphasizes every essential and conserves every ideal of historic Christianity.—*Toronto Morning Globe.*

Lectures at Other Places.

Flint, Mich.—William G. Ewing, October 30.

There is power in patience. It saves us from despair when victory is postponed. It makes it impossible for disappointment to crush us. Petulance is a quality of the weak. Patience enables us to endure and persevere, and endurance and perseverance lead to triumph.

Western Christian Advocate.

Lincoln on Temperance.

Of our political revolution of 1776 we are all justly proud. It has given us a degree of political freedom far exceeding that of any other nation of the earth. In it the world has found a solution of the long-mooted problem as to the capability of man to govern himself. In it was the germ which has vegetated and still is to grow and expand into the universal liberty of mankind.

But with all these glorious results, past, present, and to come, it had its evils, too. It breathed forth famine, swam in blood, and rode in fire; and long, long after the orphan's cry and the widow's wail continued to break the sad silence that ensued. These were the price, the inevitable price, paid for the blessings it bought.

Turn now to the temperance revolution. In it we shall find a stronger bondage broken, a viler slavery manumitted, a greater tyrant deposed—in it, more of want supplied, more disease healed, more sorrow assuaged. By it, no orphans starving, no widows weeping; by it, none wounded in feeling, none injured in interest. Even the dram-maker and dram-seller will have glided into other occupations so gradually as never to have felt the change, and will stand ready to join all others in the universal song of gladness. And what a noble ally this to the cause of political freedom! With such an aid, its march cannot fail to be on and on, till every son of earth shall drink in rich fruition the sorrow-quenching draughts of perfect liberty! Happy day, when, all appetites controlled, all passions subdued, all matter subjugated, mind—all-conquering mind—shall live and move, the monarch of the world! Glorious consummation! Hail, fall of fury! Reign of reason, all hail!

And when the victory shall be complete—when there shall be neither a slave nor a drunkard on the earth—how proud the title of that land which may truly claim to be the birthplace and the cradle of both those revolutions that shall have ended in that victory! How nobly distinguished that people who shall have planted and nurtured to maturity both the political and moral freedom of their species!

From an Address Delivered by ABRAHAM LINCOLN, February 22, 1842.

Victor Hugo's Prophecy.

A day will come when the only battle-field will be the market open to commerce, and the mind opening to new ideas. A day will come when bullets and bombshells will be replaced by votes, by the universal suffrage of nations, by arbitration of a sovereign senate, which will be to Europe what the Parliament is to England, the Diet to Germany, the Legislative Assembly to France. A day will come when a cannon-ball will be exhibited in public museums, just as an instrument of torture is now, and the people will be astonished how such a thing could have been. A day will come when these two immense groups, the United States of America and the United States of Europe, shall be seen extending the hand of fellowship across the ocean, exchanging their products, their industry, their arts, their genius, clearing the earth, peopling the deserts, improving creation under the eye of the Creator, and uniting, for the good of all, these two irresistible and infinite powers—the fraternity of men and the power of God.

Every sincere wish and prayer for goodness, every earnest attempt to fulfil difficult duty, is sure to help on our spiritual progress, either directly or indirectly. By one road or another, every such effort brings us nearer to God.

JAMES FREEMAN CLARKE.

The man who has begun to live more seriously within, begins to live more simply without.

PHILLIPS BROOKS.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Election.

THE presidential election is over. The important event came and went with perhaps as little upheaval or commotion as could have been hoped for in view of all the circumstances.

Presidential elections in this country have ever been noted for the warmth and earnestness with which each party has urged its peculiar views. Every expedient has been resorted to that promised the possible conversion of voters to those peculiar views. Each platform was urged by the most influential newspapers and the ablest political orators to be secured by the respective contestants.

The contest just closed was no exception to the rule obtaining in past history. Indeed, with the exception of the time for some years prior to and during the great Civil War, there has never been a more hotly contested presidential campaign than this one. Public feeling seldom runs higher than it did during this struggle for supremacy. There was developed much more of personal bitterness and animosity than is wise or healthful, from any point of view.

If, in such contests, principles and platforms were discussed more and persons less, it would be vastly better. If partisan feeling and rancor were subordinated to the public good, and only the best welfare of the people, as a whole, were made the prime factor, the public pulse would beat much less feverishly, and voters could cast their ballots more impartially and intelligently.

It is palpably apparent that the effect of prevalent campaign methods is to influence and prejudice the minds of voters to a point away beyond a calm, cool, and unbiased condition, so that judgment is warped, clearness of vision prevented, and passion and prejudice made to play an often dangerous part.

Let us hope that in the future calmer and wiser methods may prevail; and that whatever may be the result, in the partisan sense, that result may be reached through better methods and conditions, and in greatly more impersonal ways.

We say this without reference to the result in the present instance. Wholly irrespective of partisan bias or preference, it is now the duty of every good citizen calmly to acquiesce in the choice as expressed by a majority of our fellow-citizens, and do all they legitimately can to uphold and sustain the governmental authority, for the majority must control in the republican (human) form of government.

In connection with the above we deem it well to say, that there was no truth whatever in an item which appeared in some newspapers to the effect that because the Rev. Mary Baker Eddy in her annual message to the Mother Church last June, incidentally referred to certain existing conditions, the inference was to be drawn that she desired her adherents to support a particular candidate for the presidency. The words of her message quoted in support of that inference were these:—

"I reluctantly see great danger threatening our nation—imperialism, monopoly, and a lax system of religion."

The inference drawn from this language is thus stated in the newspapers referred to:—

"This statement has been read by the eight hundred thousand followers of Mrs. Eddy, and recent reports indicate that a very large vote of the quiet, vest-pocket kind, will be turned to Bryan from the Republican ranks."

Without even consulting Mrs. Eddy, we feel warranted in saying that the sentiments expressed by her were entirely impersonal and non-partisan, for this is well known to be her uniform habit, under all circumstances, in all her public utterances. This utterance was not intended, in the slightest degree, to influence the political views or votes of Mrs. Eddy's followers, for whatever may be her personal political views, we know her well enough to know that she never undertakes to force them upon, or even impart them to, her adherents.

Furthermore, we know, as a matter of fact, that no such construction as that hinted at in the newspapers mentioned, was put upon the language by her followers, and we feel positively certain that not a single vote was influenced thereby in the recent election. We are informed that the male portion of her household, and employees, voted the Republican ticket.

If, therefore, the item was put out to influence voters, it utterly failed of its purpose.

We know also that many Christian Scientists cast their votes for the McKinley and Roosevelt electoral ticket, while others were cast for the Bryan and Stevenson electors. Doubtless others supported some of the other candidates.

Christian Science Periodicals.

ALL who are interested in Christian Science and the great work it is accomplishing for sinful and suffering humanity, should be subscribers to the *Christian Science Journal* and the *Christian Science Sentinel*, which are the official organs of The First Church of Christ, Scientist, in Boston, Mass. The value of these periodicals can be fully realized only by those who are regular subscribers thereto. The words of encouragement and practical suggestions contained in each of these monthly and weekly visitors must be experienced before they can be fully appreciated.

The *Christian Science Journal* was founded in April, 1883, by the author of the Christian Science text-book, "Science and Health with Key to the Scriptures," the Rev. Mary Baker G. Eddy, Discoverer and Founder of Christian Science.

The Journal is published on the first of each month, and contains interesting reports of cases of physical and moral healing, as well as instructive discussions of the Principle and practice of Christian Science.

The *Journal* contains a list of the churches of Christ, Scientist, giving place and hour of services, and also gives notice of services which are regularly conducted by Christian Scientists in various places where, as yet, no churches have been organized. The location of reading rooms and the hours during which they are open to visitors, is given in connection with the churches under whose auspices they were established and are maintained.

It also gives the names and addresses of Christian Science practitioners who are members of The First Church of Christ, Scientist, in Boston, Mass., who use as their *only* text-books the Bible and "Science and Health with Key to the Scriptures," and who use and distribute, in Christian Science work, the writings of the Rev. Mary Baker G. Eddy and the publications of The Christian Science Publishing Society.

The growing necessities of the situation seemed to demand, at times, a speedier communication with the Field than was afforded by the monthly *Journal*. To meet this need and to supplement the work of the *Journal*, but in

no sense to take the place thereof, the *Christian Science Sentinel* was established in September, 1898.

The *Sentinel* is, in a sense, a newspaper, and each week gives a brief synopsis of the most important events in the world's history. There are also articles of a miscellaneous character, which are instructive and educational in a way, showing the growth and progress of humanity in various directions.

Each number contains original articles by students of Christian Science who are able to write from the standpoint of experience and demonstration. With these writers Christian Science is not a mere theory; it is practical Christianity made manifest in "many infallible proofs." These articles, which are intended to throw light upon different questions relative to Christian Science, are supplemented by testimonies from those who have experienced the healing and saving power of Truth, and who gladly testify to the moral and physical benefits they have received.

The *Sentinel* reports the progress of the Cause throughout the world as witnessed by the organization of churches, opening of free public reading rooms, erection and dedication of church edifices, etc. There is also a weekly report of the grand work that is being done by the Christian Science Board of Lectureship. The large audiences by which our lecturers are greeted, the introductory addresses by prominent men in the community, the full and complete reports of the lectures as given in the daily press, are "signs of the times" which go to show how the idea of a practical Christianity is finding favor with the multitudes.

While we have written somewhat at length regarding the work of the *Sentinel*, let it not be inferred that it does, or can, take the place of the *Journal*. Both the *Journal* and the *Sentinel* are needed in the home of every Christian Scientist. It is a great mistake to think that either can take the place of both. Many important articles, which would be helpful to every Christian Scientist, and also communications from our beloved Leader, the Rev. Mary Baker G. Eddy, may appear in one of our periodicals and not in the other. The *Journal* and *Sentinel* go hand in hand, and all true Christian Scientists need these messengers of Truth, not only for the good they may themselves derive from them, but also for the great good that can be accomplished by giving them a wide and general circulation among all honest seekers for Truth.

Among the Churches.

Christian Science Services at Lake Waha, Idaho.

Almost on the very top of Craig Mountain, Idaho, twenty-two miles from a railroad, river, town, or city, lies the lovely little Lake Waha, an ideal resting-place, where the citizens, old settlers, since the sixties have made a refuge from the sweltering heat of the valleys, Lewiston, Lapwai, and other towns.

The view from the lookout point is one of grandeur, giving one glimpses of Oregon, Washington, and Idaho, Snake and Clearwater Rivers, and a number of canyons stretching here and there with fruit and wheat ranches ripe and golden for the harvest nestling in their shelter.

But to-day for the first time has Truth been demonstrated upon Lake Waha's shores. Like Columbus when he knelt upon the ocean's beach and claimed America for the church, a handful of happy Christian Scientists enjoying their Father's beautiful gifts, have held their usual Sabbath service on the hillside of Lake Waha, and claim it for His own.

The exquisite reflection of hill, pine-tree, and boats in its glassy depths, reminds us of that which we too reflect,

and for the first time I realized fully there was no separation of the object and its reflection, nor of God and His idea; and that the calmer, the purer the water (thought), the stronger and brighter the sunlight, the more perfect the reflection.

When it storms, and the thunder echoes through the mountains, and the clouds veil their summits and creep like shadows around the peaks, and the wind sings and whistles through the pines, filling the air with their fragrance, we say, "He rides upon the storm" and "holds the winds in his fists," and rejoice to know our Father is omnipotent and omnipresent. It would seem as if this great Truth that has come so lately to me, makes even nature more lovely, and our Leader expresses it beautifully in "Miscellaneous Writings," p. 87, where she says, "I love your promise; and shall know, some time, the spiritual reality and substance of form, light, and color, of what I now through you discern dimly; and knowing this, I shall be satisfied."

It is a bright, cool, lovely Sabbath day, and the twelve Christian Scientists who are spending the heated term here, are the happiest of the happy, holding their services on the cottage verandah of one of their number, feeling so fully the untrammelled freedom of God, and the rest from civilization's demands.

The First Reader of the Christian Science Church at Lewiston, and the Second Reader of the little band at Moscow were our Readers. There was no lack of Quarters and Bibles, as they are a part of a good Scientist's wardrobe apparently.

We could fancy the birds joining in our hymns and responses, and the glistening, quivering waters below the hill at our feet seemed to smile with our joy.

While I have had no great physical healing to relate, yet the little healings are as surely miracles of love, and the spiritual growth is worth far more to me than my whole body, sick or well.

CAROLINE C. TINKHAM, Lewiston, Idaho.

Opening Services at Cincinnati, O.

Last Sunday (October 21) was a happy day for the Christian Scientists of the city and to their many friends, for it witnessed the passing of another milestone along their line of progress. Less than a year ago was published an account of the opening of a handsome suite of rooms on the ground floor of the Mitchell Building, to be used as public reading rooms in connection with the work of this denomination. That article contained a brief summary of the work done in this city since the year 1888, when this branch was started by its present leader, Miss E. A. Estes.

The various moves from private parlor to hall, and again and again to larger halls—the last the Auditorium—were there chronicled. Another move has now been made by this fast-growing congregation, this time to a church-home of its own. The brick Presbyterian Church on Rockdale Avenue, Avondale, was purchased last August, thoroughly remodeled and refurnished, and on Sunday last was formally opened for the worship of God in the way taught by Christian Science.

To appreciate the beauty of the interior of the church, it is necessary to see the restful, moss-green walls, with their gilt and rose-colored trimmings, the soft carpets of greens, the white woodwork, and opalescent amber windows, all dainty and delicate coloring, to which the dull, black pulpit and pews of Flemish oak add the necessary strength of tone.

The opening services were very simple. Every seat on floor and gallery (some seven hundred in all) was occupied. The choir was a special quartet, formed for the occasion, composed of Miss Klarer, Miss Holmeyer, Mr. Ernst, and Mr. Pendery. The address of welcome, de-

livered by Miss Estes, was a masterful and spiritual sermon. Mr. Jones, the Second Reader, followed with a brief history of the church. In the evening a still greater company gathered to listen to the addresses delivered by Dr. Max Wertheimer, of Dayton, Ohio, and Rev. Arthur Vosburgh of Rochester, N. Y.

After the close of the services an informal reception was held, many going down stairs to inspect the attractive Sunday School rooms in the basement.

The Commercial Tribune.

Progress at Memphis, Tenn.

All workers in Christian Science—and all Christian Scientists are workers—are reaping their reward according to their work. How often do we see the beauty of Love made manifest through the faithful children of God, Good. Jesus commanded, "Pray to the Father which is in secret; and thy Father which seeth in secret shall reward thee openly."

This demonstration has been made recently in one of the branch churches. Some few months ago the workers in this church saw that the time had come to build a church. Knowing the Omnipotence of the divine Mind and the Allness of God, these members prayed in secret, and in a few weeks they were rewarded openly, by receiving liberal subscriptions to a building fund. The site for a church has been bought and all arrangements made to build a beautiful edifice.

These earnest workers saw the need of more commodious quarters on account of the fast increasing attendance at the reading room. With no apparent increase in revenue, but knowing the source of all supply, they prayed in secret, and again are they rewarded openly, for now they are occupying a commodious room, beautifully furnished, and an adjoining room for practitioners. All are rejoicing and thanking Mrs. Eddy more and more every day for showing the way to this love-feast. The motto shall ever be, "My God is Good, Good is my God."

Having been connected for several years with large corporations, the writer has had many beautiful demonstrations over seeming difficulties in financial and other problems, and all have been met and overcome in the same way as in this work for the church.

It is through the understanding of God, Good, that we can receive these rewards, and the more we reflect Good, the greater will be our reward.—I. N. W., Memphis, Tenn.

Organization at Everett, Wash.

Five years ago there were only half a dozen Christian Scientists in Everett, Wash. The people were either antagonistic or manifested no interest whatever. We began holding services in a large, dingy hall, the only place available. At times, to mortal sense, it seemed discouraging, as our number did not increase as rapidly as we would have liked, but we never once thought of giving up the meetings. We knew that to "hold fast that which is good" we should "prove all things," and we have demonstrated in part what that means.

About three years ago our number began to increase, and a year ago we organized, a state charter being obtained and the articles of incorporation filed in the county. But we still held our meetings in the same large hall, although with the increase it did not seem quite so big, but as we had to hold our Wednesday evening meetings in another hall, and did not have a reading room, which we felt the need of very much, we decided that it would be desirable to have a reading room large enough to hold our meetings.

We now have a very neat building, with a seating capacity of a hundred and fifty, nicely furnished with chairs, tables, curtains, etc., also a new organ.

Our meetings are well attended, and the reading room is open every afternoon.—JANET PENDLETON, *Clerk*.

New Quarters at Cripple Creek, Col.

The Christian Scientists held their regular Wednesday evening meeting October 17, in their new reading room which will be part of their new church building when completed. A large crowd was present, completely filling the room, a good many attending from Victor and surrounding towns. This was the first service held in their own room, which they have very nicely fitted up with everything for comfort.

Many interesting testimonies were given. Mr. Charles Moore gave a short talk on what he saw of the movement in London and Paris, and of how it was being accepted by all classes of people from the nobility down. The regular service was extended a half hour in order to give others an opportunity to speak.

This church has only been organized three years and has grown from a dozen members into a good, big congregation, and in less than two years has bought lots and erected this part of their building, which has cost them over thirty-five hundred dollars. This amount has been raised almost entirely within their own congregation. They hope soon to go on with the erection of their church which, when completed, will be a credit to the city, as the building is constructed of white sandstone and pressed brick, and will have ground dimensions of 48x75 feet.—*The Daily Press*.

Reading Room at La Crosse, Wis.

In compliance with our Leader's request of January 4, 1900, First Church of Christ, Scientist, of La Crosse, Wis., opened early in April following, a reading room centrally located, well lighted, and neatly furnished.

The works of Rev. Mary Baker G. Eddy, together with the literature from The Christian Science Publishing Society, were placed upon the table. An announcement of this step was sent to the city papers in which a cordial invitation was extended to the public to call and investigate Christian Science.—LILLIAN ROBBINS, *Clerk of Board of Directors*.

A Word for our Periodicals.

Concord, N. H., October 30, 1900.

Dear Editor:—I want to put on paper my appreciation of the high standard which our publications have attained, and to thank the editors and the able contributors for the rare excellence of the *Journal* and *Sentinel*.

It is inspiring to note the generous response of the Field to the request for testimonies and original articles. As we read them we can but exclaim, "Behold what God hath wrought!" Christian Scientists appreciate that they can do no less for God, for His Cause, and for their Leader, than carefully to prepare for publication an accurate account of the mighty works wrought for them and through them.

The gift to the world of such articles as that of "A Lawyer to a Friend," in the October *Journal* is a manifold blessing. Its deep research, its keen analysis, its logical statement, is instructive and convincing. It will have a wide circulation and will accomplish rich result.

What a worthy thank-offering for blessings received, is a heartfelt, mindful contribution to our publications. As is true of Paul's first letter to the Corinthians, so it is true of the readers of the *Journal* and *Sentinel*, "Every man hath his proper gift of God, one after this manner, and another after that." Gratefully yours,

IRVING C. TOMLINSON.

My Ships.

AH, years ago!—no matter where,
Beneath what roof or sky,
I dreamed of days, perhaps remote,
Where ships of mine that were afloat,
Should in the harbor lie;
And all the costly freights they bore
Enrich me both in mind and store.

What dreams they were of argosies
Laden in many a clime;
So stoutly built, so bravely manned,
No fear but they would come to land
At their appointed time;
And I should see them one by one,
Close furl their sails in summer's sun.

And then, while men in wonder stood,
My ships I would unlade;
My treasures vast they should behold,
And to my learning or my gold
What honors would be paid!
And though the years might come and go,
I could but wiser, richer grow.

In later years,—no matter where,
Beneath what roof or sky,
I saw the dreams of days remote
Fade out, and ships that were afloat,
As drifting wrecks go by:
And all the many freights they bore
Lay fathoms deep, or strewed the shore,

While ships of which I never thought,
Were sailing o'er the sea;
And one by one, with costlier lade,
In safety all the voyage made,
And brought their freights to me;
What I had lost but trifle seemed,
And I was richer than I dreamed.

No wondering crowd, with envious eye,
Looked on my treasure rare;
Yet they were weightier far than gold;
They still increase though I grow old,
And are beyond compare;
Would all the restless hearts I see
Had ships like these that come to me.

M. R. MURRAY.

Harmony.

BY LOUISE DELISLE RADZINSKI.

IN the seventeenth chapter of St. John's gospel, we are told how our Lord Jesus Christ prayed for the disciples he was so soon to leave; after asking the Father to give eternal life to as many as the Father had given him, Jesus defined eternal life as the science, or knowledge of the only true God, and of Jesus Christ, as His Son, and prayed that they might be preserved from the temptations and dangers of the world. Continuing, Jesus prays: "Neither pray I for these alone, but for them also which shall believe on me through their word; that they all may be one; as thou, Father, art in me, and I in Thee, that they also may be one in us: that the world may believe that thou hast sent me. And the glory which Thou gavest me I have given them; that they may be one, even as we are one: I in them, and thou in me, that they may be made perfect in one; and that the world may know that thou hast sent me, and hast loved them, as Thou hast loved me."

These words show that only as Christians are *one*, *one* in Love, *one* in harmony, can they realize, and demonstrate to the world, the love of Christ for them, their oneness with Christ, and the oneness of Christ with God; also that only through such a demonstration of oneness, can the world be made to believe in the Christ mission.

Further, this oneness is made the condition under which perfection is attained, that the injunction may be obeyed, to be "perfect, even as your Father which is in heaven is perfect," and the world be made to see unmistakably that God had manifested Himself in the Christ. All this stupendous result to be wrought by the union, in harmony, of those who believe on Jesus as the demonstrator of God—Love.

How to attain this oneness had for centuries been the study of faithful men and women who sought this key to harmony, this key to heaven, by paths of self-renunciation, of torture, of painful death. In some cases years of lonely exile in the wilderness, in others, years of anguish amid the scoffs and jeers of the unbelieving, were rewarded by momentary visions of heaven, by fleeting moments of realization of divine Love; but there had been no principle discovered, no key found with which this heaven of harmony could be opened and possessed, until "Science and Health with Key to the Scriptures" was given to the world.

In this book, on more pages than I can enumerate, we are taught how to become one with Christ and through him, one with the Father, not by casting aside all companionship with mankind, as the early Christians did, who lived lonely lives and died lonely deaths in the rocky cells of the Thebaid, making life only a waiting-space for death, the deliverer, they thought, who was to bring them to God, not as others have done, immuring themselves in cloisters, deserting all human duties in the search for self-perfection,—all these strangely sought perfection in loneliness, in solitude, not in the *oneness* of love and harmony.

Throughout the ages, saintly hearts, kindled by divine Love, have perceived the true source of harmony, of perfect union with the Father, through obedience to the teachings of Jesus, and have shown the world the power of that Love, even when demonstrated by separate individuals. In our text-book, we are taught how *all* may become *one*: one in the Father-Love, one in the Christ-Spirit, one in the perfect understanding that is to make us one with the Father.

The Principle through which we are to enter into possession of our kingdom does not demand solitary suffering, the sacrifice of human ties, of human intercourse. Our key to heaven teaches us how to make that heaven ours *now* and *here*. It teaches us to love, not only the Father from whom all blessings flow, but also the brother who participates in those blessings, making them all the richer thereby and that love to the brothers, that oneness of man with man that in our Lord's Prayer is the hinge upon which the door of heaven swings, that love, sometimes so difficult to demonstrate, in belief, becomes possible of achievement through the understanding of the "little book."

There we are taught to see our brother as the child of God, in spite of the earth-mists of error, of self-love, of self-mesmerism, that would show us the mote in our brother's eye greatly magnified, but would quite obliterate the beam in our own: here we are taught to see in our brother the image and likeness of God, not the concept of mortal mind, burdened with our own erroneous beliefs of evil, of discord, and of weakness.

The knowledge that saints and martyrs labored and suffered to gain is freely given us in the pages of our text-book: there we are taught to look beyond personality to the spiritual man, as the reflection of God, and thereby to understand the possibility of man being one with man, in divine Love. This is the key to heaven, harmony.

A Word for Christian Science.

BY IRA C. HUBBELL.

I AM one of the thousands who anxiously await the weekly appearance of the *Sentinel*, for from its pages I always secure that assistance which brings clearer the realization of the absolute nearness of the kingdom of heaven.

Our Saviour said to his disciples centuries ago, "Freely ye have received, freely give," teaching the lesson that we really have only as we give, "for with the same measure that ye mete withal it shall be measured to you again."

It is because I need so much that I wish to give all I can to others until finally I may realize the fulfilment of St. John, 8:32, and have the consciousness of that freedom possible only through a knowledge and understanding of the Truth.

It is a peculiar phase of man's thought that he is most apt to criticise the things about which he knows the least. If you will but slightly consider this condition of human thought it will disclose much of the opposition to the teachings of Christian Science, all of which vanishes when the person understands but a little of the freedom peculiar to the faithful Christian Science student.

Jesus said, "Let not your heart be troubled, neither let it be afraid." What is the "heart" of which he speaks? The "heart" as we recognize it in the body does not know fear nor is it conscious of trouble. This meaning must therefore be of deeper import, and means our actual selves, and by these comforting words he sought to bring to tempest-tossed, care-worn, tired humanity, only those sweet, comforting, and practical assurances which the student of the teachings of Christian Science has received, and which are hourly multiplied to every honest seeker for the Truth.

From the writings of such men as J. G. Holland, I have received much genuine, practical good,—thoughts which have made me a better man. Employers in my earlier days, by word and by precept, have helped me in my progress. Would the world have me ungrateful for these benefits and withhold the merited and just acknowledgment of the benefits received? Then why should you or why should I act the part of the ingrate and shut our lips that the voice shall be silent and keep back the just acknowledgment of what Mrs. Eddy has done for the world in what she has given us in Christian Science?

When we pour out our loving gratitude to the dear woman who permits us to speak of her by that name most tender in the human affection, Mother, we do so not as hero-worshippers, but as the child that has been blessed and comforted by a tender parent.

One writer said that he loved Christian Science because it had made his religion practical. We all love these teachings probably more for this one thing than for all other benefits.

"Cast (ing) down imaginations, and every high thing that exalteth itself against the knowledge of God, and bring (ing) into captivity every thought to the obedience of Christ."

Nearly fifteen hundred years before Christ God said, "I am the Lord thy God, which have brought thee out of the land of Egypt, out of the house of bondage. Thou shalt have no other gods before me."

By the spiritual understanding which one receives from Christian Science as taught in "Science and Health with Key to the Scriptures," the Bible is to me a new book, and from its pages come the directing thoughts for the daily life and conversation which prompt us to "seek first the kingdom of God and his righteousness," that all we do or say may be for His glory by the more perfect reflection of His immutable law of love and harmony.

Dear reader, if you have never read Science and Health, buy a copy, carefully study the entire book, with your

Bible, and, like the writer, you will have a new beginning in your experience, for which you will always have a peculiarly affectionate regard, and life will have a new purpose.

A Review of Work in Christian Science.

BY H. A. C.

CHRISTIAN SCIENCE in our own home and Christian Science in a summer boarding house seemed at first to be very different, but now that we are at home once more and can look back at the many conversations on the subject, we are thankful that we have had the chance to do the Master's work, and to let in the blessed light of Christian Science where all seemed darkness.

We were the only Christian Scientists, and one evening during a severe thunder storm fear held all the inmates of the house but ourselves. Our children kept on with their reading or watched the storm as the lightning showed up the beauty of the surrounding hills and valleys.

After the storm had passed some came to us and said, "What was the reason that you and your children were not afraid of that fearful storm? Does Christian Science teach you not to be afraid of storms?" I told them it did, and explained as well as I could what Science and Health had taught us. They seemed much surprised and said they thought it was only a *text-book*, and not meant for Episcopalians or Presbyterians or Quakers.

During the next storm (which was more severe than the former), three of the boarders rushed into my room and closing the door exclaimed: "Oh, read to us or do something so that we needn't be afraid of these fearful storms!" They were pale with fear, but after reading to them and declaring the Truth aloud they went to the window with me and looked out, without the least particle of fear, although a tree on a lawn opposite our house was struck by lightning. Thus the fear was overcome, and the husband of one of the ladies said he was very grateful for the help received by his wife, for he had always been afraid she would be ill after a thunder storm, because she was seemingly so nervous and timid.

We were questioned and watched very closely all summer, and at times we felt a sense of impatience with these friends who wanted our help, but did not wish to read our literature or study for themselves. But we remembered how we used to feel only a few years ago, and said nothing unless we were questioned.

At last one of them who had hay fever came to me for treatment. This was met in a few days and then Science and Health was read by several people and some of the Christian Science tracts also.

Often I heard the younger members of these families remark, "Oh, do stop quarreling; don't you know we have Christian Scientists in the house and they will hear you."

We used the Christian Science thought in so many practical helpful ways that we feel we understand more fully than ever the words of Mrs. Eddy in Science and Health, p. 513, where she says: "The highest and finest rest, even from a human standpoint, is in holy work."

We left our city home thinking we should find very little to do in that quiet country boarding house, but in reviewing the doings of those summer days we find that we never had so much Christian Science work to do for ourselves and others as we had on that beautiful farm among the hills.

The noblest word in the catalogue of social virtues is "Loyalty," and the sweetest which men have learned in the pastures of the wilderness is "Fold."—RUSKIN.

A river is perfect in quality, but increases in bulk and power as it flows. No new ingredients, but greater abundance. So with perfect love.—Anon.

Testimonies.

Healed by Reading Science and Health.

It has been in my thought for some time to testify to the benefits I have received through the Truth as revealed in Christian Science. I was brought up in the Congregationalist Church, and for about thirty years was a member of the church. I read and studied my Bible a great deal, praying each day for wisdom and understanding to know God's will concerning us. I was not satisfied with the way in which Christ's promises were explained, for it seemed that in my own case and with many around me, the need was now as great as, or greater than, when Jesus healed the sick and raised the dead as recorded in the Bible.

But while I took medicine and prayed, I grew worse, and for about fourteen years was a partial invalid, suffering much of the time with acute pain. I had the advice and medicine of many doctors without any permanent benefit. They could give me no hope of a cure, but thought I might live to be old, although not one had ever had a patient with like symptoms. I tried change of climate, but it did no good. I would not have an operation, which the doctors thought would enable them to ascertain the cause of so much distress, for I had a fear that it would result fatally. Almost everything I ate caused distress. I had eaten no acid for a long time, and was constantly limiting my diet, in such bondage was I to the flesh, not realizing that I was free born and God's child. My hopelessness was so great that for a number of years I read the third chapter of Job on my birthday.

Two years ago last spring I heard some talk about Christian Science by those who had known Scientists, and a friend to whom Science and Health had been given a number of years before, offered to lend it to me, but I refused to read it, thinking it pernicious and not in accordance with the Bible. I had read some articles in church papers which criticised it.

About this time a Scientist who had been pointed out to me, but whom I had not met, handed me a *Journal*, at the request of a mutual friend. This was the first time I had spoken to a Christian Scientist so far as I know. Just a beginning of good things, as I learned when I began reading the *Journal*. I read and re-read parts of it, and saw at once how far from the truth had been my conception of Christian Science.

On the nineteenth of June, 1898, I borrowed Science and Health and began to read it while lying on the couch. I read all the afternoon and evening, being perfectly fascinated. I saw from the first lines I read that it was the Truth which I had been seeking for years. The next morning I began to practise what I had already learned by reading the day before, by not lying down as had been my custom much of the time, and by eating freely of what I wished, and I felt no ill effects. It came to me when I read, "There is no power apart from God" (Science and Health, p. 124), and that we have dominion. Then I began to claim my birthright. I read Science and Health through in a week, re-reading many paragraphs which I did not understand, and at the end of the week, I felt that I was healed and spiritually born again, a new creature, realizing that I was God's child, made in His image and likeness, and, best of all, that our Father sends good and not evil.

It seemed to me at first that all who would read Science and Health would see the Truth and understand it, and I began to urge my friends to read it; but I have been much disappointed in most cases and have met much opposition. Some attempted to dissuade me, but my feet are planted firmly on the rock of Truth, and nothing can shake my confidence, for I have daily proofs in the demonstration of God's power and love to heal and help in every

way. Words cannot express my joy and thanksgiving that I have been counted worthy to receive this great blessing. My heart sings with joy, "Praise God, from whom all blessings flow."

A severe attack of paralysis which affected the entire right side, making me perfectly helpless, was healed in eight treatments. There was some manifestation of symptoms for some time longer, but people with whom I had been acquainted hardly knew me in six months after the healing, and all acknowledge that there has been some transforming influence, even though they do not accept Christian Science. I have been told that I look fifteen or twenty-five years younger, and I certainly feel so. All this is as nothing compared with the spiritual uplifting and renewing.—MRS. ESTHER A. L. RUDD, Oberlin, O.

Faithfulness Rewarded.

So many quick demonstrations are given in the *Journal* and *Sentinel* that I think sometimes it is discouraging to those who seem to gain slowly under Christian Science treatment. For the sake of any such I am going to give my testimony.

In November, 1898, I was sentenced to a severe surgical operation, and was told I could not delay longer than six weeks before having it performed, as I was running the risk of my life.

Having known of several who had undergone the same and passed away, it was with great fear I looked forward to it, for if not successful my mother would be left alone, and it had always been my earnest prayer that I might be spared to care for her. Upon telling a very dear friend of what I was about to undergo, she suggested that I try Christian Science, though not a Scientist herself, saying it certainly could do me no harm even if it did not benefit me. I was perfectly ignorant of the subject, having only heard it spoken of in a derisive sort of way, so had no faith whatever, but the healer to whom I went in Portland said faith would come, and surely enough it did. Although I responded quickly, my healing was anything but rapid, for one thing after another, outside of myself, seemed to come up to hold me in error. There were times when I felt much discouraged.

This verse from Deuteronomy encouraged me to continue the treatment: "The eternal God is thy refuge, and underneath are the everlasting arms: and he shall thrust out the enemy from before thee; and shall say, Destroy them." So I would not give up the good fight, but plodded bravely on, reasoning that Truth must at last free me as it had others if I but did my part, fully realizing that God only helps those who help themselves.

At the end of eleven months of constant treatment, once a week present and the remaining days absent, I was at last released from the bonds that held me. They were many, for my whole body seemed to be afflicted with some trouble or other, and thousands of dollars had gone to doctors.

I had been sentenced to wear glasses all my life, as leaving them off would be likely to induce a return of iritis, with which I had suffered terribly shortly before coming into Science. I was also told I had astigmatism badly. I improved in other ways. I felt one day it was not necessary for me to wear glasses, accordingly left them off and have not felt the need of them since. I was also healed of a bronchial cough that was fast driving me into consumption, which I had always understood was inherited. Sciatic rheumatism and a severe strain were loath to be driven away, but finally they too lost their hold.

The spiritual healing with me seems quite as great as the physical. There were times when I used to feel truly ashamed of myself for reading my Bible so seldom, more especially as I had been trying to teach a class in the Uni-

tarian Sunday School for nearly two years, but it did not seem to appeal to me in the least. Now I find it quite different, for Science and Health has opened up the Scriptures to me in a new light, and comfort is given whenever I turn to the blessed book.

For a year and a half I have read the *Quarterly* lessons every Sunday at a regular hour with but one or two exceptions, and until recently, alone. How I have longed for others about me to come into this beautiful thought! For a year I have overcome many little errors for myself, and others have felt the effects of Truth, consequently several have become slightly interested. But we must be patient and Love will open the way for them.

CARRIE E. REMICH, Kennebunk, Me.

Found Help in Christian Science.

When I realize the comfort and blessing the testimonies in the *Journal* and *Sentinel*, of those who have been healed or otherwise benefited in Christian Science, have brought to me I feel that it is but just that I should bring my tithe into the storehouse.

It was through the healing of my baby boy, then only six weeks old, that I took up Christian Science. We were living at the time in Florence, Col. At his birth the little one seemed in perfect health, but each day he became more emaciated, and his hold on life gradually weakened, until I was convinced that it was only a question of time until he would pass away, as had two other children whom the doctor said had indigestion produced by improper food. As we had tried nearly every kind of patent food and had been told by the physician that it was almost impossible to help so young a child, I knew there could be no help in material methods.

I had heard of Christian Science through a friend who loaned me "Science and Health with Key to the Scriptures." It seemed Greek to me, although I had attended the Denver services a number of times. Finally I decided to see what Christian Science could do for my little one, and went to see a Scientist, of whom I had heard.

I stated the case to the Scientist. I had said but a few words when I felt those clear, truthful eyes upon me, and I broke down and wept bitterly. I saw how useless were the pleasures of sense. Did she excuse herself? No; but, like our blessed Master, she tried to comfort me and said, "God is a very present help in trouble, and I am sure He will help you if you will only trust Him." She showed me how to destroy the claims of error and led me out of the "house of bondage." I eagerly grasped and demonstrated to the best of my understanding, every word of Truth she gave me. The works of our Leader have been my only teachers. My greatest struggle has been with self. I have passed through the flames but they have not hurt me.

The demonstration for my baby was complete and the baby is now a boy of four, the picture of health. My children and I are daily proving that God is an ever-present help.—ISABELLA B. FISHER, Denver, Col.

How Good Seed will Grow.

A lady whose husband was the victim of paralysis, overheard a remark about what Christian Science had done for some one. She had never heard of Christian Science and was at once interested and desired to have her husband try this, to them, new method. A healer was engaged, and after a short time the man was healed by absent treatment, never at that time having seen the one who healed him. Later they together took class instruction. After this he located where there was but one person interested in Christian Science. On the following Sunday these two met and established Christian Science services. Later his wife

joined him and was instrumental in organizing a Christian Science Sunday School in connection with these services.

About a year and a half ago the first meeting was held in a photographer's room. To-day they occupy a large hall, newly papered, painted, and fitted up with seats and an organ bought and paid for by the Sunday School. Their reading room in the same hall has been established over three months.

A little girl, who was obliged to leave school on account of her eyes, became interested in this Sunday School and was healed, so she was able to resume her school work without any further use for her eyeglasses. Her mother, who had been an invalid for over thirteen years, was, after being given up to die, led, through her daughter, to ask for Christian Science treatment. Although she had been expected to die for several days and had made all arrangements for her funeral, she was healed instantaneously by one absent treatment and arose from her bed and ran to the gate to meet her husband, who had come home earlier than was his custom because he thought it was impossible for her to live through the day.

A. M., Arlington Heights, Mass.

Blessings we have Received.

In the fall of 1898 we applied for treatment to a healer in Boston, and as we lived in Colorado the treatment had to be absent.

In five days Mrs. Alloway was cured of a trouble of lifelong standing. Before the treatment was given Dr. H. of Cripple Creek said my use of tobacco would kill me. I smoked and chewed from the time I got out of bed until I went to sleep again, excepting at meal time. Neighbors said I could not break the habit. Divine Love destroyed the error and since October 8, 1898, I have not used tobacco in any form.

I was also told that varicose veins and heart trouble would end my days suddenly. To-day I work at timberline in the Mary Murphy mine at Romley, at the hardest kind of work. I have to climb nearly a half mile to work, and had forgotten I had such things as veins and a heart until I recalled my blessings through Christian Science. Last August I had a felon on the middle finger of my right hand. I wrote to a healer in Denver and in two days was at work again—no trace or scar now appears. In the same month a baby boy was born to us, no doctor obtainable. In twenty minutes he was with us, causing only one pain. The birth of our other child was very different. At that time my wife suffered labor pains for twenty-four hours.

Since we threw away our medicine case, bandages, rubber stockings, and tobacco the eighth day of October, 1898, not a particle of medicine of any kind has been in our house, neither have we taken any or given any to our children. We wish most sincerely to thank those kind-hearted friends who have helped us bear our burdens reflecting Love and guiding us to Him "who healeth all thy diseases" and "Who delivereth thy life from destruction."

WILL H. ALLOWAY, Romley, Col.

A Help in Case of Accident.

Last December my little boy, two and a half years old, fell from a flower stand, and was seriously hurt. A Scientist was telegraphed to and the pain was overcome. In two days I took him to her home several hundred miles away. He could neither stand alone nor lift his head on account of paralysis of the spine. He was healed in less than five days, and was running everywhere. He was also healed of eczema of the head in its severest form. These are but a few of the many blessings I have received.

E. D. W., Dallas, Tex.

Religious Items.

The *Outlook* publishes the following:—

"The New York State Conference of Religion, which is to meet in this city Nov. 20-22, will be notable at least for the demonstration which it will give that a common worship may be shared by religious men widely differing in theological doctrine and ritual forms.

"The Possibilities of Common Worship," is one of the topics to be discussed at the conference, but the discussion will be in part removed from the region of theory to the line of practice. A sub-committee, consisting of Dr. Newton of All Souls' (Episcopal) Church, Dr. Gottheil of Temple Emanuel, and the Rev. Thomas R. Slicer of All Souls' (Unitarian) Church, has prepared a manual of common worship, which is now in press. It contains selections from the Jewish, Christian, and ethnic Scriptures, prayers selected from Jewish offices and from Christian liturgies, ancient and modern, as well as from private sources, together with hymns from a wide range of authorship.

"This conference professes to differ from such bodies as the Parliament of Religions by its direction to the practical side of things, where unity is found among those who differ in theory. Its forthcoming book of common worship is an earnest of such a profession."

- In an article headed "A Great Event in Scotland," the *Congregationalist* says: "On Thursday of this week (November 1) the final step was taken at Edinburgh in the union of the Free Church of Scotland and the United Presbyterian Church. The three Presbyterian bodies—the United Presbyterian, the Free, and the Established, with a membership in the neighborhood of one million—include the large majority of the church members in Scotland. The first two of these bodies united have a membership considerably over half a million, and the United Free Church is now the strongest religious organization in the country. This union must strengthen materially the argument for disestablishment, since it leaves quite in the minority the body which draws support from the State and claims to represent it."

In a very thoughtful article on "The Preacher," by President Bashford of Ohio Wesleyan University, published in the *Christian Advocate*, we find the following: "Did you ever think that you probably learned more during the first five years of your life than during any subsequent ten or fifteen years of your experience? The child learns an almost complete use of his mother tongue and the complete use of hands and feet and all the organs of the body before he is five years old. The reason many of us cease to grow early is because of our intellectual laziness and our love of conformity. We do not keep our minds open to new truth."

By way of illustration, in an article on "Faith," the (Baptist) *Examiner* gives us the following interesting anecdote about Livingstone, the great African explorer: "It is told of David Livingstone that on one occasion his way was barred by a gathering of natives—a way that he must traverse; he went to his tent, opened his Bible at the words: 'I will not fail thee, nor forsake thee,' and closed it with the remark, 'I can trust the honor of my heavenly Father to carry me through, as to the honor of a perfect gentleman;' and next morning the opposition had vanished and the way was clear."

In an article on "Latent and Active Forces," the *Universalist Leader* says: "Be ye hopeful. Be ye faithful. God is on the side of those who are working for purity, for righteousness, for justice, for humanity. Every good cause must triumph eventually, and the day of its complete victory is forwarded by the present activity of those in whose hearts dwells the love of God and man. Great changes, extended and grand reformations, have come in this world through the movements set in motion by a

few persons, at times by a single man, of conviction, courage, and faith."

In a eulogy of Dr. Charles Carroll Everett, dean of the Harvard Divinity School, the (Unitarian) *Christian Register* says: "In his office he was simple, modest, unconventional, and affectionate, but withal dignified and influential. He did not govern so much as he controlled. He did not assert his will so much as manifest his power. That which he thought it right to do, and to have others do (within the range of his official authority), he made others regard as something which was right and wise for them to do, something which he ought to wish to do and to have done."

In an article concerning the religious side of Washington's life the (Methodist) *Christian Advocate* says: "No visitors were admitted to the Washington home on Sunday with the single exception of Speaker Trumbull, at one time secretary to the general, and who for years maintained the custom of spending an hour with him each Sunday evening. Washington, as a rule, spent Sunday afternoon in his room, and in the evening frequently read a sermon or a selection from a religious work to Mrs. Washington in her own apartment."

The *Universalist Leader* says: "The world has been benefited and advanced vastly more by moral courage than by physical courage. Prophets and seers speaking their weighty messages in critical times held their people, rulers and subjects, to higher lines of thinking and conduct than would otherwise have been their choice. The moral force of Jesus carried him to the heights of unselfish service for the world and has made him the spiritual leader of nations."

The (Episcopalian) *Church Standard* says: "Speaking some years ago at a dinner given in New York City in honor of Dr. Parkhurst, Mr. Choate, our present Ambassador to England, said that politics could never be purified until the Church would unhesitatingly denounce political corruption by Church members, and drive out of its boards of trustees, its vestries, and its pews the men who, as directors of corporations, are instrumental, under any excuse or pretence whatsoever, in bribing or corrupting public officers."

In an editorial the *Universalist Leader* recently said: "We want the expert in mechanics, medicine, and law; not less will be the demand in the not distant future for the expert in religion. Men are growing a great interest in things spiritual, presently they are going to ask for authority on these questions and will turn naturally and by right to the minister, only to find that he knows more about literature, art, music, or politics than he does about the business advertised on his sign board."

The *Congregationalist* says: "Nothing so discourages any one as to feel that his honest efforts are misunderstood and belittled. It embitters all but the most sturdy and serene natures. But he who feels that we are ready, in the very spirit of Jesus, to believe in him, be hopeful for him, and encourage him, in a word, to make the best of him, not only is grateful to us, but is nerved to renewed effort for himself."

The (Baptist) *Watchman* says: "No man can expect to serve God without sacrifice. When we succeed in making what we ought to do to advance the interests of the kingdom of God easy and pleasant to ourselves, it will not make much difference whether we do it or not. Our Lord said that in the world his disciples should have persecution, and the effort to escape persecution is apt to be an effort to escape service."

Old John Street M. E. Church in New York, the oldest Methodist church in America, celebrated its 132d birthday on October 28. John Wesley's clock, sent over from England and still keeping good time, is one of the old church's ancient heirlooms, and Bishop Asbury's chair is another.

The *Watchman* says: "The man who differs from us in religion or politics we are unconsciously apt to disparage. We tell him that he is at liberty to follow his own convictions, but if he wishes to stand well with us he must follow ours."

The (Baptist) *Examiner* says: "The conditions of success are the same in the spiritual as in the temporal realm of action. Laziness, inertia, lack of earnestness will no more win spiritual prizes than temporal ones."

The *Christian Register* says: "To overcome evil with good is the divine method of evolution. Attacking evil never succeeded unless that which was good was made to abound."

Notices.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

No. 6.—Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution, may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society.

Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each \$3.18

Two to Twelve books to one address, each, prepaid . . . 3.00

Twelve or more books to one address, each, prepaid . . . 2.75

Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00

Twelve or more to one address, each, prepaid 3.75

Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/2 x 6 1/2 inches, narrow margins, each, prepaid . . . 5.00

Twelve or more to one address, each, prepaid 4.75

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00

Twelve or more to one address, each, prepaid 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid \$2.25

Twelve or more books to one address, each, prepaid . . . 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/2 x 6 1/2 inches, narrow margins, each, prepaid . . . 4.00

Twelve or more to one address, each, prepaid 3.75

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00

Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid \$3.00

Twelve or more books to one address, each, prepaid . . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12 1/2 cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass. Post Office as second-class mail matter.

Items of Interest.

Political and Governmental Notes.

In his annual report on the operations and conditions of the treasury, submitted by Treasurer Roberts to Secretary Gage last week, the net ordinary revenues of the government for the fiscal year are shown to have been \$567,240,852, the largest in the history of the country, exceeding those of 1866, the next highest, by \$47,291,288. The increase of \$51,280,232 over the preceding year was contributed chiefly from customs and internal revenue.

On the side of the expenditures there was a decrease in comparison with 1890, so that the deficiency of \$89,111,560 for that year was converted into a surplus of \$79,527,060 in 1900.

After prolonged negotiation, conducted mainly by Rear Admiral O'Neill, chief of the naval bureau of ordnance, the Carnegie and Bethlehem companies have agreed to manufacture for the government all the Krupp armor of the first class required for the naval vessels now under construction or authorized to be constructed at a maximum price of \$455.32 a ton, including royalties on the Krupp process of \$24.32 a ton, and on the Harvey process of \$11.20 a ton.

By the adoption of an amendment to the state constitution on November 6, Rhode Island has ceased to have two capitals, and the last state in the Union to maintain them has given up that peculiar custom. Hereafter, the city of Providence will be the only capital of the state and, incidentally, the old historic State House in the city of Newport finishes its career as a legislative edifice.

The War Department was advised by cable on November 12, that the last of the American troops ordered to leave China had started for Manila, leaving the 14th infantry, a squadron of the 6th cavalry, and a battery of the 5th artillery in Peking as a legation guard.

President McKinley has asked all the members of his Cabinet to remain through his second term, but Attorney-General Griggs has authorized the statement that he will retire on March 4, on account of private business.

From the Revolution to 1860, 4,304,029 immigrants arrived in the United States. From 1890 to 1899, 3,650,338 immigrants arrived, and for the first eleven months of this fiscal year 394,164 have landed.

In his annual report, Lieut.-Gen. Miles recommends re-organizing the army so as to have a permanent force equal to one man for every one thousand of population.

At an average of twelve dollars a month

each, the pensions already granted on account of the Spanish War will cost the government more than \$500,000 a year.

The youngest member-elect of the Fifty-seventh Congress is John J. Feely of the 2d district of Chicago. He is only twenty-five.

Foreign News.

M. Hanotaux, former minister of foreign affairs, in an article entitled, "The Balance Sheet of the Exposition," says: "France expended two or three hundred million francs to erect the Exposition. She has recovered them easily in the increase of the treasury receipts, which for this year alone is nearly one hundred million francs, in the surplus of Parisian duties, in the monuments remaining to the state or the city, and in the quays, bridges, and improved transportation facilities bequeathed by the Exposition."

The Paris Exposition closed at midnight November 1. It ended in a blaze of illumination, the final evening being celebrated by a night fete. The Exposition was a gigantic success from the point of view of attendance, which was double that of the Exposition of 1889, when 25,121,975 passed the gates. When the gates of the Exposition of 1900 closed, more than fifty million persons had passed through.

The foreign envoys in Peking, constituting a commission to arrange with Chinese envoys, for the establishment of peace, agreed on the terms of settlement last week, and a formal note will be presented to China this week, setting forth the demands of the allies. Besides the execution of guilty officials, the agreement calls for razing the Taku forts, the abolition of the tsung-li-yamen, etc.

The Russian general staff recently proposed that the Siberian peasants should adopt the Cossack caste and ten thousand have signified a willingness to do so. It is proposed that the new Cossacks shall be offered eighty-two acres of land each, shall be required to serve four years in the army, and shall belong to the reserves until they become thirty-four years of age.

A Berlin dispatch says: "It is officially stated that the German government will gladly grant permission to fifteen thousand Transvaal Boers to trek through the Kalahari desert to territory in German south-west Africa. Arrangements, therefore, are now being made to welcome the vanquished Boers as a new and valuable element for the colony."

According to a Montreal dispatch, it is likely that Sir Wilfrid Laurier will recommend Sir Charles Tupper, the retired Conservative leader, for a peerage for his work in bringing about the confederation of Canada, and for the introduction of free schools.

The British Parliament will assemble December 3 to vote the expenses of the war in South Africa, which are now expected to amount to fully \$500,000,000. Before Christmas an adjournment will be taken until the end of January.

Industry and Commerce.

Chicago packers on November 10, advanced the price of beef, pork, and mutton one cent a pound. A Chicago paper estimates that in one year the additional cent will yield to the Chicago packers, basing the estimate upon last year's business, the following sums: Dressed beef \$15,000,000, dressed pork and pork products \$20,000,000, mutton \$4,000,000. Total addition to incomes \$39,000,000. The advance by the retailer to the consumer will average twenty-five per cent, for the waste doubles the increased cost of the salable portion.

The Philadelphia Ledger notes that the consumer will have to pay the cost of the

recent coal strike "and something over." It adds, "The labor cost of a ton of coal has been increased about ten cents by the ten per cent advance to the miners, but the companies, it is announced, have advanced the price fifty cents per ton beyond July prices. A part of this advance is normal to the season of the year, but it is safe to say the companies will collect twenty-five cents per ton from the public for every ten cents advance they give the miners."

Ships sailing from Boston to British ports took 51,646 barrels of apples across the Atlantic last week. Two ships sailing the same day carried together 38,314 barrels.

General News.

Dr. Parkhurst makes the statement that a syndicate of wealthy men has under consideration the establishment in New York City of an "Ideal" newspaper. He declares that an endowed theatre is also a possibility for New York. "There are those," he said, "who are anxiously considering the matter of establishing a journal for the purpose of telling the truth and sufficiently capitalizing it, so that it will have no trouble in telling the truth. There is also being considered the matter of establishing an endowed theatre. It has come to be a fact in this city that a theatre as a rule cannot be made to pay unless there is more or less of that in it which is objectionable."

In an article on evaporated eggs as army rations, a Boston Transcript correspondent declares that thirteen billions of hens' eggs will have been laid in the United States during the year 1900, and that the annual value of this product exceeds that of any mineral except coal, being greater even than the value of the annual output of pig iron. A writer in a New York paper estimates that there were 500,000,000 fowls in the United States last year, and that the number of eggs was about 17,400,000,000. The value of these fowls and of their product he set down at \$420,000,000.

Booker T. Washington has been appointed as commissioner in charge of the negro department of the South Carolina Interstate and West Indian Exposition, and Dr. Charles R. Crum of Charleston, S. C., is assistant director. They are to have exclusive charge of the collection and installation of the exhibit. The Exposition opens December 1, 1901, and closes June 1, 1902. A prize has been offered to the colored architects of the country, inviting them to submit plans for a negro building to be erected by negro contractors.

At a meeting of the board of delegates of Typographical Union 6 of New York last week, it was decided to close the farm for aged and unemployed printers which the Union has been supporting for the past three years at Bound Brook, N. J. The farm, according to John A. Hawkins, chairman of the committee that managed it, was a great success, and the vote to close it was the result of the hostility between the Union's two factions, which are known as the administration and anti-administration parties.

A visitor to Cape Trafalgar reports that in the neighboring village, where he stayed a week, not one of the inhabitants had heard of the historic naval battle that was fought off the coast ninety-five years ago. An old muleteer who was passing through was better informed. In his youth he had heard old people talking about the fight, and had the impression that Christopher Columbus was the leading performer.

Harvard's latest catalogue shows that her students are drawn from no less than thirty-nine of the forty-five states, as well as from Arizona, Oklahoma, and the District of Columbia, Hawaii, Porto Rico, the Philippines, Cuba, Japan, the Canadian provinces of Nova Scotia and New Brunswick, Kamchata, Great Britain, France, Germany, Spain, Russia, Bulgaria, and Norway.

Christian Science Fairly Stated.

Editor of *Pembroke Observer*.

Sir:—From the report of the Ministerial Association meeting published in your issue of October 7, it is seen that the reverend gentlemen selected a subject worthy of their deepest consideration, viz., "Christian Science."

To one, however, who for a number of years has given constant and special attention to the study and practice of Christian Science, it appears that some of the conclusions reached by the Association are incorrect. Will you, therefore, kindly allow space in your valuable paper to review some of the points raised in said report.

It is quite true, as stated in the report, that Christian Science gives a more spiritual meaning to certain words. For instance, it gives a clear and explicit definition of God, and consequently a better conception of Him as divine Love—the author and foundation of all that is real. Similarly, Jesus revealed to the world the nature and essence of God in a brighter light than God's chosen people had before conceived of. Mortals need to be stirred and reformed by vigorous and righteous utterances. Our fellow-beings are yearning to know God as their ever-present, all-powerful Friend, whom the poet has aptly styled "The Great Physician." Few, if any, will say that God is understood and depended upon as fully as He ought to be in the dear relationship of "Our Father," who is now and always has been with us, the omnipresent One "in whom we live, and move, and have our being."

Those who believe in one God should rely upon Him as the only cause and motive power of all that really exists. Can it, for a moment, be assumed that God is the cause of sin? Would it not be quite as unreasonable to maintain that sin has any substance or reality? From what first cause has sin derived its substance and reality? The omnipotence and omnipresence and infinity of Good has been literally accepted by orthodoxy. Then, to remain orthodox, one must abide by the principle of this fundamental statement. The principle would be departed from and it would be heterodox to say that God's perfect man—reflecting the Divine image and likeness—brought a substance called "sin" into the world, or to say that an unknown would-be creator has done so. It is absurd to believe there is another power called the devil and sin, if God is the only power—Omnipotence—All-in-all. The question is: "Was it God's man, created in the Divine likeness, who sinned, or was it a man of dust, a mortal?" Jesus said, "A good tree bringeth not forth corrupt fruit." The water which turns the large wheel is a sufficient motive power for the smaller wheel connected therewith. God controls His universe now even as He did "when the morning stars sang together." It is evident that God's standard of perfection would be trailed in the dust by the claim that His creation, originally perfect and pronounced by Him "very good," could afterwards become very bad.

If such were true, there could be no such thing as unchangeable perfection in God's universe. Yet Jesus said, "Ye therefore shall be perfect, as your heavenly Father is perfect" (Matthew, 5 : 48, R. V.). In other words, through obeying the sacred injunctions laid down by the Master, it will at length become clear to our apprehension that the eternal perfection of God and man exists here and now—"the kingdom of heaven within you."

Referring to "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, and the quotation therefrom in the ministerial report, that "man is incapable of sin;" it is necessary to read the context, from which it is seen that God's man is referred to, not mortal men. This is clearly what John the beloved meant, when he said, "Whosoever is born of God doth not commit sin; . . . he cannot sin because he is born of God." Christian Science takes the Scriptural ground that because sin and matter are not of God—Spirit—they have no right to exist, and cannot exist as part of God's kingdom; hence they belong only to mortal consciousness, and will eventually be cast out and destroyed.

Sin is a murderer, whose action will cease only when mortals learn to cease sinning. "And ye know that no murderer hath eternal life." Eventually it will be found that divine Love actually reigns supreme over all. Is "such teaching fraught with moral and spiritual danger"? Christianity demands reasonable and scientific conclusions only. It is a grave injustice to say this "leads to looseness in morals," even if all do not, as they should, live up to the teachings of Christian Science. A Methodist would persistently deny the statement that any inconsistency in church members is due to a lack in John Wesley's highest ideals of the Christian life. The teachings of Christian Science strictly inculcate the highest degree of morality.

The report states that "Christian Science denies the efficacy of the atonement for the forgiveness of sin." This statement is the opposite of the Tenets prepared by Rev. Mary Baker Eddy for the use of the Christian Science Churches. These tenets distinctly acknowledge "God's forgiveness of sin in the destruction of sin," and "the atonement as the efficacy and evidence of divine Love, of man's unity with God, and the great merits of Jesus, the Way-shower."

The term "personality" as applied to God, seems to be thought appropriate by some. Christian Scientists have no objection to that conception, provided "personality" be understood to mean Infinite Omnipresent Being,—Divine Love.

The question is asked, "To whom do Christian Scientists pray?" I reply, they pray to "Our Father which art in heaven," as the great Teacher taught how to pray. Our Lord's Prayer, spiritually interpreted, heals the sick.

The report points out that the success of Christian Science is due to two causes (1) "Mental weakness" (2) "Its cures." As to the first Festus said, "Paul, thou art beside thyself," others said, "These men are full of new wine." As to its cures, the report says, "It is true that Christian

Science has produced a large number of cures, especially of nervous disorders." From my extensive reading, and from personal information, I feel safe in saying there are very many more patients healed by Christian Science, from dyspepsia, rheumatism, fevers, tumors, and cancers, than there are from hysteria or other nervous symptoms. It is quite true, as the brethren have stated, that "this is not a sufficient reason for a Christian becoming a sceptic." The fact is, however, that no one ever becomes a sceptic through reading "Science and Health with Key to the Scriptures." On the contrary, many infidels have been reclaimed by it, and many who formerly seldom read their Bible, now love it and use it as their daily companion. The first tenet of Christian Scientists is, "As adherents of Truth, we take the Scriptures for our guide to eternal Life." That leaves no room for scepticism.

"The prayer of the righteous man" is good and avails much. His efforts are a step in the right direction, and should not be spoken of in the same breath with hypnotism, "even though he has never heard of Christian Science." When he does hear of it, however, and unites his faith with understanding, he will be far better equipped for doing the Master's work.

The statement is made that "Christian Science asserts that flesh is an illusion, and pain is an imagination." Now, if we read the full definition of "Flesh," in the Glossary of Science and Health, and then read John, 6:63: "The flesh profiteth nothing," we find the two statements harmonize fully. It was a difficult problem for the Jews to understand Jesus' statements about the "flesh." (See John, 6:52). As to pain being an "imagination," Science and Health says (p. 457): "Sickness is neither imaginary nor unreal,—that is, to the false sense of the patient. It is more than fancy, for it is solid conviction. It is therefore to be dealt with through right apprehension of the Truth of Being."

The report says, "Also our medical men produce innumerable cures every day." We may add, that they are, we believe, striving to reach a higher ideal in the art of healing disease and alleviating suffering. Christian Scientists have no quarrel with them, nor with the ministers of the Gospel, who would, if they understood Christian Science, rejoice "to imitate Christ by cleansing lepers, restoring sight to the blind, causing the lame to walk, and raising the dead." It may be properly remarked that before attempting to raise the dead, large experience is requisite in healing minor cases of disease, and in the destruction of baneful habits, such as the appetite for liquor and tobacco; also in overcoming selfishness and sin, whatever form it may assume.

When the student of Christ's religion learns through glad experience "in living more fully up to the teachings of our Lord" that Christianity has a right to a Science to declare and prove the Truth, then he will know that he has indeed found Christian Science, and that this name is by no means "a misleading term," but that it is, as the words imply, the truth of Christ made practical in the salvation of mankind from sin, sickness, and death.

Yours respectfully,

W. SPAULDING.

In the *Pembroke Observer*.

What and Where is Heaven.

THE true answer to the question, What and Where is Heaven? is very important to human progress, much more so than we can believe without thinking deeply.

To those who accept Jesus as the Christ, his words are conclusive, an all-sufficient answer to all questions, upon any and all subjects. This question was as interesting and important when Jesus was on earth as it is to-day. When the Pharisees asked him, when the kingdom of God should

come, he answered them and said, "The kingdom of God cometh not with observation: neither shall they say, Lo here! or, lo there! for, behold, the kingdom of God is within you."

The revelation of the true idea of this kingdom of heaven was indeed a most important part of his mission on earth. He was here to reveal God to man and man to himself; to reconcile man to God, it was necessary to give him a true understanding of his true nature and of his relation to the things around him. The cry of the Baptist, in the very beginning of his mission as the forerunner of the Christ, was "Repent ye: for the kingdom of heaven is at hand."

Jesus made the same declaration, when his ministry began, saying, "The time is fulfilled;" and began "preaching the gospel of the kingdom of God;" thus we see that the "where and what" of this kingdom, was what he was trying to show to blind eyes and deaf ears, all through his ministry; not only by his words, but by his works, life, death, and resurrection. Yes, and by the "many infallible proofs" he gave them before his ascension, and by that last and most glorious demonstration.

Speaking of himself on one occasion Jesus said, the son of man is in Heaven. He was talking with those around him, yet he was then and there in heaven. Then if it was a place, those around him were in heaven also, but if we recall his scathing denunciations of those who sometimes surrounded him, we know they were far from being in the kingdom that was at hand. Indeed, he said they shut it up, and neither went in themselves, nor suffered those who were entering to go in.

The Apostle Paul said, "the kingdom of God is not meat and drink; but righteousness, and peace, and joy in the Holy Ghost."

From these passages we see that it was not an outward place, but a state of mind, a condition of thought. That it was there and everywhere, for it is truly conceived to be the abode of God, dwelling in God, Good, Life, Truth, and Love.

Is not God everywhere? "Whither shall I go from thy spirit? or whither shall I flee from thy presence? If I ascend up into heaven, thou art there: if I make my bed in hell, behold, thou art there. If I take the wings of the morning, and dwell in the uttermost parts of the sea; even there shall thy hand lead me." "Do not I fill heaven and earth? saith the Lord."

How, then, shall we best understand what the kingdom of heaven is? It is the kingdom of Love. We enter it by loving, divinely loving; how? you ask. The very embodiment of divine Love has answered this question perfectly, time and again. The whole life of Jesus was an epistle of Love. Study his words and works, there you will get the true idea of what constitutes the kingdom of heaven in this world and in the whole universe. If that lesson is supplemented by the study of "Science and Health with Key to the Scriptures," and you yield the heart and life to the power of the Spirit that emanates from this true idea, therein expressed with power, it will lead you into this kingdom of Love, right here on earth. You will have an abundant entrance into the fields of Paradise; for Jesus came to give you this Life more abundant, to show you just where this beautiful kingdom is and how to enter it.

Only think of it. Heaven is surely "within you." The great Physician who "knew what was in man," certainly has diagnosed his case correctly, how can it be otherwise when it is your Life? God, Love, is your very Life. Where God is, Heaven must be. It is the pearl of great price. Recognize this as a fact, and love will begin to flow out of your heart in a living current that will bless all those around you; and above all it will be a present personal blessing to yourself. You will know by practical experience, that it—the kingdom of harmony—is within

you, and as soon as this great discovery is made, Lo! you will see it all around you! And the pearl of great price, thus sought, is found! Worth more than all the world.

In your own heart there will be a wondrous peace, even that peace of which you have heard the saints of all ages speak; "the peace that passeth all understanding" to those who know it not.

In your home this peace will become manifest; in your business, more harmonious conditions will appear, and ultimate success be assured. You will find your friends growing more loving and that you have no enemies.

Is not all this harmony most devoutly to be wished? Is it not a grand necessity of existence to know that true humility and love will quickly show you where and what Heaven is? You will then understand why a man is willing to sell all that he has, to gain this pearl.

How pernicious the teaching that one must die to enter this realm of Love, when Love is Life, and Life is God, and God is here. Never in all the ages to come, will any one enter heaven except through Love! It is Christ—the living presence and power of Truth, and Life, and Love—that opens heaven. Every man makes his own heaven when he lets go his selfishness, envy, hate, cruelty, and faithlessness, and yielding to the spirit of Love, Truth, and Right, proves the perfection of the Golden Rule in his own daily life. There is no other way. Think then of the awful error of the deceived mortal who thinks he has only to profess a certain belief to get to Heaven!

Take your elder brother's directions for entrance into his and our Father's house, our home, and native country.

"Love your enemies, bless them that curse you, do good to them that hate you, and pray for them that despitefully use you and persecute you; that ye may be the children of your Father which is in heaven; for he maketh his sun to rise on the evil and on the good, and sendeth rain on the just and on the unjust. For if ye love them which love you, what reward have ye? Do not even the publicans the same? . . . Be ye therefore perfect, even as your Father which is in Heaven is perfect."

Are not these commands for God's children here and now? Certainly they are.

There is one perfect standard, it is perfection, to be worked for and attained, by all. Jesus would not have given an impossible command. If this perfection is not attained on earth, it must be attained hereafter; to be immortal, man must be thus perfect.

Is it not then certain, that there is neither escape from sin nor suffering in passing through what men call death? While the belief of sin lasts, suffering is inevitable, for it is the self-imposed suffering of sin itself, and only expires when sin dies—expires.

Behold, then, the terrible folly and sin multiplying itself in precipitating death in order to escape from itself, sin pursuing sin even unto death, making only a harder problem to be worked out in the future; and then only to be worked out by the identical process that would have been supremely effective right here, on this plane of thought and action, yielding self-will and self-love to love for God and man, yielding error to Truth.—*Dayton (O.) Herald.*

Critic Answered.

Editor *Christian Index*.

Dear Sir:—A recent article in your paper by Rev. Bruce Brown, of Denver, Col., makes certain statements in reference to Mrs. Eddy and Christian Scientists, which are so untrue in their nature as to require an explanation from the Christian Science standpoint.

The article objects to the position taken by Christian Scientists in reference to their non-taking of medicines, claiming that the Scientists are inconsistent in eating and

drinking, while at the same time denying the power of medicine to cure bodily ills.

In reply to this criticism, I know of no better example to quote than that of Jesus Christ, the one whom all Christians follow, and who did all things as guided by the Father. The record shows unmistakably that Jesus and his disciples ate food, wore clothes, and fulfilled all the essential conditions of this seeming material existence; yet the records also prove beyond all question that Jesus "healed the sick," "cast out devils," did "many wonderful works" without medicine, and sent his disciples to do likewise.

Our critic infers that Christian Scientists claim that there is no such thing as hunger, no such thing as sickness, no pain, etc. Perhaps if he were better acquainted with what Christian Science does teach, he would find that the things to which he takes exception, have no place in Christian Science, but emanate from the popular misconception as to its teachings. Christian Scientists are striving to bring out the best possible results. In common with other Christians we desire to attain that condition of ultimate perfection, in which we will neither live to eat, nor eat to live. We do not claim to have overcome all material conditions as yet, though we see clearly that perfection can never be gained by clinging to the imperfect, material conditions as the only reality. As Paul says, *Philippians*, 3:12-14, "Not as though I had already attained, either were already perfect: but I follow after, if that I may apprehend that for which also I am apprehended of Christ Jesus. Brethren, I count not myself to have apprehended: but this one thing I do, forgetting those things which are behind, and reaching forth into those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus."

Now, we know that Paul had a clear sense of the realities of life. He caught glorious glimpses of man's birth-right, which is spiritual perfection. He had so much of the Christ-like sympathy and love for his fellow-man that he was enabled to heal him of sin and sickness without the drugs, which our critic seems to think are so essential to healing. Christian Scientists have no quarrel with any school of medicine or theology. We concede to all the right to work out their own salvation, and we ask in return, and insist upon, the same privilege. Like Abraham, we can say, "Let there be no strife, I pray thee, between me and thee, and between my herdmen and thy herdmen; for we be brethren."

Our critic has challenged Christian Scientists to furnish one proof of a cure of either cancer, tuberculosis, or pneumonia. I have in my possession well authenticated proofs of the healing of these, and various other so-called incurable diseases, and if the gentleman is honest in the position he takes, I will gladly furnish him with said proofs. Furthermore, I desire to state as an absolute fact that a large per cent of the Christian Science adherents have been healed of what the doctors pronounced incurable diseases, thus proving that "God's hand is not shortened that it cannot save."

Wireless Telephony.

At the recent annual session of the British Association for the Advancement of Science it was announced that experiments in wireless telephony have proved that it is possible to convey audible speech without wires six or eight miles over the sea. William H. Preece, who made the announcement, is consulting engineer to the British Post Office and the colonies. He has had a lifelong experience in electrical engineering, and is the author of text-books on telegraphy and telephony.

The wireless telephone is made practicable by the inven-

tion of Mr. Walker Moseley, a well-known English electrical engineer. The difficulty that has stood in the way of the use of the apparatus of wireless telegraphy for telephony is that wireless telegraphy requires an electric current much stronger than any telephone transmitter hitherto invented will stand. Mr. Moseley has made a transmitter that will utilize fifty times more current than any other now in use. "I take," he says, "a wooden hemisphere, like a salad bowl, and cut about twenty-five holes through it, in each of which I fix a diaphragm two inches in diameter, each diaphragm having one of my new microphones in its centre." The electrical current for this new telephony is carried, not through the air as in the case of wireless telegraphy, but through the sea or the ground. From the transmitter a wire runs out for a hundred yards or more a few feet above the earth. This wire is the "base." Now, an electrical current always tends to return to its starting-place, either through the earth or through the air. The current engendered by speaking into Mr. Moseley's transmitter, after passing along the wire to the other end of the base, passes through the earth on its way back. "But," as Mr. Moseley explains it, "its way back is not wholly straight. Many waves describe parabolic curves, limited in circumference only by the length of the base. With a base of one hundred yards these electrical waves will reach considerably over a mile away, so that, if there is a receiving apparatus to tap them at that distance, I can speak to any person stationed there."

In telephoning at sea insulated wire is paid out from the ship, forming a very satisfactory base. A very long base, moreover, can be secured in this way. The system will very possibly replace wireless telegraphy for use on shipboard, as it is much cheaper than the Marconi system, and is even more efficient.—*The Great Round World.*

Day of Thanksgiving.

STATE OF NEW HAMPSHIRE.

By His Excellency Frank West Rollins, Governor.

Proclamation for a day of Public Thanksgiving and Praise.

I hereby appoint Thursday, the twenty-ninth day of November, as a day of joyful thanksgiving to Almighty God, our Heavenly Father.

The husbandman has been rewarded with bounteous harvests; labor has received satisfactory remuneration; manufacturers have found a ready market for their products; success has rested on our arms and prosperity has smiled upon our country; therefore, let us give thanks to God.

Before another year has rolled around and this time-honored festival has again drawn near, let us strive to make even stronger the reasons for our thanksgiving. Let us broaden our horizons. Let us devote more of ourselves to our fellow-men and less to self-seeking. Let us offer to the world a willing hand. Let us face our duties with smiling countenances. Let us show that devotion to our neighbor, to our state, and to our country, which is the truest patriotism.

Given at the council chamber in Concord, this ninth day of November, in the year of our Lord one thousand nine hundred, and of the independence of the United States of America the one hundred and twenty-fifth.

FRANK WEST ROLLINS, *Governor.*

By His Excellency the Governor, with advice of the council.

EDWARD N. PEARSON, *Secretary of State.*

It is easy to know which law we are obeying: for any law which we magnify and keep through pride, is always the law of the letter; but that which we love and keep through humility, is the law of the Spirit: and the letter killeth, but the Spirit giveth life.—*RUSKIN.*

Testimonies.

Quickly Restored to Health.

Among my first recollections as a child were of seeing my brother in bed, a great sufferer from headaches. His sufferings made such an impression upon my child-mind that it was not long before I developed the same malady, only in a more aggravated form, which kept me from two to three days at a time confined to my bed, interfering greatly with my studies.

These continued for several years, when other complications arose, and for ten years I suffered with nervous dyspepsia, female troubles, and in fact, I fancied I had every disease known to *materia medica*. Besides taking the medicine prescribed by my physicians, I exhausted every well-known patent medicine that was recommended for my particular case, with no benefit. The more I took the worse I became. My professional duties took me to Europe, where I continued my search for health, which was doubly necessary for me, as my voice meant my living.

It was hard to appear before a public in such a nervous condition, which, according to the old belief, was anything but conducive to successful singing. I tried one physician after another, the baths of Germany, electricity, massage, etc., with the same results. Returning to America I placed myself under the care of one of the leading specialists in New York, gradually getting worse and worse, until life did not seem worth living. A dear friend, seeing my suffering, spoke gently and lovingly of Christian Science; but my ears were closed. I had lost confidence in everything and would not listen to her, only shrugging my shoulders in silent contempt for the idea. She wisely said no more. However, the seed had been sown, but I did not realize it until later, when returning from a professional tour in the United States, I came back completely broken up and discouraged beyond measure. So when this dear friend, upon seeing me again, said that I did not need to suffer, I said, "Do you mean to say that Christian Science can cure me?" She replied, "Yes." "Well," I said, "tell me where to go and I will gladly try anything; for life is not worth living in this condition." She gave me the address of a dear, loving Scientist, and from the moment of my first treatment I never doubted. In one week I was completely healed of these troubles, and could eat anything and everything, which I had not been able to do for ten years; in fact the half has not been told. I have found Christian Science a wonderful help in my singing. Whereas I once depended upon stimulants (as I am sorry to say many of my profession do) for courage and support, I now know that God is my inspiration and my strength; that I reflect the one Mind, the one Harmony which is Divine. Whereas I never read the Bible before, I can say with a heart full of gratitude that the Bible and "Science and Health with Key to the Scriptures" are my constant companions.—C. P. K., New York, N. Y.

Proof of God's Presence and Power.

I have recently been healed in Christian Science and have known of some of the wondrous work done in God's name by Christian Scientists, and here is proof of the omnipotence and ever-presence of divine Love.

About 5.30 on Saturday afternoon, August 18, 1900. I went bathing at Crystal Beach, Lake Erie, and running rapidly from the bath house across the beach to the water. I felt something penetrating and adhering to the sole of my right foot. It was a small block of wood about three inches square and in it, points up, were two small rusty wire nails about one inch apart, the points projecting at least three fourths of an inch through the block. As I was running rapidly, I could not stop until three or four

more steps had been taken, when the block of wood was found stuck fast to my foot and flat up against it, the two rusty nails in full length. It was with a great effort I managed to pull it off. I went into the water and had my bath and experienced little pain and no trouble till on my way home. When I took off my shoe, there was a little fever and some pain. I went to bed and slept two hours. About midnight I awoke to a sense of horrible agony. My foot was badly discolored, inflamed, and feverish, and shooting, piercing pains were reaching to my hip. I was bathed in my own tears and out of my senses with the agony by half past one o'clock, when my wife went for a healer. About three quarters of an hour after she left me he was at my side. In about fifteen minutes I was sleeping sweetly, and that was the end of my suffering.

In the morning, Sunday the 19th of August, my healer called again and told me I would be able to go to church. I was astonished, but I read in the very first Bible quotation in the lesson for that day, Isaiah, 30 : 20, 21 : "And though the Lord give you the bread of adversity, and the water of affliction, yet shall not thy teachers be removed into a corner any more, but thine eyes shall see thy teachers; and thine ears shall hear a word behind thee, saying, This is the way, walk ye in it." The command was plain to me to go to church, so by getting a phaeton and a heavy cane, I managed to get into the nearest pew in church, only the toe of my right foot being in my slipper.

During the beautiful service, my foot unconsciously slipped all the way into my slipper. At the end of the service I was astounded to find I could bear my full weight and walk on both feet without any sense of pain. Monday and every day since I have performed my daily work without any inconvenience. Wednesday the 22d I bought and wore a new pair of shoes, singing, mean time, praises to God for "His great goodness and loving-kindness to us and to all men." Do you wonder that I am going on investigating this "Truth that makes us free?"

I. H. QUINBY, Buffalo, N. Y.

Chronic Disease Healed.

It seems to me that no one has greater reason to be thankful for the teaching and practical application of Christian Science than I have. Having taken over-doses of calomel during a severe sickness when a child, I was left with a nasal trouble which developed into what physicians call atrophic catarrh. I understand that to be the worst form of that disease. I was unable to breathe any dust or cold air without great suffering. My physicians told me that I never could be cured as long as I was in my present occupation, as they said the dust was bad for me. Being a flour and feed dealer with a well-established business, I could not change my occupation without a large financial loss. For thirty-five years I never was free from this trouble, and for over twenty years I had not had one unbroken night's sleep.

It is often said by persons who have not investigated this subject, that Christian Science might cure nervous troubles, but never could cure chronic cases. I wish to say that I am a living witness to the healing and saving power of this Science. It certainly cannot be denied that a disease of thirty-five years' standing must be classed as chronic if it ever could be. For twenty-five years I had kept a continual fight with it. I bought nearly every remedy I could find. I employed the very best physicians, and it all ended in failure.

I was treated by a Christian Scientist for six weeks (mostly absent treatment) and immediately took up the study of "Science and Health with Key to the Scriptures." I also attended every Christian Science meeting, which I have found are a very great help to one who is under treatment. By faithfully following the teachings to the very best of my understanding I began at once to improve, and

while my healing was slow, and at times I had many discouragements which obliged me to work more diligently, victory came at last. I am now in perfect health and am a wonder to my friends who knew of my former condition. This teaching has given me a desire for Bible study in which before I had no interest. Language cannot express my gratitude to our Leader for the lessons learned in the study of her various writings, most of which I have.

When one who was in my condition can be helped as I have been in every way, surely others need not hesitate, no matter what their condition may be.

F. G. M., Rockford, Ill.

Healed by Christian Science.

On account of what had been pronounced quick consumption, the doctors declared that I must give up my home in Chicago and go West. After remaining there six years and being benefited—but not cured—I wished to return to Chicago, and consulted three of the best specialists in that city, but they all insisted I could not live there.

In this hopeless condition I was informed that Christian Science could heal me, and after six weeks' treatment I knew that I could live in a damp atmosphere and be well.

It has been five years since I was healed, and I am beginning to realize that the way to show my gratitude and appreciation is by trying to live according to the instructions given us in "Science and Health with Key to the Scriptures."—A. Y. ELLIOTT, Chicago, Ill.

Christian Science in the Schoolroom.

I am very grateful indeed for what Christian Science has done for me. It has helped me over many rough places and has been "a pillar of cloud by day and of fire by night, leading up to divine heights" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 558).

In my work among little children as their teacher I find Christian Science invaluable. The aches and pains that so often come up during the school session are banished after a few moments' talk. They take up the thought of God's love and protection so simply and sweetly that it is often a rebuke to grown-up children.

G. N. L., Chicago, Ill.

A Letter to Mrs. Eddy.

Dear Mrs. Eddy:—Your beautiful gift to my dear little girl is most gratefully received, and I am only sorry that she was not here to open and admire the choicest one of her wedding presents. But we shall have the most of her new possessions carefully packed and sent to New York in season for the steamer on which she is to sail for Havana, and then she will tell you for herself how happy and proud she is that you thought of her on her wedding day.

But there is something more that I want to thank you for, dear Mrs. Eddy. Some influence—above and beyond us—kept close by my child the last days of her life at home. She lost every trace of "nervousness" and went about among us in a sweet serenity that was a lesson to us all. This influence sustained and soothed her, so that she went from her mother to her husband and the untried life before her in absolute tranquillity.

Though so far I have not been a Christian Scientist, I acknowledge with sincere belief and untold gratitude, the Power that, all unknown to us, overshadowed and blessed her. And since you remembered her outwardly as you did, I know well who it was that watched over the sweetest and dearest girl that ever blessed a mother!

Most sincerely and gratefully yours.

Concord, N. H., November 15, 1900. S. B. P.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Christian Science at an Episcopal Congress.

THE twentieth meeting of the Church Congress of the Episcopal Church of the United States occurred at Providence, R. I., last week, commencing at eight o'clock on Tuesday evening, November 13, 1900, at the Mathewson Street Methodist Episcopal Church.

The sessions of this Congress were for the purpose of discussing important subjects by the leaders of thought in the Episcopal Church and in some cases by distinguished laymen. A number of specially prepared papers on various topics were read. Among the important events of the occasion was an able and interesting sermon by Bishop Potter of New York.

Of the distinguished persons present and participating, we note the Rev. Henry Codman Potter, D.D., Bishop of New York; the Rev. William Lawrence, D.D., Bishop of Massachusetts, and successor of Dr. Phillips Brooks; Rt. Rev. Dr. Sidney Partridge, Bishop of Kyoto, Japan; Captain A. T. Mahan, U. S. N.; Mr. Hamilton Mabie of New York; Rev. Charles C. Tiffany, Archdeacon of New York; Rt. Rev. Dr. W. C. Doane, Bishop of Albany; Bishop Randolph of Southern Virginia; Bishop Hall of Vermont; Rt. Rev. William N. McVickar, Bishop of Rhode Island; Rev. E. S. Rousmaniere, Rector of Grace Church Parish; Rev. Frederick J. Bassett, Rector of the Church of the Redeemer; Rev. Arthur M. Aucock, of All Saints Memorial Church; Rev. E. Winchester Donald, D.D., Rector of Trinity Church, Boston, and successor to Dr. Brooks; Rev. Dr. William R. Huntington of New York; Rev. Dr. Thomas R. Harris, Scarborough, New York; Rev. Dr. Henry S. Nash, of Cambridge, Massachusetts; Rev. Dr. C. W. E. Body of New York; Rev. Dr. Charles H. Babcock, Providence; Rev. Dr. William Prall of New York; Rev. Dr. J. Lewis Parks of New York; Rev. Edgar G. Murphy of Alabama, and many others.

Among the non-ecclesiastics present we note also the names of William N. Polk, M. D., Dean of Cornell University; Prof. Theodore F. Seward of New York, who read a paper on Christian Science; W. A. Purrington, Esq., of the New York Bar, lecturer on the relation of law to medical practice in the University and Bellevue Medical College Hospital and in the New York College of Dentistry, and counsel for the New York State Medical Association; John Parks Leavitt, also a member of the New York Bar, and James H. Canfield, LL.D., of New York.

From the *Providence (R. I.) Journal* of Wednesday, Nov. 14, 1900, we extract the following mention of the session of the Congress which discussed the subject of Christian Science:—

"Christian Science was attacked and defended in a masterly manner at Mathewson Street Methodist Church last evening in the presence of an audience which numbered between fourteen and fifteen hundred people, which filled the auditorium to its utmost seating and standing capacity, and was pressed out into the halls by the mass of people within. The occasion was the first discussion of the twentieth annual Church Congress of the Episcopal Church of America, and the interest in the topic and the renown

of the men who were to argue the matter were the loadstones for the immense gathering. The largest hall in the city would not have been too capacious for those who wished to be present at this opening discussion.

"The subject was handled without gloves by every speaker and writer on the programme. It was called all sorts of names from a religion to a cult, and one speaker persistently referred to it as Eddyism. Yet the debate was good-natured throughout, and the debaters touched the subject as wittily and brilliantly as they did logically. The half-dozen speakers and writers had each a different point of view, according to their professions of philosophical beliefs. It seemed a bit unfair that only one of the half dozen should be an avowed Christian Scientist, as well as the first on the programme, a position in which he was forced to outline the tenets of Christian Science and hold it up as a target for the flings of the others, yet this single speaker, Theodore F. Seward of New York, won his audience at the outset and proved quite equal to the burden laid on him.

"Rev. Dr. William R. Huntington of New York touched Christian Science from the standpoint of the orthodox churchman; William M. Polk, M.D., a brilliant medical man, from that of the physician, dwelling mainly on the claims of the Christian Scientists as healers; W. A. Purrington of New York, a well-known lawyer, from the point of view of medical jurisprudence; Rev. Dr. E. W. Donald of Boston, surprised his hearers by conceding rather more to the Christian Scientists than the others were willing to allow them. Altogether, the discussion was an intellectual treat of a kind Providence has not often the privilege of enjoying."

Rt. Rev. W. N. McVickar presided at the session in the absence of Bishop Clark.

As above stated, Prof. Theodore F. Seward of New York, who is a member of the Episcopal Church, was the first speaker. His presentation of the subject was concise, logical, and able. Through Mr. Seward's courtesy we are permitted to publish his address in full. It follows this account.

Mr. Seward was followed by Rev. William R. Huntington, D.D., of New York, from whose able paper we make brief excerpts:—

"There is said to be somewhere in existence in one of the examinations for church service, a question and answer which reads as follows: '*Question*.—How should we treat Presbyterians? '*Answer*.—We should treat them kindly, but not listen to their foolish talk.' In discussing Christian Science I think something of the same sort might apply.

"As we have already been assured, the distinguishing feature of Christian Science is idealism. It teaches the divine oneness of the divine, and the absolute nothingness of all else. I confess that if I had to choose this doctrine and the offerings of the materialists in the last forty years, I would choose Christian Science. In consideration of the cruel manner in which the materialists have assailed the church, it is not strange that there should have sprung up this quaint protest. . . .

"I would urge my fellow-ministers to take pains to recognize the modicum of truth there is in Christian Science. Guard those you teach from taking the mere immaterial for the ideal. If anything is certain this is certain: That if the Church of Christ, Catholic, had done its duty, the Church of Christ, Scientist, had not been."

Dr. Huntington was followed by William N. Polk, M.D. Dr. Polk, in the course of his remarks, said:—

"The history of medicine shows that man's conceptions of the limits between the material and spiritual have shifted. The material has made serious inroads on the territory formerly held by the spiritual. Medicine, like all material

agents, has its agents, and we, therefore, ask whether Christian Science occupies any field not already covered by us. Medicine has tested Christian Science. The first step was to place it. We found it to be nothing new, but a variety of that form of spiritism known by us as psychic therapeutics. The work done throughout the world by hypnotism or suggestion is the same done by Christian Science."

(The claim here made by Dr. Polk is being so generally made by the medical profession as well as some theologians and others, that we cannot permit Dr. Polk's remarks to pass unnoticed. With due respect to the doctor and his views, we are impelled for truth's sake to deny his definition of Christian Science, or his comparison of it to the methods of hypnotism or suggestive therapeutics. It is unfortunate that he should wish to stand before a gathering of the kind in question and make so unwarranted a statement. It is quite safe to say that there are now more than a million people, many of whom have as high an order of discernment, understanding, and power of analysis, as any to be found, who, speaking from their own investigation, knowledge, and experience, know that there is no relationship or analogy whatever between Christian Science and hypnotism or suggestive therapeutics. They know this with as much certainty as they know any other fact. Many of these persons are not Christian Scientists, but have so far investigated and received the benefits of its system of healing that they have definite knowledge upon the subject. The inseparable gulf between Christian Science healing and the kind of healing referred to by Dr. Polk is this, that the true Christian Science healer goes directly to God, the Supreme Being, in deepest and most devout prayer, setting himself and his own mind absolutely at naught and relying on God for the healing with the implicit faith of the little child, coupled with the understanding of the adult who has been instructed therein; while the mental suggester or hypnotist depends wholly on the power of the human mind, which he believes to be resident in himself, for his healing results. Broadly, plainly, but truthfully speaking, the difference is between the healing taught and practised by Jesus of Nazareth and the imitation thereof by the ancient necromancers and soothsayers. This fact the world will yet learn, and must learn. We therefore say to our brethren of the churches, in all sincerity and candor, that if they wish to take into their churches the true method of Christian healing, they must thoroughly inform themselves as to Christian Science and clearly and resolutely distinguish it from hypnotism, or other methods which rely on any power apart from God.)

Dr. Polk was followed by Mr. W. A. Purrington, who treated the question from a medico-legal point of view. Candor obliges us to say that Mr. Purrington's position—legally speaking—if he is correctly reported, is utterly untenable. His position is at variance with that of courts of the highest authority, including the Supreme Court of the state in which this convention was held—Rhode Island.

In the case of the State *vs.* Mylod, the Supreme Court clearly recognizes the system of healing through Christian Science as both legal and moral, not only by the necessary effect of the decision, as a whole, but in express language as follows:—

"Prayer for those suffering from disease, or words of encouragement, or the teaching that disease will disappear and physical perfection be attained as a result of prayer, or that humanity will be brought into harmony with God by right thinking and a fixed determination to look on the bright side of life, does not constitute the practice of medicine in the popular sense."

In the case of the State of Ohio *vs.* Evans, Judge Hollister, passing upon the question of the constitutionality of Christian Science practice, used the following language:—

"The defendant, on being asked to define Christian Science, said:—

"Christian Science is the word of God; it is the practice of Truth which destroys error; it is the life which Jesus asked of us to live, and follows his example in accordance with his command. He says: 'Go ye into all the world, preach the Gospel, heal the sick, raise the dead, cleanse the lepers,' and in obedience to this command, when I was asked by the deceased, I obeyed, and if this jury, or any one in this room, any person whatever, persecutor or friend, enemy or any one, comes to me and asks the same, I cannot but obey."

"From this and other expressions in the record, it is clear that Christian Science is a kind of religious belief."

"Freedom of thought and worship in matters of religion is a birthright of every citizen, and the Legislature cannot take it away or abridge it in any way. It is true that if any practice permitted by any form of religion is against good morals, as, for instance, the polygamy of the Mormons, the people, through their agents, the General Assembly, may protect themselves, and it is doubtless also true that similar protection might be had against any practice considered by the majority to be harmful to the public health. But it must be borne in mind that the claims of power to heal by means regarded generally as miraculous is not confined to those professing belief in Christian Science."

"It is well known that there are many persons in this country, not of this peculiar sect, who devoutly believe that bodily infirmities may be cured by contact with the bones and relics of deceased persons whose lives were of extraordinary holiness. Can it be that the Legislature had such persons in mind, and intended by this legislation to punish the custodian of such articles, if, perchance, he charged a compensation or accepted a gratuity to be expended in their care and preservation? But if this act applies to one class, it must also apply to the other. Is it not most pertinent to assert that if the Legislature had intended to interfere in matters of religion, even if the case were one most proper for interference, it would have plainly said so, and would not have left its meaning to be made the subject of learned arguments and to be declared by judges with common human failings and limitations?"

"The Court is of opinion that the law in question does not include such acts as the defendant is charged with having committed, and, for all the reasons given above, the judgment of conviction is reversed."

Mr. Purrington's position is likewise in conflict with views repeatedly expressed in legal publications of high respectability, as well as various *nisi prius* courts before whom the constitutional question discussed by Mr. Purrington has come.

Law Notes, a legal periodical of good standing, published in Northport, N. Y., in its number for November, 1898, reviewing the question presented in the case of the State *vs.* Mylod, as well as the general question of Christian Science practice, contains the following concluding statement:—

"It cannot safely be asserted, however, that Christian Scientists are charlatans. If human testimony is worthy of any credit real cures have been accomplished by them, and at the very least substantial peace of mind has been brought through their agency to sufferers pronounced beyond the powers of ordinary physicians. The positive worth of the results achieved by Christian Science is not to be set aside dogmatically or contemptuously; but, even if the doctrine is pronounced a groundless superstition, its believers have a constitutional right to hold and follow what seems to them a system of truth. The law cannot afford to approach the subject in a narrow or intolerant spirit. No one has a right to judge another's beliefs. It is believed, therefore, that the result which the Rhode Island court was able to reach was a most fortunate one, and more in har-

mony with the spirit of our institutions and of the age than that which the Supreme Court of Nebraska felt compelled to adopt under the statutes of that State."

Over against Mr. Purrington's dictum, we are glad to place the following statement by the Hon. William G. Ewing, who, at the time he made it, was one of the judges of the Superior Court of Chicago. His remarks, however, were not based upon any question coming before him officially, but were spoken by him out of the depths of his own knowledge and experience, and are entitled to respect and value accordingly:—

"I am persuaded that the dignified course of Christian Scientists everywhere; their constant exhibition of the courage of their convictions, and the consonance of their lives and professions to the teachings of Scripture are by degrees, but certainly, winning the respect, confidence, and conscience of the law-making and law-administering powers; and after all it is not so much the statute, or letter of the law, that gives protection, as the moral sentiment of the people touching the *right* to protection. I have no doubt that the time is not far distant, just how far will depend much upon ourselves, when the legal right to practise Christian Science mind-healing will be as freely and universally conceded as is now acknowledged the right to preach the gospel."

We quote also from the language of a lawyer of many years' experience in the practice, who had also been on the bench, and who in answer to certain questions propounded to him relating to Christian Science practice, in part, said:—

"Do you consider the practice of healing the sick through mental, psychical, or spiritual means, without drugs, a vital part of the Christian Religion as founded by Jesus Christ?"

"If I did not consider the practice of healing a vital part of the Christian religion as founded by Jesus Christ, I should not insist upon the legal aspects above set forth. I would prefer rather to accept the healing efficacy of the medical profession. I lay special stress, however, on the words 'spiritual means' used in your question, as distinguished from mental or psychical means. I attach no significance to the words 'mental' or 'psychical' unless they are construed to mean spiritual."

"To those who have not made a special and pains-taking study of mental phenomena, there is a vast unexplored region in the mental realm, an 'undiscovered country,' which, sooner or later, legislators, courts, and juries must take cognizance of and investigate, in order to an intelligent discharge of their duties. Already has this field of investigation been touched by some of the courts, and the necessity for further and intelligent research will become greater and greater as the varied phases of mortal mind or mental phenomena press themselves in upon ordinary human affairs. The question of the undue influence of one human mind upon another, whereby the victim of such undue influence is made to perform acts which, independently, he would not perform, is certain to become one of the grave problems of the future."

"Only by virtue of such an understanding of spiritual law as will enable one to rise above the evils of the human mind, and bring into requisition, through such understanding, the all-present divine Power, can the baneful effects of these false mental phenomena be overcome and destroyed. Herein is the one grand distinction between Christian and un-Christian healing. God is the only healer, and true healing can be accomplished only as the divine law of healing is understood and applied. Jesus taught and proved this law, his disciples did also, and their disciples, down to the latter part of the third century."

In view of the situation, then, it was quite in order for

Mr. John Brook Leavitt, a lawyer, to call Mr. Purrington's position in question; which he did, apparently with much acumen and effectiveness. The *Providence Journal* thus speaks of his remarks, which were made at the close of the general discussion, and were, as we understand, entirely impromptu:—

"John Brook Leavitt, a vestryman of St. Mark's, New York City, was accorded the privilege of adding a few remarks to those of the writers and speakers. He said he wanted to plead with the clergymen to recognize the spirituality of Christian Science and the medical fraternity to recognize the value of mental therapeutics, but he had been agreeably surprised to find that these pleas were unnecessary, as full credit had been given by both clergy and the medical fraternity."

"Mr. Leavitt took serious issue with Mr. Purrington's statement that the practice of mental therapeutics was an offence against the law. No license is required by law, said the speaker, and there is no law which compels either a child or adult to take drugs. No indictment can come for thinking or praying. 'I am sorry to see,' he said, 'that Mr. Purrington has tried to play to Christian Science the role Robert Ingersoll tried to play to the Christian Church, taking detached utterances from its books and commenting thereon.'"

Following Mr. Purrington came the Rev. E. Winchester Donald, from whose able remarks we briefly cull:—

"Is Christian Science leading men out of the darkness of unbelief into the light of God? Yes, it is, it is; there can be no doubt about that. You and I know too many Christian Scientists whose lives are blameless to doubt that. But is Christian Science the only religion? Has the Congregational Church had no saints? Are there no more Methodist saints to-day? As a Christian minister with a fine opportunity to observe I am daily humiliated and exalted by the sight of lives which are lived close to God, and I know that Christian Science has no monopoly of true living. Who was the man who first enunciated the doctrine that matter has no existence but a bishop of the Church of God, Bishop Berkeley, and he was welcomed into the church after he had enunciated this new and startling doctrine."

None more readily than Christian Scientists will endorse Dr. Donald's reference to the saintly lives of the class of Christians to whom he refers, and no one upon this earth has ever more tenderly referred to these, and other devout Christians, than the Rev. Mary Baker Eddy, in her public writings as well as in her private discourses. Dr. Donald, however, when he becomes more familiar with Christian Science, will not wish to stand on record permanently as saying, "A fool or a bad man may employ it; a wise man may not be able to use it at all." It is true that those who are accounted wise by the world cannot use this super-material or spiritual method of healing until they investigate to the point of understanding it, and it is equally true that many who are uneducated, according to the world's standard, grasp the spiritual Truth and do wondrous healing by virtue of it. This is easily accounted for because of the greater receptivity to spiritual truth where there is an absence of cold intellectual barriers; but that bad persons can exercise the divine Power to heal is not true, as our friends will learn, when they become better acquainted with Christian Science and its adherents.

The fact that a Congress of the dignity and importance of the one under consideration, recognizes Christian Science as a leading factor in modern religious life, is in itself of vast significance. If it were the insignificant and only-to-be-ridiculed thing that some would have the world believe it to be, we may be sure that it would not have so important a place in the church thought. Let us once

more assure our friends of the churches that Christian Science is not a foe of the church. Running all through the addresses delivered on this occasion, there was a vein of admission that it contained truth. Truth is of God, and whatever is of God is surely not a foe of the churches. Hence by the admission of those who spoke against it, it is not a foe but a friend. It remains for the churches themselves to determine whether they shall recognize it as a helpful evangel and welcome it accordingly, or whether they will, to the extent of their ability, rule it out of the synagogue. The whole trend of recent events is in the direction of its more friendly reception, and one of the striking evidences of this fact is found in the events here recorded.

Mr. Seward's address is as follows:—

There is but one fact in the universe.

That fact is God.

It is a spiritual fact, for God is Spirit.

It is an ethical fact, for God is Love, Truth, Wisdom, Righteousness; the Supreme Source of all morality.

It is an æsthetic fact, for God is Order, Beauty, Sublimity, Harmony; the Supreme Source of all art.

It is a scientific fact, for God is omnipotent, omniscient, and omnipresent Life; the Supreme Source of all Being and all knowing.

The universe is an outflowing from and expression of the Transcendent God—of His Life, Love, Truth, Wisdom, Order, Beauty, Harmony. This expression in the universe is spiritual and not material, for Spirit could not create anything less than itself or opposite to itself. Man, made in the image of God, is also spiritual, and he is given dominion over all things in the universe.

Jesus Christ, Son of God, son of man, came to save the human race by revealing the truth that is expressed in the foregoing statements. If we imagine a vast insane asylum whose inmates are under one and the same delusion, and that a deliverer voluntarily enters the asylum to lead the inmates out of their delusion by the sacrifice of his time, his talents, and even of his life, we have an analogue which will help to bring the case before our minds.

The delusion of mankind was the belief that the external universe is the real universe. Jesus Christ came as a messenger from the real universe—the spiritual universe—to restore the race to its normal condition of sanity. Human as the son of Mary, divine as the Son of God, he touched humanity on both sides—the side of its delusion and the side of its true being. He said, "The kingdom of God is in the realm of your own consciousness. The law of the kingdom is Love. Obey this law, keep the commandments which grow out of the law of Love, and all other things shall be added unto you; your original dominion over the lesser things of the universe will be re-established." But the Prince of Peace who came to reveal the everlasting Father was nineteen centuries too soon for the full accomplishment of his mission. He was not premature in the divine order, for the seed had to be planted, and he came at the right moment for doing that. Simple natures received the Truth at once, and have done so through all the weary years since his time. They were delivered from the great delusion, and were brought under the law of spiritual life. But the organized Church gradually lost the key. Instead of studying and following the law of Love, the church occupied itself in formulating theories which the late Aubrey Moore characterized as "forensic fictions of substitution, immoral theories of the atonement, the rending asunder of the Trinity, and the opposing of the divine Persons like parties in a lawsuit."

I am to answer the question, What is Christian Science?

Christian Science is a return to the spiritual ideals of Jesus Christ, and an effort to reinstate his standard of life. Christian Science is spiritual knowing, or the know-

ing which is gained through the spiritual intuition, and not through the intellect; the knowing described by the divine Saviour when he said, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

Spiritual science or spiritual knowing is knowing that if God is infinite, if He is Spirit, if He is Life, Truth, Love, Beauty, Harmony, then there can be no reality in the universe which contradicts or opposes those qualities. Spiritual knowing or spiritual science is knowing that the human race has not wandered from God. That would be impossible, for each member of the race is an individualized expression of the Supreme Creator, and lives, moves, and has his being in Him. He could not be separated from Him for a moment. All man can lose is his consciousness of God; regaining that consciousness is Christian Science, or spiritual knowing.

This Science or knowing is called Christian Science because it is the conviction of those who use the term that no other kind of science or knowing was recognized by Jesus the Christ. His appeal was addressed wholly to man's moral and spiritual nature. He paid no more attention to the brain and its ways than if the organ had no existence. He recognized the material world only in mastering its conditions and rising superior to its laws. In this he proved himself to be the supreme Scientist of the ages, anticipating the discoveries and conclusions of modern science, which now admits that matter has no objective existence and that Spirit or Mind is the only reality. Professor Borden P. Bowne of Boston University, voices the opinion of a school of philosophy when he says, "A thought-world is the only knowable world; a thought-world is the only real world."

In the limited time allotted to me I can only give the foregoing condensed statement as to what Christian Science is. It is an adaptation of pure Christianity to modern conditions and modern ideas. It is Truth demonstrated. It is Christian teaching revitalized and reduced to practice.

My remaining moments must tell briefly some of the things that Christian Science does.

Concerning the side of the movement which the uninformed public regard as its most important and almost its only feature, namely, the question of healing, I will say but little. On this question the burden of proof does not belong to Christian Science, but to its opponents. Christian Science does heal the sick by the Christ method of realizing the omnipotence of God as Love. Abundant proof is obtainable showing that Christian Science heals both organic and functional diseases, and handles with perfect ease and safety the worst forms of contagious diseases. Now let the theologians bring one sentence from the Word of God to prove that such healing should not be done. If they cannot bring this proof, then let them say why they themselves are not obeying the Master's marching orders: "Preach the gospel," "Heal the sick." There is scarcely a village or hamlet in America that has not one witness or more to the healing power of Christian Science in exemplification of Christ Jesus' words, "The truth shall make you free," and the work is steadily growing in all parts of the world.

And this is not the only challenge of Christian Science to the churches. It says to them, "You have opposed our work hitherto. You have done all in your power to discredit it. Now the burden of proof lies with you again. Search diligently. Investigate thoroughly, and then report the type of life and character you find as the fruit of Christian Science. Do you find its followers to be immoral, dissipated, frivolous, gossipers, mischiefmakers, what St. Paul's letter to Timothy describes as "traitors, heady, highminded, lovers of pleasures more than lovers of God"? Or do you find them moral, meek, striving to know the Mind of Christ and to do the will of God? I have made

this investigation for myself, and must bear witness that they invariably stand for the highest morality and the purest spirituality.

Why has the church opposed this movement? For the same reason that it opposed John Wesley and Methodism; because it judges its followers by ecclesiastical standards and not by the Christ-standard. I have read the books that have been written against Christian Science, and have this to say about them: They are right in condemning what they condemn, but what they condemn is not Christian Science.

Take the question of sin. Those who do not understand the teaching of Christian Science have an idea that it condones sin because it treats it as an illusion, and not as a reality. I ask you, is there anything more awful than insanity, the hopeless delusion of a diseased mind? Christian Science has impressed me with the disastrous nature of sin far more than scholastic theology ever did, for it has led me to consider the law "to whom ye yield yourselves servants to obey, his servants [his slaves] ye are to whom ye obey." Christian Science holds the terrors of the law over the sinner's head more relentlessly than the church does, for it has no forensic scheme of forgiveness to abate one jot or tittle of his responsibility. Sin is forgiven when it is removed, and not otherwise. Christian Science says as Jesus did, "Sin no more, lest a worse thing come unto thee."

One effect of Christian Science is of immeasurable importance. It brings Christianity back to the child standard, where its divine Founder placed it. The essential distinction between Christ's message and that of Buddha, Confucius, and all other founders of religions, is right at this point. They told the children that they must become like their disciples. Jesus told his disciples that they must become like little children. "Verily I say unto you, Whosoever shall not receive the kingdom of God as a little child shall *in no wise* enter therein." Ecclesiasticism and scholasticism have utterly ignored that eternal principle. What is the result? The result is well stated by Professor Roswell D. Hitchcock in these words: "After nineteen hundred years of propagandism, Christianity is now compelled to apologize for Christendom."

Christian Science gives the world a new psychology which meets equally the need of the child and of the philosopher. Its fundamental principles are expressed in five postulates:—

1. God is the only Cause.
2. Spirit is the only Substance.
3. Love is the only Force.
4. Harmony, the reflection of Love, is the only Law.
5. Now is the only time.

This is a psychology of the heart and not of the intellect. Intellect is a dethroned king. Its reign is past. Its successor is intuition—soul-perception instead of sense-perception. Why have some of you read the text-book of the new psychology, "Science and Health with Key to the Scriptures," without understanding it? Because you did not have its view-point. It is written from the point of idealism, or the absolutely spiritual, and you read it from the point of the material and intellectual. It is condemned as illogical; but it expresses the logic of the heart, and not of the intellect. Intellect says that man is a combination of matter and spirit, and must die; Jesus said that man is spiritual and will not die if he obeys the laws of Spirit. He came to abolish death.

Christian Science gives its followers a new enthusiasm in studying the Bible. Why? Because its psychology interprets the sacred writings spiritually, and not materially. It reveals the Supreme Being as a God of pure Love, and not as a combination of Love and vengeance.

The psychology of Christian Science is gradually bringing into its ranks a great company of thoughtful people

who have been repelled from the churches by the unphilosophical methods of scholastic thought. Yet at the same time it attracts multitudes of simple hearts that receive the Truth, without questioning, as a little child. The common people receive it gladly.

Christian Science provides a spiritual home for a class of people that the churches have not only neglected, but practically ostracized, namely, actors and actresses. The dramatic instinct is one of the fundamental elements of human nature. As we all know, its first expression was religious—in the miracle-plays and passion-plays. Christian Science bridges the gulf which the churches have created between themselves and the members of the theatrical profession. Scores of actors are now coming into the Christian Science Church, and it is the uniform testimony of theatrical managers that these actors are not only transformed themselves, but their influence upon their associates is most beneficent. A single Christian Scientist in a troupe will gradually change the character of the whole company, and substitute harmony for friction and discord.

I will now speak of some of the characteristics of Christian Scientists. They never seek to proselyte. They never solicit patronage. They never advertise except in their own official magazine. They never dedicate a church building till it is paid for. They have a larger church property than any other denomination in proportion to membership. They have a larger average attendance and larger collections. Their church rooms are always open.

The growth of the movement is beyond all precedent. It has been estimated, judging by the past growth and the law of averages, that in fifteen years it will be larger than any other denomination in America, and in twenty-five years it will be larger than all other denominations combined. Why may we expect this growth to continue? Because Christian Science meets a universal human need.

But I hear a cry of alarm, "A woman! a woman! This movement originated with a woman." Well, did not Christianity originate with a woman? Was it not through the Virgin Mary's spiritual concept that the eternal Christ was embodied in the child Jesus? If intuition is to take the place of intellect, then Christianity must be studied and developed from the standpoint of the woman and the child.

The methods of Mrs. Eddy are often criticised as arbitrary and "Popish," but such a rapidly growing body of people could not be led except by a spiritually farseeing leader, and one who follows a direct, well-ordered line of action. Her followers say that her rule is a rule of love and not of fear.

To this her critics reply, "She hypnotizes her followers." I have never seen Mrs. Eddy, and therefore have never come within her "sphere of influence," as the modern phrase goes. But I have talked with many who have seen her and who have felt the power of her presence—the presence of a quiet, refined and retiring personality. Their invariable expression is like that of the two disciples on the way to Emmaus, "Did not our hearts burn within us, while she talked with us by the way, and while she opened to us the Scriptures?" They testify that in her presence they realize the love and power of God as they have never done before, and receive a spiritual uplifting that is never afterward wholly lost. Mrs. Eddy has won her place as one of the great religious leaders of all time. In rapidity of growth and in magnitude of results the Christian Science movement is without a parallel. That she is misunderstood and spoken against is a sign and seal of her ministry. It has been the experience of every emancipator from Moses to Garrison. Even Jesus Christ was called a glutton and a wine bibber, and a friend of sinners.

I am aware that my treatment of this subject is a surprise to some of my audience. But what can I do? When Balaam was called upon by the Moabitish king to curse the

children of Israel, he could only give the message that he was inspired by the Spirit of God to give. He doubtless desired to obey the king's command, but when he looked from the mountain-peak upon the fair array of the Jewish camp, he was compelled against his own unworthy purpose to exclaim, "How goodly are thy tents, O Jacob, and thy tabernacles, O Israel!" "How shall I curse, whom God hath not cursed or how shall I defy whom the Lord hath not defied?" "Let me die the death of the righteous, and let my last end be like his."

John Stuart Mill says, "Every question that has God in it passes through three stages: ridicule, discussion, adoption." Dear friends, in considering this very important subject I ask you to remember that five years ago I stood where you stand with reference to Christian Science. Judging from my own experience, and from the history of my gradual change of view, I am led to believe that five years from now all will stand where I now stand who study this system of Truth with an open mind. It has been rightly said that in these transitory times the ministers are leading their people very much as a dog leads a wagon. He runs on ahead, but looks around once in a while to see which way the wagon is going to turn. It is from an instinct of self-preservation on the part of the church, that a layman has been invited to speak to you on this subject. Your members are leaving your congregations and going into the Christian Science fold. Now here is a vital question for you to consider. Are these "apostates" usually of the weak-minded sort who are easily led astray? "Well, no," I have heard many ministers say; "unfortunately some of my best people have taken up with this fad." Is not this fact the best possible evidence that you are mistaken in regarding it as a fad? The truth is, that there is not a Christian Scientist, from Mrs. Eddy down to her latest convert, who wishes the people to leave the churches, if the churches will give their members the Truth that they get in the Christian Science Church. Mrs. Eddy says in her volume of "Miscellaneous Writings," p. 21, "As the ages advance in spirituality, Christian Science will be seen to depart from the trend of other Christian denominations in no wise except by increase of spirituality." And again, on p. 91, "It is not indispensable to organize materially Christ's Church. It is not absolutely necessary to ordain pastors, and to dedicate churches; but if this be done, let it be in concession to the period, and not as a perpetual or indispensable ceremonial of the Church. If our Church is organized, it is to meet the demand, 'Suffer it to be so now.' The real Christian compact is love for one another. This bond is wholly spiritual and inviolate."

It is most important for you to realize that much that goes under the name of Christian Science is something totally and fundamentally different. In justice to yourselves, in justice to the Church, I ask you not to listen to rumors and slanders, but to investigate the question thoroughly, remembering that this is not a superficial movement, but a profound and vital movement. You cannot gain an adequate idea of it without doing three things, namely: attend at least one Sunday service of the Christian Science Church, attend not less than two of the weekly testimonial meetings, and read a recent number of the Christian Science Monthly Journal entirely through. I have been studying the Principle of Christian Science for five years, and I find that the subject will be exhausted when eternity is exhausted.

I will close by saying that the spiritual charter of the Christian Science Church is the 91st Psalm, and the spirit of the movement is indicated by the first two verses, "He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty. I will say of the Lord, He is my refuge and my fortress: my God; in Him will I trust."

From Our Contributors.

How a Trained Nurse came into Christian Science.

BY ERIKA FREDERIKSEN.

It was through the healing of a medical patient that I first heard of Christian Science. Though it was a most beautiful demonstration of instantaneous healing, the thought confronted me all the time, "Don't investigate this new method of healing, it will interfere with your nursing." But the harder I tried to forget it, the stronger was the desire to know something about it. That I did obey the still, small voice of Truth, and bought "Science and Health with Key to the Scriptures," I am most thankful to God.

What a revelation it was, as I read and began to learn that there is a true Science which rests on the basis of a fixed Principle, and to know that God is the divine Principle who heals all our diseases! I had seen the nothingness of medicine. How often have I been asked by the doctor to give a hypodermic injection of water instead of morphine, where the patient would be groaning in pain; and the sufferer would sleep quietly, believing it was morphine that had given him relief.

I remember a patient who the doctor said was suffering from a stone in the bladder. We could not relieve him in the least by giving him injections of morphine. His fear of forming the morphine habit was so extreme that the drug had no effect upon him until it was given him in the form of capsules and he was told it was a remedy to dissolve the stone. Then he was relieved.

I was not satisfied with *materia medica*, but thought it was a system which would give partial relief to suffering humanity. I was glad to give it up as soon as I found there was a better way of healing the sick. Even my nursing, which I dearly loved, I was ready to give up at once, thinking this would be necessary in order to study Christian Science. However, I continued to work along with the physicians, using all my spare time for the study of Science and Health. It was wonderful to me to see how the belief in material remedies as able to cure the human body disappeared little by little, in proportion as I grasped the great Truth and began to realize the allness of Mind and the nothingness of matter.

The most of my work being obstetrical cases made it less difficult for me, as I seldom had any medicine to give. A physician remarked once, "I like your way of speaking to patients; your presence seems to do them more good than my medicine."

The time came when I had to realize the power of divine Mind. I was called to the case of a young child with pneumonia. When I arrived the attending physician had just called a specialist for consultation, who told the parents their doctor had done all he could to save the child, but that he had very little hope it would be spared to them. As I looked at the sick baby it seemed to me that I could not take the case. I felt like asking the doctor to get another nurse; but then I remembered I had been told I would have to work out of *materia medica* by demonstration and not run away from it. After I was alone with the child different suggestions came to me. First, I thought to ask the parents if they would like to try Christian Science, and to suggest that I would get a healer for them; but I saw how dishonest this would be to the physician who had called on me in confidence, as a medical nurse, to help him, and as such I had accepted the case. Still I felt that if the child were left in medical care it would mean death. Then my heart went out in earnest prayer to my heavenly Father to guide me to do what was right towards God, as well as towards man. Two hours later, when the doctor called again, the baby was quietly sleeping; and I, still hoping to serve two masters,—God and man,—said to

him, "Doctor, if the baby sleeps, you don't want me to give her any medicine?" "Yes, indeed," was the answer, "you will have to give medicine every hour, as well as the baths; the temperature is very high." He left with the remark, "Do all you can to save her. She is their only child."

Never did the medical law seem so heavy and so hard to bear. But God helps us the most when His help is most needed. The answer to my prayer came very clearly, "Fear not. This little child belongs to God and He is taking care of her." I did not worry any more nor did I give the child a drop of medicine. She slept all night and in the morning was perfectly well. As the mother came in and saw her baby sitting up in bed and playing, she asked me if I did not think it strange that such a prominent physician would try to frighten them as he had done yesterday. I told her the doctor meant what he said; that the child had been very near death at the time, and that it was God who had done the wonderful healing, but she could not understand me. When the doctor came and saw the child, he looked at me and said, "Our patients are sometimes a puzzle to us. We physicians don't know much after all."

But to me the power of Truth was demonstrated, a little child had received the benefit, and I was free from the bondage of *materia medica*.

I then had the privilege of going through a class with one of Mrs. Eddy's loyal students. I have since been out in the battle against sin, sickness, and death. The Bible and Science and Health are my companions. They comfort me and give me constant strength, and I hope to say, with Paul, "I have fought the good fight, I have finished my course, I have kept the faith."

The Peace of God.

BY LYDIA WILKINS.

"THROUGH much tribulation, I have come into this peace," are the words of the great Italian Dante. My heart echoes these words when I look back upon the perturbed and sorrowful years that preceded my coming to Christian Science. For many years I had suffered greatly from sleeplessness, the attacks becoming more frequent and of longer duration as time went on. Though many doctors prescribed and every imaginable remedy was tried, nothing brought relief from this increasing wakefulness and unrest. Then followed most distressing pains in the head, accompanied by extreme nervous irritability, and this continued until I was sometimes almost frantic with pain and impatience. About this time, too, a great sorrow came to me in the loss of a friend under very painful circumstances. I felt this loss so intensely that it seemed to me my last hold had given way, and there was nothing left for me to cling to, nothing to live for, nothing to hope for. I no longer cared to try to get well. The darkness of despair overwhelmed me, and I was continually haunted by the direful thought that I was losing my reason. Like a big black cloud that fear hung constantly over me and tremblingly I awaited this final catastrophe.

This was the darkest hour, then came the dawn. A ray from the infinite Light and Love pierced the dark clouds of mortal sense in which I was enveloped, and brought me hope and courage. It came in the form of a vision of spiritual intuition, indescribable but strength-giving and beautiful. Supported and sustained by this new hope, I took up my daily duties once more, carrying with me a quiet conviction that a certain something, I did not know what, would set all things right. In due time I heard of Christian Science and began at once to take treatment, then to study and love this beautiful revelation of Truth. Gradually I came to know that the something I had been waiting and hoping for, the something promised and foreseen in that hour of greatest need, was nothing less than this glorious

revelation of infinite Love and Truth. And what a transformation this blessed Truth has wrought in me! No more sleepless nights or pain-filled days! Every trace of the former suffering, sorrow, despair, and dark foreboding completely obliterated, and in its place has come health, happiness, hope, joy, peace, and a sweet and abiding conviction that a God who is Love will always guide and guard me. In the words of the poet I have

an assured belief
That the procession of my future fate
Is ordered by a Being of infinite benevolence and power.

This Science of sciences has likewise taught me to understand the Scriptures in their spiritual significance far better than I had ever understood them before, and through the study of this Science I begin to understand, though probably in a small degree, compared with the "glory that shall be revealed," something of the "deep things of God," through sweet and sacred experiences of His presence and Power, experiences such as I had always thought I should have to die and go to heaven to attain; but I find that the Kingdom of Heaven is here and now.

Thus Christian Science has brought me many and great blessings, not the least of which is the blessing of peace; it is that "peace of God which passeth all understanding" and which *does* keep the heart and mind.

Living Water.

BY MARGARET RYAN.

OFTEN in my childhood I used to go with my playmates to get water from a spring in the farther end of a long pasture. We always found the water bubbling up clear and cool, rising from unknown depths which our childish imagination pictured as fathomless. About the loose roots and grass that encircled the edge of the spring a deposit of very fine soil had gathered, and after we had filled our pails or pitchers and played a while, the water would become very roily. Nevertheless when we came the next time it was as clear and clean as ever. The pure water below, ever pushing upward, forced out of the way all surface in purities. Over in the hill to the east, no doubt, through many little underground channels, the water was coming to feed this spring. Had these channels become obstructed or turned aside, the little spring would have ceased to flow. And soon nothing would have been left of it but a pool of impure water.

So it is with Truth, the living water which Christ gives us. It is within those who drink of it, as he said it would be, a "well of water springing up into everlasting life." Through this illustration of the spring we see that it is the entrance more than the outlet that we must guard. The one who is striving to live a Christian Science life must keep in close communion with God, must look to Him for all supply, must watch that no obstruction of self-will, apathy, or error of any sort comes in to clog or obstruct the free entrance of Truth into his consciousness. If given free entrance and passage through human thought this living water of Truth will push its way upward, keeping its outlet pure and free from contamination, and cleansing even the depths of man's consciousness.

Once to every man and nation comes the moment to decide,
In the strife of Truth with Falsehood for the good or evil
side;
Some great cause God's new Messiah, offering each the
bloom or blight,
Parts the goats upon the left hand, and the sheep upon the
right,
And the choice goes by forever 'twixt that darkness and that
light.
LOWELL.

Religious Items.

Edward Judson, D.D., in an article on "Christian Tranquillity," published in the *Examiner*, says: "Cowards are made in infancy. The reading of newspapers is not reassuring. The imagination is infested with fears of lightning, accidents, fire, burglars, surgical operations. Faust's complaint is true to human life:—

'Care at the bottom of the heart is lurking:
Her secret pangs in silence working,
She, restless, rocks herself, disturbing joy
and rest:

In newer masks her face is drest,
By turns as house and land, as wife and
child, presented—

As water, fire, as poison, steel,
And what we never lose is yet by us la-
mented'

In the midst of this discord the Scriptures
alone speak words of peace."

The (Baptist) *Standard* recently published an attractive article on "Discouragements in Work," by James Buckham, which, after showing how generally envied persons are dissatisfied with the results of their own work, ends as follows: "My conclusion is this; that we ought to look at our work more in the large and the final more in its totality, less in its variable and uncertain details. Most of us, who get so discouraged and depressed at times, are really, it is fair to say, doing some useful and helpful work in the world and meeting with a reasonable degree of success and appreciation. Let us judge work, even our own, as God judges it, largely, providently, for the future rather than the present, and not hinder or imperil its final result by losing courage over vexing and unfavorable incidents which may be only temporary in their effect."

Recently the secretary of the Congregational Club of Boston sent out a set of questions to the pastors of one hundred and twenty-five Congregational churches of Massachusetts intended to get the frank opinions of the ministers as to whether the Sunday evening service and the Sunday evening Christian Endeavor meeting, when held just before the service, are considered a help or a hindrance. Ninety-nine pastors replied to the questions and an article comprising the siftings from these answers was published in the *Congregationalist*. Most of the answers favor the Sunday evening service, and consider it necessary, while about one-third do not. Regarding the Christian Endeavor Sunday evening meeting, thirty-two considered it a help and fourteen thought it was a hindrance.

The *Kansas City Journal* publishes a portion of a sermon preached by the Rev. Matt S. Hughes in the Methodist Church at Independence, Mo., from which the following was taken: "When we see men lose fortune, or loved ones, or health, we are too apt to say, 'Whom the Lord loveth He chasteneth,' but we should not say so. He is a kind Father. And though sorrows and afflictions often serve to turn men into the paths that lead to God, they are not necessary to salvation nor are they sent for that purpose. True Christianity means the absence of sorrow and afflictions and disease. Had sin never entered the world neither had ill health or sorrows come."

A writer in the (Unitarian) *Christian Register* says: "One new angel of truth or liberty or justice brought into a community will drive out more devils of lust and greed and cruelty than all the denunciations of the pulpits, the exposures of the press, or the punishments decreed by the courts. It is not sufficient to unmask the vices. No beatitude was given for those who denounce evil. Among all the movements of our time, forward and backward, there is a movement toward the enthronement of the highest ideals. They who are foremost in it are the cheerful believers who allure to brighter worlds and lead the way."

In an editorial the (Baptist) *Examiner* says: "Those whom we revere for their religious lives were men and women of faith—a faith that led them to be doers of the Word. Their piety was not an emotional intoxication. Nor were they listless dreamers on the Mount of Beatitudes, who refused to arise and go down into a world where alone the beatitudes can be lived and exemplified. Very properly the demand of the world is, 'Show me thy faith by thy works,' for it is likewise the demand of God. Be the follower you profess to be."

John Quincy Adams was a close student of the Bible all his years and he gave this recommendation to others: "I speak as a man of the world to men of the world; and I say to you, Search the Scriptures. The Bible is the book of all others to be read at all ages and in all conditions of human life; not to be read once or twice or thrice through and then laid aside, but to be read in small portions of one or two chapters every day, and never to be intermitted unless by some overruling necessity."

The *New-Church Messenger* says: "The boundless field of Assyrian and Babylonian research is being worked by French, German, and American expeditions the University of Pennsylvania taking the lead. An enormous amount of literature is being taken out and is accumulating so rapidly that many years will be required to decipher and translate it. Some time ago it was calculated that forty large volumes would be required, but that number must now be multiplied by five at least."

"John Ruskin said that for people to be happy in their work three things are needed: They must be fit for it; they must not do too much of it; they must have a sense of success in it—not a doubtful sense, such as needs some testimony of other people for its confirmation, but a sure sense, or rather knowledge, that so much work has been done well, and fruitfully done, whatever the world may say or think about it."—*Exchange*.

In an article on "The Law of God" the (Baptist) *Watchman* says: "The truth is that the selfishness, the lack of sympathy and disregard of others which we account so trivial are the tokens of a deep-seated moral bias. In the parable of 'The Sheep and the Goats,' Jesus hinges the issues of eternity upon the selfish, inhumane temper, and here he makes want of kindness and helpfulness the token of the deepest moral alienation."

A writer in the *Advance* says: "Many have undertaken to read the signs of the times. But they usually see nothing but the trend of events. This trend is often in the opposite direction from that toward which the purposes of the Almighty tend. Just before the deliverance of the children of Israel from Egypt the trend of events indicated their perpetual captivity; but this was not the way of divine Providence."

"The clock on the Houses of Parliament in London," says *The Observer*, "has been undergoing repairs recently—the second time it has been stopped for such a purpose in over forty years. When the hours are chimed the bells are intended to express the prayer: 'All through this hour, Lord, be my guide, and by Thy power no foot shall slide.'"

In an editorial article on "Old Fashioned Piety" the (Baptist) *Examiner* says: "'Faith,' says the apostle, 'is the substance of things hoped for.' And that is precisely what it is. It is the foundation and support of spiritual life. We are disposed erroneously to associate substance with matter. But the most potential are the impalpable substances."

The (Baptist) *Watchman* says: "The man who builds his character upon the counsels of God's Word has the satisfaction that, as the years pass, though he comes to see a great many things more clearly, his ultimate ideals do not change. The real unity of life is to be found in fidelity to the purposes and standards God's Word enjoins."

The *Congregationalist* quotes the following from the writings of W. C. Gannett: "Our Bible is a book of lives. It is a book of men praying, rather than a book of prayer, of men sinning and repenting and righting themselves, rather than a book of ethics. It is a book, too, of men loving; it is full of faces turned toward faces."

The *Christian Register* says: "No change takes place in belief which is not heralded by doubt. If the world had continued to believe in all the things it has held to be true and sacred, heaven for our race would be a long way off. Our history writes us down as a doubting (inquiring) race."

The *Universalist Leader* says: "It must be night for stars to shine. So sometimes God's promises, hidden in the bright sunlight of prosperity and joy, beam with calm and steady radiance to whisper hope and comfort in the night of adversity and pain."

The *Outlook* says that the fundamental problem of life for every man and woman born into the world is very simple. It is to harmonize our wills with the will of God.

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on *New York* or *Boston*, but not on *Chicago*. Individual checks cannot be received, as a charge is made by the Boston banks for their collection.

All orders for Journals, Sentinels, Quarters, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address of writer are given.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

- Price (cloth) each \$3.18
 Two to Twelve books to one address, each, prepaid . . . 3.00
 Twelve or more books to one address, each, prepaid . . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
 Twelve or more to one address, each, prepaid 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid . . . 5.00
 Twelve or more to one address, each, prepaid 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
 Twelve or more to one address, each, prepaid 5.75
 Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

- Price (cloth) each, prepaid \$2.25
 Twelve or more books to one address, each, prepaid . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid . . . 4.00
 Twelve or more to one address, each, prepaid 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
 Twelve or more to one address, each, prepaid 4.75
 Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTIAS. An illustrated poem.

- Single book, prepaid \$3.00
 Twelve or more books to one address, each, prepaid . . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription :

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription :

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale :

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.

SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.

MR. KIMBALL'S LECTURE. 33 pp.

HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.

THE BUSWELL TRIAL. 24 pp.

THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.

HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

One copy or more, each, 6 cents; 12 copies, to one address, 50 cts. Twenty-five copies to one address \$1.15; 50 copies to one address, \$2.25.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass. Post Office as second-class mail matter.

Items of Interest.

Political and Governmental Notes.

According to the annual report of Governor Dole the total valuation of real and personal property in Hawaii, subject to ad valorem assessment in 1890, is \$97,491,584. The receipts from taxes are estimated at \$1,341,650. The commerce of Hawaii is shown for the period between January 1 and June 4, 1900, as follows: Imports, \$10,683,516; exports, \$14,404,496; customs revenues, \$597,897. With a few exceptions the development of the natural resources of the islands has scarcely begun. The aggregate area of the public lands is approximately 1,772,713 acres, valued at \$3,569,800.

The suspension of the exchange of bonds under the refunding law of last March was officially announced on November 21 by Secretary Gage, to take effect at the close of the calendar year. The refunding law permitted holders of the three per cent bonds, issued for the Spanish war, the old four per cents of 1907, and the five per cents maturing in 1904, to present them to the treasury for exchange into two per cent bonds, payable in gold.

Probably at no time since the Civil War have there been so few regular soldiers stationed in the United States as there are to-day. Of the one hundred thousand officers and men constituting the present army all but about seventeen thousand are serving abroad, mostly in the Philippines.

Plans are being made by the administration to press with vigor for the ratification by the Senate of the Hay-Pauncefote treaty in its original form, as the first step toward the construction of an isthmian canal.

The population of the State of New York, as officially announced, is 7,268,012, as against 5,995,853 in 1890. This is an increase of 1,270,159, or 21.1 per cent.

The population of Hawaii, as announced by the Census Bureau, is 154,001, as against 109,020 in 1896. This is an increase of 44,981, or 41.2 per cent.

Foreign News.

The Dutch Cabinet submitted to the States General, on November 14, a new bill proposing to drain the entire Zuyder Zee.

One hundred million dollars has been figured out as the cost of reclaiming "The Land of the Dead Cities," as what is now known as the gulf of the Zuyder Zee has been called. For the last half a century at least there has been a succession of schemes for driving back the sea from what was once terra firma. It was only in the fifteenth century that the Zuyder Zee assumed its present form—a gulf sixty miles long and two hundred and twelve miles in circumference. From the foregoing dispatch

it would appear that a new idea, that of draining the Zuyder Zee in its entirety, has ousted the older plan.

The Chinese problem seems no nearer actual solution than it was just after the rescue of the foreign ministers. So far the peace negotiations have been somewhat of a farce. The allied powers have been making demands impossible for the authorities of China to meet, and the Chinese emperor and plenipotentiaries have been offering reparation of such a nature as to make it seem that they are either very insincere or entirely in subjection to the anti-foreign element. Some of the allied powers also have grown mistrustful of the intentions of the others and are seriously in doubt whether they really desire to reach a settlement or intend to temporize until there arises an excuse for partitioning the Chinese empire.

A London dispatch states that the sum of about five million dollars awarded by the arbitration commission for the seizure of the Delagoa Bay Railway, was deposited in London on November 21, by Portugal. A large proportion of the award goes to the widow of Colonel McMurdo, an American, who with a number of English capitalists, built the road and operated it until the Portuguese Government arbitrarily violated the concession it had granted and seized the line.

The Russian naval estimates for the year 1901 provide for an expenditure of 97,097,666 rubles (about \$74,000,000). Of this sum 16,000,000 rubles are to be devoted to strengthening the fleet, 2,000,000 are to be expended on the harbor works at Vladivostok, and 3,000,000 are assigned to improving the defences of Port Arthur. The estimates exceed those of 1900 by 10,500,000 rubles.

There are in Queensland at present upward of one hundred and fifteen schools of art, libraries, and mechanics' institutes, which institutions the Government aids by duplicating the amount raised by the subscribers. Altogether the Government has contributed over \$534,600. In addition to these there are several technical colleges which also receive Government aid.

Former President Kruger of the Transvaal, arrived in Marseilles, France, on November 22, and was given a popular welcome. Almost the whole populace turned out to see him, and he was greeted by a hurricane of cheers everywhere he appeared. Mr. Kruger was also given a boisterous welcome in Paris on November 24.

Dispatches from Vladivostok say the Chinese have destroyed three hundred versts (two hundred miles) of the southern section of the Manchurian railroad. All the stations were burned and much rolling stock was destroyed. The damage is estimated at ten million roubles (\$7,500,000.)

A London press dispatch says that the United States machinery exhibit at the Paris Exposition has been bought in its entirety by a Lancashire engineering firm, and will be re-erected in Lancashire.

Industry and Commerce.

Herbert J. Webber, of the United States Department of Agriculture, is in Charleston, S. C., making experiments in the hybridization of cotton. Experiments are being conducted by Mr. Webber in different parts of the State and he is trying to have produced a cotton with a long, firm staple. He is also testing varieties of Egyptian cotton. Every year there is about twenty million dollars worth of Egyptian cotton imported to this country. If the experiments of the Department of Agriculture prove successful the farmers will be able to raise hybrid cotton which will equal the staple from Egypt.

The formal opening of the Great Northern Railway of Canada, on November 17, in-

creases the prospects of the Canada Atlantic Line, which operates between Chicago and Peary Sound. This is a new export line and cuts down the distance between the wheat fields of the Northwest and Liverpool about eight hundred miles. Steamers run between Chicago and Peary Sound, and grain shipments to that port run from twenty-one to thirty-five per cent of the total business here.

A Tacoma, Wash., press dispatch says: "The Russian Government will, on January 1, put a duty of eighty cents a barrel on flour for Siberia, in order to monopolize the rapidly growing trade for the Black Sea millers. This will be a hard blow to the Pacific coast millers, who have been building up a big trade through Vladivostok with Siberia."

Brooklyn is to have a new family hotel which the projectors say will be the largest in the world. It is to be twenty-three stories high and will have sixteen hundred rooms arranged in suites so that two hundred and fifty families may be housed under the one roof. The building is expected to cost two and one-half million dollars.

Since 1890 the world's steamships have increased from 12,985,000 to 22,369,000 gross tons, sail vessels have decreased from 9,166,000 to 6,674,000 tons, and the effective carrying power of the world's merchant fleets has increased sixty per cent.

On the basis of the gross earnings reported by the principal foreign steamship companies, it is estimated that during 1899 the gross earnings of steam and sail vessels in the foreign carrying trade of all nations amounted to \$700,000,000.

General News.

A press dispatch from Monterey, Mexico, says: "The report that American officers have unearthed ancient records in Peking showing that the Chinese discovered America fifteen hundred years ago, and erected temples in Mexico, has aroused the greatest interest among the scientific men of Monterey and throughout this country. The Chinese temples alluded to are in the State of Sonora, on the Pacific coast. The ruin of one of the temples was discovered near the town of Ures in that State about two years ago. One of the large stone tablets found in the ruins was covered with carved Chinese characters which were partly deciphered by a learned Chinaman who visited the ruins at the request of the Mexican Government.

The Boston Transcript says: "Ships can now go to sea with frozen ammunition. A method of utilizing liquefied air on warships has been discovered which will render the explosion of a magazine, even when the ship is in action, almost impossible. The method is so to place the liquid air that it will freeze the ammunition to several hundred degrees below zero. In that condition it could not explode, even if a shell should burst in the magazine."

A Connecticut manufacturer has recently finished a new state carriage for the Government at Ecuador at a cost of one hundred thousand dollars. It is modelled after the carriages of the Pope and the Khedive, but lacks the solid gold ornaments of the former and the gems of the latter.

Dr. Daniel C. Gilman, who has been president of Johns Hopkins University for nearly twenty-five years—in fact its first and only president—has notified the trustees of his intention to resign at the close of the present school year.

Maurice Thompson says that the word "Hoosier" comes from "Who's yer?" the dialectic inquiry of the old Indiana settlers to strangers who in those times of peril appeared o' nights at their cabin doors.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Recent Archaeological Discoveries.

Earliest Traces of the Human Race found in the Valley of the Euphrates.

PROF. B. V. HILPRECHT of the University of Pennsylvania has returned to America, after having discovered the very earliest traces of the human race. These he found at the bottom of a great heap of sand in Mesopotamia. He found a buried city, or, rather, several buried cities. He employed Arabs to dig out these cities, and to uncover relics left behind by the people who lived there thousands of years ago.

In the first place, he found curious inscribed bowls left on the surface of the mounds by the Jews who lived there as late as 800 A.D. A few feet under the surface they found the walls of a great temple, and evidences of the reign of one King Ashurbanapal, who lived there prior to 600 B.C.

Farther down they found relics of King Kadashman-Turgu, who reigned during 1400 B.C.; the temple of Ur Gur, who ruled the land many centuries before Abraham, the father of the Jews, was born; and the temple of Sargon I., who lived during 3800 B.C.

Bible students had heard of Sargon, but his existence was considered by many to be mythical. So the find was looked upon as wonderfully corroborative of Biblical lore. Yet the end had not been reached for later they found the ruins of ancient Calneh, which is mentioned in Genesis, 10 : 10. All around in the rubbish lay objects which had been lying there since the time of Lugalzaggisi, who lived previous to 4500 B.C.

There was an altar on which the ashes of the last sacrifice were still heaped several inches thick. There were sacrificial jars. There was a keystone arch, which had hitherto been supposed to be of Roman invention. As they dug farther and farther in and around they came upon evidences of houses. There was a great pre-Sargonic palace, which had at least two stories, and which had a six-hundred-foot front.

There were the remains of a great inscribed city gate, and finally there was found, just before Professor Hilprecht left Nippur, the ancient library of the temple, containing nearly eighteen thousand tablets inscribed with accounts depicting the life of the time.

This was the oldest library in the world. It was gathered together by some ancient scholar long before Christian times. The books were arranged around a room on shelves. These tablets are now on their way to America. A few specimens are to be left in Constantinople, and the remainder will follow Professor Hilprecht to this country.

Now, as may be supposed, these tablets throw wonderfully clear light upon early Biblical history. They fill in many gaps heretofore existing in the continuity of the early records, but their most remarkable quality is the fact that they prove that the people of seven thousand years ago, or thereabouts, carried on the business of life very much the same as we do to-day.

For instance, they lived in houses which were arranged with a more or less scientific drainage system. Their houses had fireplaces. Professor Hilprecht found a house with a fireplace in it. They ate from dishes the clay of which was turned in a lathe. The marks of the lathe can be seen in some of the relics, so they had machinery.

They were deeply religious. They worshiped the god Bel, and the practice of bestowing votive offerings in the temple was in vogue. Evidently the children went to school or were taught the rudiments of grammar by parents or other instructors, for many grammatical exercises were found by Professor Hilprecht.

The people sang music; at least, Professor Hilprecht came upon many hymns, inscribed on tablets, in terms closely resembling the psalms of the Old Testament. The temple was supported by the masses, who contributed money to it. Many tablets were found containing the record of the income of the institution from various sources.

There were rich people and poor people, masters and slaves. Records were found on which the sale of slaves, farms, and produce are recorded. Some of the farms were leased, mortgages were taken on others, crops were bid for far in advance of the ripening—thus the people sometimes dealt in futures. But the rich did not always live on their farms, which were in the more or less malarious districts. They lived in the cities and enjoyed the urban life and gayety, while the slaves or tenants tilled the soil. In such cases the land-owners employed agents to look after their interests.

Professor Hilprecht found the archives of the firm of Murashu Sons, attorneys of Nippur, who were in business many years as agents of the rich. In the archive room were found tablets which showed the bookkeeping of the firm. There were contracts of all kinds, records of collections, agreements, bills of sale, etc. One of the agreements was a guarantee concerning the sale of a ring to the effect that the emerald in the ring would not fall out for twenty years, or that if it did fall out within that time the jeweler would make it good.

There were artists in ancient Nippur. Professor Hilprecht found a tablet with a hole cut in the centre, which had evidently been secured to the wall of a house or temple, and on which some ancient artist had scratched a picture of two men driving sheep. The artistic feeling of this cutting is excellent, the knowledge or appreciation of anatomy wonderful.

In sculpture they were even further advanced. Many little groups have been found. Statuettes of the god Bel are plentiful. One little group shows a dog surrounded by puppies. Another group is of two lovers, evidently waiting, the woman leaning against and supported by the man, showing that the "old, old story" dates very far back indeed.

In the sciences these people were more or less learned; at least some of the tablets show that astronomy was studied

and records were made of the movements of the stars. Even the spirit of divination was manifest, for many astrological tablets were found. The literature of the day was most comprehensive, and many of the tablets are written in two languages—Sumerian and Babylonian—and they show that the beginning of this civilization was even then traditional—that is, it was already so old that no record of its beginning existed. Of course, this naturally would be so, since civilization of the Nippur perfection must always be the result of slow evolution.

These people had the desire to live in the eyes of posterity. The permanent character of their records shows this. This is shown also from the fact that at about the time of Nebuchadnezzar, an old priest started a little archaeological museum in a clay pot, and left it for the edification of posterity. This man dug into the ruins which lay beneath the city as it existed in his day and picked up the tablets of the preceding ages.

He found tablets representing a more or less complete succession of the kings mentioned above and placed them where the archaeologists of the future might find them. Professor Hilprecht found the pot, the first archaeological museum in the world. It is just possible that the old priest meant this pot to furnish an inkling of what lay around under the sand. It so happened, however, that the pot was found after duplicates of its contents were picked up by the explorers.

When the people of Nippur died they were not cast into the earth or burned in the rude manner of savage peoples. The undertakers of the day made graceful slipper-shaped coffins of baked clay and covered them with a beautiful blue glaze resembling porcelain. The body was slipped into the coffin and a cover placed over the opening above the breast and face. Then the coffin was placed in a vault on pedestals.

It has already been indicated that in architecture the Nippurians were adepts. So also in defence of their city they knew how to build huge walls with openings in which swung massive gates, beautifully carved and resting on great blocks of stone. Several of these stones are in the Museum of the University of Pennsylvania. Out of these gates the warriors of the time sallied forth to attack other towns, or in through them they rushed, pursued by some conquering invader.

The gates of Nippur once opened to receive Lugalzaggisi, the Alexander of his day, a world-conqueror, who subdued the whole peninsula lying between the Persian gulf and the Mediterranean Sea. He was not a native of Nippur, or Kengi, as it was called in those times. He was the son of Ukush, King of Haran. He descended on Nippur and conquered its people, who were the Sumerians.

Lugalzaggisi was a barbarian before he made the descent. At least all the people outside of Nippur were looked upon by the Sumerians as barbarians. The Sumerians were an old stock, whose civilization was then very old. Lugalzaggisi, however, was quick to appreciate the advantages of their advanced state, and he adopted their manner of life. Whether he had been a worshiper of Jehovah is not stated, but at any rate he embraced their religious cult and worshipped the god Bel.

He erected temples in the god's honor, and advanced the already existing civilization by his many civic improvements and public works. He improved the city, patronized art, learning, and science, and reigned long over his subjects. This was at least 4500 B.C. Undoubtedly Lugalzaggisi raised the glory of Nippur higher than its previous level, yet the Sumerians resented his Semitic rule, for as

soon as he died the national spark of patriotism for their ancient civilization glowed afresh.

With Lugalzaggisi Nippur had become the metropolis of the ancient world, and it remained so for thousands of years through the reigns of Narim-Sin, Sargon, Ur Gur, Ashurbanapal, and the intermediate sovereigns. Kings lived and died, conquerors came and went, generation after generation passed away; temple after temple was built, grew old and crumbled, and new ones were erected on the ruins of the old ones; the tablets and the coffins and the old walls sank from sight, or the sands of the desert drifted over them, yet Nippur, through many changes, remained the great centre of culture, until one time, in the neighborhood of 2200 B.C., it was suddenly invaded from the north by the Elamites, who descended upon it and sacked it.

The Elamites completely subdued its people, but, unlike Lugalzaggisi, they did not seek the advantages of its ancient cults. They razed many, if not most, of its buildings. They carried away to Elam everything they could possibly take, and what they could not take they broke into fragments. These fragments are to-day being pieced together by Professor Hilprecht, and many of the things the Elamites carried away are now being found in Asia Minor, thus corroborating the story of this ancient raid.

After this Elamitic invasion Nippur declined. The city was rebuilt, but it was no longer the metropolis of the world. It had its kings and it pursued the arts of peace and war as of yore, but it never regained the grandeur of the days of Lugalzaggisi. Yet, of course, it was highly interesting, since its treasures, even of the later dates, help to fill in those gaps which need to be filled in the Bible when the latter is considered as a historical document.

And here is where, perhaps, Nippur and the explorations in Babylonia may come to have their chief value—the perfecting of the Biblical chronology. But that will be a work of the future, since it could not be attempted until Nippur is all excavated, and the ruins are so extensive that many years must pass before every one of the antiquities is recovered.

These are the features of Professor Hilprecht's work which most concern us to-day. His explorations have brought us many thousands of years nearer the origin of mankind than we were before he went into Babylonia. He has found that people seven thousand years ago were not much different, after all, from what they are to-day, and his work in the end will fill in those gaps in the Bible which we are most desirous to have filled. The aspect of his work as it concerns the future he has not explained, nor can he do so yet.

It is for the great contribution to our knowledge of the world's history that he has been honored in Europe and America. As the discoverer of the oldest world, his name will always be famous. And yet, if you were to ask Professor Hilprecht of what aspect of the expedition he is most proud, he would probably say, the influence his wife has had upon it. Professor Hilprecht when he went abroad left Mrs. Hilprecht in Leipsic.

He went on to Nippur, while she was to go to Jena to spend the summer. She lay ill in Leipsic with nervous prostration and had to have the services of two doctors and a trained nurse. When it was suggested that Professor Hilprecht be sent for, she would not hear of it. Then, so that he might get no inkling of the true state of affairs, she had her letters to him sent to Jena and mailed from there. She was ill four months, and several times was near to death's door, yet she heroically refrained from worrying him. Professor Hilprecht says his success in Nippur this year is due more to Mrs. Hilprecht than to himself.—*Boston Herald*.

Selected Articles.

Some Objections Met.

LINCOLN, Neb., November 9.

To the Editor of *The State Journal*.

Answering a paragraph from "Daily Drift" in your issue of October 23, I would say, that what are termed organic lesions have been healed by Christian Science, and there is abundant testimony to this fact, hence it is rather late for the statement that Christian Science cannot do what every Scientist knows it has done, and this objection can have no effect on any one familiar with the results obtained in Christian Science, and should not deter those who are unacquainted with this practical Science from seeking the facts as to its Principle and practice at first hand from its sources, viz.: the Bible, "Science and Health with Key to the Scriptures" and the other writings of Mary Baker G. Eddy, and by actual observation of cases which have received Christian Science treatment.

If there is any one in this city who still doubts that real benefits are derived from Christian Science, we cordially invite such a one to attend the Wednesday evening meetings and hear the testimony of neighbors as to cases of healing, and see the happy faces which betoken the presence of health and contentment.

In our city library, or in the Christian Science reading rooms may be seen the *Christian Science Journal*, in which will be found every month authentic accounts of the healing of almost all manner of diseases, including what are called organic lesions; and the names and addresses are given in some cases and can be obtained in others. These testimonies come freely from hearts full of thanksgiving for health and peace found in a better understanding of eternal and infinite Good.

Mr. Bixby says, "All things may be possible with Omnipotence, but that does not signify that the Almighty will suspend the operations of natural law to accommodate metaphysical healers engaged in 'demonstrating' at so much per."

Nothing could be further from Christian Science than the supposition that God will alter, or suspend, or miraculously supervene any universal law to accommodate a Christian Scientist or any other human being. The infinity and eternity of God (Good) and of God's government, leads to the conclusion that evil, through all eternity, never has had or can have power to suspend the reign of God's law, so as to enter God's universe, and destroy the order and harmony thereof. Of God's universe we truly say that Omnipotence keeps the peace eternally. When we say that God (Good) is almighty and eternal, and that God is everywhere present, we mean thereby to deny that evil ever has had any place or time or power in reality.

Now the belief that evil (or devil) has entered the universe, and is ever with us, involves the erroneous supposition that at some time in the past God's power was suspended to let evil in, and has ever since been impotent to cast evil out. Such exaltation of evil is contrary to the very first commandment: "Thou shalt have no other gods before me." When Paul says: "Give no place to the devil," he is stating the negative side of the proposition that God (Good) is everywhere.

If the words "demonstrating at so much per" are intended as a rebuke to Christian Scientists for receiving remuneration for their time employed by those coming for treatment, our answer is, that an honest man who wants to be treated will insist on paying for the treatment if he is able, and any one in poverty will be treated freely by a Scientist. But we have found that where one is able to pay for treatment, and yet comes with the thought of getting something for nothing—especially if one is making an

idol of money—that we cannot serve such a one except by rebuking the error of mammon-worship. Even in our charges, our moderation is known unto all who have taken treatment of us. Analyzing the objection that Christian Scientists charge for their treatment, and its implication that they ought to treat without charge, it will appear that the motive back of this objection is to put a stop to Christian Science treatment (though I am persuaded that Mr. Bixby does not cherish such a motive). For if a given line of action offers absolutely no means of support, then no one can or ought to follow such a course. "The laborer is worthy of his hire." When the Master said: "Carry neither purse nor scrip," he evidently meant that they should live from their labors among the people who welcomed them, ministered unto their wants, and received the Gospel.

Again, in your issue of October 12, it is said: "No use arguing against the sure penalties of violated physical law. If we sin, we must suffer, and it is right that we should." None will dispute the doctrine that if we sin we must suffer; but Mrs. Eddy says, page 390 of *Science and Health*, "It is error to suffer for aught but your own sins. God, or Truth, will destroy all other supposed suffering; and real suffering, for your own sins, will cease, in proportion as the sin ceases." (See also the 18th chapter of *Ezekiel*.)

As to the "sure penalties of violated physical law;" God is the only lawgiver of universal and immutable law; and God is Spirit or Mind, and not matter, and God's law governing the universe is mental or spiritual and not material or physical.

What shall we say, then, if so-called physical law, by reason of which sin, disease, and death reign over the people who sit in darkness, and "who through fear of death were all their lifetime subject to bondage"? We shall not admit the force and effect of such opinions by calling them bad laws; so we say bluntly they are not laws, but merely human theories and misconceptions of God and of God's law, under which the universe is and always has been governed in unbroken order and harmony.

WILLIAM HOLMAN JENNINGS.
In *The Nebraska State Journal*.

A Personal Explanation.

To the Editor of the *Sunday Journal*.

In behalf of the Church Congress, for which I spoke last Tuesday evening, and of the large gathering of citizens and guests assembled on the occasion, may I be permitted to mention some points suggested by the editorial on Christian Science which appears in your issue of this date. Your own admirable report of the discussion gives me some ground for asking the privilege, as you express the opinion that it was "a bit unfair" that I was obliged to be the first speaker, and thus "was forced to outline the tenets of Christian Science and hold it up as a target for the flings of the other speakers." Let me say in passing, however, that I did not and do not complain of the arrangement, which, on the whole, was the best that could be made.

That the question is a vital one is shown by the fact that the Congress gave an entire evening to it, and that it attracted so large and intelligent an audience. My attitude on the subject will be better understood if I give a brief history of my relation to the movement.

After originating the "Brotherhood of Christian Unity" in the year 1891, with its motto, "Love your neighbor and respect him in his beliefs," it became my duty in the interest of unity to investigate the various movements which seemed to embody a distinctive principle or theory. In due time the Christian Science cult naturally attracted my attention. I began the study of it with the prejudice which

a superficial knowledge of it seems invariably to create. On closer investigation, I could not help recognizing the fact that its adherents were not fanatics, but a well ordered class of citizens, whose standard of morality and spirituality was above the average. The apparently excessive devotion to Mrs. Eddy proved to be not so much a personal feeling as a sense of profound gratitude toward one whose teachings had resulted in their emancipation; sometimes from years of chronic invalidism; sometimes from acute organic and functional diseases of every kind; sometimes from slavery to the alcoholic or narcotic habit; sometimes from lives of sin and degradation.

From this observation I was led to study carefully the text-book of the system, "Science and Health with Key to the Scriptures," written by Mrs. Eddy. I say to study carefully, for I found it to be a book that could not be fully taken in by a single casual perusal. It is an exposition of the principles of absolute idealism, not as already presented by Plato, Bishop Berkeley, and some modern writers, whose discussions are purely academic, but as a practical basis of life, and a presentation of Christian principles growing out of the teaching of Jesus Christ: "The kingdom of God is within you," and the corollary: Seek first the things of this inner kingdom, and all other things shall be added unto you.

Looking for the fruits of this teaching I found them everywhere apparent in improved health of body, sanity of mind, and sweetness of disposition. What could I then do but surrender and say: "I will no more oppose this movement, but will study it in all its bearings and see whereto it leads."

I have not time, nor has the *Journal* space, to give all the results of this quest. My one purpose in these lines is to lead others to cease regarding Christian Science as a "monstrous delusion," and resolve no longer to condemn it without understanding it. Fair investigation is all that the most ardent champion of the movement desires.

The question of its being a menace to the health of the public cannot stand in face of facts. From three thousand to five thousand patients are treated daily in New York City, the same number in Boston, and a still larger number in Chicago. In view of this fact is it not amazing that only very rarely is a case of failure heard of, although the enemies of the movement are on the alert to make the most of every unfavorable point?

The Church Congress has rendered a most valuable service to the people of America by bringing the movement forward in the dignified way in which it has been presented. This will no doubt change the mental attitude of many people, both in the churches and outside of them. As to the effect in the development of Christ's kingdom in the world, that can surely be left to the guidance of divine Providence.

THEODORE F. SEWARD.

Providence, November 15.

In the *Providence* (R. I.) *Sunday Journal*.

Earth's Size Exactly Measured.

It has cost the United States just five hundred thousand dollars to find out that the earth we live upon is 7,899 miles tall and 7,926 miles wide, so to speak.

In our school geographies we learned that the earth is a round ball, slightly flattened at the poles. The flattening amounts to thirteen miles and a half for each pole—the polar diameter being twenty-seven miles less than the equatorial diameter. So it isn't such a very flat earth after all.

The circumference of the earth at the equator—people don't travel around it by way of the poles—is 24,900.32 miles. This is only about 1.32 of a mile more than the measurement fixed by the French scientists who founded

the metric system upon the measurement of an arc of the earth's circumference.

As a basis for reaching the diameter of the earth the United States survey cast the longest straight line ever measured by instruments. It was laid along the track of the 39th parallel of latitude, from a point near Cape May light, straight westward to point Arena, Mendocino County, Cal. This line was begun in 1871 and only recently was the last triangle laid, showing that the absolute distance between Cape May light and point Arena is 2625.6 miles.

Delaware bay, the District of Columbia, and thirteen states and territories are crossed by this parallel.

In determining the polar diameter a line had been run independently from Lake Superior through central Illinois. This and the line of a hundred years ago run through Ecuador, in South America, were taken as bases for the longitudinal diameter.

In casting the network of transcontinental triangles, the survey worked from both ends, finally closing the gap in Colorado. In this mountain work the instruments at times were from ten to fourteen thousand feet above the sea, and in some stretches from one hundred to one hundred and eighty miles were covered by the light flashes from the heliograph. The longest reach was 182.7, flashed from one mountain to another, the instrument sending the signals being akin to the heliograph used in war messages.

To make signalling possible in the plains country, towers had to be erected. These towers were of skeleton frames made proof against wind by guy ropes. Canvas was stretched to protect the instruments on the top from high winds.

The highest towers were built in Ohio, Indiana, and Illinois, where forest trees interrupted the views. Many were one hundred feet and more in height. At Green, Ind., the telescope was raised one hundred and fifty-two feet above the earth. At Still Pond, Md., was a tower one hundred and twenty feet tall, which supported a target to the height of two hundred and seventy-five feet—the highest above ground of those employed.

In this signalling, especially in the mountain country, the observer to the east would be in the twilight of sunset and yet reading signals from the west, where the sun might be seven minutes above the sky line.

By actually laying bars of metal end to end the surveyors in the course of this stupendous measurement, marked off the base lines essential to their triangulation work. The temperature of each bar was carefully measured by thermometers and its effect upon the length of the bar taken into strict account. A single pair of these complicated bars cost fifteen hundred dollars.

Stretched across the country they were not rested upon the ground, but upon tripods carefully leveled. One style of measuring bar utilized in this delicate work was carried in a trough filled with melting ice and was thus kept at the freezing point.

In the work of more than a quarter of a century the United States coast and geodetic survey has overturned no old findings. Perhaps its work would have been of much less value had it done so. It has added dignified proof to an accepted fact.—*New York World*.

Every time a man bethinks himself that he is not walking in the light, that he has been forgetting himself, and must repent, that he has been asleep and must awake, that he has been letting his garments trail, and must gird up the loins of his mind—every time this takes place, there is a resurrection in the world. And every time that a man finds that his heart is troubled, that he is not rejoicing in God, a resurrection must follow—a resurrection out of the night of troubled thoughts into the gladness of the truth.

MACDONALD.

The Lectures.

At Winfield, Kan.

An audience that nearly filled the Opera House assembled Sunday afternoon (November 4) to hear the lecture of Judge Joseph R. Clarkson of Omaha, on the subject of Christian Science. For over an hour the speaker held the undivided attention of his audience and delivered a masterly address. Mr. Clarkson presents a fine platform presence and is a convincing speaker. He was introduced by Rev. George T. Smith, of the Christian Church, who by way of introduction said:—

To the weary problems which have surged through the hearts of the race many solutions have been offered during the ages. We can but welcome any one who endeavors to lessen the misery of the world and to add to its happiness.

Christian Science teaches men to be victorious, to bid defiance to sin, disease, despair, and doubt. Whatever may be our judgment as to the success attained, the aim is worthy of our praise; and after we have listened to one who is competent to make an able presentation of the theme we shall go out of this house with a deeper respect for those who are trying to lessen the miseries of mankind. I now have the honor of introducing to you Judge Clarkson of Omaha, Neb., who will address you.

Southwestern Advocate.

At Dubuque, Ia.

Judge William G. Ewing of Chicago, lectured on Christian Science to a large and appreciative audience Thursday evening, October 25, at Stout Auditorium, under the auspices of First Church of Christ, Scientist, Dubuque, Ia.

Judge Ewing was introduced by Judge James Husted of Dubuque, who said in part:—

Those of you who know no more of this Science than I do, will probably go home to-night with something to think about. The gentleman who is to speak to you was long prominent in his chosen profession of the law, and ranked high at the bar. As a judge he administered the law fearlessly and without favoritism, and in taking the position in which he has been placed, his talents and character have commanded respect. The highroad to fame was open before him, but he chose to set all this aside and devote himself to the advancement of the Cause of Christian Science, which he had warmly espoused.

Bespeaking for him this evening your warmest attention and your faithful consideration of what he may say, I have the pleasure of introducing to you, ladies and gentlemen, Judge William G. Ewing, who will now address you.

Correspondence.

At Wabash, Ind.

One of the most scholarly lectures ever given in this city was that of Judge William G. Ewing of Chicago, at Harter's Opera House, Monday evening, November 5, on Christian Science, which was attended by a large number of people.

Judge Ewing has an excellent control of English and clothed the thoughts he wished to emphasize with eloquent and beautiful words. He spoke in a low tone of voice, but was heard all over the house.

The speaker was introduced by Judge H. B. Shively, who presided at the meeting. He paid the lecturer a compliment for his attainments in the legal profession and in the realm of learning, and expressed pleasure that the new belief came championed by such a man. Judge Ewing did not enter into a minute explanation of the Christian Science faith, but tended to clear up some of the false impressions that prevailed. The lecture was well received by all, many ministers being present.

Wabash Daily Plain Dealer.

At Cedar Rapids, Ia.

Fully one thousand people assembled at the new Auditorium last evening (Monday, November 12) to listen to a lecture by Judge Joseph R. Clarkson of Omaha, on Christian Science. Judge Clarkson is one of the ablest men in the West, a man who has gained honor and fame in his chosen profession of the law, but who, during the past few years, has been devoting himself entirely to the work of Christian Science and to lecturing on the subject.

Judge Clarkson was introduced by John M. Grimm. He said that many who were on the outside scoffed at the believers of Christian Science as fanatics, but that he himself, as one yet on the outside, had been deeply impressed with this new religion. He spoke of the wonderful growth of Christian Science, told of the magnificent churches being built and of the rapid increase in the membership, and asked if it might not yet lead to revolutionizing Christian belief. He paid a high compliment to Judge Clarkson and presented him to the audience.

*Cedar Rapids Daily Republican.**

At Toledo, O.

Mr. Edward A. Kimball of Chicago delivered a lecture yesterday afternoon (Sunday, November 4) in the Christian Science Church, corner Monroe Street and Lawrence Avenue. His subject was, "The Cause of Disease and its Scientific Cure."

The church was filled, many standing throughout the lecture. The audience, which numbered between eight hundred and a thousand persons, listened attentively for more than an hour and a half to a discourse on disease and its cure from a Christian Science standpoint.

The earnest way in which the lecturer handled his subject won for him friends among those who do not accept the doctrines of Christian Science, and the lecture was pronounced by those who heard it to be one of the best that has been delivered in Toledo on Christian Science.

Toledo Bee.

At Peoria, Ill.

Hon. Joseph R. Clarkson, formerly a successful jurist of Omaha, addressed a large and representative audience at the Grand Opera House yesterday evening (Thursday, November 8) on Christian Science. The lecture was given under the auspices of the local church of Scientists, and was free to the public, as are all affairs given by this body.

Mayor Lynch introduced the speaker of the evening in a neat address.

Judge Clarkson has a splendid presence, is a gifted speaker, and presented the polity and basic principles of Christian Science in a clear, lucid manner, which greatly interested his auditors.—*Peoria Herald-Transcript.*

Lectures at Other Places.

Sherburn, Minn.—Joseph R. Clarkson, October 15.
Howell, Mich.—William G. Ewing, October 29.

The Church Manual.

The nineteenth edition of the Manual, containing the names of all the members of the Mother Church, including those admitted November 1, 1900, is now on sale.

Address orders to The Christian Science Publishing Society, 95 Falmouth Street.

Take your stand, unswerving, heroic, by the altar of truth, and from that altar let neither sophistry nor ridicule expel you.

HENRY VINCENT.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Thanksgiving.

THE Chief Executive of our nation has appointed and set apart, Thursday, November 29, "to be observed by all the people of the United States, at home and abroad, as a day of thanksgiving and praise to Him who holds the nation in the hollow of His hand."

As Christian Scientists we do most gladly unite with our fellow-countrymen in giving thanks to God for His goodness and mercy toward us, and for the countless blessings He has bestowed upon us as a nation and as individuals. While we strive to give thanks daily and hourly, yet we esteem the privilege of making this day a special season of thanksgiving and praise to Him in whom "we live, and move, and have our being."

Without doubt one of the greatest needs of the hour is a more just recognition and acknowledgment of what God has done for our native land. We must not lose sight of the fact that all the freedom we enjoy—religious, political, and civil—is the result of our country's faith in God, and the triumph of right over wrong. "Blessed is the nation whose God is the Lord." Do we, as individuals and as a nation, desire greater freedom and a more liberal outpouring of blessings from on high? Then let us humbly and sincerely thank God for His goodness and devoutly pray that we may be worthy of "the continuance of His divine favor," ever mindful of the fact that as a nation, as well as individuals, we shall reap as we sow.

On this occasion it may not be amiss to consider why, when, and how we should give thanks to God, and also call to mind some of the many reasons we, as Christian Scientists, have for thanksgiving.

First: Why should we give thanks?

"It is a good thing to give thanks unto the Lord." The Scriptures declare that "every good gift and every perfect gift is from above." Thanksgiving brings "all the tithes into the storehouse;" then the windows of heaven are opened and the blessing which is poured out is so great that there is not room enough to receive it. Thanksgiving enlarges the borders of human consciousness, thereby removing the limitations of material sense. Thanksgiving is a recognition of the Source of our blessings and brings us nearer that Source. Whatever enables us to draw nearer to God, destroys the error of sense which seems to separate us from Him. This gives us an enlarged conception of our Father in heaven who created man in His own image and likeness. A higher and purer thought of God gives a better idea of what constitutes true manhood and enables us to bring out our identity as sons and daughters of God.

Thanksgiving turns thought God-ward and this lifts us above the seeming power and presence of evil. To recount our blessings, when all seems dark and discouragements beset us on every hand, will dispel the gloom and enable us to see that in reality we have all things and there is no reason for discouragement. Since God holds all things in the hollow of His hand, what is there to fear?

Experience has taught us that the contemplation of evil does not show us the way out of discord and suffering. As Christian Scientists we are learning that when our gaze is

turned toward the Light we do not see the shadowy forms of error and their claims to reality are made of none effect. A mind filled with gratitude to God for the countless blessings He has bestowed upon His children, has no room for thoughts of error which rob man of health, happiness, and harmony. Ingratitude causes mortal man to retreat within the narrow limits of his own selfish sense of things, while thanksgiving fills the heart with love for God and man, and causes one to live not for himself alone, but that the whole world may be the better for his having lived in it.

Then why should we give thanks? Because it brings heaven down to earth and reveals the glorious reality of a present salvation. "O give thanks unto the Lord, for he is good: for his mercy endureth forever." "Surely the righteous shall give thanks unto thy name: the upright shall dwell in thy presence."

Second: When shall we give thanks?

At all times and under all circumstances the prayer of thanksgiving should arise unto the God of our salvation. "At midnight I will rise to give thanks unto thee because of thy righteous judgments." "In every thing give thanks: for this is the will of God in Christ Jesus concerning you." "Giving thanks always for all things unto God."

There is always great reason for rejoicing when we look to the spiritual fact of Being. No matter what may seem to be the manifestations of error, they do not change the fact that God is, and that man is His child, pure, perfect, and eternal. On one occasion Jesus said to his disciples, "rejoice, because your names are written in heaven." The faithful disciple of Truth always has this cause for rejoicing. This is the joy which the world can neither give nor take away. No matter what the seeming, he knows that his true being abides in harmony and he rejoices in that fact. This very rejoicing helps to dispel the darkness and lifts him above the discordant sense of that which seemeth to be and is not.

Third: How shall we give thanks?

In thought, word, and deed we should sing songs of praise and thanksgiving unto our God. Thanksgiving should come from the heart and find expression in works as well as words. Obedience to the law of God is the best expression of our appreciation of what He has done for us. Jesus said to his disciples, "If ye love me, keep my commandments." If obedience is the proof of love it is likewise the best evidence of sincere and heartfelt gratitude.

All that we have is given to us in trust, and if we are truly thankful for the blessings we enjoy, we shall employ our time and talents in such a manner as will redound to the glory of God. Thus shall we proclaim to the world that in God's presence is fulness of joy; and at His right hand there are pleasures forevermore.

Fourth: What are some of the reasons we, as Christian Scientists, have for giving thanks?

First of all we are thankful for Christian Science; thankful that we have caught a glimpse of the Truth that makes free indeed; thankful that we are learning how to work out our salvation. And although we are called to put on the whole armor of God and wage ceaseless warfare against the claims of evil, yet we do rejoice that even in the noise and tumult of battle there has come to our human sense the "peace of God that passeth all understanding." We are thankful that we are found worthy to enlist in this grand warfare wherein no son or daughter of God is made to suffer, but only error falls at the feet of Truth.

We are thankful that we are learning the value of each individual experience and how to profit thereby. We see more clearly than ever before how it is that "all things work together for good to them that love God." Seeing this we are encouraged to be more faithful in the application of Truth to all the affairs of life.

We are thankful for life and we rejoice that we are learn-

ing that our life is not at the mercy of matter, for God is our Life, and we can say with Paul. "The life which I now live in the flesh I live by the faith of the Son of God." We are also thankful for health and strength, and we have not less but more since we have learned that health and strength are in Mind not matter.

Our hearts are filled with joy when we remember that Love, the Mind that was in Christ, is the only real Intelligence, and that evil, no matter when or where it appears, has in reality no intelligence and no power. This shows us how it is possible to love even our enemies.

We are thankful for all the beauty and harmony we see expressed. Because we have learned in Christian Science that Mind, not matter, is the Substance of man and the universe, this has not robbed the world of its beauty. The beauty of form and color disappears as matter, but re-appears as the idea of divine Mind, there to reflect the Infinite. Likewise the good we see expressed in individual character becomes not less but more as we realize it is the reflection of infinite Good. This conception of our present sense of existence causes us to seek diligently for the manifestations of Good and accept them as the realities of life which alone are worthy of an abiding-place in our consciousness.

We are thankful that we have learned in Christian Science how to overcome sin and sickness in ourselves and others. The sick are healed after all material means have failed, and the sinner is lifted above the false sense of pleasure in sin. For these manifestations of God's presence and power we sincerely return thanks.

In conclusion we are thankful for all the blessings the world calls material. "The earth is full of the goodness of the Lord." The mortal and material sense of life and its joys is giving place to that which is real and eternal, thus we are laying up for ourselves "treasures in heaven, where neither moth nor rust doth corrupt, and where thieves do not break through nor steal."

The Wednesday Evening Service.

To the Editor:—Apropos of your wise and timely editorial, in a late number of the *Sentinel*, regarding the testimonies given at the weekly meetings, permit me to add a word of suggestion respecting the conduct of the service.

In the beginning of Christian Science, when there were but a very few active participants in this service, it was natural and proper that a considerable part of the hour should be given to the reading from the Bible and Science and Health. Unfortunately, some of the Readers have continued the custom long after the conditions were so changed as to render it incongruous.

The writer recently attended a service where, though there were at least a dozen active Scientists present, including himself and one or two other visitors, more than half the hour was consumed in the reading of an entire chapter from the Bible, a yet longer selection, which included many distinct topics, from Science and Health, and all the hymns in full. As a result the time for the testimonies was altogether inadequate, and the service was much less effective—less significant to inquirers—than it would have been had the readings been topical and more brief.

The maintenance of a flexibility which readily adjusts each service to the attendant conditions and to the spirit of progress, is certainly of great importance, and it would demonstrate that tact and good judgment which must characterize the leadership of every competent Reader. The writer is sure that in all this he is voicing the thought of many of the laity who in their modesty are patiently holding their peace in the hope of better things.

A TRAVELER.

We endorse what our correspondent above says. As a rule the selections from "Science and Health with Key to the Scriptures" should be short, not exceeding a page, and often a paragraph or two is better. Nor is it well to read profusely from the Bible. Shorter selections, confined to a single topic, are apt to be more effective than lengthy selections covering different topics. This is true in making selections from Scripture for Wednesday evenings as well as the Scripture reading at the Sunday services.

In places where the attendance at the Wednesday evening meetings is small and the speakers few, the extra time may be well occupied in reading articles and testimonies from our periodicals.

"My Ships."

The beautiful poem, bearing the above title, which appeared in the *Sentinel* for November 15, was sent us by Mrs. M. R. Murray and by mistake was credited to her. The author of the poem is unknown, and at Mrs. Murray's request we make this statement, as she does not wish it to appear that the poem was original when it was only selected.

Among the Churches.

Anniversary Service at Marion, O.

Sunday, October 7, 1900, was a happy day to the little band of Christian Science workers at Marion, O., as it was the fifth anniversary of the planting of Truth in their city. In loving recognition and acknowledgment to the Father of every good and perfect gift, loving hearts and willing hands had been busy for a number of days helping to decorate and beautify their little hall. Many new pieces of furnishings were added; among them a handsome new Readers' desk in oak, the gift of the Sunday School. The motto "Divine Love always has met, and always will meet, every human need," from our much-loved text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, adorns our wall, done in the burnt wood in panel form.

A beautiful copy of Hofmann's head of Jesus in crayon, also pictures of Concord Hall and Pleasant View, adorn the walls. New carpets, rugs, and hangings all blending in color, and a number of potted plants make many bright spots in this little church home which serves a double purpose, that of church and reading room. Our hall has a seating capacity of eighty or ninety. May many weary wanderers find here a resting-place, and the thirsty ones drink.

A short address given by our First Reader on this occasion was as follows:—

Beloved Students and Friends:—Before we take up the Lesson-Sermon, it becomes my pleasant duty to express the pleasure we feel in having you with us at this our fifth anniversary of the birth of Christian Science in our city.

The Scriptures admonish us to "rejoice with them that do rejoice;" but Jesus said, "Notwithstanding in this rejoice not, that the spirits are subject unto you; but rather rejoice, because your names are written in heaven."

In the five years past we have much cause to return thanks to our heavenly Father for His loving-kindness and tender mercies manifested towards this little branch of the parent vine. The greatest cause for our rejoicing to-day is not for the outward manifestation, but because we can say, like one of the disciples of olden time, "We have found him of whom Moses and the prophets did write." We have beheld the Christ, "The Lamb of God, which taketh away the sin of the world."

Jesus said, "Happy are your eyes that they are seeing, and your ears that they are hearing. For verily I say to you that many prophets and righteous men longed to see what ye are seeing and did not see; and to hear what ye are hearing and did not hear" (Matthew, 13 : 16, 17, Roth-erham's translation). For verily they found not the way to change their minds, though they sought it carefully with tears.

We give you all a hearty welcome to this little church home, and hope your desire will be to share with us in the future the peace and happiness which comes from the Truth which Jesus said to know [understand] would make you free.

It may be gratifying to those of you not closely associated with our work to know something of the growth in our city.

Five years ago the first Christian Science service was held in a private parlor; number present seven; meetings were held at the different homes for six months, when permanent quarters were secured at the corner of Prospect and Center Streets. The first meeting was held there the first Sunday in April, 1896; attendance twenty-one. These rooms were occupied for two years when we moved to our present hall, Farmers and Mechanics Bank Building. Our present membership is thirty-nine.

During the past year and a half we have purchased a church lot, and secured three lectures. These expenses, along with current expenses, amounting to something like twenty-five hundred dollars have all been paid and there is a surplus on hand.

Within the past year there has been an average of three copies of the Christian Science text-book sold monthly.

Amount of literature purchased within a year and a half, exceeds five hundred dollars.

Literature distributed the past year, some six thousand tracts, twelve hundred Sentinels, eight hundred Christian Science Histories, two hundred Journals, and an unlimited amount of other publications from The Christian Science Publishing Society of Boston, Mass.

Our reading rooms are open daily to visitors, in which are kept all the publications issued by The Christian Science Publishing Society. Some one is always in attendance who has experienced benefits from the understanding of this great Truth and is always glad to give any information on the subject that may be desired. May we go forward in the years to come giving the cup of cold water in Christ's name.—JEANNETTE QUICK, Marion, O.

Corner-stone laid at Tacoma, Wash.

The corner-stone of the new Christian Science Church at Division Avenue and I Street was laid with appropriate ceremonies at half past seven yesterday morning, about one hundred Christian Scientists assembling to witness the simple but impressive ceremonies.

The services consisted of readings from the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, after which the stone was placed in position. After a few moments of silent prayer the congregation joined in the Lord's Prayer. A few selections were then read from the Bible, and "Miscellaneous Writings" by Mrs. Eddy, followed by "The Scientific Statement of Being" from Science and Health. The services closed with the doxology.

In the corner-stone was deposited a box containing copies of the Bible, and all the published works of Mrs. Eddy, also a copy of the articles of incorporation of the church and the literature published by The Christian Science Publishing Society.

The contractors expect to complete the church before January 1. When completed, it will be the first Christian Science Church erected on Puget Sound.—Tacoma Ledger.

The Bible references which were read on the above occasion were as follows: Ezra, 3 : 10, 11; Isaiah, 28 : 16, 17; 54 : 13, 14, 17; 1 Corinthians, 3 : 8, 9, 16, 17; Ephesians, 2 : 19, 20; 1 Corinthians, 3 : 11; Ephesians, 2 : 21. The last four references were read after the stone was placed in position.

Three of the charter members were present. Two of them came from Portland, Ore., to attend the ceremonies.

MRS. BERTHA M. F. GASTON, Clerk.

Progress in New Whatcom, Wash.

We read in the *Sentinel* of other little bands of workers like ourselves, and it gives us courage to go steadily on, confident that in due time we shall surely reap the good results. Even now we see the manifestation of Truth's all-presence, at least in a small degree. We know we have nothing to fear if we faithfully follow our impersonal guides, the Bible, and "Science and Health with Key to the Scriptures."

About six years ago our first lesson was read here by two young students of Science and Health. Four years ago we organized as a Society. In March, 1899, we re-organized as First Church of Christ, Scientist, of New Whatcom, Wash. Many are asking for Christian Science literature, and also for treatment, and many good testimonies of physical and mental healing can be cited.

The *Sentinel*, for September 13, was especially dear to us on account of the report of our Leader's appearance at the Concord Fair.

Last May, a children's Sunday School was organized, with an enrolment of twenty, the average attendance is eight or ten. They have purchased two hundred tracts for distribution and subscribed for the *Sentinel*, to be sent to the public library for one year, and extra Quarterlies. Some of the children whose parents are not even interested in Christian Science, enjoy coming, and nearly all are able to give good testimony, for what Truth does for them.

H. M. BUCHANAN, New Whatcom, Wash.

Organization at Hoopeston, Ill.

The Christian Science Society in Hoopeston, Ill., re-organized as First Church of Christ, Scientist, September 1, 1900. It has twenty-four members. Services are held in pleasant rooms over the post-office, carpeted and nicely furnished with chairs, a good cabinet organ, and two oak reading desks. These stand for much self-denial and love for the Cause.

On the twenty-fifth day of September, this new church gave to the people of Hoopeston the privilege of hearing a lecture by Hon. William G. Ewing, which was well attended and listened to with interest, and great good to the city is expected to result from it.

Science and Health is in the public library, and also in Greer College. Boxes for Christian Science literature are placed in the two railway stations. The reading room is open to the public from 10 A.M. to 12 M. and from 2 to 4 P.M. The reading table is supplied with Science and Health and other works of our Leader, also the publications of The Christian Science Publishing Society.

S. F. S., Hoopeston, Ill.

Organization at Santa Barbara, Cal.

Christian Science Hall on Anapamu Street was prettily decorated and its seats were well filled last Sunday morning. The occasion was the first service by the membership as an established Church of Christ, Scientist, though Christian Science meetings, with steadily increasing attendance and number of adherents, have been regularly held there in an unorganized capacity for several years. The charter members number sixteen, which is but a small

portion of the believers in its tenets and regular attendants at the semi-weekly services.

Last Sunday's services, which drew a somewhat larger audience than usual, did not differ from the regular order, and were conducted by Mr. and Mrs. C. H. Frink as First and Second Readers.

The new church has no debt, but a balance in the treasury, which, when sufficiently augmented by voluntary contributions, will be used for the building of a church edifice, the meetings at present being held in a rented hall.

Santa Barbara Herald.

Reading Room at Wausau, Wis.

The Christian Scientists of this city have recently renovated their reading rooms, at 311 Third Street, and the same are again open to the public each afternoon during the week from one to four o'clock, also Tuesday and Friday evenings from 7.30 to 9, and all are cordially invited to call. There is always some one in attendance to receive visitors, and give any desired information on the subject of Christian Science.

The rooms are harmoniously finished in shades of green, and have oak furnishings. There are two rooms, separated by large folding doors, which, when thrown open, form a hall in which their church services are held. Except for the regular Sunday morning service and the Wednesday evening meeting, these doors are closed, the larger room being used as the reading room. This contains the library, consisting of all the works of Mary Baker G. Eddy, and those of The Christian Science Publishing Society, free for the use of visitors, and also for sale.

Wausau (Wis.) Pilot.

Reading Room at Springfield, Mass.

It is with joy that First Church of Christ, Scientist, of Springfield, Mass., announces that service was held last Sunday, November 4, in a new hall in Barnes Block, 394 Main Street. This hall has been prepared for our exclusive use as a church home and reading room.

Our reading room will be supplied with all the works of our Mother and Leader, Mary Baker Eddy, and all current literature of The Publishing Society, including lectures, pamphlets, and other matter for free distribution, in order that all who desire may know the *truth* relative to Christian Science.

The reading room will be open to the public daily from 1 to 5 P.M., and on Saturday until 9 P.M.

Sunday services will be held at 10.45 A.M., and Wednesday evening testimonial meetings at 7.45.

JENNIE LOUISE COOLBROTH, *Clerk.*

The Work in Albert Lea, Minn.

Our little church here is a small organization so far as numbers count, but is alive and earnest in the work of Truth. We have a pleasant assembly room, with a reading room in connection which is open daily from 2 to 5 P.M. All Mrs. Eddy's works are on the tables for the use of the public and for sale, also the *Journal* and *Sentinel*. We have a nice little Sunday School and the children do a great deal of missionary work with their Sunday collections by buying and sending out Christian Science literature under the direction of the superintendent and teachers. Our growth has been slow but steady, and many good demonstrations of the power of Truth over error have been made, as the testimonies at our Wednesday evening meetings prove.—NELLIE H. WULFF, *Clerk.*

Reading Room at Topeka, Kan.

The Christian Scientists have established a reading room in Room 6 of the Central National Bank Building. The

reading room was formerly conducted at the church, but was moved down town so it would be easier of access.

The room is free to the public, and will be open every day from 11.30 A.M. until 4 P.M. All Christian Science literature is on file.—*Topeka Daily Capital.*

Change of Location at Philadelphia, Pa.

First Church of Christ, Scientist, in Philadelphia, Pa., has removed from its former location on Twenty-first Street below Fairmount Avenue, to the Tabernacle Church on Chestnut Street above Eighteenth Street. The reading room maintained by the church has also been removed from 1025 Arch Street to the church edifice.

JAS. H. WILLARD, *Clerk.*

Concerning our Publications.

Many Calls for Science and Health.

Stamford, Conn., November 17, 1900.

Editor the *Sentinel*, Boston, Mass.

Dear Sir:—*The Critic*, of New York, publishes each month lists "of the books most in demand during the month . . . at the circulating libraries, free and subscription, in the representative centres of the United States and Canada." The record applies to books other than fiction, "though the one most-called-for novel is admitted to the list." Eighteen cities send in their reports, and three of these, Chicago, Ill., Detroit, Mich., and Kansas City, Mo., include in a list of not more than eleven books, *Science and Health*, giving the name of the author, also that of the publisher and the price of the book.

I was impressed by this indication of the growing interest in Christian Science, and believed that the readers of the *Sentinel* would be glad of this item of news.

Yours in Truth,

MARY BAIRD MARRIOTT.

A Valuable Addition to the Library.

Carson City, Nev., October 22, 1900.

F. A. McD., Cherry Creek, Nevada.

My Dear Sir:—I trust you will pardon the delay in acknowledging your kindness in donating to the Nevada State Library "Miscellaneous Writings" and "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, and the *Christian Science Sentinel*, but your address was not on the card received with the books and was only obtained from Mrs. Fordham a few days ago. The books are a valuable addition to the library, and I am sure will be appreciated by those who are interested in the study of Christian Science.

Thanking you for the same, I remain,

Very truly yours,

EUGENE HOWELL, *State Librarian.*

Per A. T.

A Word for the Journal and Sentinel.

321 Pearl Street, New York, November 19, 1900.

Editor *Christian Science Sentinel*.

Dear Sir:—I want to thank you for the pleasure I have in reading the *Sentinel* and the *Journal*, to both of which I am a subscriber.

To say that they are the most interesting pamphlets that come into this office would be the truth, and I am glad to testify to the benefit Christian Science and its literature is to me in every-day business life.

Yours in Truth,

R. E. CAREY.

From Our Contributors.

Free!

BY FRANCES H. COIT.

Ye shall know the truth, and the truth shall make you free.—
John, 8:32.

FREE! as a bird in radiant beauty,
Singing sweet songs in its skyward flight;
Free! as the ocean, raging and foaming,
Or peaceful and still in the calm summer light.

Free! as the stag o'er forest and mountain,
Roaming at will, in boundless glee,
Free! as the brooks from spring and fountain
Hastening through meadows to reach the sea.

Free! as the sun o'er palace and prison,
Sending to each the same bright ray,
Filling the earth with gladness and splendor,
Glorious emblem of eternal day!

Spiritual Power Producing Physical Results.

BY REV. JESSE L. FONDA.

"SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES" by Mary Baker G. Eddy, pp. 28 and 211, says, "There is divine authority for believing in the superiority of spiritual power over material resistance." "Jesus' spiritual origin and understanding enabled him to demonstrate the facts of Being,—to prove, irrefutably, how spiritual Truth destroys material error, heals sickness, and overcomes death." The Truth expressed in these statements underlies the whole of the book and is the power of the Science which it teaches. It is also an important consideration in the philosophical and theological study of the Science and its work.

The common teaching is different from this; it can be stated as follows: The world that we see and the body that we feel are of material substance and are governed by material forces, and when in an abnormal condition or action they must be set right by material forces and medicines. That is, matter is an entity, having its sphere with its intelligence and power, laws and results. There is opposed to this the idea that Spirit, Mind, is also an entity entirely different from matter and having a sphere of activity and results entirely its own. The philosophy of the scholarly world is based on this double idea, this dualism; and presents much resistance to any other idea of the nature of the world and man.

Without any abstruse argument on the subject, some considerations will be presented opposing this double basis, and showing that spiritual power is the only one, and that there is no matter nor material results.

The idea that matter, so called, is a distinct entity, entirely separate from Mind, is losing its hold on the thinkers of the day. The atomic theory is being repudiated by physicists. In their common discussion of Christian Science many talk of the atom as an accepted fact; whereas scholars know that it is only a theory, an hypothesis, and its only force is that it explains, if you accept its basis, a greater number of appearances in the natural world than any other theory has ever done before it. But no one ever yet saw the atom; it exists only in thought. When this is once seen the authority for materialistic thought is gone as to fact.

It is well known that many have held that matter is another form of motion; others that it is force. Professor Tyndall held to such a view. Those known as "Christian Evolutionists" hold to this view. One young writer who had studied the very latest literature on this subject summed

up his labors in this short sentence: "Matter is an inextricable mystery." That is, matter as an entity distinct from Mind leads into a hopeless confusion of thought. Some great scholars have come to the conclusion that it is but the work of the human mind. Prof. W. Oswald of Leipzig, Germany, calls it "A manifested human thought."

One form of thought which has given the religious world much trouble—scepticism, the rejection of the supernatural in the Bible and religion—is explained by the true understanding of Mind and its phenomena. The philosophical scepticism has held more or less consciously that it is absurd to think that Mind, an entity with a certain principle, intelligence, power, and manner of working, can project itself into the realm of matter, an entity with an entirely different principle, intelligence, and working, and there produce results entirely contrary to the established order of the material realm. The metaphysics and logic of the case sustain the doubters in their conclusion. Hence they have held it to be absurd to think that Moses ever brought water out of a rock, that the sun ever stood still, that the dial of Ahaz ever went back fifteen degrees, or that water ever held up Jesus so that he could walk on it as on land.

In metaphysics we cannot think contradictions nor bring opposites into vital connections. It is asked, What is the difference whether you call it matter or mind when you see it and handle it just the same? It makes all the difference in the world in our thinking, and in the consciousness. In the science of music, harmony, it makes great difference in naming chords whether a note is called C sharp or D flat, while on the instrument they are the same key. The only way that the miracles of the Bible have held their place in the theology has been by the determined holding to the contradiction that matter and mind, entities of different substance and intelligence, can work together harmoniously, that one can manifest the other, and one can rest in the other. The common religious philosophical thought is like a Colossus standing with one foot on matter and the other on mind. If matter is a reality, then one foot is on something and the other on nothing. If mind is the reality, then he shifts his weight to the other foot, but it does not relieve the situation.

But in Christian metaphysics we must have clear thinking and straight reasoning. The only way to have this is to take the single basis view; to take Mind as the Creator and all creation a mental phenomena; Spirit the Creator and the universe a spiritual creation. In this way we have one Substance, one entity, one Principle, one Intelligence, and one Power. All is mental and governed by Mind. The fragrance of the flowers and the odor of some vegetables apparently is made from the soil, air, and moisture; but to transform them into the mysterious and impalpable fragrance and odor is just as wonderful a transformation as to bring water out of a rock; only we are familiar with one and not the other. Neither can be explained logically, metaphysically, or microscopically by the common metaphysics. "The only intelligence or substantiality of a thought, a seed, or a flower is God, the Creator of them. Mind is the Soul of all, and Truth and Love constitute the Intelligence which governs all" (Science and Health, p. 501).

So when it is said: "There is divine authority for believing in the superiority of spiritual power over material resistance" (Science and Health, p. 28), it is simply expressing a spiritual, philosophical fact that all is mental and governed by the thought or Intelligence. Also in the other passage (Science and Health, p. 211), "Jesus' spiritual origin and understanding enabled him to demonstrate the facts of Being,—to prove, irrefutably, how spiritual Truth destroys material error." It is all perfectly consistent, for we believe that there is underlying all Jesus' words the absolute, spiritual philosophy; all is mental and

governed by Intelligence. He substituted the thought of divine Intelligence for the so-called human mind, and so brought harmony. "The divine Mind . . . acts upon the human mind through Truth, leads it to relinquish error, and find the divine Mind to be the only Mind" (Science and Health, p. 147).

The applications that Jesus made of this Truth were to cases of sickness, deformity, and death. He walked on the water, turned the water into wine, and multiplied the bread to show the universality of it, and then used it to relieve men of their troubles. He saw men's bodies, but not as matter. Mortal thought and human belief of disease had no reality, so were easily set aside.

Then the basis of Christian Science is this: that material substance and material power are illusions; all is Mind and mental phenomena, Spirit and the spiritual universe; all results are mental, spiritual, and there is no power or agent but God. This opens a wide field for application and study.

This spiritual philosophy sets aside the old theory that God made the roots, herbs, and minerals for medicines, and inspired the invention of decoctions, lotions, and hygiene as His chosen means of healing. In the absolute, deep, creative philosophy of God, the Infinite, there can be no planning for the use of such a transient mortal thought as matter. Spirit is the only Substance that it is possible for God to know, and the spiritual universe the only one that He governs. It cannot be that this mortal-mind illusion has so much as a shade of reality or a trace of substance in His searching thought!

To the Christian consciousness as developed by Christian Science there is no matter or material results. The mortal sense is fading away and the reality of Spirit and the spiritual, Mind and mental phenomena, is taking its place.

Since all is spiritual and mental the consciousness governs the condition. It is through the consciousness freed from its mortality that we shall be able to see the "new heaven and new earth;" for as the material sense vanishes the "first heaven and the first earth" pass away.

A Helpful Thought.

BY S. M.

IN the Lesson-Sermon of May 20, we read of David going forth to battle with Goliath.

What a wonderful lesson this is to us. Should we not examine ourselves daily, and see whether we have on an armor of self-righteousness and self-justification? or whether we are armored in the name of the Lord?

Our friends would often load us down with many so-called protections as Saul did David when he was preparing to meet Goliath. But let us lay aside all material things, and say with David, "I have not proved them."

When we see this giant error and its army coming out to try us, let us not be afraid, but with the courage of David, run toward it and, in the name of the "God of the armies of Israel," overcome it at once.

Thanksgiving.

BY FRANCES MIHILLS BISHOP.

We give Thee thanks, dear Father, for this day;
For all the sunshine shed upon our way;
For life, for home, for friends, but most for Thee
We give Thee loving thanks, in unity.

Bless Thou the absent whereso'er they roam,
And bring their wandering footsteps safely home;
And may Thy blessings, ever freely given,
Guide all our footsteps, till we walk in heaven.

Testimonies.

How I became a Christian Scientist.

Up to eighteen months ago I was a very worldly selfish woman, living for very little but self and my own pleasure. Owing to financial troubles, and one disappointment after another, I was most unhappy and discontented. I also suffered from chronic indigestion, which medicine could not reach, although I had doctored for years. My nerves had gotten into such a condition that I could hardly speak without crying, and I had become tired of every one and every thing.

This was the condition I was in when Christian Science came to me one year ago last June, through a dear, loving friend, who had for some time been trying to open my eyes to the omnipotence of God. Up to this time I was not ready for the Truth and would not listen to that still, small voice which has proven such a blessing to mankind. I thought I could get along without God. I had to undergo a great deal of suffering, both mental and physical, before my eyes were opened, and I was made to see how selfish and ungrateful I had been all my life.

A year ago last June my friend came out to the suburban town where I then resided to spend the summer, and shortly after this invited me to attend a little gathering of Christian Scientists who were holding meetings once a week, to study the Bible lesson, in the *Christian Science Quarterly*. I thought I would not go, but changed my mind, and every moment of life since have I thanked God for the joy, peace, and happiness that have come into my life and into my home. I shall never forget that first little meeting, the earnestness and sincerity of those dear people when they bowed their heads in the most impressive prayer (our silent prayer) that I had ever known. From that moment the light came to me. I caught a glimpse of the understanding. I became a Christian Scientist. All the worry, troubles, discontent, unhappiness, and physical troubles, dropped from me. The indigestion entirely disappeared, and I have never had an attack since. I commenced to study our text-book, Science and Health. I procured all the Christian Science literature, and have read little or nothing else since. I found that, coming into my right mind, made me hunger and thirst after righteousness, and also brought me into a true sense of what happiness is. My husband, seeing the decided change in me, became interested, and together we, in December last, received class instruction, and are both members of a branch church in New York City and of the Mother Church in Boston.

In June last it was our privilege to attend the Communion service at the Mother Church. We also had the great happiness of visiting Concord and seeing our dear Leader. The past year has brought us many blessings, so many, that it would take too much space in the *Sentinel* to tell of all that this wonderful Truth has done for me and mine. We have dedicated our lives to God, praying for that "Mind to be in us which was also in Christ Jesus." We are striving to be loyal to God, to our Leader, and to mankind, and worthy of the name of Christian Scientists.—SARAH GILBERT SCHUYLER, New York, N. Y.

Found Health, Contentment, and Satisfaction.

While I was delivered from numerous diseases, some of which had held me in bondage for a long time, not having seen a well day for six years although all material remedies that were heard of were tried, yet one of the greatest blessings is the deliverance from a feeling of discontent. It was not ingratitude, for I tried very hard to be grateful for all that was done for me, but a longing for something better in life, which I knew certainly must exist somewhere if I could only find it.

From early childhood I searched through books and

papers with the hope that I might find some clue to where it was. I saw a lack in humanity that no one I ever met could supply, and truly in my heart there was an aching void the world could never fill. I talked with intelligent people, and asked them many questions, but never found anything satisfying or that would give me contentment. Then I thought to be strictly religious would give me contentment, so I tried that about five years but could never find the religion I wanted.

I talked with many ministers and would especially question them about Jesus' crucifixion. I remember from my earliest readings of the Bible that was the most perplexing to me, how his crucifixion could in any way affect our salvation. I have read and studied that one thing for a week at a time, trying to solve it. Then I would quit thinking about it for a while only to return to the same line of thought very soon. I saw nothing but the material Jesus, whereas I now see that the idea of divine Love must be presented to human understanding which self-righteousness would slay in order to justify itself. But through the demonstration of the eternal Truth that man is deathless, its veil of hypocrisy was rent in twain, thus revealing to deceived humanity the fruitless efforts of trying to reach heaven in a material way.

Before coming into Christian Science I had read a great deal in the Scriptures about healing, and I often prayed to God to heal me. I wondered why He did not.

Finally, about a year before being healed, I concluded there was not much in religion and decided that afterwards I would not take much interest in it, though I still clung to the Bible. I was, as I then thought, the most miserable creature in all the world. The first time I heard of Christian Science I was very anxious to try it, though I had no idea it had anything to offer but physical relief. The first time I ever talked to a Scientist she seemed like an angel sent to tell me the good news. Never had words sounded so beautiful. Never had I experienced such peace and satisfaction. I was instantaneously healed of what physicians called a tumor. Other troubles left one by one until within five or six weeks I was made perfectly whole. That peace and satisfaction which the world can neither give nor take away has come to me through the study of "Science and Health with Key to the Scriptures."

I have seen nearly every disease that flesh is heir to disappear through the declaration of this grand Truth. Twice has Christian Science rescued my child from the hands of death in which the deceived senses had plunged him, for which I am very grateful. I am thankful for having had class instruction from one of Mrs. Eddy's loyal students, and last but not most am I thankful to the dear Mother for giving this living Truth to a hungering and thirsting world.—MRS. A. JONES, Chickasha, I. T.

Permanently Healed by Christian Science.

Sixteen years ago my attention was first called to the possibility of healing the body by divine Power. It came to me then as a most beautiful possibility, and I eagerly listened and read everything I could find on the subject. Reading the Bible with this thought in mind I soon became convinced that the teaching was according to Jesus' teaching and practice.

At this time I was suffering from an aggravated stomach trouble which gave me no peace or comfort save when sleeping, and then only to return upon awakening. I was astonished, however, to find that although I was so willing to be healed and that God was so willing to heal, yet I experienced no help. I studied and sought and prayed; the anguish and disappointment I experienced no one knows, only those who in a measure have seen the Truth and have not had the understanding to demonstrate it. Year after year went by, and although I did not seem to derive any

benefit, yet I could not let go of this Truth which, in spite of seeming defeat, was gaining a stronger hold upon my consciousness.

Ten years ago I heard of Christian Science. A few years later I bought Science and Health and began to study it. This was a help to me, and when, three years ago, I read in an Oak Park paper of the opening of the Christian Science reading rooms I was thankful and glad, for it breathed a thought of deliverance and help. I called soon after and the practitioner in waiting took up my case. I was wretched, despondent, and despairing. The symptoms which accompany an aggravated condition of the stomach I contended with daily. Dieting, fearing to eat and then so hungry that I would overstep all bounds and eat heartily and then suffer for it. Soon after I commenced receiving treatment I began to feel better. Melancholy and depression left me and I began to feel as if there were something to live for. I began to eat anything I wanted and realized that I was not conscious of a stomach.

Thankful as I have been for this relief, there has been an underlying fear that at some time this would return and I hesitated to tell of my healing. But as the years have gone by and there has been no return of the old trouble, I have begun to see what it means to be healed by Christian Science, and it is with thankfulness that I give this testimony to the effectiveness of Christian Science healing.
J. A. M., Oak Park, Ill.

How my Prayer was Answered.

"The sharp experiences of belief in the supposititious life of matter, as well as our disappointments and ceaseless woes, turn us, like tired children, to the arms of divine Love" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 218). "Friends will betray and enemies will oppose, until the lesson is sufficient to exalt you; for 'man's extremity is God's opportunity'" (Science and Health, p. 162). These two quotations from our text-book seem to express my condition at the time Christian Science found me. I had lost a large sum of money in business, friends did betray and enemies oppose, until I was in an awful state of mind. All was darkness, not one ray of sunshine was in the path before me. I was never a church member and not even a church-goer; in fact, I might have been called a scoffer at the Bible, and precious little I knew of it to scoff at. While denying the divinity of Christ Jesus I did believe in a supreme controlling power, and was satisfied to call this power, God.

While in this terrible state of fear, the whole world was seemingly opposed to me; knowing nowhere else to go, I turned to God and cried for help. This prayer was answered by divine Love leading me to Christian Science. From the first day that blessed book, Science and Health, was placed in my hands the clouds began to disappear; and now, after four years of Christian Science in my family, I can truly say that it has brought only blessings. In regard to the price of Science and Health, I would say that money cannot express its value.

During these four years of trying to live the life of a Christian Scientist, the road has not been a flowery one, for many obstacles seemed to obstruct the path; but with a little understanding of the nothingness of evil and the allness of Good all obstructions were removed. My heart is filled with gratitude to our dear Mother for Science and Health and all other good she has done.

LOUIS HELM, St. Louis, Mo.

There is no beautifier of complexion, or form, or behavior, like the wish to scatter joy and not pain around us.
EMERSON.

It is love that asks, that seeks, that knocks, that finds, and that is faithful to what it finds.—ST. AUGUSTINE.

Religious Items.

The (Swedenborgian) *New-Church Messenger* says: "One sometimes hears religion set forth as if it were mere pleasantness and beauty. That makes no great demand upon character. But religion as a principle, and as a determining power in one's life; the religion which, like the Lord who gives it, can apply itself to the special needs and difficulties of life, and come straight to some wrong thought, some selfish desire, some particular weakness or taint, and control it; the religion that can brave ridicule; that can walk the storm—there is nothing weakly sentimental in that. It is one thing to smile complacently upon some truth which one reads out of a book, or recognizes in some friend's conversation, and exclaim in perfect sincerity and with enthusiasm, 'That is beautiful!' It surely is another thing to have the truth look one in the face and say, 'If you believe in me, follow me, and then, it may be with drawn sword, lead one straight through some terrible temptation.'"

"The Church and the Criminal," is the subject of a paper by Charles R. Henderson in the (Baptist) *Standard*. The following is an extract from it: "The worst use society can make of a man is to despair of his salvation and hang him. That is the deliberate verdict of the modern civilized Christian world, for capital punishment, even where it is legal, is rarely inflicted.

"Even the life confinement of habitual criminals with hard labor, is of limited application, for only half of all who are arrested could properly be brought under this costly method. The prison comes too late; it does not touch the sources of crime. Criminals do not reason far ahead; they are not frightened from crime, as is popularly supposed, by dread of prison. They are all gamblers and take chances of being caught. It is part of their life-sport to outwit detectives and escape from policemen. In prison they are at home with their own kind."

The following is an extract from the address of the president of the Illinois Universalist Convention published in the *Universalist Leader*: "We are living in an age which, if it cannot wholly be called an age of absolute doubt, is emphatically an age of scepticism, of inquiry and of unrestrained investigation. And the processes by which all claims are sifted, investigated, verified, accepted, or rejected, are applied to the fundamental claims of Christianity as well. And they are applied to the latter by the world at large with relentless rigor and severity, because—and we need not look farther for a better reason—the claims which Christianity makes for itself and offers as the reason for its existence are, on their spiritual side, in the very nature of things, higher by far than are other claims."

In an "After-Election Meditation," the (Methodist) *Christian Advocate* says: "Many of the papers and persons foremost in the political excitement would accuse of unbridled fanaticism those who should be as earnest and continuous in arousing interest in religion. A multitude of professed Christians who have cheered themselves hoarse and spent days drumming up voters, stirring up the sluggards, convincing the doubtful, helping the hesitating to decide, and who were not ashamed to make the rafters ring with their jubilation over the victory, would be ashamed to be found making similar efforts to lead friends, neighbors, and strangers to choose Christ for their Leader and the commandments of God for their platform!"

In an editorial headed: "Is Religion Losing its Hold?" the *Christian Register* says: "Religion, regarded merely as the bond that bound us to another world, is weakening just in proportion as the present life is becoming relatively more important. The underlying social fact that determines our sentiments and behavior is a deeper apprehension of the life that now is. Jesus said, I came that ye might have more life. This

is the divine thought in the world,—more life, less death; more of those purposes, efforts, concepts, that lead to broad, rich, true living."

The (Episcopalian) *Church Standard* says: "The growth of the Zionist societies has been marked. Within the year they have grown in Russia from 877 to 1,034. In the United States the advance has been from 102 to 135, scattered through the thirty states of the Union. In all, the membership is now about one hundred thousand. The wealthy Jews in the great cities of the world seem well satisfied with the lands of their adoption and do not turn in longing towards the land of their fathers. Not so those who are destitute and oppressed. Among the Israelites, as among the Christians, it appears that God hath chosen the poor of this world rich in faith."

The (Unitarian) *Christian Register* says: "When Dean Everett took part in the ordination of several young men at King's Chapel, as he laid his hands upon the head of each one in succession, he repeated a brief formula of charge and benediction containing the words 'speak the truth in love.' The whole philosophy of persuasion, of conciliation, and of moral influence, lies in this charge. Any truth-telling may do good; but the highest forms of truth-telling, which result in the reformation of the wrong-doer, always proceed from the spirit of love and sympathy."

The *Congregationalist* says: "So many Roman Catholic priests have become Protestants lately in France that an institution has been established at Sevres where they may find temporary shelter and care after having abandoned their livings, and a special periodical has been started in their interests. More than three hundred are stated to have left the Roman Catholic Church within two years. A singular fact is that the French Protestant churches are said to look upon this movement in their own direction with some suspicion."

The *Watchman* says: "It has been well said that even in the lowest estate in which any one of us stands, we could see ourselves surrounded by innumerable occasions for thankfulness; but we gauge our gratitude by our ambition. We are exceedingly grateful when our plans are rounded out into success, or when some darling plan is carried to success. But when our favorite objects are defeated, we are not only downhearted, but full of complaints."

The *Northern Christian Advocate* has the following: "God is near at hand. Truly He is not far from each one of us. Then how strong should be our faith in ourselves if we are at one with Him, and can expect His help. Dr. Charles Parkhurst says, 'The human soul is not graced or replenished by a God who is put at a distance.' The application of the nearness of God is our constant safety. Let us feel that we are abiding (at home) with Him."

In an editorial article on "How to make Bible Study more Helpful," the *Congregationalist* says: "Study it [the Bible] therefore in order to apply its teachings to your own life. To know what its precepts are is not enough. They must be accepted and illustrated in conduct. Studied thus and thus applied, the Bible becomes what the Psalmist called it, 'a lamp unto my feet, and a light unto my path.'"

A writer in the (Baptist) *Examiner* says: "We learn to be quiet in the thick of present troubles, just as one who moves gently and fearlessly about in the midst of a swarm of bees escapes unstung. It is not that the cat scratches the child. Rather the child scratches itself against the cat's claws. We may handle the troubles of life so deftly and peacefully as to disarm them of half their sting."

A building was dedicated at St. Petersburg recently, designed for the purpose of aiding young men in the line of moral and physical

improvement. It will resemble the Young Men's Christian Association of this country. It is said that the czar is much interested in this work.

A writer in the (Baptist) *Standard* says: "A wearisome prayer in the pulpit, full of worn-out, vague, or meaningless platitudes, is a sin. It is a waste of time and spiritual energy during the hour of holy service."

The *Christian Life* furnishes the following epigram: "Human nature is not yet through building monuments to those its fathers stoned."

Notices.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

No. 6.—Christian Science: Is It Christian? By M. S. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution, may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society.

Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/2 x 6 1/2 inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/2 x 6 1/2 inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.	

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTIAS. An illustrated poem.

Single book, prepaid	\$3.00
Twelve or more books to one address, each, prepaid . .	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription :

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription :

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale :

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12 1/2 cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

Political and Governmental Notes.

The United States auxiliary cruiser *Yosemite* was wrecked on November 15 as the result of a typhoon which swept over the island of Guam two days previously. After her cables had parted, on the 13th, she drifted on a reef near the harbor of San Luis d'Apra, and stove in her bottom. Five of the crew were lost; the rest were transferred to the collier *Justin*. The typhoon wrecked thousands of houses, among them being the headquarters of Governor Schroeder. The towns of Indragan and Terrafero were swept away, and it is estimated that hundreds of the native population in various parts of the island met their death. The cocoanut crops were rendered absolutely worthless and the vegetation of the island was killed by salt water.

Congress met on December 3 for the beginning of the short session. On December 3 the President's message was received. The leading Republicans of both houses have been conferring with one another and with the President and members of his Cabinet ever since election concerning legislation to be put through during the short term. Senator Allison, chairman of the committee on appropriations, says there are three measures which must pass during the present session. They are the appropriation bills, an army reorganization bill, and a reapportionment bill. Under present statutes the volunteer army will be disbanded next July, leaving a regular army of only about twenty-seven thousand.

The largest stock of gold coin and bullion ever held in the United States is now accumulated in the treasury and its branches. The total has been rising steadily during the present year, and the amount is now \$474,108,336, or about \$76,000,000 greater than at the close of 1899. The increase up to June 30 was about \$23,000,000, but since that time has been about \$1,000,000 for July, \$6,000,000 for August, \$10,000,000 for September, \$18,000,000 for October, and \$17,000,000 in November.

Signor Marconi's proposition to flash messages without wires between Europe and America may prevent the passage of the bill for a Pacific cable. Chairman Hepburn of the House committee on interstate and foreign commerce, who reported a Pacific cable bill in the last session of Congress, said recently: "What is the use of putting \$15,000,000 or \$20,000,000 under the ocean in a cable plant, if an invention has been perfected that will render all submarine cables useless?"

Civil Service Commissioner Proctor has formulated a plan for educating large numbers of the brightest Filipino boys in American colleges. Fifty colleges, including four or five in Pennsylvania and several in New

England, have agreed to accept Filipino students under the plan proposed, and four of the fifty colleges have agreed to defray the expenses of the young Filipinos who come to them. The others have offered exceptionally favorable terms.

Secretary Long received, on November 30, from the Carnegie Company and the Bethlehem Company signed contracts to deliver eighteen thousand tons each of armor plate for eight battleships and six armored cruisers to be finished during the next few years, the total amount to be divided by the two companies being \$160,300,000. The contract is unprecedented in terms and extent.

Foreign News

Under date of November 28, Lord Roberts cabled from Johannesburg that the British garrison of four hundred men at Dewetsdorp was compelled to surrender on November 23 to a force of twenty-five hundred Boers, after severe losses. The Boers have been very active lately, carrying on operations on a small scale, but so successfully as to cause uneasiness in the minds of the British public because it was confidently believed quite generally that the Boers were too badly beaten to muster any considerable forces in the field. The War Office in London announced on November 30 that Lord Roberts had handed over the command of the British troops in South Africa to Lord Kitchener on the previous day.

Japan will shortly be the strongest naval power in the far East. Three new warships have lately arrived from England, France, and Germany, and the *Hatsuse* is expected from England. In mere tonnage alone the four new vessels surpass the total tonnage of the eleven Japanese or the twelve Chinese ships that were present at the great sea fight in the Yellow Sea. In case of hostilities the Japanese could now put eight vessels in the line of battle, and these would be more than a match for the combined forces of any two powers in the far East.

A news telephone service has been established at Budapest, the object of the scheme being to supply subscribers with reports of all the important occurrences which are ordinarily chronicled in the daily papers. The service has a main line one hundred and sixty-eight miles in length, and is connected with private houses and various public resorts. Between 7.30 A.M. and 9.30 P.M. twenty-eight editions of news are spoken into the transmitter by ten individuals, who work in shifts of two.

During Mr. Kruger's stay in Paris last week he called on the prime minister, who returned his call, and both chambers of the national legislature passed resolutions of sympathy with the Boers. He was treated with marked respect by both officials and citizens. He went to Cologne, Germany, December 1, and from there intended to go to Berlin, but he received an intimation that Emperor William would not receive him and decided to go direct to Holland.

M. Yermoloff, Russian Minister of Agriculture, estimates that the coal deposits recently discovered on the Black Sea coast, in the government of Kutais, will yield 1,640,000 tons annually for sixty years. He considers the quality excellent.

The Chinese problem took on a more favorable phase last week, by the general acceptance of the American view as expressed in a note to the powers, that the demands on China should be moderated.

Japan is to have an international exposition in 1902.

Industry and Commerce.

More failures in proportion to the number engaged are to be found in the history of the packing interests of Chicago during the last thirty years than in any other line of commercial activity. There are but nine

active plants left out of sixty-three that were in existence prior to and established after the big fire. The tendency of business in the stock yards has been toward a consolidation. During the last ten years the greatest changes have taken place in the packing interests. It has been the era of the rise of the "big four"—two of whose constituent members had no existence prior to 1890.

Since the public quotation of the Pittsburgh Stock Exchange for Carnegie stock, recently, there has been considerable guessing as to Andrew Carnegie's wealth. The quotation was \$1,500 a share and no sales were made. The capital stock of the company is \$160,000,000, with the same amount of bonds. Mr. Carnegie holds five-eighths of the total issue of each. If the offer of \$1,500 a share establishes the market price, the stock is worth \$129,568,500. The bonds would probably sell at 110. This would make Mr. Carnegie's holdings worth \$95,016,900.

"Along the high voltage transmission line running from Provo, Utah, to Tintic, the 'salt storms' from the plains often produce remarkable electrical displays," says the *Western Electrician*. "On account of the moisture in the air and the thick covering of the poles with salt, powerful discharges occur at frequent intervals; short circuits are momentarily caused, the lights dip, and sometimes the operation of the motors is interfered with. These discharges are usually of dazzling brilliancy, and at times startling."

An American railway man, who was recently in Europe, reports that a new railway is being built in Northern Sweden under the Arctic Circle. He says there have been discoveries of extensive iron ore deposits in that region, and the new road, which now extends two hundred and fifty miles from the iron range to the Baltic, is designed to enable the ore to be shipped to Atlantic tide-water.

General News.

Negroes the country over have been invited to assist in the organization and incorporation of the West African Trading Company, which, it is proposed, shall operate a steamship line between Philadelphia and Liberia. Rev. William H. Heard, former United States consul-general at Liberia, is at the head of the movement, which also has the support of leading colored men of Philadelphia, New York, New Jersey, and Georgia. A meeting has been called for January 10, 1901, at which time the stockholders will meet to elect permanent officers and decide upon the time to commence business as importers of rubber, coffee, ginger, palm oil, palm kernels, hides, and cocoa.

In a lecture before the New England Women's Press Association in Boston, Gerald Stanley Lee of Smith College recently said: "Men cannot write inspired things without living inspired lives. This disease of self-support is on almost every face one meets in our daily walk. If the demands of personal appearance were less, greater personalities would be developed and the world would know more great souls than it does. From an economic standpoint, there are towns in Europe whose entire living is made out of some famous artist's name, who lived there in seclusion centuries before."

John A. Johnson, a manufacturer of Madison, Wis., has offered forty thousand dollars to the Board of Supervisors of Dane County, Wis., for the purpose of erecting and maintaining a home for aged people. In addition to the regular method of entering the home, by the payment of not less than two hundred dollars, Mr. Johnson has conceived the idea of issuing admission policies similar to insurance policies, which may be taken out by people in youth or middle age, to provide for their support and comfort in old age, or which may be taken out by any one for the support of a friend.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Indians' Queer Ways.

Their Primitive Life in British Columbia.*

WHEN a new Longfellow arises western America will constitute his Arcadia. Folk lore a-plenty, traditions the most far-reaching, relics, and sombre reminders of ancient glory and greatness abound in the extreme Northwest.

During the last three years the American Museum of Natural History has conducted extensive investigations among the native tribes of the Pacific coast. The valleys of the high mountains are inhabited by an endless number of tribes, and hundreds of distinct languages are spoken.

It is a fascinating problem to unravel the history of the tribes inhabiting this region, and to trace the obscure origin of these tongues that are doomed to early extinction. Many a one that was spoken thirty or forty years ago by hundreds or thousands of individuals is now known only to a piteous remnant of a few souls. There are even languages which are now extinct, and others the knowledge of which is confined to a single living person.

For this reason the American Museum of Natural History has endeavored to contribute its share in the preservation of all that can be learned of the languages, habits, and industries of the early Indians, and it is largely through the munificence of Morris K. Jesup, president of the Museum, that it has been possible to carry on this work on a large scale.

In previous years much material has been collected in the state of Washington, in northern British Columbia, and in Alaska. The field work of last summer was directed toward a thorough investigation of the tribes of Vancouver Island.

Dr. Franz Boaz, who has been in charge of this work, has just returned from the Northwest. He prepared the following account of his trip for the *Boston Herald*:—

Early in June I reached the field of my operations, and renewed at once the acquaintance of my old friends, whom I had not seen for several years. Here we still see the Indian in quite primitive conditions.

He still lives in his old house, built of cedar planks, the front painted with designs which represent the crest of his family. The roof of his house is supported by heavy posts and enormous beams, some of which are more than five feet thick and forty feet long.

It is a most interesting scene to witness the raising of a house. The whole tribe assembles, invited by the man who intends to build, and the work is opened with a splendid feast. First the people are seated in the form of a square and the host steps to the middle and tells them about his plans. He praises the achievements of his ancestors in most bombastic phrases, speaking of them as the pillars of heaven, upon which rests the welfare of the world, as steep mountains from which rush down avalanches of wealth; their house he describes as the centre of the world, and themselves as the liberal supporters of every one who is in need.

The guests listen carefully to these boastful speeches, at

the conclusion of which songs are sung. Dishes containing the food are then passed around, and at last the guests are ready to take up their work. By the combined efforts of all the men the beams are pushed upward on slanting posts leaned against the uprights of the house, until, after much shouting, pushing, and quarrelling, the heavy logs reach their final resting-place.

The manufacture of planks for the sides of houses used to be an important industry of these people. In early times, when they had no metal tools, they selected large cedar trees, and after climbing up some thirty feet, they chipped with their stone chisels a long transverse cut into the tree. A similar cut was made at the bottom, and then the planks were split from the living tree.

The houses are from thirty to forty feet square. Each corner is inhabited by one family, each having a fireplace of its own. Often the mother may be seen sitting next to the fire, and not far away we see the trunk of a small yew tree, with a stout branch attached to it, from which is suspended the cradle. The mother rocks the cradle by means of a cedar bark rope, which is tied to her toes. At the same time she occupies herself with preparing the meal, or with other household occupations.

In preparing food it must be carefully washed. It is seasoned with certain herbs. In smoking fish, great care is taken to keep it free from dust. Clams, which are dried and used as winter food, are put on long poles, which are made of the wood of a certain kind of raspberry, which is believed to give them a nice flavor. The length of time required for boiling certain kinds of roots is exactly determined; and in storing food for winter use great pains are taken to use boxes made of wood which will give a pleasant smell and taste to the provisions.

The Indians are also very particular in regard to their table manners. It is considered very inappropriate for a person of noble birth to eat hastily, or to take large bites. The mouth must not be opened so that the teeth or tongue may be seen. Some water ought to be taken after each meal. On the other hand, it is considered presumption on the part of people of lower rank to imitate the table manners of the nobility. Such people ought to eat quickly. When invited they are expected to smack their lips in order to express their appreciation of the nice taste of the food offered to them, and they are expected to eat great quantities.

In the same way the Indians expect on the part of well-educated persons of noble rank a behavior different from that of other people. Girls belonging to the nobility, for instance, are expected to stay at home most of the time and to be industrious. They ought to know everything pertaining to housekeeping, so as to enable them to entertain their fathers' guests properly.

When going out they are expected to walk slowly and to take short steps. They must look down to the ground and not look about much.

Common people, on the other hand, are allowed all kinds

of freedom, and while girls are expected to become expert housekeepers and boys learn to be expert fishermen, the rules in regard to their behavior are not by any means so rigid as those enforced upon the nobility of the tribe.

Most of the people, particularly the older ones, have not adopted the white man's costume, but they still wear the blanket. On a sunny day, at a time when most of the people are at home, the street of a village presents a bright appearance. The houses all stand in a long row. Most of them are whitewashed, many painted with more or less elaborate designs.

In front of the houses stand high carved poles, showing the crest of the house owner. On top of some is carved a bird with spread wings; others are carved all over with human and animal figures, which represent a tradition referring to the origin of the family.

The street in front of the house is carefully levelled. A steep grade leads down to the beach, which is covered with canoes. These are cut out of trees.

Over the steep grade leading down to the beach are built a number of platforms surrounded by a low balustrade. These are the summer seats of the Indians, on which they spend most of their time. Here they squat down, wrapped in their gaudy colored blankets, and gossip about the events of the day. The children are playing on the beach, some are bathing, and their parents look down upon them and encourage them when they endeavor to learn to swim and to dive, or to manage the canoe. The younger people often assemble at one end of the village playing games.

One day I visited the site of an old village, now deserted. At the time of Vancouver's first visit to these regions, more than a hundred years ago, this site was inhabited. The famous navigator found here a small village, situated on the top of a hill, and surrounded by a high stockade. Warriors were detailed to watch the gates. I landed at the foot of the deserted hill and climbed up under the guidance of an old Indian.

Thus the old picture of the village which is preserved to us in the description of Vancouver's travels received new life by the tales of this old man. On the place that had been the street of the village I found a large granite boulder, showing a number of small, cuplike depressions. These were made at the time when the first guns reached the Indians. They used to buy copper from distant tribes and hammered bullets out of it in these small cups.

At this place empties a large river, which the salmon ascend every year. Late in the fall enormous numbers of dog salmon are found here, and during this season the Indians come from their villages all along the coast and camp on the banks of the swift river.

In the course of my investigations during the past summer I had to make a journey up this river, which rises in the interior of Vancouver Island. The glaciers of the steep mountains of the interior of the island feed a number of small rivers, which empty into a long, narrow lake. From the lower end of this lake the rapid river runs down into the sea. According to tradition, a tribe of Indians was located in early times on the small rivers in the interior of the country. Traditions tell of their encounters with the coast tribes and of their gradual descent to the sea.

It was with the intention of seeing the points that are mentioned in these traditions, and of examining a number of old village sites and fishing stations, that I made the ascent of the river. At high water the canoe reaches easily the foot of the lowest rapid, which is formed by a large island. Here the canoe is unloaded, and is pushed upward by the boatman, who stands in the water. The rapid is not

very long. Just above it a deep pool is reached. Here the river cuts through a small ridge, forming a short, deep canon.

My companions pointed out to me, on the east side of the river, a long cave, in which the ancient inhabitants of this region used to bury their dead. On the opposite side, in the crevices of the rock, is an interesting place.

The Indian infant is embedded in a cradle made of wood, and is wrapped in bedding and cushions of soft cedar bark. As soon as the child leaves the cradle its wrappings are suspended from the rafters of the house. They are kept until the child is grown up and then carried to this place, where they are pushed into the crevices or deposited in baskets. This custom has been continued for generations, and every little crack in the rocks is filled up with the remains of infants' bedding.

When I was ascending the river the water was quite low, and in the canon it was smooth, but it is said that in times of high water the river runs impetuously through the gorge. After passing out of the canon the valley suddenly widens, and two small rocks are seen in the river. Behind these there is a little hill, forming a peninsula. This spot, which is about three miles from the sea, is one of the historical points around which innumerable traditions cluster.

It is said that in the beginning of the world the ancestor of the tribe whose home is on this river emerged from the bottom of the sea, standing on the back of a huge halibut. He built his house on this hill. After the posts were erected a large eagle descended from heaven, which placed the beam upon the posts. Then the eagle took off his eagle dress and became a man. These two heroes became the ancestors of the tribe.

In later times the tribe waged war against the Indians who lived on the small island north of Vancouver Island. In one battle they were almost exterminated. But two brothers escaped to the woods, and by prayer and fasting obtained supernatural powers. The one was given an arrow. By pointing it at his enemies the owner was able to kill them. The other hero had his hands transformed into stone, so that he was able to kill his enemies by striking them down. Every rock and every village site on the river has its tradition referring to the deeds of these two men.

In traveling along the coast of Vancouver Island the spot is pointed out where the salmon was created, where the first people, during the deluge, tied their raft or canoe to the top of a mountain, and where they regained the ground after the waters had disappeared. You may see the place where the Creator, with mighty step, walked from island to island, and where the muskrat dived to bring up the leaves out of which were created the trees which cover the hills.

And you may see the island where, in ancient times, the fabulous owl jealously watched the fresh water, and where the raven succeeded, by crafty tricks, in obtaining the water for the benefit of mankind. The Indians will also tell you proudly of the places where their ancestors came down from heaven or arose from the bottom of the sea. But there are also places made memorable by savage fights, and fortresses which resisted fierce attacks of the enemy.

On going further up the river we reached an ancient village site, in front of which there are a great number of salmon traps, which supply the principal part of the winter provision of the people. Each family group had their own traps, which no one except members of this family are allowed to use.

Selected Articles.

Wednesday Evening Meeting at Winchester, Mass.

PERHAPS few people realize the character of the Wednesday evening meetings that are held in the Town Hall by First Church of Christ, Scientist.

The writer attended the meeting last week, November 7, and was much impressed by the services, and the good that could be derived from them by one who did not understand the doctrine.

The service consisted in singing of hymns, reading selections from the Bible and the Christian Science text-book, and interesting personal testimonies of healing and spiritual benefit that had been gained through Christian Science.

The first person to speak was a lady, who said: "I think there is no one more grateful for Christian Science than I am, for it indeed has been a blessing to me. I had gotten to that point described by St. Paul as 'having no hope, and without God in the world.' An attack of the grip had left me with a troublesome cough which had kept me awake nights, and was very annoying to my family; but my physical ailment was nothing compared with my mental condition. I felt that God was going farther and farther away from me, and that I was drifting out to sea. One day my husband found me crying bitterly, and he asked me to tell him just how I felt, and I said I was wretched and did not know which way to turn. We talked together for a while and he asked me why I did not try Christian Science? and as a result in a few days I went to a healer. I did not then know that Christian Science was a religion, so I did not mention my mental state to the healer, simply telling her of my bodily ills, but she soon discovered my state of mind. That night I lay awake wondering at the peace and calm that had suddenly come over me and my cough had entirely left me. The next night I went to sleep as soon as I touched the pillow and slept all night, the first time in many weeks. I found a religion and a God that is All-in-all to me, and I am trying to live worthy of the name of Christian Scientist. I often stumble and sometimes even fall, but I am never discouraged, for I know if I am faithful over a few things, God will make me ruler over many."

Another lady spoke of the first time she came to Winchester, a good many years ago. She said she was called to give Christian Science treatment to a little baby who seemed to be passing away. The nurse said to her afterwards, "I am not in the habit of burying my patients until they are dead, but if ever a child was brought back to life, that one was. Now make me whole, too."

She also told of a patient who, when she came to her, said she had been praying to God sixteen years for health, and asked if we (Christian Scientists) believed in Christ? She was assured that Christian Science was all Christ, and in living Christian Science we should show to the world what the Christ-life really is. She is now reading Science and Health, and although not entirely healed, is fast becoming so.

A gentleman testified to a case of healing of paralysis. The patient was a man who had gone to a resort for his health, and while there his wife heard of Christian Science, and persuaded her husband to take treatment, which he did, and although he had never seen his healer, he was cured in three weeks by absent treatment. Soon after, this gentleman went to Port Angelus, Washington, and there found one Christian Scientist. To-day, through their efforts, a church with fifty-seven members and reading room nicely furnished, all free from debt, are established.

A young man told of a case of inherited eczema in a

child that was healed through the understanding of Christian Science which the mother had. Afterwards the same child, a little girl, healed herself of a fever, by repeating the Scientific Statement of Being, which she had learned at a church service.

One lady spoke of a brother who had always disliked her. From the time they were children until they grew up and married, he had taken every opportunity to show his dislike, even telling her at one time that he never had liked her and never should. This was a great grief to her and she often asked God for help, and after she became a Christian Scientist, it was entirely overcome with Truth, so that now there is perfect harmony between them. She said, "I do not think you could find a brother and sister anywhere who have more love for one another than we have now."

Another lady said: "Our text-book, Science and Health by Mary Baker G. Eddy, says, 'Disease is fear made manifest on the body' (page 489). This was made very plain to me one evening when I was obliged to leave my little girl who was suffering with a sore throat. I had treated her, and felt that it was right to leave her to keep a necessary engagement. On my return I went directly to her and found her much worse, being hardly able to make me understand a word, but I learned that a great fear had been planted in her thought by one of the family who was not a Christian Scientist. I took my Bible and seating myself beside her, began to read the ninety-first Psalm. This quieted her, and shortly I found her repeating the psalm aloud with me, her voice growing clear and distinct. In the morning she was well. This was proof to me that this disease was 'fear made manifest on the body.'"

A gentleman told of a case of a New York business man who was subject to severe attacks of suffering at intervals. He had consulted a number of physicians without being relieved, and while traveling at one time was seized by one of these attacks and given up to die by several doctors who were present.

A traveling salesman who was a Christian Scientist, happened to be stopping at the same hotel with this man, and hearing of his case asked if he could see him, which request was granted. He talked to him of Christian Science, and the man was willing to be treated, and in three or four days he was healed and ready to go home.

This same gentleman also told of the case of a woman who was suffering with a cancer, and for whom the physicians could do no more. Her husband wished her to try Christian Science as a last resort. She was treated, and in three weeks was completely healed.

A lady told of the healing of a friend of what the doctors pronounced gall stones. She had been everywhere to the very best physicians and had come to Boston to be under the care of a specialist, when she met with a Christian Scientist and was healed.

Several other good testimonies were given, as proof of the sincere earnestness of these people, and their firm belief that they have found a religion that will meet and overcome every trouble.—*Winchester Star*.

Blessings of Christian Science Recognized.

In a signed article in your issue of October 21, Mrs. George Archibald discusses Christian Science, and propounds questions which she attempts to answer. Your contributor is not a Christian Scientist, and for that reason she cannot have that understanding of this subject which is necessary to reply to these queries. Of Christian Science Mrs. Archibald asks:—

"Is its effect on society satisfactory?" Those who con-

scientiously and earnestly study Christian Science and understand what it teaches, are satisfied with it. Those who know nothing of it cannot be expected to recognize its blessings.

"Does it unite or divide mankind?" The brotherhood of man, and the gospel of the golden rule are insisted upon in Christian Science. Where else can such a teaching tend than toward perfect unity? When we understand what Christian Science teaches, that there is but one God, "Who is the father of us all," the whole race will be drawn together in the bonds of universal love.

"Does it harbor rancor and encourage egotism?" Malice and hate and self-love are qualities of mortal thought, which divine Love destroys. The Christian Scientist daily strives "to put off the old man with his deeds," and to have that Mind which was in Christ Jesus, wherein the thought of personality or of self is given no place. The Christian Scientist knows that God governs him, and such realization dissipates the false sense of rancor, envy, or jealousy.

"Does it strengthen character and fit men more intelligently to do their duty towards themselves and their fellows?" There can be no doubt as to the effect of Christian Science on the individual and on the human family. When we acknowledge one God and one Christ, when we make our lives conform as nearly as possible to the life of the ideal man, Christ Jesus, the result must be to purify, ennoble, and strengthen character, and fit men to regard themselves and their fellows as God's children. This is what Christian Science does.

It is noticeable that in this article there is an evident absence of any knowledge of healing instituted by Christ. Christian Science is based on a demonstrable Principle, that is, upon the teachings of Christ, and this must be recognized at the outset of any discussion. We meet here on a metaphysical plane, and that view-point must be kept constantly in mind.

The position taken by Mrs. Archibald on this question of healing is logically not tenable. If the power to cure is admitted at all, as she does admit it, it must be accepted *in toto*; for "the Lord's hand is not shortened, that it cannot save; neither his ear heavy, that it cannot hear."

This healing power will increase as we gain more of the Mind of Christ. The Science of Life is becoming understood, and it is as capable of proof as the science of mathematics or harmony, because the Principle of this healing is God.

There is nothing in history, and nothing in the present to warrant any evil prophecy as to the disintegration of the Church of Christ, Scientist. The majestic march of Truth cannot be impeded by the petty human will of one man, or of many. All the might of Pharaoh, with the organized military forces of an empire, could not stay the progress of God's children.

Jesus had occasion to reprove those who opposed his work, and he did it fearlessly. He rebuked sin in every form, and for this he suffered persecution and crucifixion. When he healed the sick, those opposers declared that he cast out devils by Beelzebub, the prince of devils, and his answer was clear and sharp: "If I by Beelzebub cast out devils, by whom do your sons cast them out?" The accusation of evil did not deter Jesus in his denunciation of sin.

Christian Scientists are engaged in a contest against sin in all its forms, and through the power of the Christ-Mind, which alone destroys error, they succeed in healing the sick and in casting evils out of themselves and others. Strongly intrenched in the citadel of divine Love, the Christian Scientist meets every attack of the opposers of Truth, and waits patiently for the final destruction of evil.

The power of Truth and Love as reflected by the Christian Scientist is a strong rebuke to the sinner, and the angry cry of baffled error is still heard: "Art thou [Truth] come hither to torment us before the time?"

Christian Scientists do not treat any one for physical or mental discord without being requested by the patient to do so. This disposes of the absurd accusation of malpractice. Mrs. Archibald has answered this as clearly as could a Christian Scientist, when she says that Mrs. Eddy teaches how to destroy the influence of malpractice. "If Satan also be divided against himself, how shall his kingdom stand?" Mrs. Eddy's followers, possessing the understanding which destroys evil, could not practise evil, knowing its unreality. Malpractice is hypnotism, or the act whereby one human will takes possession of and controls another human will without the latter's knowledge or consent. This is diametrically opposed to Christian Science, which never employs the human mind, but subordinates it to the divine Mind, and reflects only God.

No one has a right to question the veracity of those testifying to cures in Christian Science, and thousands will continue so to testify. "The laborer is worthy of his hire," and those who practise Christian Science are justified by every civil, moral, and religious law in accepting payment.

The final conclusion of your critic is that one must belong to the "established organizations of Christian churches," to be free from the charge of arrogance and dissension. This is taking a limited and dogmatic view of the power of good to leaven the whole lump. Christian Science preaches the absolute unity of all men with one another and with their divine Principle, God. This admits of no separation, in thought or practice. This sentiment is powerfully set forth by Mrs. Eddy in the Christian Science text-book, "Science and Health with Key to the Scriptures," p. 235:—

"One God unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates Pagan and Christian idolatry; all social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed."

Yours truly,

WILLARD S. MATTOX.

Instinct—Imitation—Ideas.

IN the higher types of civilization, where advances in every department are rapid, where education is widely diffused and opportunities of all kinds are numerous, we might, with reason, look for a corresponding progress in the growth of ideas in the individual and in their practical outcome in his actions. We might expect that customs themselves would be brought to the bar of personal thought, and that they should be judged as good or bad, not on account of their long continuance or the number of their adherents, but because of their intrinsic worth or worthlessness. We fear, however, that this is the exception and not the rule. Take the lighter things of life, for example, as how we shall eat or drink or what we shall wear, what kind of houses we shall dwell in and how we shall furnish them, how we shall manage our expenses, regulate our time, conduct our hospitalities, our charities, our amusements—in all such things are we thinking out for ourselves the best ways and practising them, or are we merely imitating our neighbors? Do we follow custom or work out ideas?

Then, too, in the matter of our beliefs or opinions, are they really our own? Have we worked them out for ourselves, earned them by faithful mental labor, tested their truth to the best of our ability? or are they only appropriated from the brains of others, copied from our party, or our sect, or our newspaper and passed off as true coin.

when, in truth, they no more belong to us than any other borrowed possession?

How is it in our occupations? Are we doing our best work, in the best way, so far as we can discover it, or are we content to do as others do? Do we search for a surer method or a shorter road to a given end, or do we follow monotonously on in the beaten track, be it ever so long or crooked? Have we formed conclusions of our own as to the claims of honesty and the principles of justice, from which we will not swerve, or are we satisfied to conform to the common standard and glad to escape active disapproval? Are our dealings with one another governed by our own cherished ideals of human brotherhood, our own highest conceptions of mutual kindness, helpfulness, and sympathy, or do we simply imitate what we see done in the ordinary intercourse of people? Are we, in fact, rising into true manhood, putting forth our faculties, exercising our powers, making determined efforts for good results in all departments of life, or are we sinking into mere transcripts of other people, mirrors to reflect their thoughts, echoes to reproduce their words, puppets to imitate their deeds?

These are questions which each one will do well to ask himself from time to time. They are vital matters to the vigor and energy of his life, to the development of his character, to his value in the world. Emerson says:—

"There is a time in every man's education when he arrives at the conviction that imitation is suicide; that he must take himself for better, for worse, as his portion; that, though the wide universe is full of good, no kernel of nourishing corn can come to him but through his toil bestowed on that plot of ground which is given to him to till. . . . What I must do is all that concerns me, not what the people think. This rule, equally arduous in actual and intellectual life, may serve for the whole distinction between greatness and meanness. It is easy, in the world, to live after the world's opinion; it is easy, in solitude, to live after our own; the great man is he who, in the midst of the crowd, keeps, with perfect sweetness, the independence of solitude."

[Extract from an editorial which appeared in a recent issue of the *Public Ledger*, Philadelphia.]

Popularity of the Bible.

LONDON, October 27.—Statistics issued this week show a vast increase in the circulation of the Bible. It has been stated that the opposite is the case in the United States, where publishers and booksellers are cited as having said "there is no money in the Scriptures." A talk with Mr. Henry Frowde of the Oxford University Press corrects this statement very materially. He says it is true that the business of some American publishers has been largely reduced, but this is not the result of any falling off in the popularity of the Bible in America. The explanation given is that new and more economical machinery has been introduced by other publishers of the Bible. Never was there, he says, such a demand for Bibles as at present; three times as many Oxford Bibles have been sold as in any previous year. The British and Foreign Bible Society, which prints the Scriptures in four hundred languages, representing the speech of seven tenths of the world, issued in the twelve months ending with last March 5,047,000 copies of the Bible—a bulk absolutely without precedent and considerably more than half a million in excess of the corresponding period previously. Of that huge mass, over thirty per cent or 1,521,000 copies are in English.

In themselves those figures are sufficiently significant, but even more striking is the record privately compiled and not yet published, of the growth during the last decade. In 1889-90 the number of complete English Bibles sent out was 534,980. Each year showed a consistent, steady

rise up to last year, when it was 618,215. Ten years ago the New Testaments were 599,613, and last year 614,719, the intervening figures having somewhat fluctuated with a general tendency to increase. Of portions of the Scriptures, such as the Psalms or the Gospels, twenty-five thousand were issued in 1889-90, and last year they numbered 467,482, not a little of that great increase being due to the fact that one hundred and twenty-six thousand copies were distributed to the troops as they left these shores for South Africa. The penny English New Testament is sold at less than cost price. Since it was first brought out in 1894 over seven million copies have been issued at a loss of £25,000, as it cannot possibly be produced at its selling price. At the Oxford and Cambridge University Presses which, together with the Queen's Printers, alone have the right of printing the Bible in this country, the finest typography, the choicest paper, and most artistic of bindings are requisitioned for the sacred volume, and there is not the slightest diminution to be observed in the demand for sumptuous copies.

Mr. Frowde says that the total annual output of Oxford Bibles for some years past has been upward of a million copies, and even before there was an American branch of the Oxford University Press, the weekly shipment of Bibles to the United States often exceeded five tons in weight. The Americans take the keenest interest in Bibles and Biblical matters, as was shown very clearly at the time of the publication of the revised Testaments. Not only the authorized Bible holds its own, but the revised version is slowly but steadily increasing in popularity.

New York Sun.

Origin of Alphabets.

A unique volume has just been presented to the Smithsonian Institution by Professor J. C. C. Clarke of Upper Alton, Ill. The work is on the origin and evolution of the alphabets. For many years Professor Clarke was at the head of the department of Greek at Shurtleff College, which was named in honor of Dr. Benjamin Shurtleff of Boston. Since retiring from active work in that department Professor Clarke has spent most of his time in travel and original research work. The materials for the work just finished were gathered for the most part during travel in foreign lands and by correspondence with specialists. Professor Clarke published in 1884 a volume of twenty pages of illustrations on "The Origin and Varieties of the Semitic Alphabet." In the new work, which is folio, elegantly bound in morocco and gilt, the compilation of the alphabets of the world is so tabulated as to show the origin of all of them in the Egyptian hieroglyphics, and to exhibit the development of each from its earliest to its latest forms.

The volume contains about a thousand varieties of the alphabet, of which two or three hundred may be called distinct alphabets. They are arranged according to dates and geographical and racial connections. All the Hebrew, Arabic, and Syric, and the European alphabets are traced from the Egyptian. The many Rumi alphabets are traced from the Greek. The Persian, Indian, Manchu, Thibetan, and Malay are traced from the Syric. Not the least curious feature of the book is the exhibition of the six Philippine alphabets, and those of the other islands, as Sumatra, Java, the Celebes, and Formosa. The exhibition of the evolution of the alphabet of Java alone fills two pages. The volume also exhibits the numeral cyphers of all the world. The latest European books on this subject say that the origin of the numerals and the zero is unknown. Professor Clarke shows that they are Syric letters of about the Christian era, and are the first ten letters of the alphabet. The figures four and eight are older forms than the others, and our circular zero has been made from the Syric "I" enlarged.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Christian Science Thanks.

THE following was contributed by the Rev. Mary Baker G. Eddy to a symposium on Thanksgiving which appeared in the *Boston Globe*, November 29, 1900. There were twenty-three articles written by prelates of various denominations, and Mrs. Eddy's was the only one contributed by a woman.

The communications were sent in answer to the following telegraphic inquiry from *The Globe*:—

On the threshold of the twentieth century, will you please send through *The Globe* to the people of New England, which is the birthplace of Thanksgiving Day, a sentiment on what the last Thanksgiving Day of the nineteenth century should signify to all mankind?

New England's last Thanksgiving Day of this century signifies, to the minds of men, the Bible better understood and Truth and Love made more practical; the first commandment of the decalogue more imperative, and, "loving thy neighbor as thyself," more possible and pleasurable. That Love, unselfed, knocks more loudly than ever before at the heart of humanity and finds admittance. That revelation, spiritual voice and vision are less subordinate to material sight and sound and more apparent to reason. That evil flourishes less, invests less in trusts, loses capital, and is bought at par value. That the Christ spirit will cleanse the earth of human gore. That civilization, peace between nations, and the brotherhood of man should be established and justice plead not vainly in behalf of the sacred rights of individuals, peoples, and nations. That the Science of Christianity has dawned upon human thought to appear full-orbed in millennial glory. That Scientific religion and Scientific therapeutics are improving the morals and increasing the longevity of mankind—mitigating and destroying sin, disease, and death. That religion and *materia medica* be no longer tyrannical and proscriptive. That divine Love, understood in Divine Science, impartial and universal, forms the coincidence of the human and divine, which fulfils the saying of our great Master, "The kingdom of heaven is already within you." That the atmosphere of the human mind, when cleansed of self and permeated with divine Love, will reflect its subjective state in clearer skies, less thunderbolts, tornadoes, and extremes of heat and cold. That agriculture, manufacture, commerce, and wealth should be governed by honesty, industry, and justice, reaching out to all classes and peoples. For these signs of the times we thank our Father-Mother God.

MARY BAKER G. EDDY.

Christian Science and the Episcopal Congress.

THE following article from the pen of the Rev. Mary Baker G. Eddy appeared in the *Boston Herald*, Sunday, December 2, 1900.

The Church Congress of the Episcopal Church, recently convened at Providence, R. I., smiled mildly on some fea-

tures of Christian Science, but its arrangement of the programme for the discussion of the subject was unfortunate, in the interests of strict justice and fair play. The discussion was opened, first, with an address by Professor Theodore F. Seward of New York, author of "The Brotherhood of Christian Unity," and a member of the Episcopal Church, which was able, compact, courteous, and altogether logical and ample. It was a conscientious tribute from one whose heart is manifestly full of the love of Christ and love for his fellow-men; who has studied Christian Science from its spiritual standpoint, with a firm belief in Christ Jesus, his example, and his teachings; and who has aimed to get to the very bottom of his subject. It is reported that he was listened to with rapt attention, from its beginning to its close, by an audience of fifteen hundred persons. His opening of the discussion gave unlimited opportunity for unbridled criticism from those who followed him, without possible reply; and a lawyer, who referred to Christian Science in objectionable phrase made the argument against it, and made his exit from the Congress, substantially uncorrected and unrebuked.

As Christian Science is founded strictly on the life and teachings of Christ Jesus, it may be pertinent to ask why a doctor or a lawyer, who evidently has no aggressive faith in Jesus and his life labors for humanity, and who seldom reads a chapter from the Gospels and rarely enters a Christian house of worship, should be asked to address such a Congress on such a subject? Is it not obvious that the religious side of the question—its important and vital side—would be studiously ignored? Note the addresses of Dr. William M. Polk and Mr. W. A. Purrington, as reported in the *Providence Journal*, for a definite answer. Lawyer Leavitt's reply to unjust criticisms against the Christian Science text-book was a spiritual sunburst on the darkness.

As an interesting illustration of the lack of spirit and breadth, and nobility of Mr. Purrington's address, the following is quoted from it verbatim:—

"It is only just to say that Mrs. Eddy's practice is in accord with this part of her teaching. She says there is no pain and no disease, and that she can restore decaying bones to healthy condition (*Science and Health*, 16, 359), yet she had her teeth extracted by Dr. Fletcher of 77 North Main Street, Concord, N. H., under the so-called painless method, by local anæsthesia, and she now wears artificial dentures made by him."

The following over Dr. Fletcher's own signature is also given verbatim:—

"The story told by the Rev. Dr. Whitaker and others, to the effect that Mrs. Mary Baker G. Eddy called at my office in Concord, N. H., in great pain, and had a carious tooth extracted, requesting me to use a local anæsthetic before extracting the tooth, is incorrect. Mrs. Eddy did call at my office and had a troublesome tooth extracted. But it was not a carious tooth, neither was she in pain at the time. She did request me to extract the tooth, allowing me to use my own painless method for extracting teeth, which I had recommended.

"I shall take no further notice of inquiries on this subject.

“(Signed)

JOHN M. FLETCHER.

"Concord, N. H., November 22, 1900."

I have a copy of a letter which Dr. Fletcher received, in which the writer proposed a bribe of \$200 if the doctor would authorize a story about Mrs. Eddy concerning this remarkable episode (!) such as the correspondent might dictate. But Dr. Fletcher said practically, "Get thee behind me, Satan." The doctor is a man of repute—a native of my native state—a man that cannot be bought or sold.

Those familiar with my writings know that long ago I instructed Christian Scientists not to interfere with methods

of surgery, but if they should call a surgeon, to submit to his methods without discussion. Those who are unfamiliar with them, or misconstrue them, should hesitate to criticise without personal knowledge. The following is extracted from the Christian Science text-book, page 400, and has been published in said book since its first issue in 1875: "Until the advancing age admits the efficacy and supremacy of Mind, it is better to leave surgery and the adjustment of broken bones and dislocations to the fingers of a surgeon, while you confine yourself chiefly to mental reconstruction, and the prevention of inflammation."

I have always instructed students in Christian Science to be wise and discreet, conforming, where conscience is not offended, to the usages of men. The practice of surgery is not introduced into Christian Science, whose rules and methods are based upon the examples of Jesus and his followers. Bishop Berkeley and I agree that all is Mind. Then, consistently with this premise, the conclusion is: that if I employ a dental surgeon, and he believes that the extraction of a tooth is made easier by some application or means which he employs, and I object to the employment of this means, I have turned the dentist's mental protest against myself; he thinks I must suffer because his method is interfered with. Therefore, his mental force weighs against a painless operation, whereas it should be put into the same scale as mine, thus producing a painless operation as a logical result.

Matter is but the objective state of mortal mind. It has only the substance and reality in our day-dreams that it has in our dreams by night. It is all the way the Adam-dream of mind in matter, which is mortal and God-condemned; it is not the spiritual fact of being. When this Scientific classification is understood, we shall have one Mind, one God, and we shall obey the commandment "Love thy neighbor as thyself."

If nineteen hundred years ago Christ taught his followers to heal the sick, he is to-day teaching them the same heavenly lesson. God is the same yesterday, to-day, and forever. "God is Love"—the ever-operative divine Principle (or Person if you please) whose person is not corporeal—not finite. This infinite Person we know not of by the hearing of the ear, yet we may sometimes say with Job, "but now mine eye [spiritual sense] seeth Thee."

God is one because God is all. Therefore there can be but one God, one Christ. We are individually but specks in His universe, the reflex images of this divine Life, Truth, and Love, in whom "we live, and move, and have our being." Divine Metaphysics is not to be scoffed at; it is Truth with us—"God manifest in the flesh"—not alone by miracle and parable, but by proof—even the divine nature of God, which belongs not to a dispensation now ended, but is ever present casting out evils, healing the sick, and raising the dead—resurrecting individuals buried above-ground in material sense.

To-day this Bethlehem star looks down upon the long night of materialism,—material religion, material medicine, a material world,—and it shines as of yore, though it "shineth in darkness; and the darkness comprehended it not." But the day will dawn and the day-star appear, lighting the gloom, guiding the steps of progress from molecule to mortals outward and upward in the scale of being.

Hidden electrical forces annihilating time and space, wireless telegraphy, navigation of the air, in fact, all the *et ceteras* of mortal mind pressing to the front, remind me of my early dreams of flying in airy space, buoyant with liberty and the luxury of thought let loose, to rise higher and forever higher in the boundless blue. And what of reality, if waking to bodily sensation is real and it makes us captives? The night thought, methinks, should unfold in part the facts of day, and open the prison doors and solve the blind problem of matter. It shows us rationally that even mortals can mount higher in the altitude of being,

till they cease to be mortal, and Christ hath led captivity captive and immortality is brought to light.

Robert Ingersoll's attempt to convict the Scriptures of inconsistency made his life an abject failure. Happily, misquoting "Science and Health with Key to the Scriptures," or quoting sentences or paragraphs torn from their necessary contexts, may serve to call attention to that book, and thus reveal truths that otherwise the reader would not have sought. "Surely the wrath of man shall praise Thee."

The nature and truth of Christian Science cannot be destroyed by false psychics, crude theories or modes of metaphysics. Our Master Metaphysician, the Galilean Prophet, had much such a class of minds to deal with as we have in our time. They disputed his teachings on practically the same grounds as are now assumed by many doctors and lawyers. But he swept away their illogical syllogisms as chaff is separated from the wheat. The genuine Christian Scientist will tell you that he has found the physical and spiritual status of a perfect life in his text-book.

The text-book of Christian Science maintains primitive Christianity, shows how to demonstrate it, and throughout is logical in premise and conclusion. Can Scientists adhere to it, establish their practice of healing on its basis, become successful healers and models of good morals, and yet the book be absurd and unscientific? Is not the tree known by its fruit? Did Jesus mistake his mission and unwittingly misguide his followers? Were the apostles absurd and unscientific in adhering to his premise and proving his conclusion logical and divine?

"The Scientific Statement of Being" may irritate a certain class of professionals who fail to understand it, while they pronounce it absurd, ambiguous, unscientific. But that Christian Science is valid, simple, real, and self-evident, thousands upon thousands attest from their individual demonstrations, they themselves having been healed and having healed others on the Principle of Christian Science. Science has always been met in this manner. A fiction or a false philosophy flourishes for a time where science gains no hearing. The followers of the Master in the early Christian centuries did just what he enjoined, and what Christian Science makes practical to-day to those who abide therein and build on its chief corner-stone. Our religious denominations interpret the Scriptures to fit a doctrine, but the doctrines taught by Divine Science are founded squarely and only on the Scriptures.

"Science and Health with Key to the Scriptures" is not inconsistent in a single instance with its logical premise and conclusion, and ninety-nine out of every hundred of its readers—honest, intelligent, and scholarly—will tell you this. The earnest student of this book, understanding it, demonstrates in some degree the truth of its statements, and knows it contains a Science that is demonstrable when understood, and is fully understood when demonstrated. That Christian Scientists, because of their uniform pure morals and noble lives, are better representatives of Christian Science than the text-book itself, is not in accordance with Scriptures: The tree is known by its fruit. The student of this book will tell you his higher life is the result of his conscientious study of it in connection with the Bible.

A book that has won its way through the good it does into the palaces of emperors, kings, and the president of the United States, into the chief cities and the best families in our own and in foreign lands, that lies beside the Bible in hundreds of pulpits and in thousands of homes, that heals the sick and reclaims sinners in court and in cottage, is not less the evangel of Christian Science than he who studies it and thereby is healed of disease, or who practises its teachings. About a quarter of a century ago this book was first given to the public; since then two hundred editions, of

one thousand copies each, have been sold, and the sale continues to increase. Can such a book be ambiguous, self-contradictory, or unprofitable to mankind?

St. Paul was a follower, but not an immediate disciple of our Lord, and he declares the truth of the complete system of Christian Science in these brief sentences: "There is therefore now no condemnation to them which are in Christ Jesus, who walk not after the flesh, but after the Spirit. For the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." Was it profane for St. Paul to aspire to this knowledge of Christ and the demonstration thereof—healing sin and sickness—because he was not a disciple of the personal Jesus? Nay, verily. Neither is it presumptuous or un-Scriptural or vain for another, a suckling in the arms of divine Love, to perfect His praise.

A child will demonstrate Christian Science and have a clear perception of it. Then, is it a cold, dull abstraction? or is that unscientific which all around us is demonstrated on a fixed principle and given rule, and in proportion as these are understood men are found casting out the evils of mortal thought, healing the sick, and uplifting human consciousness to a more spiritual life and love? The signs of the times emphasize the answer to this in the rapid and steady advancement of this Science among the scholarly and titled, the deep thinkers, the truly great men and women of this age. In the words of the Master, "Can ye not discern the signs of the times?"

Christian Science teaches: Owe no man; be temperate; abstain from alcohol and tobacco; be honest, just, and pure; cast out evil and heal the sick; *in fine*, Do unto others as ye would have others do to you. Has one Christian Scientist yet reached the maximum of these teachings? And if not, wherefore point the people to the lives of Christian Scientists and decry the book which has moulded their lives? Simply because the treasures of this text-book are not yet uncovered to the gaze of many men, the beauty of holiness is not yet won.

My first writings on Christian Science began with notes on the Scriptures. I consulted no other authors and read no other books but the Bible for about three years. What I wrote had a strange coincidence or relationship with the light of revelation and solar light. I could not write those notes after sunset: all thoughts in the line of Scriptural interpretation would leave me until the rising of the sun: then the influx of divine interpretation would pour in upon my spiritual sense as gloriously as the sunlight on the material senses. It was not myself, but the divine power of Truth and Love, infinitely above me, which dictated "Science and Health with Key to the Scriptures." I have been learning the higher meaning of this book since writing it.

Is it too much to say that this book is leavening the whole lump of human thought? You can trace its teachings in each step of mental and spiritual progress, from pulpit and press, in religion and ethics, and find this step either written or indicated therein. It has mounted thought on the swift and mighty chariot of divine Love, which to-day is circling the whole world.

I should blush to write of "Science and Health with Key to the Scriptures" as I have were it of human origin, and I, apart from God, its author. But, as I was only a scribe echoing the harmonies of heaven in divine Metaphysics, I cannot be super-modest in my estimate of the Christian Science text-book.

The Lectures.

At Syracuse, N. Y.

Carol Norton, C.S.D., of New York City, lectured yesterday afternoon (Sunday, November 18) before a large

audience in the Wieting Opera House on the subject, "Christian Science: Universal Christianity."

The address was for the purpose of giving those interested in Christian Science correct information concerning its principles and beliefs. In this city, as elsewhere, such lectures are always delivered by a member of the Board of Lectureship, hence the statements are always authentic. Judge William G. Ewing of Chicago lectured on a similar topic at the Wieting last December before an audience of fifteen hundred people.

Every seat in the entire lower part of the house, the boxes and the entresol, was occupied yesterday. The balcony was also well filled. In attendance at the meeting, besides members of the Syracuse Church and people interested in its work, were out-of-town members from Albany, Rochester, Rome, Utica, Lyons, Geneva, Auburn, Phoenix, and Fulton.

Upon the stage were seated Carol Norton, Mr. E. P. Bates, President of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., Rev. Mr. Vosburgh, and C. I. Ohrenstein, the First Reader at First Church of Christ, Scientist, of this city.

Mr. E. P. Bates was chairman. After extending a welcome to those present and speaking briefly on the purpose of the meeting, he introduced Rev. Mr. Vosburgh.

The Post Standard.

The preliminary remarks by Mr. Bates were as follows:—

Dear Friends:—I am requested by First Church of Christ, Scientist, in Syracuse, to welcome you at this time. This church, in harmony with the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., and other branch churches, desires that you may be properly advised as to what Christian Science is. To this end the Mother Church has instituted a Board of Lectureship, and the speaker of this evening is an honored member of that Board. Christian Science is the subject before the people, and it must stand on its merits, not on any opinions which we may have regarding it. The local church desires that this community may know the facts regarding Christian Science, and that they may be presented by authorized speakers and those conversant with the subject.

We thank you for accepting the invitation given you, and it is gratifying to see so large an audience assembled to listen to this interesting subject.

It is my great pleasure at this time to present to you the Rev. Arthur R. Vosburgh, C.S.B., of Rochester, N. Y., who is also a member of the Board of Lectureship, and who will introduce the speaker of the day.

The introductory address by Rev. Mr. Vosburgh was as follows:—

What is Christian Science? Our critics a few years ago were almost unanimously saying it was the work of the devil. To-day this attitude is very radically changed, and the critic who, from study of the writings and acquaintance with Scientists, has prepared himself to speak with any degree of intelligence, acknowledges Christian Science as a Christian movement.

Christian Science claims to be the heir of the ages, the true interpretation and demonstration of the teachings of the Christ, and this is certain, that if Christian Scientists did not believe that this work is founded on the teachings of the Bible, and is the explicit unfolding and application of the doctrine of Jesus, no such movement would to-day be in existence.

All the questions that arise regarding the merits of Christian Science focus themselves in this: Is it rightly named? has it the logical, orderly, demonstrable character that belongs to science? and does it embody the high ideal of righteousness and love which constitutes Christianity?

Science is founded on facts. Science lives and moves only in the realm of facts. All that is recognized as scientific thought is that which gives an explanation, or an attempted explanation, of facts. We know how what is recognized as scientific teaching has changed and advanced as human experience has developed new facts, for the impossibilities of yesterday are the common experiences of to-day.

Not many years ago the notion that men could talk hundreds of miles over a wire, or see through a solid substance, would have been relegated to the realm of dream-land. To-day these are a part of the most common knowledge, and we find that all human progress has been a bringing of the unknown into the known, and a doing of the impossible. For Christian Science there stands this palpable, irrefutable fact,—that by it “the sick are healed, the sorrowing are comforted, and the sinful are reformed” (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 244), and it is found that these works are the outcome of a divine Principle and a spiritual law that may be understood; and to the extent that they are understood can be demonstrated. Whatever has such a rational basis and such a demonstrable character is inevitably Science.

Its claim to be Christian is only to be tested by the standard of the Master: “By their fruits ye shall know them.” Does it make men more reverent toward God and more kindly toward their fellow-man? Does it lead its followers to do justly, to love mercy, and to walk humbly with their God? Does it hold to the essential principles, the fundamental truths, of Christianity? Now what are these fundamental truths that must be emphasized in whatever has a right to be called Christian? They are four: First, the Being of God,—God as revealed in the Bible and seen through Christ; Second, the Bible as God’s revealed Word; Third, Christ Jesus the one mediator—the Way-shower—between God and men; Fourth, the necessity of a radical conversion, a deep, sincere repenting, and receiving and living the Christ-life. These constitute the essentials of orthodox Christianity, and Christian Science does so include and enforce these vital principles that every Christian Scientist finds them renewedly and increasingly emphasizing themselves in his life.

From this basis the speaker will to-day address you. The subject of his message is, “Christian Science: Universal Christianity,” and we know that the worth of the message and the merit of the messenger will unite in gaining your most cordial and careful attention.

It is now my pleasure to introduce to you Carol Norton, C.S.D., of New York City.—*Correspondence.*

At Leavenworth, Kan.

Judge William G. Ewing of Chicago addressed a large audience at the Opera House Friday night (November 16) on the subject of Christian Science. He is one of the best-known lawyers and judges of Illinois, and his address was greatly appreciated. Major McClaughry, warden of the federal prison, an old friend of Judge Ewing, was introduced to the audience by E. H. Keach, First Reader of the Christian Science Church here, and Major McClaughry in turn, presented his old friend to the audience. Major McClaughry spoke as follows:—

Ladies and Gentlemen:—A good many years ago—so many that out of consideration for the judge and myself, I will not state—Judge Ewing and I knew each other in western Illinois, he as state’s attorney in a judicial district, and I as clerk of a court in the same district. We were also actively engaged at that time, in opposing political parties, in the work of “saving the country,” and, that we succeeded in saving it, is evidenced to-night by the present

satisfactory condition of the country, notwithstanding the severe “jolts” that it has lately received.

From that district he drifted to Chicago and I to the penitentiary. From my seclusion I could keep track of him, and I marked his rise through the successive stages of a successful lawyer and United States Attorney, to the position of an able, upright, fearless, and eminent judge, and—best of all—to that of a true Christian, American citizen. He resigned the judgeship for his present work. He comes to address you to-night on higher themes than law or politics. It is not my province either to approve or criticise his views. He will present and ably defend them. I do, however, take pleasure in assuring you that his utterances, whether you agree with him or not, will be worthy of your respectful consideration, for they will represent the honest convictions of an honest man.

I now take pleasure in presenting to you, Judge Ewing.
Leavenworth Times.

Major McClaughry is a man of exemplary Christian character and stands high as a prison official. He is generally regarded as one of the best superintendents of convicts in this or any other country. He was at one time warden of the state penitentiary at Joliet, Ill.—Ed.

At Joplin, Mo.

At the Club Theatre Sunday afternoon (November 18) Dr. Silas Sawyer of Milwaukee delivered a lecture on “True Sonship in Christian Science.” A large audience assembled in spite of the disagreeable weather, and that they were profoundly impressed with Doctor Sawyer’s remarks was evident from the close attention with which they followed the speaker.

F. S. Yale introduced the doctor in the following words:

Not being a member of any religious or anti-religious society or sect, I esteem very highly the honor conferred upon me by the Christian Scientists of Joplin in selecting me as the chairman of this meeting. It is evident to me that they believe in religious freedom and willingly accord to others every right and privilege which they ask for themselves. They seem to be aware of the fact that there are some six or seven thousand different religious societies in the world, each one of which believes that it is right and all the others are wrong. This society realizes that all are not right, as it is an established fact that when the truth is seen as it really is there must be perfect agreement. When two persons disagree as to a fact it is evident that one of them is wrong, and possibly both.

The Christian Science Church is a society whose religion is to do good and whose good is truth, justice, and love personified; a society that believes in going forward, onward, and upward toward a given goal, and that goal the uplifting of mankind everywhere; that believes in building and not in destroying, in overcoming error with truth, evil with good, vice with virtue, and hatred with love; in short, a society devoted to the cause of truth, justice, liberty, and love.

The members follow their conscientious convictions, and believing that they possess the truth have the courage to proclaim it to the world, well knowing that if correct they can wait for success. They believe with the poet who said:—

Truth crushed to earth shall rise again,
The eternal years of God are hers.

I now have the pleasure of introducing the speaker, Dr. Silas C. Sawyer, C.S.D., of Milwaukee, Wis.

A Hymn.

BY M. C. S. W.

LEAD me gently, Love Divine,
Through this maze of mortal strife;
Let thy brightness round me shine,
Breathe in me thy Perfect Life.

Selfishness and pride remove,
Drive impatience from my heart,
Fill me with forgiving love,
More of Good and Truth impart.

Love Divine! O let me know
That the everlasting arms
Where earth's dark, deep waters flow,
Hold me safe from all alarms.

When my spirit cries for bread
And I only find a stone,
When in thorny paths I tread,
Let me say Thy will be done;

Know that every seeming ill
Worketh in the end for good,
Love Divine my spirit fill,
Feed me with thy heavenly food.

Infinite Eternal Power!
Source of Being! Fount of Life!
Lead and guide me every hour
Through this maze of mortal strife.

Reflection.

BY A. P. BLACKLER.

How much do we understand of what is meant by this word reflection in Christian Science? It covers the whole ground in our work. Webster gives several definitions of the word, some of which exactly fit the Christian Scientist. In fact, a Christian Scientist is simply a "reflector." In the degree that we understand that we are a reflector pure and simple, with no power of our own, are we Christian Scientists.

A few of the definitions of Webster that fit our case particularly well, are: "Reflect. To give back an image of; to attend earnestly to what passes within the mind."

Are we giving to the world in our daily life an image of our dear Master? Are we reflecting his life in ours? Are we following his example thereby reflecting Good and Love? In just the degree that we are reflecting his Life, are we truly Christians.

This is the standpoint from which God judges. Never mind what the world thinks or says of you; the world cannot work out your salvation; you have this to do, and it can only be done by reflection. Even our Master claimed no goodness of his own; but merely reflected the goodness of God. We must go and do likewise. Remember there is "no good thing" in mortal selfhood or mortal sense.

We must get above any thought of self-love or any influence of personality, and be governed by the Principle of goodness and love in every act, motive, and thought.

In the definition of reflection by Webster he says, "That which is produced by reflection, especially thoughts suggested by truth." We know these are the only thoughts that have any reality, and the *only* thoughts we, as Christian Scientists, should have anything to do with. Paul sums it up briefly in Philippians, 4 : 8: "Finally, brethren, whatsoever things are true [real], whatsoever things are honest, whatsoever things are just, whatsoever things are

pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things."

Our work is all in thought. Jesus declared the Truth again and again to dull ears, until they began to see and reflect the Life and Love, that he came to teach and live. We must strive and pray for that mind to be *in us* that was also in Christ Jesus, to gain the understanding of what Life, Truth, and Love *are*, before we can expect to reflect them. We cannot expect to give to some one else what we do not ourselves possess; neither can we expect to give love to one and the opposite to another; it must be love to all.

The same fountain cannot send forth sweet waters and bitter. That Mind which was also in Christ Jesus did not express love one moment and hate, anger, and malice the next. It was love first, last, and all the time, because Love was all he knew.

We cannot reflect Love until we have first learned the lessons of Love; in trials, in meekness, gentleness, kindness, forgiving our enemies as we would be forgiven. No mortal has this Love and it is gained only through this purification and chastening. "Whom the Lord loveth he chasteneth."

Do not complain if trials come. If you would be able to reflect Love, you must take each lesson and learn it well. A student in mathematics does not work one problem in addition, one in subtraction, and then stop; he keeps working until he has learned, or understands the principle thoroughly, then he is ready for something higher. So we must not cease from our labors when we have solved one problem, but must continue until all problems are solved according to the one Principle, Love. If anything but Love is influencing us, we have departed from our Principle. We shall fail to gain the answer to our problem, and will have to come back, and work it out in the right way.

The more Love you reflect the more there is for you. When you see some one who seems to do better work than you do, they have learned the lessons necessary to be able to demonstrate it, or they would not have "the signs following." Working in this way there is no danger from self-righteousness. Jesus said: "So likewise ye, when ye shall have done all those things which are commanded you, say, We are unprofitable servants: we have done that which was our duty to do." "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you."

Here are the promise and conditions. The first is sure; you alone can take care of the latter. Rest assured that in just the proportion that you really and truly abide in him, will the "signs follow."

"Prove all Things."

BY GEORGE L. BRETT.

IN conversation with a business man the subject of Christian Science was introduced, and he made the remark, "I do not think religion or Christian Science should be brought into business." At present, myself a business man and also a Christian Science healer, I wish to give a little experience of my own.

Some years ago the doctors had said that unless I complied with certain rules—to work only a few hours each day, to be very moderate in all things, to avoid all excitement, etc., I might die at any moment. I laughed at it all and continued to do as far as I could everything that I wanted to, until, through fear, I tried to be obedient to the doctors, but at the same time grew weaker day by day until I was hardly able to get to the store. This all proved that what the doctors had said was true on their plane of

thought. But what medicines and obedience to the so-called material laws failed to do, Christian Science has accomplished, and for four years or more I have been able to attend to business, and not one day has sickness kept me from being on my feet and at work.

Sick thoughts were ever-present with me until, through Christian Science, those thoughts were forced out, proving that to ever-present Life, Truth, and Love, there can be no room for sin, sickness, and death; and in so far as we hold fast to the good thoughts they must be manifest on our bodies and in every branch of our business.

A certain man had the reputation of being a mean, dishonest, selfish man, never known to settle his accounts when due. A Christian Scientist had occasion to call on this man; the Christ-Spirit of Love went on before, and when the Christian Scientist arrived he found a man that stood ready to settle his account because it was right that he should, and nothing existed between the two but love and harmony, and the account was settled then and there.

Another instance: A business man, through seeming reverses, poor collections, sickness in family, etc., was discouraged and decided to make an assignment. He went to the largest creditor, who was a Christian Scientist, and made known his decision. He made a clear, honest statement. The sick and discouraged thoughts were met and destroyed; his thoughts were changed; he began to see light, and with new courage he tried once again. He went home happy, not knowing at the time what had been done. He did not fail but succeeded in his business. Instead of looking into darkness and failure, his thoughts are good and of success, and the good results do and must follow. "Whatsoever a man soweth, that shall he also reap."

A Word to Beginners.

BY MINNA TRAIN.

UGHT we to expect our lives to work in harmony if we let all the worries and absorbing cares of the everyday material existence come into our thoughts first?

When we learn to begin our day with the consciousness of the omnipotence of God, eternal Good, and to realize that in this government there is no place for discord or trouble, I am sure it will bring to each one of us wonderful results. When we are young in the Christian Science thought it seems very easy to say "I must attend to this or that duty or pleasure first, but later in the day I will find time for my study of the Sunday lesson and for the reading and work so vital to our progress in the understanding of God." The only *sure* way, is to *start* the day with the God-thoughts, even though you may have to rise earlier to secure the extra time. By so doing you will find that many seeming difficulties are smoothed away, and you will have a keener sense of the presence of divine Love, always near at hand, protecting and guiding your every footstep.

To those just looking into Christian Science who seem to find our text-book difficult to understand, I would say: Take the *Quarterly* and study the carefully prepared lessons for each Sunday, and then see if the Bible does not become illuminated and a new book, through the wonderful explanations of Science and Health. Every week these lessons grow stronger and clearer, and by this constant and sincere study I am sure that little by little the glorious truths of Christian Science will dawn upon human consciousness and you will gradually awake to the realizing sense of the inexhaustible treasures of this wonderful book.

God's hand within the shadow lays
The stones whereon His gates of praise
Shall rise at last.

WHITTIER.

Testimonies.

Wonderfully Sustained by Truth.

When thou passest through the waters, I will be with thee; and through the rivers, they shall not overflow thee.—*Isaiah*.

It was on September 8 last, at the time of the Galveston flood, that I found *more* faith in God, and I am prompted to write my experience that others may see what Christian Science can do, and has done for us in the storm and darkness.

The tempest was raging and our home was situated only a short distance from the Gulf. At half past two o'clock in the afternoon my husband came home from town with great difficulty. At that hour the rain was falling in torrents and the sea water was gradually covering the streets in the lower parts of the city. However, we were not apprehensive of any danger, having always lived on the coast and being accustomed to ordinary coast storms. During the remainder of the afternoon we read the Bible and Science and Health constantly. As night came on, a neighbor sent for us to come over to her house as she was alone and becoming alarmed; but before we could get away, the water had risen to such a height and the storm increased in violence to such an extent that we were unable to leave our house. This was something altogether unexpected, as we had never, for a moment, thought the water would reach our yard. It was right here that we began to appreciate what Science was to us, as conditions were becoming very serious from a mortal standpoint, but through the constant realization of Truth, we remained perfectly calm and felt safe in our own home.

We had our house girl (who is a Scientist) come in with us; and with Nezzell, our little six-year-old daughter, we all sat quietly down to realize the Omnipotence of God. My husband read the ninety-first and ninety-third Psalms. I read Science and Health, p. 189, and we ceased to concern ourselves about our safety but left that entirely with God. The elements now seemed wrought up to their highest point, the house was rocking like a cradle, and it seemed almost beyond human belief that it could withstand such a terrific wind for even a single moment. Still there was no fear. Soon I discovered that the water was coming through the floors. My husband scuttled each room, while the water rose rapidly. In a few moments we felt an awful jar, and as the water came pouring in through the door casings, we knew that the house was off its foundations. The lights had gone out and we were groping in total darkness, in water to my waist. Here the following verse from Isaiah came to me: "Fear thou not; for I am with thee: be not dismayed; for I am thy God: I will strengthen thee; yea, I will help thee; yea, I will uphold thee with the right hand of my righteousness."

My husband took our little girl in his arms and we went to one door but failed to open it, quietly but swiftly we went to another and **through it reached the kitchen**, there a door had blown open and we discovered that we were floating. Soon the water reached my chin, and we found that every piece of furniture in the house was floating. Something must be done, and that quickly, for in a very short time the water would be too deep for me. For just one brief moment fear tried to take possession of me, but its sway was brief, for almost with the next breath the thought came to me: "Underneath are the Father's everlasting arms." My husband told me to get up on the kitchen stove, which was two feet under water but was the only thing in the house that was stationary. So I was lifted above the wave. All four of us stood on the stove without difficulty.

It was suggested that each of us say aloud something Scientific. My husband repeated the Scientific Statement of Being (Science and Health with Key to the Scriptures.

p. 464). C. repeated those dear consoling words of our Leader, "Peace, be still! our Father is at the helm." Then I repeated the first verse of the ninety-first Psalm: "He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty," and I was followed by our little one, who, throughout it all had been so courageous and brave, with the first verse of our Mother's beautiful poem "Satisfied:"—

It matters not,
What be thy lot
So Love doth guide;
For storm or shine—
Pure peace is thine—
What'er betide.

We then silently tried to realize God's Allness and to know that "He holds the wind in His fist."

About eleven o'clock Nezzell noticed that the water was receding, and in some unforeseen way we found a lamp and some dry matches and were thus enabled to see.

Our experience lasted from five o'clock in the afternoon until half past two the next morning. Most of that time we were in the water. We never experienced the slightest trouble of any kind. Once, while standing on the stove, Nezzell (who was very thinly dressed) complained of being cold. Mr. C., without knowing how it got there or where it came from, reached out and found a coat of his floating around on something. It proved to be a heavy one, and although soaked with water, kept her warm nicely. Again, when I seemed to be chilled, he was able to reach a pair of portieres, which served to keep us warm, wet as they were.

But not until we were able to leave our house did we realize how wonderfully we had been protected and how much we had to be thankful for. We found that our house had floated a distance of two squares, and upon going around to where it had stood a realization of the awful destruction that had been wrought dawned upon us, for where, that afternoon, we had looked out upon hundreds of pretty homes in front of us, was now a barren waste, the houses were piled up in mountains of wreckage all around us, while our house had been carried to the highest part of the highest street in the neighborhood and there it stood perfectly intact, out of harm's way from the floating debris which would surely have demolished it had we not gone when we did. Surely did we feel grateful that we had placed our safety in our Father's hands, with the feeling that "not my will, but Thine, be done," knowing full well that "He doeth all things well."

We attribute our safety entirely to Christian Science, and we are striving to show our gratitude to our Leader by following more closely in her footsteps, learning of her greater humility, deeper love, and broader charity for all mankind.—MARY E. CHRISTIE, Galveston, Tex.

Healed Physically and Saved from Infidelity.

Two and a half years ago, Christian Science came to me, when my way was so hedged about that I could not get out. I had been a great sufferer from physical ills. I had exhausted all remedies known to the local medical skill, including, electricity in all its forms, but with all this I was "nothing bettered, but rather grew worse." I was hungering for Truth, yet I was comparatively an infidel. My suffering had been of such a nature that there seemed but little hope for me; I was merely drifting along aimlessly, suffering as much as it was possible for a mortal to suffer and exist.

Finally, Christian Science came to me, bearing the good tidings, "Ye shall know the Truth, and the Truth shall make you free." Involuntary antagonism to Christian Science was in my thought when I was brought face to face with the signs that follow them that believe. I had seldom given any form of religion a thought. I had

heard of Christian Science, but had never heard any good of it, and, had I been called upon to give my views of the subject, they would have been very uncomplimentary. Now I find myself singing the highest praise to the good work of Christian Science, not, however, as a mere profession, but because I have been healed. "As a vesture shalt thou change them, and they shall be changed."

A friend who had been a sufferer from ailments very much like those which afflicted me, was healed in a short time under Christian Science treatment; in this case, I beheld unmistakably the proof of faith by works. This proof affected me like the opening of the eyes of the blind. I placed my case in the hands of a Christian Scientist. After three days' treatment I experienced an uplifting which caused me to feel as though I were literally lifted off the ground to be carried along by a gentle breeze. It would seem that this experience alone should have been sufficient to dispel all doubts from the mind of the most sceptical; but error was in me, and it must be gotten out. After a few weeks' treatment, all of which time it seemed that I could almost discern the outlines of the new heaven and new earth spoken of by the Revelator, there came the demand, "Work out your own salvation." Here is where the real battle began.

From a physical, and I might say a moral, wreck, two and a half years ago, I am now a healthy man, and much happier. Of the God whom, before coming into Christian Science, I regarded as the author of unjust laws, I now say, "Just and true are thy statutes, Lord God Almighty."

Appetite for tobacco, which had claimed power over me for eighteen years, has entirely left me; for nearly two years I have had no desire for tobacco. I have also lost the appetite for coffee.

Among the numerous troubles of which I have been entirely healed may be mentioned nervousness, dyspepsia, spinal trouble, headaches, and melancholia of the very worst form, and I might add, infidelity of a rather mild form.

I wish to add in conclusion, that with my limited understanding of the great Principle which Christian Science teaches, I have been able to do some very good work for the suffering. I was called upon a short time ago to treat a patient who was bedridden with the grip. Error endeavored to make me believe that I could do nothing with this particular case, but realizing the allness of God and the nothingness of error, my efforts were abundantly rewarded, as the patient was up and about her work the following day after my efforts in her behalf.

Wonderful indeed is the power of Truth over error. Thanks to God for this great Truth and to our Mother in Israel, Mrs. Mary Baker Eddy, for that great book, "Science and Health with Key to the Scriptures."

ROBERT CALVIN HUMPHREY, Knoxville, Tenn.

A Testimony for our Text-Book.

Truth is ever at work as is evidenced by the healing of the sick, the binding up of the broken-hearted, and the reforming of sinners. Some months ago I presented an inmate of our poor farm with a copy of Science and Health, and although I had apparently forgotten it, he came in this morning to remind me of the work that the volume had done, for although rejected by some, yet to him it had been the Great Physician that healed him of rheumatism, boils, and an attack of bone erysipelas, and now he is not only happy but more active than for twenty years before.

J. E. BURNHAM, Unionville, Mo.

When one has learned to seek the honor that cometh from God only, he will take the withholding of the honor that comes from men very quietly indeed.—MACDONALD.

There is no peace when our life is revolving round self.

Anon.

Religious Items.

In a review of "The Life and Letters of Thomas Henry Huxley," the *Church Standard* quotes the following interesting extracts from Huxley's letters to his friend Charles Kingsley: "I have the firmest belief that the Divine government is wholly just. . . . The ledger of the Almighty is strictly kept, and each one of us has the balance of his operations paid over to him at the end of every minute of his existence."

"Kicked into the world, a boy without guide or training, or with worse than none, I confess to my shame that few men have drunk deeper of all kinds of sin than I. Happily, my course was arrested in time—and for long years I have been slowly and painfully climbing, with many a fall, towards better things. And when I look back what do I find to have been the agents of my redemption? The hope of immortality or future reward? No—"

In the juvenile department of the (Swedenborgian) *New Church Messenger* we find the following: "It certainly is not so difficult to live a life which leads to heaven as is supposed, and the more thought one gives to the subject the plainer it becomes that this is true. We have wound ourselves up so deeply in snares and snarls that we think we are very badly off. We say we cannot cast off this fetter or that. We cannot rise to this or that standard of conduct. We cannot feel for others as we do for ourselves, and we work ourselves very severely to maintain the truth of our assertions. The snarls which look so thick and close while we are in them and in the acknowledgment of them, disperse with surprising ease once we see that there is a simple way out of them. They wind about us just as thickly as we will permit, and unravel when we make it possible."

F. A. Christie, in the *Christian Register* says: "The kingdom and the judgment were at the door; but the old, half-hearted, compromising life went on. Men were sentimentally religious, but they were living the life of a perishable world. They hoped for the predicted perfection, but the eye was open to the solicitations of gain and corrupt desire. They looked on two contrasted, alluring pictures, and won neither as a controlling motive. They were in confusion. Life was divided, irresolute, vacillating. Belief in eternal interests succumbed to fears inspired by the present. They dickered with God as an uncertain power. They served two masters,—God and Mammon. The call of Jesus was: 'Break loose! Serve God alone! Have a single eye!'"

In an article on "Sober Living," published in the *Congregationalist*, Rev. Isaac Ogden Rankin says: "It is the unprosperous time that tests men's souls. Then the weak man shows his weakness and the sober-minded man his strength. What follows its deliberate purpose through discouraged times like sober-mindedness? Christian found the Slough of Despond his hardest trial, but while Pilate floundered back to the City of Destruction, he kept his face toward the wicket gate until at last he found firm footing on the side of hope. How can a man be brave in hours of solitude and depression, unless he has the peace of faith born of a great decision?"

The (Methodist) *Christian Advocate* says: "One reason why so many men and women fail to love the Bible is because they have never tasted the sweetness of its truths. They may have read some of it; they may have read all of it, but not with an understanding mind. There is a wide difference between tasting the kernel and chipping off the shell. Reading the Bible may be nothing more than chipping off the shell, while the truth so rich and sweet lies far within, unobserved and untouched. The word of the Lord is sweeter than honey and the honeycomb, but not to all. To some it is dry and bitter."

With a majority of one vote, that of the

moderator, the New York Presbytery on November 12, decided against a revision of the Westminster creed. The number of votes cast was 142, of which 109 were recorded as votes of clergymen and 33 as votes of elders. The Presbytery of Philadelphia on the same day voted against revision of the creed, and recommended to the General Assembly that the whole matter of revision be dismissed. The vote stood 70 against 65, divided as follows: Against revision, ministers 48, laymen 22; for revision, ministers 45, laymen 20.

The *Standard* says: "If we do what we know to be wrong, or if we refuse to do what we know to be right, we have reason to reproach ourselves afterwards with the results of our error. But if, in a prayerful desire to do right, we act in the light of duty as it presents itself to us at the time, we have no reason to reproach ourselves, whatever be the result. Duty for the hour is in the light of the hour. God takes care of the consequences of such duty-doing."

Edward Everett Hale says in the (Unitarian) *Christian Register*: "Is there, perhaps, a new ripple in the eternal discussion why the people who do not go to church on Sundays stay at home? It has been rather a favorite topic in the newspapers in that 'off period' which in my boyhood the editors called 'cucumber time.' For myself I have never doubted for a moment that, if the preaching were better, more people would go to hear it."

The (Baptist) *Examiner* says: "Having done the work of the day, prayerfully, conscientiously, earnestly, we can in confidence commit it to God; and it becomes our duty then to restrain the divinely prohibited apprehension that borrows trouble, and ruptures present peace by anticipating ills that may or may not belong to the future. Worry indicates two things with certainty: (1) neglect of worship; and, (2) while the worry lasts, incapacity for worship. Where there is worship there is faith, and faith restrains foreboding."

A writer in the (Baptist) *Watchman* on "The Terror of Love," says: "We practise self-deception without realizing what we must meet in the day when we can no longer hide our sin from ourselves or from God. Sin is itself the terror of the Lord. Then we shall see what now we fear the revelation of,—our own hearts. It will be enough to see that we have sinned. The terror will be the unmasking of the soul, and the sight of it in the light of the life and the love of God."

The *Christian Register* is a consistent defender of the present age. In an editorial it says: "They who carelessly rail at the degeneracy of the age forget that, in ninety cases in a hundred (or more) we are depending upon each other for our comfort and safety, and trusting everybody to such an extent that, with all its complications, life could not be carried on did we not act upon the belief that the men and women about us are trustworthy."

In an editorial on "The Cultivation of Charity" the (Swedenborgian) *New Church Life* says: "Theoretically every one desires the growth among men, of charity, harmony, and good-will toward the neighbor; but practically, in the wear and tear of daily contact with the neighbor's shortcomings and offences against us or against our notions of what is right and fitting, the spirit of good-will gets a great many set-backs."

The *Universalist Leader* says: "It is the progress of Christianity that has made our present civilization what it is and which has led men to cry out against war and conquest. The spirit of Christ is not confined to his church, but is beginning to flood the world and mould the thoughts and conduct even of those who call themselves unbelievers."

In an editorial on "Cheerful Thanksgiving" the *Congregationalist* says: "The secret of the

happy life is found in the direction of our eyes and the order of our thoughts. Which do we look for first, complaint or praise? Which goes first into our scale for estimation, trial or mercy? Are we looking part way up to compare ourselves with more successful men, or far beyond success to the centre of our life and joy?"

An æsthetic English Vicar will not allow the word "died" to be put on the tombstones of the people buried in the cemetery. He insists on phrases like "departed this life" or "passed away" or "entered into rest," and says that "died" is a denial of the Christian teaching of immortality.

Seneca Co. Journal.

A writer in the (Baptist) *Watchman* says: "You can sing sacred music profanely; that is often done. I would not give you anything for music, however sacred may be the words which it expresses, if it be not sung in the spirit of its own sacredness."

Rev. George D. Herron, in a recent speech, said: "It is a strange superstition that makes men regard what they know to be elementally good as dangerous in practice, and what they know to be elementally wrong as practically safe."

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on *New York or Boston*, but not on Chicago. Individual checks cannot be received, as a charge is made by the Boston banks for their collection.

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address of writer are given.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each \$3.18

Two to Twelve books to one address, each, prepaid . . . 3.00

Twelve or more books to one address, each, prepaid . . . 2.75

Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00

Twelve or more to one address, each, prepaid 3.75

Morocco, limp, round corners, gilt edges, convenient for pocket, $4\frac{1}{2} \times 6\frac{1}{2}$ inches, narrow margins, each, prepaid . . . 5.00

Twelve or more to one address, each, prepaid 4.75

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00

Twelve or more to one address, each, prepaid 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid \$2.25

Twelve or more books to one address, each, prepaid . . . 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, $4\frac{1}{2} \times 6\frac{1}{2}$ inches, narrow margins, each, prepaid . . . 4.00

Twelve or more to one address, each, prepaid 3.75

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00

Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTIAS. An illustrated poem.

Single book, prepaid \$3.00

Twelve or more books to one address, each, prepaid . . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883.

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Political and Governmental Notes.

Senator Frye of Maine and Senator Hanna of Ohio managed to get a hearing for the ship subsidy bill in the Senate last week. The bill provides for paying subsidies or bounties to American vessels engaged in foreign trade calculated to offset the difference in the cost of building and navigating American vessels as compared with British vessels. In order to encourage American capitalists to build up the American merchant marine, which now is so inadequate that American ships at the present time carry only nine per cent of the enormous exports and imports of the United States. The bill provides that the maximum subsidy payable in any one year shall be nine million dollars. At present the expenditure would be about half that sum. Under the provisions of the bill a 10-knot ship, with a mileage of 42,000 per annum would earn \$48,300. A 15-knot ship with a mileage of 63,000 miles per annum would earn \$141,750. A 21-knot ship with a mileage of 88,200 miles per annum would earn \$304,290. All vessels receiving subsidy would be required to carry the ocean mails of the United States free of charge, and would be subject to being impressed into the service of the navy as auxiliary cruisers or transports, if required.

The army reorganization bill, which provides for a regular standing army of 96,000 men, and containing a clause abolishing the army canteen, was passed by the lower house of Congress on December 6, by a vote of 166 to 133. The debate brought out the surprising statement from Representative McCall of Massachusetts that if the bill should become a law the military expenses of the United States would be greater each year than the joint military expenses of France and Germany, the two countries whose army establishments are usually pointed to as extreme examples of the evils of militarism. He said: "The French army costs \$125,000,000 a year, the German, \$130,000,000; the British, \$100,000,000, and the Russian \$153,000,000. These figures include pensions and fortifications. If this bill passes the War Department will need \$113,000,000. We are appropriating for pensions \$145,000,000 a year. Our total charges therefore for military purposes are \$260,000,000 per year."

A bill was introduced in the House of Representatives by the chairman of the Ways and Means Committee, on December 5, providing for an aggregate reduction in the war revenue taxes of about \$40,000,000 a year. The bill provides for taking nearly \$10,000,000 taxes off of beer annually, nearly \$4,000,000 off of wines, nearly \$3,000,000 off of cigars, \$7,000,000 off of bank checks, and about \$15,000,000 off of bonds, mortgages, money orders, promissory notes, express receipts, telegraph messages, insurance policies, and other documents.

The Supreme Court of Massachusetts decided, on December 4, that it is unlawful for licensed innkeepers,—as it is for other liquor sellers,—to serve intoxicating liquors with food orders to their guests between eleven o'clock at night and six o'clock in the morning. The decision hinged on the substitution of a semicolon for a comma when the law was revised. The presence of a semicolon where there had formerly been a comma, made it unlawful for hotel keepers to sell liquor to guests after eleven o'clock at night.

The report of the Isthmian Canal Commission, submitted by the President to the Congress December 4, gives as the unanimous conclusion of that body that "the most practical and feasible route for an Isthmian canal under the control, management, and ownership of the United States is that known as the Nicaragua route." The commission estimates the cost of this route at \$200,540,000. The length of the canal would be eighty-six miles and it would take ten years to complete it.

Bids were opened in the office of the Secretary of the Navy, December 7, for the construction of \$50,000,000 worth of war ships for the United States, including five first-class battleships, of 15,000 tons each, namely: the Pennsylvania, New Jersey, Georgia, Virginia, and Rhode Island, and six armored cruisers of 13,800 tons each. There were eight bidders. The award of contracts could not be made until the bids are all carefully gone over.

On December 1, Secretary Hay for the Government of the United States, and Senor Correa, the Nicaraguan minister for his own Government, signed a treaty whereby the latter Government concedes to the Government of the United States the necessary rights and privileges within her bestowal for the construction of the Nicaraguan Canal.

This removes one of the chief obstacles to the construction of the canal by the United States Government.

Foreign News.

On December 4 the foreign envoys in Peking agreed on a basis of settlement with China conforming to the recently expressed consent of the powers concerned to impose less severe conditions for China to meet than were at first proposed. Immediately on learning of the agreement Secretary Hay cabled to Minister Conger to sign the agreement on behalf of the United States. The terms formulated call upon China to punish the leaders in the anti-foreign uprising in the severest manner short of death, and to pay reasonable indemnity to the powers for the killing of their citizens, damage to property, and expenses incurred in the sending of relief expeditions to Peking. The agreement also includes the demand that the Taku forts be razed, that permanent foreign guards be maintained between Peking and the sea, and that the importation of arms be interdicted.

In the British Parliament, December 7, Joseph H. Chamberlain, secretary of state for the colonies, announced that the government hoped to establish a civil administration in the Orange River and Transvaal colonies very shortly, and that Sir Alfred Milner would be appointed governor of both. He declared that it was the government's desire to give the Dutch colonies self-government ultimately. Mr. Chamberlain frankly admitted that there were serious economic problems to be met in South Africa, and even that there was a prospect of a famine.

A London dispatch says: "The Pacific Cable Company, in behalf of the governments of Great Britain, New South Wales, Queensland, and New Zealand, has accepted the bid of the Telegraph Construction & Maintenance Company to make and lay a cable from Vancouver to Queensland and New Zealand, via Fanning, Fiji, and Norfolk Island, nearly nine thousand miles in length, for \$8,975,000, the work to be finished at the end of 1902."

The British Parliament re-assembled last week for the short session. The Queen's speech, which was read before the Lords and Commons in joint assembly on December 6, asks for further provision for the expenses of war operations in South Africa, but does not make any statement of the sum needed or of the policy to be pursued. The opposition, led by Lord Rosebery, was vigorous in its attack on the government.

The Portuguese minister at The Hague, and the Netherlands minister at Lisbon, have left their respective posts. Holland is accused of violating the neutrality of the Portuguese territory bordering on the Transvaal to aid the Boers. Portugal is accused by the Dutch with secret intrigue with the English, to the detriment of Dutch political and commercial interests in South Africa.

The Cape Colony government has widely distributed a leaflet contradicting many of the anti-British stories afloat among the Dutch settlers and pointing out the hopelessness of the Boer resistance, as the British hold fourteen thousand prisoners and all the principal towns in the two republics.

The British garrison at Schweizerrenneke, in the southwestern part of the Transvaal, has been relieved. It has been besieged by the Boers since last August.

Industry and Commerce.

Seventy Boer families from South Africa are expected to arrive in New York December 29. They are to form a settlement on Long Island under the encouragement and partial support of members of some of the prominent old Dutch families of New York, Troy, Philadelphia, and Washington. A tract of land has been purchased which will permit of an allotment of from five to twenty-five acres for each family. The new comers will be provided for during the winter. Some of them have a little money and some have none. All will be assisted in proportion to their needs to build dwellings and buy the necessary implements, horses, cows, and chickens, so that they will all start on a practically equal footing.

Consul Bush at Niagara Falls, Ont., reports to the State Department in Washington that work has begun in earnest on the construction of a railway to connect the Great Lakes with Hudson Bay. Although work was commenced only ninety days ago, twenty-five miles of the road has been finished and is in use, as some of the rolling stock was in readiness for use as soon as the rails for the first few miles were laid. The road penetrates a vast wilderness heretofore seldom traversed except by Indians, which is rich in timber and minerals. At the end of the first fifteen miles the railway commenced to haul heavy consignments of timber, and traffic is following closely upon construction.

General News.

The plan to replace the temporary arch which was erected in Fifth Avenue, New York, in honor of Dewey at the time of his great reception in the metropolis, with a permanent marble arch costing \$500,000, has been abandoned. The committee had \$65,000 in hand and pledges for \$135,000 more, but no more money seemed obtainable and the public lost interest in the project, so it had to be dropped.

Holy Trinity Church, situated close to the Tower of London, in which is one of Washington's ancestors' tombs, bearing a coat-of-arms which is supposed to be the origin of the Stars and Stripes, is threatened with destruction unless one thousand dollars is subscribed for its repair.

Philologists are already noting that the English language is to be enriched by three new words as a direct result of the South African war, namely "khaki," "kopje," and "commandeer," to each of which future lexicographers will give a distinctive meaning.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

The President's Message.

SHORTLY after the opening of the second session of the Fifty-sixth Congress on December 3, 1900, President McKinley's message was received and read. Foreign affairs received the fullest consideration and the trouble in China was the leading theme. The President carefully reviewed the circumstances which led up to the trouble, stated what had been the policy of the administration, and expressed a hope of immediate and satisfactory settlement. The situation in the Philippines was also considered at length and favorable progress reported.

We make the following excerpts from the message:—

To the Senate and House of Representatives:—At the outgoing of the old and the incoming of the new century you begin the last session of the Fifty-sixth Congress with evidence on every hand of individual and national prosperity and with proof of the growing strength and increasing power for good of republican institutions. Your countrymen will join with you in felicitation that American liberty is more firmly established than ever before, and that love for it and the determination to preserve it are more universal than at any former period of our history.

The republic was never so strong, because never so strongly intrenched in the hearts of the people as now. The constitution, with few amendments, exists as it left the hands of its authors. The additions which have been made to it proclaim larger freedom and more extended citizenship. Popular government has demonstrated in its one hundred and twenty-four years of trial here its stability and security, and its efficiency as the best instrument of national development and the best safeguard to human rights.

THE PARIS EXPOSITION.

The year of the Exposition has been fruitful in occasions for displaying the good will that exists between this country and France. This great competition brought together from every nation the best in natural productions, industry, science, and the arts, submitted in generous rivalry to a judgment made all the more searching because of that rivalry. The extraordinary increase of exportations from this country during the past three years, and the activity with which our inventions and wares had invaded new markets, caused much interest to centre upon the American exhibit, and every encouragement was offered in the way of space and facilities to permit of its being comprehensive as a whole and complete in every part.

Apart from the Exposition several occasions for showing international good-will occurred. The inauguration in Paris of the Lafayette monument, presented by the school-children of the United States, and the designing of a commemorative coin by our mint and the presentation of the first piece struck to the President of the Republic, were marked by appropriate ceremonies, and the Fourth of July was especially observed in the French capital.

COURT OF ARBITRATION.

The Administrative Council of the permanent Court of Arbitration has been organized, and has adopted rules of order and a constitution for the international arbitration

bureau. In accordance with Article 23 of the Convention, providing for the appointment by each signatory power of persons of known competency in questions of international law as arbitrators, I have appointed as members of this court the Hon. Benjamin Harrison of Indiana, ex-President of the United States, the Hon. Melville W. Fuller of Illinois, chief justice of the United States; the Hon. John W. Griggs of New Jersey, attorney-general of the United States, and the Hon. George Gray of Delaware, a judge of the Circuit Court of the United States.

INTEROCEANIC CANAL.

The Nicaragua government shows a disposition to deal freely with the canal question, either in the way of negotiations with the United States or by taking measures to promote the water way.

Overtures for a convention to effect the building of a canal under the auspices of the United States are under consideration. In the mean time, the views of the Congress upon the general subject, in the light of the report of the commission appointed to examine the comparative merits of the various trans-isthmian ship canal projects, may be awaited.

I commend to the early attention of the Senate the convention with Great Britain to facilitate the construction of such a canal, and to remove any objection which might arise out of the convention commonly called the Clayton-Bulwer treaty.

A NEW TREATY WITH SPAIN.

Satisfactory progress has been made toward the conclusion of a general treaty of friendship and intercourse with Spain, in replacement of the old treaty, which passed into abeyance by reason of the late war. A new convention of extradition is approaching completion, and I should be much pleased were a commercial arrangement to follow. I feel that we should not suffer to pass any opportunity to re-affirm the cordial ties that existed between us and Spain from the time of our earliest independence, and to enhance the mutual benefits of that commercial intercourse which is natural between the two countries.

COMMERCIAL TREATIES.

The failure of action by the Senate at its last session upon the commercial conventions then submitted for its consideration and approval, although caused by the great pressure of other legislative business, has caused much disappointment to the agricultural and industrial interests of the country, which hoped to profit by their provisions. The conventional periods for their ratification having expired, it became necessary to sign additional articles extending the time for that purpose. This was requested on our part, and the other governments interested have concurred, with the exception of one convention, in respect to which no formal reply has been received.

Since my last communication to the Congress on this subject special commercial agreements under the third section of the tariff act have been proclaimed with Portugal, with Italy, and with Germany. Commercial conventions under the general limitations of the fourth section of the same act have been concluded with Nicaragua, with

Ecuador, with the Dominican republic, with Great Britain on behalf of the island of Trinidad, and with Denmark on behalf of the island of St. Croix. These will be early communicated to the Senate. Negotiations with other governments are in progress for the improvement and security of our commercial relations.

EXPOSITION AT BUFFALO.

The Exposition of the resources and products of the western hemisphere to be held at Buffalo next year promises important results, not only for the United States, but for the other participating countries. It is gratifying that the Latin-American states have evinced the liveliest interest, and the fact that an international American congress will be held in the city of Mexico while the Exposition is in progress encourages the hope of a larger display at Buffalo than might otherwise be practicable. The work of preparing an exhibit of our national resources is making satisfactory progress under the direction of different officials of the federal government, and the various states of the Union have shown a disposition toward the most liberal participation in the enterprise.

GOOD WORK BY OUR CONSULS.

The practical utility of the consular service in obtaining a wide range of information as to the industries and commerce of other countries and the opportunities thereby afforded for introducing the sale of our goods, have kept steadily in advance of the notable expansion of our foreign trade, and abundant evidence has been furnished, both at home and abroad, of the fact that the consular reports, including many from our diplomatic representatives, have to a considerable extent pointed out ways and means of disposing of a great variety of manufactured goods which otherwise might not have found sale abroad.

Testimony of foreign observers to the commercial efficiency of the consular corps seems to be conclusive, and our own manufacturers and exporters highly appreciate the value of the services rendered, not only in the printed reports, but also in the individual efforts of consular officers to promote American trade.

SURPLUS REVENUES.

It is gratifying to be able to state that the surplus revenues for the fiscal year ended June 30, 1900, were \$79,527,060.18. It is gratifying also to note that during the year a considerable reduction is shown in the expenditures of the government.

Because of the excess of revenues over expenditures the secretary of the treasury was enabled to apply bonds and other securities to the sinking fund to the amount of \$56,544,556.06.

It will be the duty, as I am sure it will be the disposition, of the Congress to provide whatever further legislation is needed to insure the continued parity under all conditions between our two forms of metallic money, silver and gold.

Our surplus revenues have permitted the secretary of the treasury since the close of the fiscal year to call in the funded loan of 1891 continued at two per cent., in the sum of \$25,364,500. To and including November 30, \$23,458,100 of these bonds have been paid. This sum, together with the amount which may accrue from further redemptions under the call, will be applied to the sinking fund.

OUR FOREIGN TRADE.

Our foreign trade shows a remarkable record of commercial and industrial progress. The total of imports and exports for the first time in the history of the country exceeded \$2,000,000,000. The exports are greater than they have ever been before, the total for the fiscal year 1900 being \$1,394,483,082, an increase over 1899 of \$167,459,780, an increase over 1898 of \$163,000,752, over 1897 of \$343,489,526, and greater than 1896 by \$511,876,144.

WAR REVENUE TAXES.

I recommend that the Congress at its present session reduce the internal revenue taxes imposed to meet the expenses of the war with Spain in the sum of \$30,000,000. This reduction should be secured by the remission of those taxes which experience has shown to be the most burdensome to the industries of the people.

I specially urge that there be included in whatever reduction is made the legacy tax bequests for public uses of a literary, educational, or charitable character.

RESTRAINT UPON TRUSTS.

In my last annual message to the Congress I called attention to the necessity for early action to remedy such evils as might be found to exist in connection with combinations of capital organized into trusts, and again invite attention to my discussion of the subject at that time, which concluded with these words:—

"It is apparent that uniformity of legislation upon this subject in the several states is much to be desired. It is to be hoped that such uniformity, founded in a wise and just discrimination between what is injurious and what is useful and necessary in business operations, may be obtained, and that means may be found for the Congress, within the limitations of its constitutional power, so to supplement an effective code of state legislation as to make a complete system of laws throughout the United States adequate to compel a general observance of the salutary rules to which I have referred.

"The whole question is so important and far-reaching that I am sure no part of it will be lightly considered, but every phase of it will have the studied deliberation of the Congress, resulting in wise and judicious action."

Restraint upon such combinations as are injurious, and which are within federal jurisdiction, should be promptly applied by the Congress.

RURAL FREE DELIVERY.

The continued and rapid growth of the postal service is a sure index of the great and increasing business activity of the country. Its most striking new development is the extension of rural free delivery. This has come almost wholly within the last year. At the beginning of the fiscal year 1899-1900 the number of routes in operation was only 391, and most of these had been running less than twelve months. On the 15th of November, 1900, the number had increased to 2,614, reaching into forty-four states and territories, and serving a population of 1,801,524. The number of applications now pending and awaiting action nearly equals all those granted up to the present time, and by the close of the current fiscal year about four thousand routes will have been established, providing for the daily delivery of mails at the scattered homes of about three and a half millions of rural population.

BEWARE OF EXTRAVAGANCE.

In our great prosperity, we must guard against the danger it invites of extravagance in government expenditures and appropriations; and the chosen representatives of the people will, I doubt not, furnish an example in their legislation of that wise economy which in a season of plenty husbands for the future. In this era of great business activity and opportunity caution is not untimely. It will not abate, but strengthen, confidence. It will not retard, but promote, legitimate industrial and commercial expansion. Our growing power brings with it temptations and perils requiring constant vigilance to avoid. It must not be used to invite conflicts, nor for oppression, but for the more effective maintenance of those principles of equality and justice upon which our institutions and happiness depend. Let us keep always in mind that the foundation of our government is liberty, its superstructure, peace.

WILLIAM MCKINLEY.

Executive Mansion, December 3, 1900.

The Lectures.

At Needham, Mass.

The lecture on Christian Science given in Needham Town Hall Tuesday evening (November 20) was one of the signs of the times, showing that everywhere people are waking up to the necessity for religious tolerance if the time is ever coming when there will be "one fold and one shepherd."

There were between five and six hundred present. Special cars came from several directions. Every denomination in town was represented and all listened respectfully to the speaker as he, in a clear, concise, scholarly manner, explained something of the teachings of Christian Science, never once expressing an unkind thought for any other denomination or body of people.

Town Clerk Thomas Sutton, who we all know is one of the honored deacons of the First Baptist Church in town, introduced the lecturer as follows:—

Ladies and Gentlemen:—We have been invited to meet this evening to hear a new religious sect in our town, Christian Scientists, present their views of faith and practice and correct wrong impressions that have gone abroad.

The town of Needham is getting to be a decidedly religious community of late. Fifty years ago the territory now comprising this town had but one church, "The First Parish" commonly known as the Unitarian, but all the inhabitants did not worship with them and some were strenuously opposed to the doctrines they taught. So that in 1856 the First Baptist Church was founded, hoping to meet the need of all so-called Evangelical Christians. Hardly had their house of worship been built when about half of their congregation left to establish what is known as the Evangelical Congregational Church. A few years later the Methodist Church was formed in order to teach Gospel truth as they understood it, and even then many people went out of town in order to worship God as they had been taught; in due time, however, a Roman Catholic Church was located in our midst. Truly one would think that we had quite enough different denominations, but within a few months a Chapel has been dedicated for the use of the Episcopalians, who could not find a comfortable church home in any of the different societies.

All these churches so far as I can observe are in a prosperous condition, with well-appointed arrangements, faithful ministers, and zealous followers, but even now they do not reach all the people and a new church seeks admission within our borders.

Other churches may well question whether they are doing their full duty if in our town of only four thousand inhabitants another church can find material for a permanent organization.

Here we have six bodies of Christians, whose religion is founded on the Bible, whose adherents profess to love and worship God and obey the teachings of Jesus Christ, and there is a demand for another, and I understand that their text-book is the same Bible and they also worship God and profess to obey the teaching of Jesus Christ.

Years ago men would think they were doing God's service by persecuting this new interest and driving their disciples out of town. I, myself, belong to a denomination whose great leader was banished from the state because he dared to worship God according to the dictates of his conscience, and whose church doors were nailed up by order of the authorities and their leading members publicly flogged in the streets of Boston and afterward thrown into prison, because they ventured to preach and to teach gospel truths as they believed them.

Happily we have outgrown those times and are willing to accord to you that for which we so earnestly fought—"freedom to worship God."

I am not here to-night as an advocate for another church. I am not a believer in Christian Science, I hardly know what it teaches; but I do know that its adherents are diligent Bible students, and many live exemplary Christian lives; and I believe that all persons or sects who hold an honest opinion and have the conviction that God has a work for them to do in the world, have a right to be heard, and I am willing to give them a respectful hearing. I do not care to receive my impressions of a new religion from adverse critics, but rather first hand, therefore it is a pleasure to introduce the speaker of the evening, the Rev. Irving C. Tomlinson, C.S.B., member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass.—*Needham Recorder*.

At Guthrie, Okla.

Judge William G. Ewing, a leading member of the Chicago bar, delivered an able and explicit lecture on Christian Science at the Opera House in this city yesterday afternoon (Monday, November 26) to a large and attentive audience. He is an eloquent speaker and handles this topic in the manner and with the decision of a jurist of long standing. He was United States attorney for the Northern Illinois district under President Cleveland, and made for himself an enviable record, on account of his high attainments in his profession.

Attorney C. G. Hornor presided, and in brief manner introduced the speaker as follows:—

Ladies and Gentlemen:—We have assembled here to-day for the purpose of listening to an address upon a subject that has enlisted the interest of many of the best and most intelligent people of the country.

A story is told of a Saxon chief who sat feasting and revelling with his retainers one tempestuous night, in the great hall of his castle. In the midst of the uproar of the elements, a bird came fluttering in out of the darkness, and after flying about bewildered for a few moments, it darted out into the darkness of night again. "My friends," said the chief, stilling the noise of the revellers, "the bird that just now fluttered into our midst may be likened to the life of man. It came from out the darkness, we know not whence, and having hovered in our sight for a moment went forth again in the darkness, we know not whither. Such is the life of man."

This is the common philosophic view, and when I say there has been no solution of the mystery of life and death, you will understand there has been no philosophic solution. But philosophy is not all, and some questions admit only of a spiritual answer.

The world is constantly advancing, and there can be no greater mistake than to suppose that we in our day have exhausted the possibilities of the intellect, in fact all experience proves that we have not. It is the duty of every intelligent person to keep an open mind and watch for inspiration from whatever source it may come.

Life for us ought to be a broad and shining path leading ever onward and upward, and it would be if it were not for the obstructions we place in the way. Divinity is all about us and if we would only open our minds it would pour in and flood our being. We are a stiff-necked generation, rebellious and stopping our ears like the adder of Scripture. Like bats and owls, we dwell in twilight, dreading the open light of day.

Truth is the greatest thing in the world, and the man of prejudice is a moral coward. Emerson said, "We must advance forever on chaos and the dark." Life is a striving, and the noblest effort is to struggle upward. To aspire is to rise. To try all things by experience, and to hold fast to what is good is the best philosophy to-day as it was in Paul's time.

My remarks are of course general, and indicate an attitude rather than a doctrine. I am only a novice at the outer gate of the temple, speaking without authority. The thought I wish to leave with you is this: keep an open mind, and fear not. The temples of the Greeks were open at the top so as to admit light from above.

Without detaining you longer, I have the pleasure of introducing Judge William G. Ewing of Chicago, who will address you on the subject of Christian Science.

Oklahoma State Capital.

At Topeka, Kan.

Over one thousand persons listened to an address on Christian Science in the Crawford Opera House, Sunday afternoon (November 18). Judge Ewing, who spoke, has long been an able jurist, for some time occupying the bench in the Superior Court of Chicago. For some time Judge Ewing has been a member of the Board of Lectureship of The First Church of Christ, Scientist, of Boston, the object of which is to promulgate the principles of the Science throughout the country. He was brought to this city through the offices of the local Christian Science Church.

Judge Ewing was introduced by Dell Keizer, who spoke as follows:—

The influence which has done more to strengthen and promote the true cause of Christianity than all other forces combined is the religious toleration which has come to us with the nineteenth century. The power of the church for good has grown just in proportion as doctrines have broadened and creeds have ceased their tyranny. And so to-day the only vital and essential tests of true Christian life are an understanding and application of the teachings of Jesus Christ and a desire to comprehend and accept that sublime character whose light and love have pierced the darkness and superstition of centuries.

Christian Science, as I understand it, is not in conflict with any religion founded upon that principle, but seeks rather to win from all humanity an acceptance of the divine love which Christ taught was ample for the material as well as the spiritual well-being of mankind. From my own observation and investigation of its practice, I am strongly convinced that Christian Science is bringing health, happiness, and hope to thousands of lives and homes, where only sickness, sorrow, and despair were known before.

For that reason it gives me the utmost pleasure to bespeak for the distinguished gentleman who will address us this afternoon the same consideration which he accords to those who believe differently from himself, and to which his wide learning and lofty purpose entitle him. So wise and winning an advocate as Judge Ewing would justly bring great prestige to any cause which he espoused, but to his chosen work to-day he comes under circumstances which add peculiar and extraordinary force to his position. Educated in a profession which has commanded the greatest intellects of all time, a profession which more than any other trains men to discriminate between the just and the unjust, the right and the wrong, the false and the true, he has turned from a long and successful career at bench and bar to devote himself to the cause of Christian Science. He brings to his cause a ripe scholarship and a firm conviction of its truth born of his own experience. I congratulate you upon the opportunity of learning from so eminent an authority, and take great pleasure in presenting to you the Honorable William G. Ewing of Chicago.

Topeka Daily Capital.

At Fredonia, N. Y.

A representative and most attentive audience gathered at the Opera House on Monday evening, November 19, to hear Carol Norton, C.S.D., lecture on Christian Science.

The lecture was given under the auspices of the Christian Science Society of the city, and the event begins the public recognition of our Cause here.

Mr. Norton's exposition of Christian Science received marked attention throughout. In this city is located one of the state normal colleges, and thus the lecture was considered of vital educational value.

Professor Myron F. Dana of the Normal College introduced Mr. Norton in the following words:—

Probably this audience could be roughly divided into two classes: one containing those who have come together to have their faith renewed or their convictions deepened and strengthened in a new doctrine, or perhaps old teachings under somewhat new forms; in the other class may be placed those who are here to learn of that which has enlisted the interest and enthusiasm of many intelligent and honest people, also those who are seeking to learn of the doctrine for its own sake—seekers for Truth. Each of these objects may be a sufficient and legitimate reason for being here.

The student of these phases of our social life cannot ignore that which influences so large a number of people. All should be seekers for Truth—not that the Truth needs us, but because we need it. Some seem to think that unless they rise early and strive till late at night in the support of Truth, she will be crushed to earth, never to rise again; but this notion, in my opinion, is wrong. Truth will rise and assert herself, though a host of errors be encamped against her. Individually, if we have Truth with us, we need not fear the power of any adversary. If ours is error, we may be assured that we cannot build a wall so high or so strong as to keep out Truth. Our attitude of Mind, here, as on similar occasions, should be that expressed in the universal prayer:—

If I am right, Thy grace impart
Still in the right to stay;
If I am wrong, oh teach my heart
To find the better way.

But you did not come here to hear me talk, and I will simply bespeak for the lecturer of the evening that thoughtful, unbiassed, unprejudiced frame of mind, which is so essential to the world's progress, intellectually, ethically, and religiously.

I now introduce to you Mr. Norton of New York City, whose utterances, I am assured, may be taken as those of a man who can speak with authority on the subject of Christian Science.—*Correspondence.*

At Bloomington, Ill.

On Friday evening, November 16, Mrs. Annie M. Knott of Detroit, delivered a lecture on Christian Science in the Coliseum in this city. Notwithstanding the inclement weather, an appreciative audience was in attendance. The lecturer was introduced by Judge Alfred Sample of Bloomington.

The *Daily Pantagraph* of this city published a good synopsis of the lecture.

The introductory address of Judge Sample was as follows:—

Ladies and Gentlemen:—When requested by a committee from the Christian Scientists of this city to introduce the lecturer this evening, I thought a mistake had been made in assuming that I was a Scientist, and so informed the gentlemen who waited on me. But on learning that often some one who was not a Scientist was asked to perform that office, I cheerfully consented.

It has been my privilege to listen to two lectures on the subject of Christian Science. One in this city by Judge Ewing, and the other in Los Angeles, Cal., last winter, when the great Auditorium in that city was filled to over-

flowing by as fine and as intelligent-looking an audience as I ever saw.

The rapid growth of Christian Scientists in this country, and that, too, largely from among the intelligent, orderly, and sober-minded citizenship of our land, who, in their every-day life gently and quietly, but firmly and persistently, manifest the most profound belief in the efficacy of their religious faith to bring peace, contentment, happiness, and health here, as well as hereafter, to a sin-sick world, has naturally awakened a deep and abiding interest in the public mind.

Let me, therefore, proceed at once to gratify that interest by introducing the lecturer, Mrs. Annie M. Knott, who will address you on the subject of Christian Science.

Correspondence.

At Rock Valley, Ia.

The lecture delivered Tuesday evening (November 13) by Judge Clarkson of Omaha, on Christian Science, was well received by a large and appreciative audience. The judge established the belief in the minds of those who were privileged to hear him that he is a Bible student without a peer. His style of delivery was most pleasing, and standing, as he does at all times, securely upon the teachings of the Bible, his lecture was of a high and scholarly order and worthy the ear of any audience throughout the Christian world. The speaker was preceded by O. G. Reiniger, who in a few appropriate words introduced the lecturer.—*Rock Valley Gazette.*

Mr. Reiniger's introductory remarks were as follows:—

Ladies and Gentlemen:—Ever since man could reason, he has been in search of Truth, and as long as man exists he will continue to search for the very truth of every subject which presents itself to him. There is no religion but what is entitled to an honest hearing and a full investigation from us. I don't know that I fully understand the meaning of the term Christian Science as used by Christian Scientists but if it means so to broaden, cultivate, and strengthen the mind as to give it control over material things, then I approve it, or if it makes men stronger and better rather than weaker, I endorse it. We have with us this evening one who can tell us of Christian Science and what it does, and who is here under the auspices of First Church of Christ, Scientist, of Rock Valley. I have the pleasure of introducing to you Judge Clarkson of Omaha.—*Correspondence.*

At Saginaw, Mich.

On Friday, November 9, 1900, a fine, appreciative audience assembled at Masonic Temple to listen to a scholarly lecture on Christian Science, or "The Cause and Scientific Cure of Disease," by Edward A. Kimball of Chicago.

The lecturer was introduced by Mr. John W. Symons, a business man of Saginaw, who is a member of the Christian Science Church here. He said:—

Ladies and Gentlemen:—The subject which will be presented to us to-night will be comparatively new to many of us. I am reminded of the saying of a Western lawyer when introducing a Christian Science lecturer. He said that many years ago he decided that he did not know everything, that in order to increase his store of knowledge he should keep his ears open, his mind alert, and, to people who came with good credentials, to extend mental hospitality. Now, I ask that we extend to the speaker to-night, who comes with the best of credentials, whose life has been so enriched and made valuable to the world by the knowledge that he will give us to-night, alert, mental hospitality.

I have the pleasure of introducing Mr. Edward A. Kim-

ball whose subject will be the "Cause and Scientific Cure of Disease."

The audience seemed eager to receive every word. This, our third lecture was a great help to all who heard it, and a special incentive to students, and that each had received manifold blessings was evident at our Wednesday evening meeting which followed.—*Correspondence.*

At Belleville, Kan.

Edward A. Kimball of Chicago, Ill., delivered a lecture on Christian Science in the Opera House, Sunday afternoon, November 18, to a most attentive and interested audience of several hundred.

Mr. Kimball was briefly introduced by John A. Beecher, First Reader of the local church, and spoke for an hour and a half. He gave as clear an explanation of the doctrine of Christian Science as was possible in so short a time.

Visitors from neighboring cities and the surrounding country were present, some driving twenty and even thirty miles to hear Mr. Kimball's exposition of Christian Science.

This was the first lecture given in this city since the Board of Lectureship was established, and the Scientists here feel that great good will result.—*Correspondence.*

At Fort Dodge, Ia.

There was a large and intellectual audience out Saturday evening (November 10) to hear Judge Joseph R. Clarkson, C.S.B., of Omaha, Neb.

He was introduced by Hon. S. T. Meservey, who said that the lecturer would address them on a subject that the entire world was deeply interested in.

Judge Clarkson is a pleasing speaker. He immediately gets into his lecture and wastes but little if any time in trimming around the edges, but gives the audience meat from the beginning to the close.

Fort Dodge Daily Chronicle.

Lectures at Other Places.

Webster City, Iowa.—Joseph R. Clarkson, November 11.

Symphony Hall.

It seems eminently fitting that the new Symphony Hall in Boston should have proved on its opening so complete a success, for Boston possesses a high record for the study and presentation of the best music. The new building was dedicated on October 15 with the presentation of Beethoven's Solemn Mass in D—one of the most inspiring, yet most difficult to render, of all musical compositions. The acoustics of the new hall is practically perfect.

The matter of acoustics is of especial interest, as the results in this case followed an almost incredible amount of study. Mr. W. C. Sabine, Assistant Professor of Physics at Harvard, assumed responsibility for the acoustics of Symphony Hall, and undertook scientific experiments to furnish the basis of his work. He began by studying the duration of reverberation, and then determined the power of various building and furnishing materials—lath, plaster, cushions, draperies, etc.—to absorb sound. Five years of this work enabled him to lay down rules for the construction of Symphony Hall, so that the results achieved have been practically identical with his hopes. To have done this is to have instituted a definite method for meeting a problem which hitherto has been regarded as depending more upon chance than upon rule.—*The Great Round World.*

What is inside daylight?

The shining of the Lord's presence.—*Anon.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Our Text-Book.

INASMUCH as numerous inquiries have been received by Mrs. Eddy's publisher asking the meaning of two paragraphs as they appeared in recent editions of "Science and Health with Key to the Scriptures," she has restated the latter part of these paragraphs so that they will read in future editions of our text-book as follows:—

On page 127, last part of first paragraph:—

"What God cannot do man need not attempt. If God heals not the sick, they are not healed. In any case feebler attempts would be hopeless, for no lesser power equals the infinite, All-power; but God can and does heal the sick."

And on page 458, last half of first paragraph:—

"Some individuals assimilate Truth more rapidly than others; but any student who adheres to the divine rules of Christian Science and practises them, can demonstrate Christian Science, cast out error, heal the sick, and add continually to his store of spiritual understanding, potency, enlightenment, and success."

By comparing the above with what is in earlier editions of our text-book, it will readily be seen that the author has retained the original ideas, and only clothed them in new dress, which, by some readers, may be more easily understood.

CALVIN A. FRYE.

Our Literature.

To the Editor of the *Sentinel*:—

In thinking of the splendid opportunity for mission and educational work given us by the far-seeing management of our Christian Science Publishing Society, I have been led to ask myself a pointed and reasonable question,—a question that I am inclined to think I share with perhaps the larger part of our field-workers. It is this: Are we generously, earnestly, and methodically using the admirable means within our reach for the dignified propaganda of our faith through the medium of our publications?

During the last three years I have been privileged to be the secretary and superintendent of distribution of an extensive mission fund, donated by a group of philanthropic Christian Science business men. The names of the supporters of this fund have been unknown to the public, but their good works have abundantly shown forth their devotion to the Christian Science movement, which they so dearly love. A quiet, systematic, and extensive distribution of the publications of our Leader and The Christian Science Publishing Society has gone on for months. In some periods of thirty days not less than eighteen thousand pieces have been sent out in carefully prepared sealed envelopes to the *thought leaders* of the English-speaking world. Great care has been used in mailing and distributing. There has been no promiscuous choice of names. Publications have gone to clergymen, lawyers, judges, officials of cities, presidents of colleges, schools, and universities, public school principals and teachers, physicians, authors, religious editors, editors of daily papers throughout the United States, Canada, and Great Britain, secretaries of Y. M. C. A.'s, officers of women's clubs, etc.

The general plan of work has been to reach the *leaders of thought* in the various departments of life, with the idea in view of giving all who wanted to learn the tenets of our faith an opportunity to do so.

I have been privileged while making my different lecture tours in the Middle District to ascertain, by coming in direct contact with the editors of newspapers, that the reception from time to time of regularly sent literature had not only pleased them, but in many instances I find they had gladly availed themselves of this opportunity to become posted according to the basis of newspaper knowledge. In many instances a changed attitude of thought greeted my approach to them when I lectured in their cities, and the Scientists asked space for the presentation of Christian Science. When we remember that our well-printed pamphlets can be bought in lots of fifty copies for \$2.25, our excellent Supplements to the *Sentinel*, giving the official lectures, at the rate of six dollars per thousand, the telling and terse reprints for three dollars per thousand, our *Sentinel* at \$1.65 per hundred copies, and our ably conducted and valuable *Journal* at two dollars a dozen copies, I am led to ask the question, Are we, as a body of people, giving sufficient attention to the well-ordered circulation of this literature? This is a reading age. The people are anxious to read true Christian Science literature. Are we awake to the opportunity given us for dignified missionary labor and educational propaganda? The work should not be overdone, nor should non-Scientists have forced upon them too much literature, but the intermediate and philanthropic central position certainly is not yet possessed by us all. Above all else in value for circulation we place our text-book, "Science and Health with Key to the Scriptures," and the smaller works of our Leader, which are accomplishing a great work in the enlightenment of mankind.

I submit these impressions, not as one who has attained, but as one who seeks the best interests of the Cause.

Sincerely yours,

CAROL NORTON.

The above communication from Mr. Norton is worthy of serious thought and consideration. There is no doubt that there is an increasing desire on the part of the public to know more of the claims, purposes, and achievements of Christian Science, and a consequently increasing demand for whatever will impart such information.

There is no better way of removing misapprehension and breaking down prejudice, born of misapprehension, than by placing our literature, of every kind, in the hands of the people. As Mr. Norton suggests, not in a forced or obtrusive, but in a dignified and respectful way.

We know that in thousands of cases in the past, the perusal of a single tract, or a single number of the *Journal* or *Sentinel*, has removed the prejudice and misapprehension of years; and, whereas, these readers had previously supposed Christian Science to be the foolish fad they had been told it was or had read of its being, they saw at a glance that they had been misled. The prejudice was destroyed, and the misapprehension replaced with respect and, in many cases, with an interest which led to further reading and investigation and a final adoption of Christian Science as a religion, for they had experimentally learned that it is a practical religion which heals mind and body.

Moreover, the instances are numerous where hopeless invalids, who in some cases had been given over by physicians to gradual decline and final death, in others to a few days or weeks more of life, with death, according to medical pronouncement, certainly staring them in the face,—have been rescued through our literature. The reading it, or hearing it read, has brought to them hope, courage, convalescence, and health. Instead of languishing and despairing invalids, we see bright and happy members of the family and community, as well as disciples of Truth,

zealous in telling others of their raising up from death and the grave, and pointing the way. Many such cases have been published in our periodicals.

The Publishing Society are constantly distributing large quantities of literature free. If their work is supplemented with zealous hands, in that spirit of love and desire to aid which should characterize every disciple of our glorious faith, thousands more may annually be reached and saved.

It is well to reach the thought-builders and the educators; but it is well also to reach, as directly as may be, the invalid classes, and the myriads, in all walks of life, who are seeking higher ideals and longing for better conditions.

Christian Science is no respecter of person, class, or condition. Its mission is the Christ-mission of reaching the avowed and more abandoned sinner, as well as the pharisee who is deceived by the subtlety of error into a belief that he is good, although in reality living apart from the one and only Good. The world is in sad need of an awakening from the false dream of Life in matter, or Life separate from God as Spirit, and from the belief that sin, sickness, and death are in the divine order.

Until it is so awakened it knows not how to distinguish between good and evil, and until it can thus distinguish, it knows not how to be good, in the Christ-sense of goodness. So long as it trusts in other gods than the one supreme God for life and health and wholeness—salvation—it is not conforming itself to the law of Good, in the true sense, and has not reached a knowledge of salvation.

Christian Science literature, from the text-book, "Science and Health with Key to the Scriptures," down to the tracts and periodicals, teaches of this salvation; and should we not, one and all, awaken to a deeper sense of our mission and duty, not only in respect to our literature, but in all respects?

An Impostor.

We have received letters from various places in Indiana and Ohio that a man claiming to be a Christian Scientist is traveling about the country and, upon the strength of plausible stories, has succeeded in obtaining money from a number of the Scientists. He only asks to borrow the money and promises to return it within a few days, but in no case has he fulfilled his promise. The name he gave on some occasions was George E. Adams.

Various persons (or possibly the same person giving different names) have been heard of in different parts of the country during the past year or two, who, taking advantage of the willingness of Christian Scientists to help the needy and unfortunate in every way possible, have succeeded in obtaining money under false pretences. It is well for Scientists to be on their guard and *know* that the money they give, especially to strangers, is going to benefit the one to whom it is given. Fraud and dishonesty should not be encouraged, even unwittingly.

Among the Churches.

A New Church to be Erected at Denver, Col.

The Christian Scientists of Denver are going to build a new church. They have bought the lot and broken the ground for it. The lot is on the corner of Fourteenth and Logan, near the Capitol Building.

The Scientists tried to get the lots right opposite the Capitol, but that land is in litigation, so they had to be contented with the next to the best building site in Denver. They paid fifteen thousand dollars for the lots. The church is going to be one of the most beautiful buildings in this country. Parian & Sterner are the architects.

The plan of the exterior is wholly on the old Greek temple of justice style, with a broad portico upheld by springing columns and crowned with a great dome. The material is to be lava stone and a brand-new kind of lava stone at that.

The great trouble with the lava stone generally in use is that the bubbles in it are particularly formed to catch and hold moisture. But this new sort of lava stone is without the bubbles. It has been recently discovered at Salida, so that it is a Colorado product.

There are to be no galleries and nothing to take away from the severe style of the interior or to detract from the grandeur of the springing roof arch. It will seat eighteen hundred people, and an auditorium that will do that is really deserving the name of an auditorium. At a rough estimate the building will cost one hundred thousand dollars.

The money is not all raised yet. The Scientists have made no attempt to raise a special sum. They believe that what they need will come to them, and their belief has certainly been justified so far, for since the very first whisper of the need of a new church money has simply poured in. There has been no soliciting and no regular collection.

The little gray stone church which has been a home to the Christian Scientists since First Church of Christ, Scientist, of Denver was founded, has grown smaller and smaller, and yet the Scientists have been putting additions on it every little while.

Their church is so crowded that there is really not half room enough in it for those who wish to worship there.

If you want to get standing room in the Christian Science Church you must go very early in the morning or in the evening either, for that matter. The services on Wednesday evening are so crowded that it has been a serious matter for consideration for some time, and yet there is nothing at all sensational about the services.

The growth of the church in Denver has been little short of miraculous. When the movement first began here a few earnest thinkers gathered at private houses and read Science and Health together. When the little circle of friends had grown large enough they established a regularly organized church.

The little church that started so humbly with a handful of quiet members has grown to be a congregation of four hundred regular communicants and an immense number of worshippers who have not yet joined the communion.

William Griffiths and Mrs. Frances Mack Mann are the Readers now. There is a large and wonderfully growing Sunday School. The children are taught Christian Science from the moment they enter the school. The doctrines of the Christian Science Church are spreading with marvelous rapidity.

The Scientists of Denver are ambitious to make their church one of the most beautiful, artistic, and practically serviceable churches in the country. They have not yet decided upon the entire scheme of interior finish, but the general idea is to use ivory white as much as possible in the decorations.—*Denver Sunday Post*.

The Work in Winfield, Kan.

Twelve years ago the first seeds of Christian Science were sown in Winfield, Kan., by a lady from Boston. Healing work was done by different persons at various times later. For about two years prior to organization a few persons met weekly to study the lesson. In July, 1899, a society of ten loyal Scientists was organized. A suite of rooms in the Hudson Building was rented and reading rooms were established. These rooms have been open daily ever since and much literature has been distributed from them. Wednesday evening meetings were begun at once and Sunday services were added about five

months later. Headquarters were maintained at the Chautauqua Assembly both in 1899 and 1900. This was the means of bringing our Cause before the people in a degree and gave further opportunity for the distribution of literature.

Our membership has increased to fifteen and interest in the work has been manifested in many ways. On Sunday, November 4, Judge Joseph R. Clarkson lectured here to nearly seven hundred people in the Opera House. Forty-six Scientists from Arkansas City and many from Wichita, Wellington, and other places made us glad with their presence. This lecture has done very much to remove misconceptions of Christian Science. We already see and feel some of the good effects. Eternity alone will reveal it all to us. The press, both religious and secular, has been very courteous to us in publishing announcements. All the papers published here gave more or less notice to the lecture, and some of them quoted at length from it. We are more than pleased with the beautiful demonstration accompanying this lecture. In it all we see the hand of God. We praise Him for this new appearing of the old demonstrable Truth.

We hope soon to effect a regular church organization. A building fund has been started looking to the time when we shall have outgrown our reading rooms as a place for holding services.—R. M. WILLIAMS, *Secretary*.

Organization at Sandusky, O.

On October 18 last, those interested in Christian Science in this city met and organized First Church of Christ, Scientist, with a charter membership of eleven. The church has obtained a charter from the state and held opening services Sunday, November 11, at 10.30 A.M., in Odd Fellows Temple. Services will be held regularly at this place every Sunday morning and on Wednesday evening at 7.30, to which all are cordially invited.

A Christian Science reading room will be established by the church in room 14 Odd Fellows Temple to be open daily except Sunday from 9 A.M. to 12 M., and 2 to 4 P.M., for the purpose of giving information relative to Christian Science, and for the sale of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy and all other writings by the same author, together with literature authorized by The Christian Science Publishing Society of Boston.—*Daily Register*.

Public Reading Room at Kalamazoo, Mich.

First Church of Christ, Scientist, has opened a public reading room at 312 West Main Street. This is an innovation in Kalamazoo religious circles, it being a plan never before attempted by any Kalamazoo church. Such rooms are maintained by the Christian Scientists in many of the larger cities of the country. Besides the public reading room feature, Christian Science literature of all kinds will be kept for sale and inquiries will be answered.

The room will be open to the public daily except Wednesday evenings and Sundays, from 2 to 5 and from 7 to 9 P.M.—*Kalamazoo Morning Gazette-News*.

Courage, Faint Heart!

Courage, faint heart! the stars shine still,
As they have shone ten thousand years;
The planets all their work fulfil
Throughout the night, and have no fears.

Courage, faint heart! and like a star
Your life at last shall learn to shine,
Till men shall hail its light from far,
And bless you for its beams divine.

Christian Science from the View-Point of a Friend.

Editor of Journal.

Dear Sir:—I have just read in your issue of October 26 the report of a sermon by Rev. Mr. Sewall, which is entitled, "A Course of Study in Christian Science."

I desire to call the attention of the reverend brother to the fact that course of study in this Science should not only involve the study of its Principle and rules, but should include the examples for practice. How much real understanding would a pupil in mathematics gain, if he simply studied the rules and skipped the examples for practice? So in Christian Science, it is necessary that we should put its ideas into practice, and thereby be able to bring out results, for no science is properly understood until it is demonstrated.

We would ask, how long has Mr. Sewall been a practitioner of Christian Science; how many patients has he healed since taking up its study, in order to prove, even to himself, that he understands it? If he has not thus assured himself and proven to others his understanding of this subject, I would advise him to defer his effort to teach others. As a rule, a Christian Scientist is not considered properly qualified as a teacher until he has demonstrated his clear comprehension of its teachings by at least three years in healing sickness and sin, which answers to the examples for practice in this Science.

I would also inform our friend that "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy is the only text-book which gives a clear exposition of this Science. There are no other recognized authorities on this subject outside the Bible. The theories of others on this subject are more or less mixed with a more material sort of mental science, and are insufficient to the exalted purpose of this faith.

Mr. Sewall declares: "I shall show the kind of cases where it wins success, and trace the coincidence between Christian Science and other forms of healing without medicine." Here he betrays his misapprehension of the subject of Christian Science, for if he really understood this Science he would recognize at once that it is an exact opposite of all other mental systems; that is, it recognizes no other power but the divine Mind, while other mental systems are based upon the human mind. Jesus said: "Not my will, but thine, be done." His method of healing was mental, not physical, and yet it was not based upon the human mind.

The assumption that Christian Science does not heal all kinds of disease is also based upon a lack of understanding of the effects of this Science. No one who knows anything whatever of the extensive work of healing accomplished through this system could take such a position, for it is true that almost every ill to which the flesh is heir, has been healed through this faith.

Again, our critic states: "I shall show that her doctrines of God, man, sin, prayer, salvation, and human destiny contradict the plain teachings of the Bible; that in putting her pretended revelation on a level with the Bible, she is dragging down the Scriptures to the level of her own intellect."

It should be understood here that the Christian Science text-book is not offered to the world as a new Bible, and its teaching is not expected to take the place of Christianity. Its purpose is to give the Scientific spiritual interpretation of the Scriptures, and thus render Christianity more practical. Mrs. Eddy claims nothing in her theory that she has not found in the Scriptures. It is indeed the religion of Jesus Christ,—healing the sick and sinful as it did nineteen centuries ago.

Will our brother kindly show wherein Christian Science differs from the teachings of Jesus in the following statement? "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." "It is the Spirit that quickeneth; the flesh profiteth nothing." "If ye love me, keep my commandments." Also, will he please show wherein the following Scriptural statements conflict with the teachings of Christian Science? "Cease ye from man, whose breath is in his nostrils; for wherein is he to be accounted of?" "So God created man in his own image." "And God saw everything that he had made, and, behold, it was very good." "Without him [the Word] was not anything made that was made." "For it is written, I will destroy the wisdom of the wise, and will bring to nothing the understanding of the prudent." "Hath not God made foolish the wisdom of this world?" "But the natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned."

ALFRED FARLOW.

In the *North Brookfield (Mass.) Journal*.

Were Healed by Christian Science.

ACCORDING to promise recently made in a letter to *The Star*, the following testimonies of healing through Christian Science are submitted by Mr. Wesley Spaulding for publication:—

A few years ago a daughter of Mrs. Evans, now living with her mother at 448 Church Street, was taken ill, with symptoms indicating a severe attack of typhoid fever in a complicated form. Being unaware of the serious condition with which she had been contending for about two weeks, a Christian Scientist was called in. No medicines nor cold sponging were used, but the patient drank cold water when she wanted it, though in a state of perspiration. She was raised to perfect health, after being confined to bed about ten days in all.

Mr. and Mrs. McHugh, 208 Gladstone Avenue, state that in the fall of 1898, before they heard of Christian Science, their son Gyle, then about two years old, was attended by their physician for scarlet fever, which about three months later was followed by what the doctor said was acute consumption, and that it could run only a few months and would terminate fatally. After being in the care of two doctors for eight or nine weeks, a consultation was held, and the third doctor was called in. All three agreed there was no hope for the patient, and that he could not live more than a few hours.

At this time a friend told them of Christian Science, and they were willing to try it, having no other hope. The doctor was informed of this decision, and gave up the case. A Christian Scientist was sent for, medicine was discontinued, and the lad has never taken a dose since. He received Christian Science treatment every day, was out of bed in a week, and could walk around in two weeks. He kept on gaining steadily, and in a few weeks had recovered perfectly. He is now hearty and robust.

Mrs. Bessie Forsyth, 49 Jersey Avenue, states that about a year ago her son, eleven years old, was unharnessing a frisky horse. It made a jump from the shafts and knocked the boy down and stepped on him, cutting his ankle very badly with a sharp shoe and causing him to faint. The foot swelled to three times its usual size, and the leg was black up to the hip. When Christian Science help was procured, the boy was delirious from pain and

fright. The accident occurred in the evening. He went to sleep about midnight and rested well. He suffered very little pain afterwards, and in about two weeks was quite well. No material remedies were used. The case was left in the hands of the Great Physician, and Truth healed him.

Mr. William Arnott, 63 Jersey Avenue, was healed of the tobacco habit of about fourteen years' standing in one treatment by Christian Science. Previous to this he had tried many times to give up the habit, but failed.

Recently his brother was healed of the habit of intoxication. He received a week's Christian Science treatment, and has had no desire for liquor since.

Mrs. M. E. Snyder, Westmoreland Avenue, states that she accepted Christian Science, not because of physical healing for herself, but through having seen her nearest neighbor healed by Christian Science treatment in one week. He had been suffering terribly from asthma, bronchitis, and other diseases. After enquiring about this wonderful healing power and being satisfied that it was of God, she purchased "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, and before she had read it through and while reading it she was healed thereby of a severe attack of the grip. She says she has seen typhoid fever, diphtheria, and many other diseases healed in a very short time through the understanding of Christian Science. Her experience is that Christian Science not only heals sickness and sin, but preserves health and lengthens our days.—*Toronto (Can.) Daily Star*.

Christian Science Methods.

Editor Herald:—In your issue of October 5, your columns gave some remarks about "Christian Science in Peking," showing, by way of illustration, that the doctrines of Christian Science do not prevent its believers from at least exercising sound judgment and effective action in a trying emergency such as the siege of the legations.

There is considerable misapprehension among those who have not studied and practised Christian Science as to its teachings respecting the realities of the universe and those things which must vanish away because they are not a part of the harmonious and eternal creation of God. Discord of every kind, sin and disease, cannot come from God because they do not partake of His nature. If these are a part of human experience, to that extent they are realities to us; and to sit down and tamely submit to them as such, would only be to make them greater realities. Activity, hope, courage, faith in God, and wisdom to do the right thing at the right time—these are real characteristics of those taught in Christian Science; and through their exercise these qualities are fostered and strengthened, and their opposites—indolence, despair, cowardice, lack of trust in God, etc., are thereby made unreal and powerless to influence and fix our destiny.

The advantage possessed by the Christian Scientist is, that the Principle of Science understood by him in a degree, gives him a larger measure of confidence, better methods of action, surer results in the right direction, and supreme trust as to the final outcome; and this applies to every detail, every need and every line of growth and of work in all the varied walks of life.

WESLEY SPAULDING.

In the *Hamilton (Can.) Herald*.

Sing the song of great joy that the angels began,
Sing of glory to God and of good-will to man!
Hark! joining in chorus the heavens bend o'er us!
The dark night is ending and dawn has begun;
Rise, hope of the ages, arise like the sun,
All speech flow to music, all hearts beat as one!

WHITTIER.

Love and Hate.

BY WILLIAM BRADFORD DICKSON.

If I but truly say, "I love,"
The darkened way grows bright,
And I behold the heavenly light,
Beneath, around, above.

Strange fire warms my deadened soul,
My being wakes anew;
Eternal glories greet my view,
Man perfect, sinless, whole.

But if I madly say, "I hate,"
I make my bed in hell;
Bleak is the land wherein I dwell,
Cold, dark, and desolate.

Remorse and fear hold constant sway,
My heart is filled with gloom;
Hate carries in its arms its doom,
But love its endless day.

Is Christian Science Transcendental?

BY HERBERT S. FULLER.

IN my work in Christian Science I am often told by those who are investigating and have but reached the numeration table, even if they have got that far, that Christian Science seems transcendental, and in each of these cases the word is used in the sense of that which is "vaguely and ambitiously extravagant in speculation, imagery, or diction." Were it referred to as transcendental, meaning "superior excellence," I should say unhesitatingly that Christian Science is transcendental; but from the meaning often given the word by those who apply this term to Christian Science I dissent.

Too often we are apt to term that transcendental which we do not understand, and we thus show our ignorance of the subject under consideration. All too often we use this term to dispose of the matter in hand, realizing that we cannot defend our position. It is probable that the very practical rule of three seems transcendental to one who does not understand its meaning or know what can be brought forth because of an understanding of it. The science of music is open to the same charge, as is every other science when the term is used as expressing exaggeration. To the mind unprepared the statement of astronomical facts would be considered transcendental. It is the belief that "seeing is believing" that says that unless a system satisfies the material eyes and the material mind it must be classed as transcendental.

In Webster's International Dictionary we are told that transcendental has reference to those beliefs or principles which are not derived from experience, and yet are absolutely necessary to make experience possible or useful. Here again Christian Science fails to answer to the definition of transcendental, because a belief in Christian Science, or rather an understanding of it, is from a Principle which does make experience possible and useful. The Principle of Christian Science is God, and realizing this and working from that standpoint alone, Christian Science is found to be a belief that brings forth works which are derived from experience and which are most useful to the world.

Instead of standing afar off and declaring that Christian Science is transcendental in the lowest meaning of that much-abused word, why not draw nearer, be fair, and investigate with an honest heart? A sweeping declaration

that this Science is transcendental and a dismissal of it in that way is a rejection of the pearl of great price. Let the dear ones who are investigating Christian Science be not turned back by the cry that it is transcendental, but let them press onward with a knowledge that it is God's truth, and that it will thus appear to them "in due time, if they faint not."

Transcendent Christian Science is, when the word is given its full and fair meaning of "superior in excellence," but transcendental it is not, when the definition given that word is "vaguely and ambitiously extravagant in speculation, imagery, or diction."

Christian Science, unlike so-called sciences, does not rely upon theories to prove it but upon works, and in the healing work that it is doing to-day all over this broad land of ours is the answer to the charge that it is "extravagant in speculation," for these cases but prove that Christian Science is not working from speculation but from Principle, and that Principle is God—Good—who healeth all our diseases.

Three Lessons.

BY EDWARD EVERETT NORWOOD.

WHILE riding on an electric car recently, I had three illustrations presented to me, which, rightly understood and applied, were useful lessons in Scientific demonstration. I noticed every time we crossed another street car line, the motorman, after going a few yards, shut off the power. In reply to my inquiring why this was done, he answered, "When we cross another line our car takes on a certain amount of that line's current, and we must cut ourselves off from it, else it interferes with our progress and deranges the machinery." So, in journeying along, when adverse circumstances—errors—seem to cross us, we must cut ourselves off from them, so the wrong atmosphere cannot touch us, and thus hinder our progress by deranging our mental mechanism and harmony of thought.

A few squares further on a hot box was discovered under the car, and the conductor telephoned ahead to the barn for a man to be ready with the lubricants to oil it when we passed. Thought I, "So it is in our Scientific life. When the cares and worries of the day seem to cause friction, a halt is necessary, and the lubricant of divine Love is applied, which instantly overcomes the difficulty."

Just before getting down town, the car came to a blockade in the street. It was where one street intersected another and ended. A half dozen street cars, trucks, cotton-wagons, and vehicles of all kinds, were seemingly hopelessly entangled. Men were shouting orders in various degrees of irritation and the answers were not a whit more loving. In a few moments the cause was discovered. A very small Texas pony, hitched to a dog-cart, had become entangled between two wagons, and nothing could go forward until it was extricated. So by dint of much care, pushing forward a few feet, then a wagon a few feet, then a street car a yard, it was finally untangled, and the blockade broken.

So I saw that sometimes the very little things in our life-problem block entirely our progress if we are not careful to see and remove them from our way. A wrong thought in our consciousness, however trivial, will surely cause a disarrangement if not detected and removed. We should be so grateful that this Truth which we profess gives us the intelligence, the spiritual discernment, to see the trouble, and then scientifically overcome it, thus insuring a rapid and harmonious progress towards the kingdom of heaven.

Thank God for our dear Leader. She has set before us an "open door which no man can shut,"—even the rule by which we can work out our life-problem, and be saved.

Testimonies.

What Christian Science has Done for Me.

I am in my seventy-ninth year. I joined the Methodist Church when I was seventeen, attended services and Sabbath School regularly, and had no doubt that the Methodists were in truth Christ's peculiar people. I never enjoyed a robust constitution, and chronic troubles kept my body in a suffering condition. After I was forty years of age I was seldom out of medicine and consulted many physicians, two specialists. They gave me no encouragement that I would ever be well, telling me that medicine would keep me more comfortable while I remained in the body.

Whenever I commenced taking a new remedy I seemed to improve, but after a little the trouble would become aggravated and I would try another doctor or different medicine. When I had reached seventy-three years of age my nervous system seemed a wreck. I could not sleep, was taking all kinds of medicine to produce sleep, yet I would be very wide awake and the more I tried not to think or be troubled the more it seemed to me the unpleasant things of life would crowd about me. Oh, the horrors of those nights those that have experienced the like only know. I could not read or hear reading, could not converse with friends, and was obliged to keep secluded. All this time I was suffering from a number of chronic complaints.

When I heard of a wonderful cure of a friend of mine through Christian Science, I at once sought to inform myself of its healing. One of its earnest workers sought me out and worked indefatigably to bring me into the Truth, but my progress was very slow. It seemed to me that I had to dig out the old thought by the roots, as it appeared to have become so a part of my being that it was impossible to accept the new without eradicating the old. It had always seemed strange to me that Christ should command his followers to heal the sick and yet not give them power to do so. I was quite sure the mistake was with us, therefore I strove to understand "Science and Health with Key to the Scriptures," and also to demonstrate according to its teachings.

For five years the days have been few that I have not studied Science and Health. I have not taken or used any remedies whatever, and am remarkably well. I think I can endure as much as most women of sixty. The cases that have yielded to demonstration in healing of cuts, bruises, colds, stomach and bowel complaints, are many. Once I fell down a flight of uncarpeted stairs, stepping off backwards in the dark and bounding the whole length on my back into the room below, without any serious injury, in fact with the exception of a little soreness, I was as well as usual the next day. I had an attack of grip. I did not take to my bed, and in a few days overcame it entirely. In August, 1899, during some very hot weather on looking out I saw my nasturtium vines had blown down. The sun was under a cloud and I went out to fasten up their supports. It was more work than I expected. After a little the sun came out very hot. I reached up to drive a nail, suddenly it grew dark and sharp pains darted through my head over my eyes. I grew sick and faint; zigzag lightning flashed before my eyes. I exclaimed sun-stroke, dropped my work, and commenced to declare the Truth. I went to my room and lay down, but continued to work. I fell asleep, and when I awoke found myself much better; before night the next day the trouble was overcome.

I will mention one more case that to me was wonderful healing. Last February as the family and I were sitting in the back parlor in the evening, I noticed the room seemed dark, the light dim, and I looked at the gas burners for the cause, but as I saw nothing amiss I became interested in the conversation of the family who were discussing the life

likeness of some photographs of friends. Just then they handed them to me; to my surprise I only saw some black on white, not a feature could I discern, and then the thought flashed on me, I was growing blind. Just at that moment the dinner-bell rang and I went with the rest to the dinner table where other subjects were introduced. I no sooner saw that the dimness of the light and the lack of my seeing the pictures was due to my eyes than I commenced to work in earnest. I had not a doubt that God would give me back my sight; in fact I argued that my blindness was all a delusion, that I could see and my eyes were all right for sight was spiritual and Spirit could not fail. When we returned to the parlor it was as light as usual. I took up the pictures and found my sight good. Language fails to express my thankfulness for these great blessings.

MRS. D. F. SEAVER, Blissfield, Mich.

The Blind Restored to Sight.

The following extract from a letter tells something of what is being accomplished by Christian Science in London.

It is simply marvelous, the wonders that are being accomplished here in London, in this conservative old city, with its old customs and ideas. The deeper one goes into Christian Science, the more absorbing it becomes, until our old habits, ideas, and desires, and everything begin to change. What a new life, what new views, how everything changes! And one cannot help seeing the truth of it more and more as one receives constant new proof of its wonderful power. I can well remember when we were only about ten, and now we are hundreds, and when one hears the testimonies of one's friends, and is made aware of what Christian Science is doing in different cases, and two years, nay, one year, in some cases, have made these wonderful changes, is it not glorious?

A great friend of mine, in fact he became interested in Christian Science through us, a German baron, has given up his diplomatic career to go into Christian Science work. At first it seemed very hard to overcome all the seeming obstacles, as he had a very important position and had been trained for a court life; besides, he will come into large estates, etc., but it has all been overcome and he is now doing beautiful work. Then an English nobleman, an earl, has also gone into the work, and when his father passed away, he had to take his seat in the House of Lords; so it marches on. He has rented his castle for a number of years so he can devote more time to the work and give up giving large house parties.

When such facts as these become more and more realized as facts, then many people will wonder what it all means. Is it not wonderful when men seem to have everything in their hands, that they recognize the Truth, while less fortunate ones are deaf. "Having eyes ye see not, and ears ye hear not." As our beloved Lord said, "Heaven and earth shall pass away, but my words shall not pass away." How true that is!

Then in beautiful contrast to this, the letter tells also of the healing of a blind beggar.

There was a beautiful case of healing done last spring by a young man who had only heard of Christian Science eighteen months before. The case was one of blindness. This poor man had been blind for years, sitting day after day on the pavement, holding a cup into which passers-by dropped their pennies. His wife went out to do cleaning by the day, and in this way heard of Christian Science. Well, he took treatment, and his healer wisely asked him to make a sacrifice by giving him (the healer) the money he spent in tobacco. This seemed a great sacrifice to the man, but he made it. About eight weeks after he had begun treatment, one night, near midnight, the healer was awakened, and going to the front door, found this man

and his wife in great excitement. "He can see! he can see!" was all the wife could say, and the man could hardly contain himself for joy. He is now learning to read.

Our Lord says, "By their fruits ye shall know them," and the healing constantly proves the harmony which exists between Christian Science and the teachings of the Bible. There is nothing that covers our whole life like it. Business propositions, success in teaching, healing the sick, in fact in every honest line that mortal man can enter, Christian Science meets all. Always "a present help in trouble." If I had only known it sooner! It is such a joy to *know* something and not always to be wondering about life and immortality.—F. L. W., London, Eng.

Crutches Laid Aside.

Soon after I came to Fitzgerald I met with an accident which seriously injured my knees and ankles, resulting in my being a confirmed invalid for more than three years. During that time I tried various physicians of this place and four specialists from other cities, as well as all the patent medicines and home remedies recommended for my case. I had the best attention, all that loving hearts and willing hands could do to alleviate my suffering and administer to my wants, but I could get only temporary relief.

Finally Christian Science came to my rescue. A Scientist brought me Science and Health to read, which interested me very much; still I could not see how I could be healed without medicine. I told her that it might cure people who were not very sick, and who were naturally of a despondent nature, needing only a little encouragement to stimulate them back to health; but to cure a chronic disease like mine seemed impossible. However, she did not become discouraged, but called frequently, scattering sunshine to cheer my drooping spirits.

One day when I felt worse than usual—suffering from a severe headache—I told her that I had just finished taking three large bottles of medicine that had been highly recommended, with no benefit resulting therefrom, and that I was getting discouraged. She then advised me to try Christian Science. Although I had not a particle of faith in it, as a last extremity I complied with her wishes and sent for a Christian Science practitioner. To say I felt amused when he gave me the first treatment expresses it very mildly, but I soon felt the influence of his treatment, which inspired me with faith. I gained so rapidly that in a week I was able to walk at intervals without the aid of my crutches. In less than two weeks I discarded them altogether. Still I expressed a fear of having a relapse, but my healer said, "In Christian Science relapses are impossible." His words proved to be true. I kept on improving until I felt perfectly strong and life was worth living.

Christian Science has not only benefited me physically but morally and spiritually. I was so passionately fond of dancing that even while an invalid the thought of not being able to dance gave me intense pain, and to be denied such pleasure seemed worse than death. Since reading Science and Health I have lost all desire for such indulgences. I take greater delight in listening to spiritual instruction.

Since being healed I met with a similar accident, which no doubt would have terminated in my being an invalid for years, but calling Christian Science to my aid I was immediately restored to health.

The beauty of Christian Science when once understood gives a joy and peace, which to me seems wonderful, for I was never religiously inclined. In this newly discovered world of Spirit I feel so enraptured, so overjoyed, that I can find no words to express my feelings. I gladly send this testimony, feeling that I owe it to God, to the Rev. Mary B. G. Eddy, and to Christian Science.

MRS. CLARA WETTSTEIN, Fitzgerald, Ga.

A Grateful Acknowledgment.

It is with deep thankfulness, that I acknowledge the benefits of Christian Science. Since my earliest childhood I never knew what it was to be quite well. In February, 1899, I became the victim of a very severe trouble which steadily grew worse. In March I went to a hospital, where I underwent a severe surgical operation. After weeks of intense suffering I was no better. Other diseases asserted themselves. I was attended by the best medical practitioners of the city, who pronounced my trouble tuberculosis of the joints. After remaining at the hospital for three months, I was removed to my home to die. The physicians said I might live a few weeks at the most. I was perfectly helpless in every way.

At this period Christian Science was suggested to me, but I scoffed at the idea. I was thoroughly imbued with medical theories. At last at the urgent request of friends I consented to the treatment, but without any hope of relief in that direction.

A loyal student was called, and through his patient kindness I soon found myself on the road to recovery. My healing was slow, but time was not considered, for I realized I was being made "every whit whole." I had worn glasses on account of weak eyes for fifteen years. That trouble, along with all others, vanished into nothingness before the power of Truth.

While the physical healing seemed wonderful, yet it was as nothing compared to the spiritual uplifting, and the peace and comfort which came to my troubled sense. To-day I rejoice in health, peace, and love. I feel unbounded gratitude to the author of Science and Health, also to the dear student who so kindly and lovingly led me into the understanding of Truth. I have enjoyed the great blessing of class instruction. My hope is that I may be of use in the Master's vineyard.

MATE C. THOMPSON, Fort Wayne, Ind.

Broken Bone Quickly Healed.

In October, 1897, a middle-aged man fell from an apple-tree, and was carried to his home by a doctor who was driving by. Examination showed a rib broken and the sternum fractured. The doctor set the bones and left him. The man expressed his desire to have Christian Science treatment, as he was suffering greatly, and it was given. He had no severe pain after the treatment, and slept well that night. Next day the kind-hearted physician came and said the bones were in proper place, pulse good, temperature normal, no inflammation or swelling. He said to the patient, "You will be on your back ten days if you do well, then you can sit up some, but you will not be able to go to work for three weeks."

When the healer went to see him the next day his wife told her that he would have his way, and sit up to have his bed arranged. The next day he repeated this to have a new mattress placed. Then, at the healer's suggestion that it certainly could not harm him to remain quietly in his bed a few days, even if he could be sitting up, he remained there two nights and a day, but on the fifth day after the fall, sat in a chair nearly all day. On the sixth he walked about most of the time. On the day the good doctor thought he might sit up a little, he walked a mile or more, and two days later he walked two miles. He resumed his duties as gardener, using shovel and wheelbarrow, four days later, which made it the sixteenth day after the fall. He said to the Christian Scientist, "You have healed me of my sickness and of my sins, and money cannot repay you."—N. M. D., Boston, Mass.

The serene, silent beauty of a holy life is the most powerful influence in the world, next to the might of the Spirit of God.—CHARLES H. SPURGEON.

Religious Items.

A writer in the (Methodist) *Christian Advocate* says: "One who never goes apart to pray will soon cease to pray at all. It is the spiritual strength acquired in the hour devoted exclusively to prayer that enables the Christian to keep up his communion with God when busy with worldly cares. Going apart to pray we escape the distraction of worldly business and social life. One can give his mind to two things at the same time, but the attention he gives to each is not so close as it would be if he gave his mind to one at a time. He cannot fix his thoughts on God so intently while transacting business as he can when alone with God. The human mind has its limits. The nature of the mind requires that we give some time exclusively to the things of the kingdom of God. The distractions of daily life interpose a serious hindrance to our devotions. It is by communing with God apart from the world that we become acquainted with Him. We shall never learn to know God by reading of Him and hearing what men say about Him. It is only by withdrawing from the world and spending some time each day alone with Him that we come to know Him."

A writer in the (Methodist) *Christian Advocate* says: "It is necessary to be kind and forgiving. A surly spirit and revengeful heart, in which something always rankles, is miserable. A gratified revenge is neither contentment, cheerfulness, nor happiness. One might be grateful and have a kind and forgiving spirit, and yet long for something else. We must be active or miserable; so that work, useful, helpful, or profitable, must be a part of every person's life."

"Idleness will not cure low spirits. Dissipation, like drunkenness, is a kind of sleep or delirium which has a rude awakening. Petty triumphs leave no joy. Harsh words leave a sting in the heart that conceived them. No one ever wounds another intentionally without wounding himself more."

Concerning the value of daily Bible reading the (Swedenborgian) *New-Church Messenger* says: "It brings us nearer to the Lord and therefore makes all things look brighter. By lifting up our thoughts we are enabled to keep things in their due proportion. The man who thinks of eternal things will not be easily disturbed when temporal things are not to his liking. He realizes their comparative insignificance. He will not fret nor worry. He will be a happy man. Small things to him are small, and a sweet tranquillity is his in consequence. After a day of petty vexations, of worldly desires, of foolish anxieties, how quickly and surely we are brought to see things as they are—in just relations in true proportions—by lifting up our thoughts, out of all their turmoil, to the Lord."

An editorial in the (Baptist) *Watchman* on "The Bible in English," contains the following interesting bit of history: "Four hundred years ago, and less, in Christian England it was a crime even to read the English Bible, and it was punished with fine and imprisonment or worse. Of course it was a much greater crime to translate it. William Tyndale, the great Biblical scholar, one of the glories of Christian history, had to hide himself here and there on the Continent, as though he were a thief or murderer, and he was finally burned at the stake by Christian princes and Christian bishops, his only crime being that he persisted in translating God's Word into the language of the common people."

The *Church Standard* quotes the following from one of Phillips Brooks' sermons: "A thousand men to-day care whether the State is pure for one who cared in the last century. A thousand eyes are anxiously watching the Church for one that looked to see whether she did her work a hundred years ago. A thousand hearts sink at a catastrophe in the purity of social life where once

only one felt the disgrace. Out of all this watchfulness has come a sensitiveness and a narrowness. Because our own age has its vices which distress us, we forget the vices of other times, and we let ourselves judge the world by that bit of the world which is just under our own eyes."

The record of daily events shows that the happiest men and women are not those who seek soft places, not those who avoid dangers, not those who are free from care and trouble," says the (Unitarian) *Christian Register*. "There is a joyful note in many of the Old Testament psalms and prophecies which came from the discovery that divine wisdom was at the heart of things at the beginning, and that men and women might have a share of it. Some great souls had announced the fact; and those who received it, in the joy of fresh discovery, made their world ring with it, and, as always happens, they who had worked hardest and suffered most were most exultant."

In an editorial the (Baptist) *Examiner* says: "He alone who loves, truly lives. For out of love—hate's opposite—springs joy. Hate is the parent of the whole brood of sorrows. Inward rebellions, murmurings, discontents, fears, and their like, are all of them hate's creations. The spirit of hell is hate, and so long as he cherishes it a man is in affinity with devils. Its presence in the soul is deadly as death-damps, and under its influence life's lustre pales and disappears. But where love is, life is always burgeoning, and its steadily accumulating pleasures bring, not satiety, but peace. As we grow in love we advance in the life of heaven."

The *Boston Post* says: "One hundred and eighteen valuable Egyptian papyri are soon to be brought to this country for various American universities, among which is a manuscript of great antiquity, which is believed by several authorities to be the original manuscript of St. John's Gospel, and which at least ante-dates any other of the codices from which the English version is taken. The St. John manuscript is not complete and may not be the original manuscript, but it is unquestionably older than any manuscript found to date."

The *New-Church Messenger* says: "It is the lack of single-minded, single-hearted desire which keeps us in conflict and distress. We labor too in our efforts to harmonize the elements of our warfare. We want to do one thing, it is for ourselves, and to our own ends. We detect this and the better nature which we call our conscience pulls us toward the opposite way. It takes harder work to still these claims of the higher self than to conquer the lower nature and obey them, but this we are often too dull to see."

A writer in the *Universalist Leader* says: "As no man lives or dies to himself, he that is wise will strive to live helpfully and generously among his fellows. None can guess to what extent his daily life will help or hinder those about him; but each may exert himself *purposely* for good. And having sown the seed, he need not concern himself because fruitage is not at once—or ever—revealed to him. The good Father will take care of the harvest."

In an editorial on the "Secret of Cheerfulness," the *Christian Advocate* says: "To be cheerful is two-thirds of the battle, and no one can long be cheerful who is not temperate. The secret of cheerfulness is like the secret of health and long life: something near to us, and not something far off. Really thankful persons are always cheerful whether sick or well, for really to feel grateful is in itself a kind of cheerfulness."

Governor Roosevelt's declaration in his speech at the Grant birthday dinner. "We all know that for right acting there must be right thinking," has been much applauded. The *Advance* observes that it is only in the sphere of religion that this principle is disputed. It is only here that it is thought possible for men to think anything and believe anything and yet do right."—*The Watchman*.

"Gladness shall reign among us because we are on the road that leads upward; and the hummocks and hollows of the highway cannot make us despond while we know that we are always climbing," says the (Baptist) *Standard*.

The *Christian Register* says: "One thing that gave the apostle Paul power with sinners was his frank confession of his own weakness and failures."

"The time has passed when any preacher, church or denomination, can thrive on opposition to other preachers, churches, or denominations."

Notices.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

No. 6.—Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth St., Boston, Mass.

Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price (cloth) each \$3.18

Two to Twelve books to one address, each, prepaid . . . 3.00

Twelve or more books to one address, each, prepaid . . . 2.75

Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00

Twelve or more to one address, each, prepaid 3.75

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid . . . 5.00

Twelve or more to one address, each, prepaid 4.75

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00

Twelve or more to one address, each, prepaid 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid \$2.25

Twelve or more books to one address, each, prepaid . . . 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid . . . 4.00

Twelve or more to one address, each, prepaid 3.75

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00

Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid \$3.00

Twelve or more books to one address, each, prepaid . . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Political and Governmental Notes.

The Davis amendment to the Hay-Pauncefote treaty, modifying the neutrality clause in the agreement regarding the Nicaraguan Canal project, to the extent of permitting the United States to fortify the entrances, was passed in the United States Senate December 13, by a vote of 65 to 17. On the following day other amendments were introduced which would cause the treaty to be rejected by Great Britain; and Senator Lodge and Senator Foraker served notice on the President that they would be adopted unless the treaty should be withdrawn. This the President refused to do.

The Washington correspondent of the *Boston Herald* outlines what he understands to be the programme that will be followed in regard to the Nicaraguan Canal proposition as follows: "The Hay-Pauncefote treaty will be transformed by amendments and then ratified by the Senate, and in its new shape will be rejected by Great Britain, after which the Senate will endeavor to secure the abrogation of the Clayton-Bulwer treaty, and will pass the Nicaraguan Canal Bill."

The treasury estimates of the provision necessary to be made by Congress to meet the expenses of the United States government for 1901-2 are as follows: Agriculture, \$4,669,050; army, \$113,019,044; diplomatic and consular, \$1,897,638; District of Columbia, \$9,080,703; fortifications, \$12,461,103; Indian, \$9,250,571; legislative, etc., \$25,399,509; military academy, \$1,045,750; navy, \$87,172,430; pensions, \$145,245,230; post-office, \$121,267,349; river and harbor, \$25,130,000; sundry civil, \$63,378,113; permanent annual appropriations, \$124,358,220; total, \$743,374,800.

Edward Erskine has written an article on the year's cost of the government of New York City. He says that the tax budget for 1901 is one hundred million dollars, which is double the cost of the government of Mexico with its fifteen million inhabitants, including the cost of Mexico's army and navy; a third the cost of the government of the German Empire, having a population of fifty-two million, including the support of its immense army, great navy, railroads, etc., and a quarter the cost of governing the United Kingdom of Great Britain and Ireland.

A bill to establish a National military park at Valley Forge, Pa., has been introduced in the House by Mr. McAleer of Pennsylvania. The bill authorizes the President to appoint ten commissioners, who shall locate definitely the territory occupied by General Washington as a camping ground at Valley Forge, and appropriates \$200,000 for acquiring and improving the territory so located.

The annual report of Postmaster General Smith shows that there were 7,129,990,202 pieces of mail matter of all kinds handled in

our post-offices during the year. These were divided as follows: Letters, paid and free, 3,309,754,607; postal cards, 587,815,250; newspapers and periodicals, known as second-class matter, 2,356,698,377; third and fourth class matter, 875,721,968.

The centennial anniversary of the establishment of the seat of government in the District of Columbia was celebrated in Washington, Wednesday, December 12. A joint session of the two houses of Congress was held at which patriotic speeches were made and the President received the governors of the states and territories at the White House.

Admiral Dewey's flagship, which led the squadron to victory in the battle of Manila Bay, and which is now at the Charlestown Navy Yard undergoing extensive repairs, is to have a figure-head commemorative of her part in the great achievement of May 1, 1898. The ornament will be a reproduction in bronze of the classic statue, "The Winged Victory."

Charles A. Towne, who was nominated for the vice-presidency by the Populist National Convention last summer, and who afterwards withdrew in favor of Stevenson, has been appointed by the Governor of Minnesota to fill a vacancy in the United States Senate. Senator Towne took his seat December 10.

The first of the great supply bills, the legislative, executive, and judicial appropriation bill, was passed by the House December 10. The bill carries \$24,496,408 and has 131 pages, but there was less than ten minutes' debate upon it.

Foreign News.

The newspapers of December 15 published a report obtained from Chinese sources, declared to be credible, that Emperor Kwang Su will agree to the following demands: Indemnity to the amount of 700,000,000 taels, payable within sixty years; the erection of a monument in Peking to the memory of Baron von Ketteler; that an imperial prince go to Berlin to apologize; that foreign troops hold the lines of communication between Taku and Peking; punishment of the Boxers; abolition of the tsung-li-yamen; that foreign envoys have access to the Emperor at all times; that the importation of arms into the province of Chili be abolished; that the land and sea forts between Taku and Peking be destroyed.

After nearly all the powers had authorized their representatives in Peking to sign the agreement as to the demands to be submitted to the Chinese government, Great Britain and Germany suggested one or two changes in the phraseology of the agreement, which, however, made no essential change in the meaning, and the United States authorized Minister Conger to sign the agreement as thus amended. It is believed that the other powers will take the same course.

The French Chamber of Deputies on December 10, unanimously passed a resolution calling upon the government to prohibit the manufacture and sale of absinthe in France. The mover of the resolution said: "The increase of consumption of absinthe marches arm in arm with the increase of cases of drivelling insanity, which will end by becoming a national malady."

The British secretary of state for war, on December 11, introduced in the House of Commons supplementary estimates of eighty million dollars for the army, which it is anticipated will be needed to bring the military operations in South Africa to a close. The estimates were adopted with but eight votes opposed.

The Dutch foreign minister, in an interview with Ex-President Kruger at The Hague on December 11, communicated the decision of the government not to take the initiative in behalf of arbitration between the Boer republics and Great Britain.

General Wood has authorized a credit of one hundred thousand dollars for the payment on cattle which have been contracted for in Mexico and which will be taken to Cuba and distributed at as early date as possible.

Lord Roberts and his wife and daughter sailed from Cape Town December 11. On his arrival in England he will assume the post of commander-in-chief of the British army.

A Johannesburg dispatch says the town has been fenced around with barbed wire, to prevent the inhabitants from getting food to the Boers.

President Diaz of Mexico has just been inaugurated for the sixth term as ruler of Mexico.

Industry and Commerce.

J. Pierpont Morgan & Co., the great banking house of New York, made the announcement on December 13 that the firm had acquired the stock of the Pennsylvania Coal Company, paying therefor 752 per cent of par. As the capital stock of the company is \$5,000,000 the amount involved in the transaction is \$37,000,000. Taken in connection with other changes in the anthracite coal fields of Pennsylvania, this deal is thought to be a certain indication that the Morgan interests will soon control the whole output.

The steel rail pool to December 13 had booked orders aggregating 1,000,000 tons of rails. The last to come in was an order for 80,000 tons from the New York Central. The orders for rails are said to be larger this year than at the close of 1898 or 1899.

It is estimated that the Florida orange crop this year will be 870,000 boxes. The young groves are in excellent condition.

General News.

In a recent article A. R. Colquhoun shows that Siberia has made most rapid strides in population and development of its natural resources during the past ten years than possibly any other territory of similar character on the globe. It is not an arctic wilderness, as generally imagined, but a stretch of rich, virgin country from three to four hundred miles one way, but from two to three thousand miles the other, very similar to the northern half of the United States and the southern half of Canada.

In seven years, 1893-1899, nearly nineteen million acres of public land were transformed into farms, of which five-sevenths are now occupied. Since 1887 more than one million immigrants have settled in Siberia, and the business of the Siberian railway has increased enormously.

The *London Daily Mail* describes a phonograph, invented recently by Horace L. Short, which can be heard distinctly ten miles off. Experiments were made at Brighton, where the inventor has his workshops, and, the *Mail* says, "At a distance of ten miles the sounds were heard by a number of people, every word being perfectly distinct. It was found that an unknown message could be taken down in short hand at a distance of twelve miles, and over the water the sound would carry still farther. It is proposed to place them on lighthouses and lightships to give verbal warning."

Dr. A. Donaldson Smith of Philadelphia has returned from his second exploring trip into the interior of Africa. He penetrated three thousand miles into the interior of the dark continent, and claims to have passed through regions never before trodden by civilized man, and that he encountered many strange tribes, most of whom had never seen a white man.

The Mennonite brethren of Kansas will go into the banking business to raise money for their missionary fund. Their bank will have a capital of fifty thousand dollars, to be subscribed by members of the church. A small percentage of the profits will go to the stockholders and the remainder will be devoted to the missionary fund.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Deserts Reclaimed by Irrigation.

Problem Being Worked out by the National Irrigation Association.

THE tree is the mother of the fountain. "Save the forests. Store the flood waters. Reclaim the deserts. Annex arid America."

That is the slogan of the National Irrigation Association. The marvelous growth of the movement fostered by this organization, which held its ninth annual congress at Chicago a few weeks ago, is attracting the attention of the public in the East, as well as in the central and far West. The magnitude of the problem the organization has bravely set out to solve and the influence and energy it is bringing to bear are well worth considerate attention.

Millions of acres of barren land that might be made arable; miles of territory now uninhabited that should support many thousands of prosperous families. That is the proposition now being wrought out.

To persons who are not familiar with the matter many questions naturally arise. The first and most comprehensive is: What is the National Irrigation Association, and what does it seek to accomplish? Briefly, this organization, composed of men identified with the manufacturing, transportation, and commercial interests of the country, as well as those in professional occupations, is seeking to provide the largest possible number of homes upon the public domain.

This can come about only through a wise administration of the resources in water and forests, since upon these depend directly the value of the vacant public lands. But why should not these matters be left to the Washington authorities to settle? Simply because the Congress at Washington has not given serious attention to this matter, and the conditions are becoming so ominous for the future that the business interests of the country, as well as the philanthropists, have begun to take alarm.

The great public domain, one third of the whole United States, is being administered not to make the largest number of homes, but rather the reverse. Under wise laws and institutions, framed with a knowledge of the facts, ten families can obtain a good living where now one is scantily fed.

But why should not this be left to private enterprise? It has thus been left, and individuals have seized upon all they could grasp, and in many instances have ruined the opportunities for making homes for tens or hundreds of other individuals. The treatment of the arid public land has been comparable to that of a poorly tended orchard, where each apple has been bitten by a bird or insect—the amount actually consumed is relatively insignificant, but the fruit is spoiled. One man by securing title to a few acres controlling the water supply, has virtually become possessor of thousands of additional acres which might otherwise have been used for farms. The opportunities for doing this on a small scale have largely been seized, but by combinations of capital they may be indefinitely extended.

Why not leave the development to corporate enterprise, as in the case of railroads? This also has been tried, and large irrigation systems have been built. In nearly all instances these have been financial failures, although of great benefit to the country. It is highly improbable that more capital can be brought to construct those costly works unless the most stringent and oppressive monopoly can be created. If well administered the benefits are such that they cannot accrue solely to a water company, but the public gains at the expense of the investor. The latter becomes an involuntary philanthropist, simply because he cannot control all the returns which come from his investment.

In other words, these works, when successfully built, benefit the community, but not the owner. The situation is comparable in some respects to that in building lighthouses, improving harbors or public roads—the corporation or the individual who expends the money cannot be sure of securing remuneration for his enterprise.

Why not turn over to the states in which they are situated all these lands, and let each state attend to the matter? This has been frequently advocated and tried in a small way, but the states in which these lands are situated are for the most part poor, and the lands themselves must be used as a basis of security for money obtained; in other words, the lands must be sold or rented to secure funds, and this in the past has invariably resulted in putting the lands into the hands of speculators—the very thing to be avoided.

The national government is the owner of these millions of acres of fertile but arid land, and, as the owner, has duties as well as privileges. But the question may be asked: Why should the East be taxed to assist in developing the West? The answer lies in the fact that the prosperity of one part of the country is closely linked with that of another.

But the farmers of Illinois and Indiana say: We do not want more agricultural land and more products brought into the market, as will result from the creation of more small farms in the West.

This is a mistake founded upon ignorance. The products of the arid and semi-arid region cannot compete with those of the humid. Different crops seeking a different market are produced. The products which come East are almost wholly semi-tropical or the more expensive dried fruits. The ordinary farm crops of Illinois are protected by the heavy railroad tariff from the competition of the far West.

Now, what is the reclaimable country like, and what is to be done?

Briefly stated, there are, in round numbers, nine hundred and fifty thousand square miles, or six million acres of vacant public lands. Of these three hundred and seventy-four million acres are suitable for grazing, ninety-six million acres are covered with woodland, in which there is also grazing, and from which fuel, fence-posts, etc., can be had;

there are seventy million acres of forests of commercial value, and about an equal area of absolutely desert land, having no present value.

There is water sufficient for the irrigation of from seventy-five million to one hundred million acres, depending upon the methods of conservation employed. The average size of an irrigated farm is about forty acres to a family of five persons, not including in this the grazing or range land.

Probably ten million people could find homes on farms and be self-supporting if the water supply were properly regulated.

This would mean an enormous development of the mineral and other resources, which, with the prevailing scanty population, will thus be vastly augmented by the mining and other industrial occupations, as well as by the merchants and related trades. The experience of the old world has shown that there is almost no limit to the density of population within the arid region, where, with ample water and continuous sunshine, the soil produces the most wonderful succession of crops.

At present the vacant public land can be considered under two heads: that which is truly arid and that which is semi-arid or sub-humid. In the case of the first, it is impossible to make a home without providing a water supply. In the case of the second, however, there are years when large crops can be produced. Settlers have rushed in during these times of unusual moisture, have attempted to make homes, and when, year after year, the crops have been lost through the prevailing drought, the farmers have become impoverished and have finally abandoned their homes, as has been the case in western Kansas and western Nebraska.

The soil of these drought-stricken regions is notably fertile when watered, and the luxuriant vegetation which followed an occasional rain lured on the pioneer to his ruin. Farming there is a gambling operation, in which the occasional high winnings cause thousands to lose their judgment and risk their efforts in a hopeless undertaking.

The semi-arid regions include the great belt of country extending from western North Dakota through the western portions of South Dakota, Nebraska, Kansas, Oklahoma, Texas, and the eastern part of Colorado. Here may be found thousands of ruins, indicating the attempts made to secure a foothold without first providing a water supply. It is truly the land of famine, for, like all the great famine regions of the world, its soil is extraordinarily rich and everything is conducive to prosperity except the one factor of rainfall.

While the government has not taken up seriously this matter of the reclamation of the arid and semi-arid lands, Congress has authorized various investigations by the Department of the Interior, in whose charge are the public lands, and by the Department of Agriculture. In 1888 the geological survey was authorized to investigate the extent to which the arid lands could be redeemed by irrigation, and since that time it has been systematically measuring the streams, surveying reservoir sites, and obtaining facts and figures on which to base an estimate of the cost of reclamation.

Not only are the surface streams being measured, but investigations are being made of the underground waters and their movements. Maps showing the depth of water-bearing beds beneath the surface are being prepared, showing by lines or colors the depth to which a well must be sunk in order to reach the pervious rocks. In localities where artesian wells occur these maps also show the height to which water will rise above the surface. Many of the

desert valleys of the West are thus being watered by the apparently unlimited supply lying far beneath the dusty surface.

Among the most notable of the recent works of the geological survey are the examination of St. Mary's River in Montana, and of Gila River in Arizona. St. Mary's River, receiving water from the snow-clad Rocky Mountains flows along the eastern base of these into Canada and carries away to the north the waters needed on the dusty plains still further to the east. Milk River, a tributary of the Missouri, rises against the side of St. Mary's River, and is cut off by the latter from the well-watered mountain area. It is thus a mere brook or rivulet, except in times of storm.

The division of hydrography of the geological survey has demonstrated that the water from St. Mary's River can be conducted around into the head waters of Milk River and kept on the south side of the Canadian boundary, flowing eastward to the parched, fertile lands of the Milk River valley.

The surveys have not yet been brought to completion, but it is probable that several hundred thousand acres can be irrigated at a cost not prohibitory, providing homes for thousands of families.

In the extreme south it has been shown that reservoirs can be built on the Gila River, storing up the flood water for the public lands and for the supply of the Indian tribes residing along this stream. These Indians have from time immemorial supported themselves by agriculture through the use of these waters; but in recent years the activity of the white settlers has resulted in depriving them of the water and they are reduced to penury. Thousands of dollars are being expended to educate these Indians, and at the same time, they are forced to live in idleness and are not allowed to continue the agriculture of their forefathers.

Saved by Seeming Miracles.

THE Rev. Charles E. Ewing, one of the American missionaries who recently arrived from China, stated in a sermon yesterday (Sunday, December 9) that miracles seemed to have been wrought in their favor during the siege of Peking. He has been in China for some time, and was in Peking during the recent siege.

"How we all stood the siege is almost a miracle," he said. "The principal reason is that God seemed to be with us. We had able and valorous defenders, and the native Christians did wonderfully well. We had only five hundred men against possibly hundreds of thousands. Something beyond human power seemed to aid us. As an illustration, bullets whizzed by our ears at intervals, but no civilian was wounded, and only one missionary injured in the legation.

"One day a bullet hit the window of the chapel where we were holding prayer, but strange to say, while it broke the glass it never entered the chapel.

"Fire was the most terrible enemy we had to meet. The enemy would set the fire, but almost every time they did so, extraordinary as it may seem, the wind would change the course of the fire away from the legations.

"The Lord not only protected us, but he provided for us. There were no preparations for a siege, but shortly after it commenced we found tons of stored wheat, which we confiscated, ground, and baked. It made very fair eating. Three horses and a mule were killed every day, and we had excellent sausages. We had plenty of water, but it required boiling before use."—*Boston Post*.

Selected Articles.

Thanksgiving Service.

THE lesson for the Wednesday evening meeting at First Church of Christ, Scientist, November 28, 1900, was selected from the sixth chapter of Matthew with appropriate selections from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

The First Reader said in part:—

"I believe that Christian Scientists are the most grateful class of people. I do not want to go from here without giving an expression of thanks. It would be impossible for me to tell all that Christian Science has done in my own behalf, and I would not think of taking the time to tell all the many reasons why I am grateful.

There is no one who knows so well as I do, the many reasons for which you should be thankful, having labored with you in your troubles. As I look at the faces present, I see at a glance six cases where surgery had utterly failed to give relief. To-night all of you are enjoying the best of health. I also see many others who have been freed from the ills of life and are now living witnesses of the power of Truth. I see in your faces the smile of joy and gladness, where once rested the effects of sorrow and poverty, for which I know that you are truly thankful.

"As I look back over my past life, one that has not been very smooth, starting out in the world at the age of nine years, battling with the mortal sense of life's stern realities, passing through deep waters of experience, I can now see that divine Love has taken care of me, and that God's hand has guarded and guided me all the way, and while the clouds are still dark and the sea rough at times, yet I feel that Truth is guiding my bark into the quiet haven of harmony. As I began the study of Christian Science and it lifted me out of dark despair, the star of hope grew brighter until I could say for the first time in my life, 'I am a well man.' As I began the practice of Christian Science, starting in with the great desire to be able to benefit mankind (a desire that has been with me from my earliest recollections), the light of Truth has grown brighter, and God has, as it were, revealed Himself to me in this mountain of darkness, until at times I could see the very peaks of the Mount of Transfiguration.

"In the ten years of my practice, I have realized as many others, even when passing through the dark scenes of persecution, the perfect care of God, which was to me the ark of safety with cherubim wings touching either side of my being and Shekinah's light brightening up the way before me. While I keenly feel a sense of unworthiness, yet I am thankful that I have been found worthy, even in a degree, and able to hold up against all the opposition that has assailed this banner of health and happiness to a sick and suffering humanity.

"When one feels as I do, that he is here on this plane of existence, and that every breath that animates his entire being is due to this great Truth, he becomes conscious of the fact that there is a debt of gratitude that can never be paid. Our Scripture lesson of to-night is a very helpful one, that of God's care for man financially as well as in all other ways. We see all about us the world's millions in their struggle for bread and raiment, and how little seems to be accomplished. We have in this lesson the solution of one of the greatest problems of life, especially in this one verse, 'Seek ye first the kingdom of God, and his righteousness; and all these things [all the needs of life] shall be added.' In Christian Science we have found this to be true, and for all these things we are truly thankful."

A lady said: "To give expression to our gratitude for blessings received will sometimes result in benefit to our-

selves; to show our gratitude by right living may result in good to others.

"The world so needed this Truth, and it meets so fully the needs of humanity, in giving rest to the weary; to the sick and sinful, freedom from pain and remorse; to the grief-stricken, surcease from sorrow, and dispels every shadow of fear and doubt. What an inspiration to earnest effort in the direction of right living is this gospel of deliverance with its unlimited possibilities for good? Surely we should put forth every effort suggested by Wisdom and Love to bring it to the knowledge of others, thus proving our gratitude for the good it has brought to us."

A gentleman testified: "One year ago on Thanksgiving Day I was tied down on a cot in a hospital, not able to move, could not turn my body nor my head sideways; but notwithstanding my condition I was healed through Christian Science and enjoyed a hearty Thanksgiving dinner. One week previous to that time, there were but two persons who expected I would live six days—those two persons were the Scientists in charge of my case. My family physician tried to console me soon after the accident occurred by telling me that I could only have lived a few years at the most. I can truly say, as far as my own benefit is concerned, it has done a wonderful work, and not only for myself but for other members of my family. I do not see how any family can be more thankful for Christian Science than we are."

A mother spoke of the great value of Christian Science in healing her of lung trouble, of the healing of her daughter of what the doctors would pronounce St. Vitus's dance, and the great blessing Christian Science had proven to her husband in case of a broken arm. "I feel that I can never be grateful enough," she said, "for the many blessings Christian Science has brought us."

The husband of this lady stated that three weeks previous he met with an accident in one of the large factories in this city, breaking both bones of the left arm and dislocating the wrist. He immediately used what he knew of Christian Science. Surgeons were employed to set the bones and pronounced it a very bad break. As soon as possible, a Scientist was summoned, and the case has been under his care with the exception of attending to the splints. "I can truly say, though it would seem almost impossible to the senses, that I have not suffered any pain to speak of. In thirty-six hours after first treatment in Christian Science I could move my fingers. The accident occurred on Monday morning, and the following Sunday evening, less than one week, I took the hand out of the sling and reached to the floor and picked up a handkerchief with it. I could not ask to get along better than I am doing. When I compare my experience with those who have had similar accidents, and been altogether under medical treatment, I find that Christian Science shows great superiority, and is of inestimable value in overcoming pain and reducing inflammation and protracted confinement."

A gentleman testified: "I am very grateful for what Christian Science has done for me in the past two years, and I am confident that it has brought more blessings than I would have received otherwise. I read the Bible and tried to live a Christian life before hearing of this Truth, and while I was benefited in the orthodox thought, I must say that Christian Science has brought greater blessings in giving me better health and a better understanding of God and the Bible. In our family a number of ills have been healed that medicine failed to reach. I have learned that when I walk in the path of Christian Science I succeed in business, and when I do not, I do not prosper."

A member said: "To-night, so near the time set apart by our President, when all the people of this great nation are asked to remember their Creator, giving thanks unto His holy name for the marvelous blessings bestowed upon us, it is very appropriate that we, who have named the name

of Christian Science, should tell why we are grateful, and what God has done for us. As we think of the many thousand happy homes to-day where, before Christian Science was introduced, suffering and misery reigned, while now they are rejoicing in health, it is perfectly natural that they should thank God for Christian Science.

Our public lecturers inform us that there have been more than a million instances of healing. We find that it is the universal experience of all who understand and live Christian Science that there is something far better than relief from physical suffering. It is the moral reformation that Christian Science has wrought in their lives. If dishonesty ruled, it has now been supplanted by honesty; if immorality reigned, morality now governs. In many instances the desire for liquor, tobacco, profanity, and other vices have disappeared as this Science has been better understood. But beyond all this there is something they value more highly. They find that Christian Science gives them a better understanding of God, and illumines the Scriptures. One of our religious periodicals recently published an article stating that 'Christian Science was the most dangerous ism of modern times and opposed to the gospel of Christ.' We know that this is not true. A teaching that will do the works of which we have spoken must have its origin in God. Its fruits prove this.

"We are very grateful for the rapidity with which Christian Science is spreading. We notice that loyal Christian Science workers are to be found in every state and territory in the United States, including the Hawaiian and Philippine Islands. We have also read of some work done in Alaska and Mexico. Much good work has been done in Canada. It has not stopped in the Western Hemisphere. We see that it has reached Switzerland, Great Britain (England, Scotland, and South Wales), France, Germany, and on to China and Australia. Wherever Christian Science has been introduced, it has been with 'signs following,' as spoken of in the latter part of Mark's gospel.

"We should not forget that every Christian Scientist in the Field owes a debt of gratitude to the faithful corps of workers in the Publishing House at Boston. Every one in and about Dayton, interested in Christian Science, owes a debt of gratitude to those faithful ones who stood at the helm, willing to hold aloft the banner of Christian Science in the dark hour of persecution here. How thankful we are that so many false impressions have been corrected and a truer presentation given to our citizens, and to-day, the secular press, at least, has greatly changed its attitude toward our cause. Its recognition as a healing agency and a religion is being established in our midst. We are much indebted to The Herald Publishing Company of this city, for this. We are also grateful to the other papers of the city for publishing articles on Christian Science.

"When we attempt to thank God for the revelation of Christian Science, and thank Him for the one found worthy through whom it could be revealed, Mary Baker G. Eddy, whom we endearingly call Mother, and think of her labors of sacrifice and love, to bring us nearer to Christ, words fail us. Our gratitude is best expressed in works, in doing all the good we can, healing the sick and comforting the sorrowing."—*Dayton (O.) Herald.*

Thankfulness.

THANKSGIVING eve seemed a fitting occasion for the Christian Scientists of this city to utilize their Wednesday evening meeting in testimonials of thankfulness for physical, mental, moral, and spiritual benefits directly traceable, as they think, during the past and previous years, to this Science. These are a few of the thirty-three testimonials given by men, women, and even children during that hour. One man, apparently over sixty, said that before he heard of Christian Science he was as mean as he could be—

addicted to drink and other bad habits, which led him to treat his family most shamefully—but now, thanks to Truth, he was sober, industrious, manly, and improved in every way.

A lady of serious and earnest mien, referring to St. Peter's imprisonment, remarked that most of those present had been in prison—captives to some form of fear based on beliefs of heredity, sin, sickness, or death—in bondage to disappointment, self-pity, or selfishness; but all, she said, might have the iron gate of fate, or so-called destiny, thrown open if they would but welcome the angelic visitant ever ready to set the captive free through an understanding of this Science.

A white-haired man was reminded of his debt to Christian Science by the praise bestowed on him the day before by a letter carrier, who said, "What a firm, steady hand you write for such an old man."

A little girl of twelve years absented herself from school in order to cure herself of physical suffering. She avoided talking about it, which helped her; studied the Bible lesson and the Christian Science text-book; held the thought that God creates and knows no imperfection, no opposites, and realizing this, she was healed.

A woman was thankful that she had learned, through Christian Science, that it is a sin to try to get something for nothing.

Another woman, who had been an invalid for years, expressed her gratitude and joy that for four years she had been well, due to Christian Science, which had brought her increased prosperity and happiness.

The mother of a family testified to the great help which this Science had conferred upon her in the government and control of her children.

A business man said with solid conviction that Christian Science had done more for him in a business way during the past year than anything else ever did in all his life, and the health, joy, and peace in his home were blessings for which he could never be thankful enough.

Ten months ago, said an earnest woman, I could neither sew, read, nor write. I was doomed to blindness, and the time was set for a surgical operation. Just at that critical moment the angel of Christian Science came and saved me, and now my sight is restored and I am healthy and happy and the dark cloud is lifted from our home.

She had no sooner sat down than her husband arose, and with an eloquence of tender, loving pathos that touched every one, confirmed his wife's statements, and added that the half had not been told, for before coming into Science he had such a bad disposition and uncontrollable temper as to make every one discordant and unhappy around him, but divine Truth and Love had so changed his nature as to make his home a heaven on earth.

Some strangers present, including a doctor and lawyer, could not help observing what earnestness, sincerity, and honesty characterized all the speakers at that meeting.

A BELIEVER.

In the *Press-Post*, Columbus, O.

Half-hearted, false-hearted! Heed we the warning!

Only the whole can be perfectly true;
Bring the whole offering, all timid thought scorning,
True-hearted only if whole-hearted too.

Half-hearted! Saviour, shall aught be withholden,
Giving Thee part who hast given us all?
Blessings outpouring, and promises golden
Pledging, with never reserve or recall.

Peal out the watchword, and silence it never,
Song of our spirits, rejoicing and free!
True-hearted, whole-hearted, now and forever,
King of our lives, by Thy grace we will be.

HAVERGAL.

The Lectures.

At Concord, N. H.

The annual lecture for 1900 under the auspices of First Church of Christ, Scientist, in Concord, was delivered last evening (Tuesday, December 11) in Phoenix Hall, by the Hon. Joseph R. Clarkson, C.S.B., of Omaha, Neb., ex-judge of the District Court of that state, who attracted an audience which completely filled the hall and its galleries, and which followed with close interest the lecturer's earnest and well-knit presentation of the theme "Christian Science Reveals the Kingdom of Heaven at Hand."

In addition to a large attendance of local Scientists there were many hundreds of other Concord people present, and there was a large contingent present also from Boston, Lowell, Nashua, and Manchester, who came in special cars attached to the 7.05 train, and who returned home by special train at the close of the lecture.

The Rev. Irving C. Tomlinson, C.S.B., First Reader of First Church of Christ, Scientist, in Concord, and himself a fellow-member with Judge Clarkson of the Official Board of Lectureship of the Mother Church in Boston, introduced the speaker, using these words:—

Friends, Neighbors, and Brethren from afar:—It is with something more than pleasure that I introduce the lecturer of the evening. His legal ability, his well-won reputation as a judge, his eminent services to his political party, his high position as a cultured gentleman and thorough scholar, entitle him to our regard. But something more than these brilliant gifts has made him a member of the Christian Science Board of Lectureship of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass.

Judge Clarkson is with friends who eagerly await his message. We willingly listen while he tells us from his own deep experience how Christian Science reveals the kingdom of God at hand.

I well remember the impression created as he gave in that church his first testimony of his experiences. He had won the prizes that the world holds dear, but he was still unsatisfied. To him the kingdom of Heaven was afar off, God was an unknown God, Christ Jesus well-nigh a stranger, and the Bible an unused book. Through the power of a living religion he found the kingdom of God at hand. God had become near, Christ had become dear, and the Bible had become the chart and compass of his life. It is needless to say in this presence that the Sun of his new day was the Light of Christian Science.

Concord Monitor.

At Parsons, Kan.

The lecture of Judge William G. Ewing of Chicago, Ill., at the Opera House Thursday night (November 22) attracted an audience of ladies and gentlemen worthy of the gifted lecturer. It embraced members of every denomination in the city. Some were there through curiosity, but there were few in the audience, who were not impressed by his remarks about the Christian religion. The judge is a most interesting lecturer and presented his theme, Christian Science, in a most fascinating garb. He left a very pleasing impression upon his audience. The Cause he so ably espoused will be greatly benefited by his visit.

Parsons Daily Sun.

Mrs. Mary F. Hibben, First Reader of First Church of Christ, Scientist, in Parsons, introduced Judge Ewing in the following words:—

Friends:—In this age the world is reaching out as never before for a higher standard, a more consummate perfection, materially, physically, and spiritually. To-day

over a million people are ready to testify that this higher standard has been attained by them through the power of Truth as taught in Christian Science. They are glad to acknowledge that this age has been given proof of a demonstrable Christianity that does reclaim the sinner and heal the sick.

That Christian Science might be more clearly apprehended, that facts as to the rise and growth of this movement might be given to the people, that the misstatements and false conceptions abroad concerning Christian Science might be corrected, a Board of Lectureship was established by the Mother Church of Boston. The distinguished gentleman who will address us this evening is a member of this Board. He is of high social standing, an able lawyer and an ex-judge of the Superior Court of Chicago. He has pleaded many a cause but none with more fervor than the cause of Christian Science which he advocates to-night.

I have the pleasure and the honor of introducing to you the Hon. William G. Ewing.—*Correspondence.*

At Fort Worth, Tex.

Judge William G. Ewing gave an interesting and instructive talk at the Opera House on Sunday (December 2), his topic being Christian Science. He had a large audience of sympathetic listeners, who gave close attention to the address. Judge Ewing was at one time a judge of the Superior Court of Chicago, Ill. He is an easy and attractive orator, who impresses his hearers and holds them throughout his discourse, and there can be no question of the man's absolute sincerity.

If his words did not carry conviction, it was not for any lack of frankness, or any attempt on the part of the speaker to be other than perfectly fair in the treatment of his subject. He spoke without the aid of manuscript, and in an easy, conversational style. A wide vocabulary and a comprehensive grasp of his subject were apparent throughout his discourse, which lasted about an hour and a half.

The Morning Register.

Notice.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Exchange on Chicago and other cities not named above, will not be accepted.

A Full Line of Bibles.

The Christian Science Publishing Society carries a full line of Bibles. Catalogues will be mailed upon request. We are now prepared to fill all orders for the new Bible specially bound to match the pocket edition of Science and Health. This Bible is on India Oxford paper, bourgeois type, self-pronouncing, Alaska seal, limp, leather lined to edge, silk sewed, round corners, gilt edges. Catalogue number 01435x; price \$4.00.

Bound Sentinels.

We have Volume II. of the *Christian Science Sentinel* bound in cloth at \$2.50 per volume; half calf or half morocco at \$3.00 per volume, prepaid.

The poles unite, the zones agree,
The tongues of striving cease;
As on the Sea of Galilee
The Christ is whispering, Peace!

WHITTIER.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Christmas.

CHRISTMAS-TIDE is again with us. The usual festivities are marking its presence. The churches observe the occasion with special services and special music. Outside the churches there is much to suggest frivolity and material pleasure, little to impress upon mankind the solemnity or real significance of the Christmas observances.

What benefit is conferred by this popular observance? How many seriously think of the *event* which gave rise to it? How many have a deep or earnest care for that event?

We do not wish to dwell on this side. We refer to it only to emphasize the hope that ere long the present practices may cease, and the day be observed somewhat in the spirit which brought it into existence, and in a manner bearing more the stamp of fitness. The idea originated in a degree of spiritual reverence and a laudable desire to perpetuate, in human memory, the solemnity and significance of the birth of Jesus. As commonly applied, it has departed from the original purpose and degenerated too largely into materiality; we mean outside the religious bodies.

Let us glance at the other and brighter side. The birth of the Nazarene child marked the beginning of a new religious era—the Christian era. It was the greatest event of all the ages! The mightiest fact of all history! It gave to the world a new calendar of time. In its results, it gave to mankind a new and better conception of God. It inaugurated a new spiritual code. Yet, according to the words of him who established this code, it was to fulfil and not to destroy the preceding code. It seemed to destroy, but the seeming was an advance from the lower to the higher.

A brief review of Jesus' birth, as we find it recorded in the gospels, may be of interest.

In Matthew we find recorded an account of Jesus' mortal lineage. It is "the book of the generation of Jesus Christ, the son of David, the son of Abraham." The lineage is traced from Abraham through successive progenitors to David, and thence down the line to Joseph the husband of Mary.

Here, then, is a fairly explicit history of Jesus on the human or mortal side. Yet even in this account we are taken above the mortal or material, for we are told that Mary was "found to be with child of the Holy Ghost." It further appears that this birth was in fulfilment of prophecy, for we read, "Now all this was done, that it might be fulfilled which was spoken of the Lord by the prophet, saying, Behold, a virgin shall be with child, and shall bring forth a son, and they shall call his name Emmanuel, which being interpreted is, God with us."

The account in Mark makes no pretence to setting forth Jesus' fleshly lineage or birth. It begins abruptly with the declaration that he was the Son of God. The first recorded act of Jesus in this gospel is his baptism by John the Baptist.

The account in Luke is the most extended of all, yet it does not set forth the mortal lineage. It announces the angelic message to Mary, namely: "The Holy Ghost shall

come upon thee, and the power of the Highest shall overshadow thee: therefore also that holy thing which shall be born of thee shall be called the Son of God." In this Gospel is also recorded the manner and place of Jesus' birth; the angelic heralding thereof, the finding of the babe in the manger by the humble shepherds, and other incidents.

In John we find, what may well be considered an impersonal account, for we read, as the first statement: "In the beginning was the Word, and the Word was with God, and the Word was God. The same was in the beginning with God. . . . In him was life; and the life was the light of men." Also: "The Word was made flesh, and dwelt among us, . . . full of grace and truth."

In these various accounts of the advent of Jesus the Christ, there is clearly shown forth both the personal-human-Jesus, and the impersonal Christ, or the eternal Christ-Principle, the Spirit of Truth or Comforter, "who is, and who was, and who is to come."

Hence it is not the birth of the personal Jesus alone that the world should celebrate at Christmas-time. It should intelligently celebrate the birth of the Christ-Truth in human consciousness. Jesus was the personal demonstrator of this Christ-Truth. He came to make it known to mankind in the healing of sin and sickness and the overcoming of death. Hence the mighty significance of his coming—his birth.

In the light of the Scripture referred to may we not more intelligently read the following from our beloved text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy: "Born of a woman, Jesus' advent in the flesh partook partly of Mary's earthly condition; although he was endowed with the divine 'Spirit without measure.' This accounts for his struggles in Gethsemane and on Calvary, and this enabled him to be the mediator, or *way-shower*, between God and men. Had his origin and birth been wholly apart from mortal usage, Jesus would not have been appreciable to mortal mind as the Way" (page 335).

The world must grasp the deep and solemn import of Jesus' advent in the flesh, and its meaning to mankind ere it shall know how adequately to observe the Christmas-day.

May it speedily awaken to the necessity of following that wondrous life in *all its ways*, and thus, by growth and advancement, come into a knowledge of the Son of man and the Son of God by conscious nearness to the eternal Father-Mother, the Almighty God.

A beloved co-worker sends us this Christmas greeting:—

"I shall not send you a 'Merry Christmas' but a joyful heart that I am one with you and others in thankfulness unspeakable for the Christmas that Christian Science brings to us. In looking back over our lives, how forlorn they seem, and what counterfeits our Christmases were! My heart turns in gratitude to the one who was faithful over every little ray of light which came to her, until she gathered enough to give us what is indeed life, to 'know Thee the only true God, and Jesus Christ whom Thou hast sent.'"

"Outlaws Made through Class Legislation."

WE take pleasure in republishing from the *Arena* for November, 1900, the following editorial remarks, under the above heading, by Mr. B. O. Flower, who, we are glad to know, has recently again become connected with editorial work on that valuable magazine.

In a recent number of the *Medical Times*, under the title of "Christian Science Outlaws," the editor thus approvingly comments on the recent conviction of two Christian Scientists for attempting to save the lives of some believers in mental therapeutics, contrary to the medical restrictive laws of the state in which they resided:—

"Two Christian Scientists have been found guilty of

practising medicine in violation of state law in Wisconsin. Judge Allen, in his charge to the jury, quoted the decision of the United States Supreme Court in the Mormon case, holding that a man's religion must be subordinate to the laws of the land, and that he must obey the laws of his particular state. This seems like sound common sense, and ought to be good law, but it will probably have no effect upon people who accept the dicta promulgated by this senseless sect."

We cannot agree with the *Times* that the decision "seems like sound common sense," or that it "ought to be good law." We believe that these medical restrictive laws, secured by an interested class and never asked for by the people, are unconstitutional as well as a clear infraction upon the rightful freedom of the citizens, in that they are compelling a large minority of as intelligent people as can be found in the state to employ physicians belonging to schools of practice in which they have no faith.

One of the greatest menaces confronting our people lies in the increasing number of special laws which are being constantly secured by interested classes. Through pernicious medical monopoly laws, representatives of one class, school, or theory are protected, and practitioners of other theories or schools, who are not a whit less successful and whose clientele is equally intelligent, are outlawed.

Let us suppose that the Roman Catholics, who greatly preponderate in Louisiana, secured the passage of a statute forbidding all citizens to eat meat on Fridays. Now, the physician who had a patient whose life might, according to the belief of the doctor, depend on his taking meat at short intervals, could not prescribe and administer it without becoming a lawbreaker, or, as the *Times* would put it, "an outlaw."

Again, let us consider the question from another viewpoint. The Christian Scientists and those who believe in mental therapeutics are very strong and are rapidly increasing in Massachusetts. A year ago a physician estimated that at least \$5,000 a day was being paid out by the people living within a radius of twenty miles of Boston to Christian Scientists and mental healers. Now, let us suppose that in the course of a few years the metaphysicians became sufficiently powerful to secure a class law, and furthermore that they had the disposition to imitate the regular profession in gaining special protection. Let us suppose that the legislature passed a bill that outlawed the regular doctors; and furthermore we will suppose that the outlawed doctors continued to wait upon patients who desired their services, and for the offence were sentenced to prison because they violated the law of this particular commonwealth. Would the unprotected physicians unite with the *Times* in saying of this ruling that it seemed "like sound common sense, and ought to be good law"? A person does not have to be a Christian Scientist to recognize the just right of a free citizen to select whomsoever he desires to minister to his body or soul in the hour of sickness, sorrow, and need.

We regret to see an able journal indulge at this late day in such epithets as "senseless sect." Epithets are the weapons of the weak; moreover, no one acquainted with the Christian Scientists will fail to be impressed with two facts concerning them. They are, as a rule, persons above rather than below the average intelligence, and they are, as a general thing, conscientious and high-minded people, who are striving to live what they conceive to be the Christ life. Furthermore, they have among them very many men and women of superior mentality. This much should in common fairness be said. I am not a Christian Scientist, but I love to see fair play, and I know whereof I speak. Furthermore, I am unalterably opposed to trusts of all kinds that operate for the benefit of a special class. Monopolies in the control of commercial products and commodities are bad enough, but when the trusts invade the domains of

art, education, medicine, or religion they become intolerable, as they fetter progress and take from the individual citizen sacred rights that are among the most cherished heritages of rightful freedom.

Among the Churches.

Dedication at Ogden, Utah.

The dedication of the new church of First Church of Christ, Scientist, at Ogden, Sunday (November 25), was an event of great importance in the history of the work of that church in Utah. The Ogden church is composed of sixty-one members and is a body of continuous workers, ever enlarging its sphere and bringing forward additional evidences of its labors. The building dedicated Sunday is located at the corner of 24th Street and Lincoln Avenue, and is a brick and stone structure originally occupied by the First Presbyterian Church. First Church of Christ, Scientist, purchased the building, remodeled, repaired, and refitted it, and made of it a church edifice which is worthy.

On the occasion of its dedication the interior was beautifully adorned with flowers and potted plants in profusion. It has been fitted with chairs; has two ante-rooms, and the platform and pulpit are well arranged for the service.

The walls were re-papered, electric lights installed, and the whole made a model home for church work.

The dedication services consisted of addresses by Mr. M. H. Lincicome, the First Reader, and Mrs. Webb, Second Reader, both of which follow. The music was for the most part by the congregation, led by Miss Mary Harrington, who sang as a solo "The Holy City," a most appropriate selection, in a voice of unrivaled purity and strength.

The building was crowded at both the morning and evening services, which were very similar, though in the evening several members of First Church of Salt Lake were present, and Mr. Coates, the First Reader of that Church, delivered a short address.

The address of Mr. Lincicome was as follows:—

Friends, Brethren, Ladies and Gentlemen:—On behalf of the church I greet you. I extend to you a loving welcome; and ask you to join with us, in this service of rejoicing and praise, by which we to-day dedicate this house to the worship of the only living and true God.

To those who have come from a distance, to be with us on this occasion, I wish to extend a special greeting. The fact that you are here is to us sufficient evidence that your purpose is to swell the anthem of praise to God that is being sung to-day, in the hearts of the members of this church; pitched to the soul-cheering harmony of Christian Science; wherein Love is God, and God is Love, and we learn to love our neighbor as ourselves.

No doubt some who are present this morning, are here for the first time in attendance at a Christian Science Church service. If such be the case, we trust you may see so much of this Christ love manifested that you will feel inclined to come again; and we assure you a cordial welcome at all times.

The Christian Science Church is founded upon the Gospel of healing of sin and sickness, Jesus Christ himself being the chief corner stone, "and the gates of hell shall not prevail against it." This building, which we to-day dedicate to God, stands as a testimonial to this healing Gospel; as almost every dollar with which it has been paid for, finished, and furnished was the loving contribution of those who have, in a degree, realized the great benefit to be derived therefrom—the healing not only of all manner of sickness and disease, but of sin.

While it is gratifying to the beginner in Christian Science, to know that he is being truly healed of physical disease, his gratitude is a million times greater when he

knows that he is being healed of sin. And this is but the natural result of an honest, unbiased study and application of the teachings of Christian Science.

The Christian Science religion is pre-eminently the religion of Jesus Christ. Why?

First, because with Peter, it sees manifested in the life and works of the human Jesus, the Christ Principle. Peter said, "Thou art the Christ," and this understanding of the divine Principle of the man Jesus, expressed by Peter, is the rock on which he founded his church; and not on the personal Peter. He said: "Thou art Peter [a stone], and upon this rock [the Christ-Principle] I will build my church."

Second, because it makes practical in daily experience the teachings of our great Master who said: "Go ye into all the world," "Preach the Gospel," "Heal the sick," "Raise the dead." "The works that I do shall he do also," and "Love thy neighbor as thyself."

If one of these divine commandments or promises apply to us to-day, they certainly all apply.

Third, because it teaches that the Christ healing, practised by Jesus and the apostles and vouchsafed to all who believe through their word, is the stone which the builders have rejected, and is become the headstone of the corner, "For there is none other name under heaven given among men, whereby we must be saved."

The Psalmist sang: "Oh that men would praise the Lord for his goodness, and for his wonderful works to the children of men!" "Blessed be the Lord, who daily loadeth us with benefits, even the God of our salvation. He that is our God is the God of salvation; and unto God the Lord belong the issues from death."

Paul said: "Work out your own salvation;" also, "Now is the accepted time; behold, now is the day of salvation." Did Paul mean that now is the time to be saved, or only that now is the time in which to prepare to be saved after death—after the enemy has taken us? Christian Science re-echoes Paul's statement, and declares that now is the day of salvation; and preaches a salvation that is broad enough to save us, not only from sin, but from sickness and death, physically and morally, and that God is the author of salvation, "who forgiveth all thine iniquities; who healeth all thy diseases." "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 219, says: "The way is strait and narrow, which leads to the understanding that God is Life. It is a warfare with the flesh, wherein we must conquer sin, sickness, and death, either now or hereafter, but certainly before we can reach the goal of Spirit, or Life, as God."

We understand that sickness, sorrow, and death are the result of sin unforgiven. Paul said: "By sin came death." "The wages of sin is death." "The last enemy that shall be destroyed is death." Now if death came by sin, if it is the wages of sin and not the result of righteousness, and is to be "destroyed," why have we been taught all these years that we should patiently submit to this triad of evils,—sin, sickness, and death; look lovingly forward to this "enemy," as being our friend and Saviour which would usher us into the glorious presence of Him who said by his prophet Ezekiel, "As I live, saith the Lord God, I have no pleasure in the death of the wicked; but that the wicked turn from his way and live: turn ye, turn ye from your evil ways; for why will ye die, O house of Israel?"

Paul said: "Present your bodies [not dead, but] a living sacrifice, holy, acceptable unto God, which is your reasonable service. And be not conformed to this world [of sin, sickness, and death]: but be ye transformed by the renewing of your mind." Showing the process to be metaphysical, rather than physical.

Jesus' parable of the leaven which a woman hid in three measures of meal until the whole was leavened, is to us a

beautiful prophecy of the transforming work of Christian Science. And to illustrate, we will liken the three measures of meal to natural science, medicine, and modern theology, and the leaven which a woman put into it, the Truth as revealed in the Christian Science text-book, and what is the apparent result?

First, we see natural scientists (so-called) fast forsaking their material base of operation and investigation, founded on the evidence of the physical senses; and themselves proving that these senses are unreliable, false; seeking a higher, more metaphysical basis, and as this leaven of Truth continues to work in the consciousness of the honest seeker, he will find his sure foundation in Mind, Spirit.

Second, our friends of the medical profession—an army of earnest, bright men and women—only a few short years ago, resorted to bleeding and blistering the poor body on almost all occasions; dosing it with disgusting conglomerations. But to-day we find them sweetening the pure water, giving it a pleasant flavor; sugar coating their bread pills; saying to the patient: Be cheerful and happy; do not think of your ailment, and this changing process will go on, as the lump becomes leavened.

Third, our brethren of the churches are feeling somewhat the influence of this leaven, as shown by their teachings. Many of us have heard preached John Calvin's doctrine of foreordination, and predestination, the election of a few to be saved, while the rest were damned. This tenet is almost a thing of the past. We have also heard preached Wesley's original sin, literal hell fire, and eternal damnation doctrine, presenting in doleful tones the insatiable wrath of God, to be visited on all who did not believe as they believed. This teaching is also losing its hold. Only a week ago last Tuesday evening, at a session of the Episcopal Congress, held at Providence, R. I., the Rev. Dr. E. W. Donald, D.D., rector of Trinity Church, Boston, in an address delivered before the Congress asked the question: "Is Christian Science leading men out of the darkness of unbelief, into the light of God?" and answered, "Yes, it is; there can be no doubt about that. You and I know too many Christian Scientists whose lives are blameless to doubt that." Also: "It is at least conceivable that fifty years hence, no man will need a drug or a knife to cure his disease, but will employ only the force which Christian Science employs to-day."

So we see the leaven is working, bringing out the higher, broader thought voiced by the beloved disciple, that, "God is Love," and making of greater import to humanity Paul's quotation from Jeremiah in the Epistle to the Hebrews: "For this is the covenant that I will make with the house of Israel after those days, saith the Lord; I will put my laws into their mind, and write them in their hearts: and I will be to them a God, and they shall be to me a people: and they shall not teach every man his neighbor, and every man his brother, saying, Know the Lord, for all shall know me, from the least to the greatest." And the First Epistle of John: "And we know that the Son of God is come, and hath given us an understanding, that we may know him that is true, and we are in him that is true, even in his Son Jesus Christ. This is the true God and eternal life."

While our hearts to-day, in the largest sense, are overflowing with love and gratitude to God for this great privilege and blessing, we are not unmindful of her, through whose years of toil, sacrifice, and cross-bearing, this crowning event in our history has been made possible. I speak of the Rev. Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of our text-book, "Science and Health with Key to the Scriptures." This noble, loving, God-fearing woman, has dared to stand alone, and with a calmness that comes of assurance, she has gently but firmly withstood the criticism of the world,—a world ignorant of the great import of her mission to suffering humanity. But in the face of it all she trusted in God and

God sustained her; and to-day she realizes the truth of the statement that, seed sown on good ground brings forth an hundredfold.

We, who are directly the beneficiaries of the loving message, are grateful for the privilege of calling her Mother, while we loyally strive to honor her with that child-like obedience which shows appreciation of the mother's love.

Mrs. Eddy's statement in our text-book that "all is Mind," giving as synonymous terms, Intelligence, Life, Truth, Love, Principle, God, and Man as the idea of Mind, has startled the world with its tendency toward materialistic ordinances, forms, and ceremonies, until the cry has gone forth, "Crucify him." But we are glad to know that a host of intelligent, consecrated men and women of the world are hearing the still small voice of Truth expressed in our text-book, and have the courage to say with Gamaliel: "Let them alone: for if this counsel or this work be of men, it will come to nought; but if it be of God, ye cannot overthrow it."

This text-book of Christian Science makes no effort to establish a new religion, nor to present to the world a new Bible, but it does furnish the key to the old one, admitting us to its inspired meaning, wherein we are enabled to prove by practical demonstration, according to fixed rule, that its teachings are scientific, carrying out the commands of our blessed Master therein contained, to "preach the gospel and heal the sick."

Mrs. Eddy established in Boston, Mass., in the year 1879, The First Church of Christ, Scientist, now known as the Mother Church, or Parent Vine, of which this church is a branch. And to all who are working and willing to work in this vineyard, I would say in the words of Longfellow:—

Let us, then, be up and doing,
With a heart for any fate;
Still achieving, still pursuing,
Learn to labor and to wait,

giving to this parent vine honest, loving labor, that its pure roots may penetrate, renovate, and purify the very depths of materialism, and that its branches may cover the whole earth; that we may hear the "well done" of the Master, joyfully gathering into the storehouse of divine Love, from our own well tended branch, the precious fruit ripened by the showers and sunshine of a self-sacrificing experience.

The Church of Christ, Scientist, in its relation to other church denominations, does not stand as an enemy, in a menacing attitude, but is fulfilling its mission of love, reclaiming the infidel, reforming the sinner, bringing peace and joy to the troubled and disconsolate, to the sick and sorrowful, health and happiness.

Then rise and greet the signs that prove
Unreal the ages' long lament!
The "one far off divine event,"
Is now, and that event is Love.

Mrs. Webb then read a very interesting history of the church as follows:—

My Friends and Fellow-Workers:—It seems it would be well on this occasion to take a brief retrospective view of the work which has been done in this field during the past eight years, this being about the length of time which has elapsed since the work was started here. In looking over the work we find the changes which have been made and the steps which have been taken during this time, have been the workings of Truth, all leading up to the attainment of the event which we to-day celebrate.

In the year 1892 a Christian Science student came to Ogden and began the healing work of Christian Science, and for a time studied the lesson from the *Quarterly* on Sunday by himself.

Soon two or three of his patients began attending, and,

as the case has invariably been with these meetings, others were drawn to the Truth, until it became necessary to rent a hall to accommodate those who wished to attend.

In May, 1895, this First Church of Christ, Scientist, was organized with eighteen charter members; the present membership is sixty-one, but this does not represent the entire growth since the organization, for some who have been with us for a time have gone into other parts of the Field to labor for the Cause.

One year ago this month we decided to buy this building, formerly used by the Presbyterian Church. Our first business meeting, held for the purpose of ascertaining the amount our members desired, at that time, to subscribe, resulted very satisfactorily, for over half of the amount necessary to purchase the building was subscribed by the twenty-one members present, and three months later the entire sum required was paid into the treasury. Soon after the organization of the church a Sunday School was organized and this also has been doing its work. The free-will offerings of the dear children have supplied our church with hymnals and the public library with the *Christian Science Journal*, and also appropriated toward the buying of our church.

The changes and repairing made in the building were completed so that we had our first service in the church June 3, 1900, and we are dedicating free of debt. With few exceptions the membership of this branch church have been brought to the recognition of Truth through physical healing. But we find the spiritual benefits derived from Christian Science of far more importance than the physical. For in this blessed Truth we find there is a sense of peace, and the positive assurance of God as an ever-present help. Science and Health is teaching us how we can make practical the words and works of Jesus here and now. Christian Science is saying to-day, to all humanity, in the language of Jesus, "Come unto me, all ye that labor and are heavy laden, and I will give you rest. Take my yoke upon you, and learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls."

The Standard.

Another Change of Location at Philadelphia, Pa.

Since Sunday, December 16, the services of Third Church of Christ, Scientist, in Philadelphia, Pa., have been held in the Beth-Eden Church at northwest corner of Broad and Spruce Streets. The church has removed from Odd Fellows Temple where it was organized just one year ago. The reading room is open every day at the Spruce Street entrance of the edifice. The new location is the most desirable in the city and the Beth-Eden Church is admittedly one of Philadelphia's handsomest church buildings.—E. D. CUTHBERT, *Clerk*.

A Christian Use of Friendship.

It helps amazingly in the maintenance of one's own right conduct to resolve to better every life he influences. There is a natural affinity, arising out of similarity of tastes, of training, and of purpose, by which certain ones are drawn to certain others. But Christian interest in others is a larger sympathy than that. It is inclusive, and not, like that of social clubs, exclusive. There is a mutual delight in one another that is not limited to a clique whose circle is kept barred against outsiders. It is the feeling of interest in the Christian character of others, which submerges all distinctions caused by education, training, and possession, as the swollen river sinks fences from sight. This rests not upon what men have or have not, but upon what they are or may become. A Christian's actions, if not his words, should convey to all he meets the idea that his greatest joy is to hear of their walking in the truth. This is the highest use of friendship.—*Christian Intelligencer*.

The Christmas Dawn.

BY FANNIE ISABEL SHERRIES WARDELL.

FLUSHED with glory comes the dawn
Across the soft grey sky,
With roseate garments trailing wide
On soft wings sweeping by;
Boldly sweet she bears to earth
From heaven's gentle fold,
"Peace on earth, good-will to men!"
The angel song of old.

Waiting shepherds heard it first,
That wondrous Christmas morn,
When on the sin-swept, sorrowing earth
The Prince of Peace was born,—
"Peace on earth, good-will to men!"
Oh child of Love Divine,
With hearts aglow this Christmas Dawn
We seek thy heavenly shrine.

Costlier gifts we cannot bring
Than sacrifice and tears,
And hopes and joys and child-like trust
For happier coming years.
"Peace on earth, good-will to men!"
Oh may the glad bells ring!
And waken every heart to hear
The song the angels sing.

History of a Purse.

BY LYDIA A. DIVOLL.

NEARLY five years ago little Harold R., three years old, and his brother, five, were in great sorrow. All the dogs in their neighborhood had received something from a cruel hand which had taken them off, and now their family pet, a valuable setter, had been given the same. Everything was done for him from a *materia medica* standpoint, but without relief. For a week the poor animal had moaned and been unable to walk, and for three days he could not eat. The R. family knew something of Christian Science, for Mrs. R. had been healed of a serious trouble, and her children had each known the benefit of being healed without medicine.

They all talked together about what might be done by Christian Science. They knew it could cure *them*, but what could it do for a *dog*? Mrs. R., thought that if it were arsenic there might be a possibility of saving the dog, but for pounded glass, how could it be possible! (The general thought was that pounded glass was what had been given to the dogs.) And now the little boys were nearly broken-hearted. There was one hope to which they were clinging—could Christian Science heal the dog?

That evening Mr. and Mrs. R. came down to see me about it, and apologetically they said that they did not like to ask me to treat a dog. "Why," I said at once, "there is no reason why the dog shouldn't live. Of course I'll treat the dog." I gave him a treatment, and as Mr. R. was leaving he said, "Mrs. D., don't let the dog die." "Let the little ones bring him in the morning at nine o'clock," I said. "Why," exclaimed Mrs. R., "he cannot stand on his feet and he cannot eat!" The next morning his little companions were anxious to take him. Their wagon was brought around, the dog put in, and with their nurse they sallied forth to take him to the healer. When they reached the front steps, the nurse on one side and the children on the other helped him up.

After a few moments' treatment the dog straightened out and seemed to pass through the death change. Twice he turned over, and twice he seemed to go through the same struggle. In about ten minutes he raised himself up, came toward me, and laid himself down at my feet. I then told the children that their dog was healed. I said to them, "If the dog doesn't go with you, leave him here and call for him latter in the day."

As they arose to go, big tears came into Harold's eyes, for he thought he would have to leave the dog. The nurse and elder brother passed out on the porch. While Harold still lingered in the doorway, the dog gave a vigorous bound out on the porch, down the steps, and jumped over the gate. The children ran after him, drawing the wagon in which they had brought him, while he bounded and barked around them.

The memory of that brief half hour from the time the children came pulling the dog into the house, the awe of the little ones as they sat there in the seeming presence of death until they took their departure, is a picture that I can never forget. Their sorrow had turned into joy. They had no longer any thought for their pet but life. When they got home he drank his milk and ate a good breakfast. He was completely cured and has been well ever since.

Then Mr. R. said he wanted to know what healed the dog. Taking up the study of "Science and Health with Key to the Scriptures," he has found for himself the Truth that heals.

A few days later, near Christmas, the same little boys with grateful hearts and laughing eyes, called to see me with their purse containing five dollars, which they said was for the healing of their dog. While I objected to receiving their generous offering, they insisted on leaving it, and I then laid it away with my most valuable treasures.

Three years later a church lot was being purchased. The boys had given up the thought of having a Christmas tree. I could not think of such dear liberal children going without their Christmas tree, so the thought came to me, now is the time to return their purse and contents, but when I called to return it to them, I found that they had already been supplied with Christmas gifts more generously than ever before.

As soon as I gave them the purse they exclaimed, "Oh, mamma, we'll have more money for the church lot!" So the mother carried the purse and its contents to the treasurer. She told him the story of the healing of the dog and of the purse. It was requested that the purse be returned to me, and that I write its history.

What Christian Science teaches Business Men.

BY EDMUND C. MOULTON.

As I am one of the many men who are trying to shape their affairs by Christian Science, to be guided by its teachings, I believe it my duty to give my experience in coming in personal contact with merchants, lawyers, bankers, manufacturers, railroad men, salesmen, bookkeepers, policemen, conductors, firemen, or day laborers. I have met and associated with men of the various callings I have named, who dare take Christ into their every-day lives and are happy to say that they are followers of the teachings of Christian Science. I have seen them in the church, at their homes, and in their business, and they have taught me that false pride is put away; that vicious temper has been overcome; morbid appetite destroyed; that Truth has taken the place of dishonesty; and that they are trying to live as pure and wholesome men. No more are they advocates of a single code of morals for women, and another for men, but they expect the clean thoughts and virtuous lives in their fellow-men.

These are the things I have found among Christian Sci-

ence business men both in the country and in the towns or large cities; and the heartfelt right hand of fellowship that is always extended tells me that the love of their brother man is uppermost in their thoughts. Furthermore, they tell me that in business transactions where in the old way they would run about for advice or to borrow money, they now depend on divine Principle as their source of supply, and guide, and if they stand firm in the Truth they are never disappointed. Can I hold up anything more tempting as an example to the world of business? Ask any of these men, if they could sell, what would they take for this understanding, and they invariably shake their heads, for they have given up much they once thought they could not do without and gained "The pearl of great price."

A Sign of the Times.

BY CLARENCE C. EATON.

THOSE who, because of increased wisdom and understanding, can "discern the signs of the times," see the manifestation of divine Love on every hand in the trend and transformation of human affairs.

Christian Scientists will regard as especially significant of the influence of their faith, several statements contained in an editorial which appeared in a recent issue of the *Minneapolis (Minn.) Journal*, relative to a marked decline of the law business, a fact abundantly proven, the article states, by the complaints and admissions of attorneys, that their "services in the courts are not in demand," and also by the court records.

The editor of the *Journal* includes in his observations the following: "It is no doubt true that litigation is decreasing. The records of the courts would seem to show it. While business and population have increased during the past year, the number of cases was two hundred less in our district court than during the previous year. Nor does there seem to have been as much important litigation of late as used to occupy the time of courts."

While conceding that this condition of affairs is a deplorable one from the standpoint of the lawyer, the writer suggests as a possible explanation of the situation, "that a higher degree of commercial morality is coming into vogue."

Christian Scientists readily recognize in this manifest decline of litigation, the fruits of the Spirit,—the logical working of divine Love, the great Arbitrator of all human controversies. Truly the world is fast becoming conscious that "divine Love corrects and governs man" (*Science and Health with Key to the Scriptures*, p. 311).

An Impressive Communion Service.

BY J. F. M.

As the congregation rose from communion at the service held in Cambridge, Mass., December 9, the sun, which had been obscured all the morning, broke forth, flooding the room with light, a fit emblem of the spiritual illumination that must have been experienced by all present. The sun had been shining all the time, but we had been unable to perceive it because of the clouds. As soon as the clouds are swept away we bask in the sunlight of Truth and Love.

I do not see how any one could fail to be impressed by the Lesson and the communion. They would, if faithfully followed, produce a spiritual illumination which was typified by the burst of sunshine which filled the room and gladdened the worshipers.

It has been well said that no man ever sank under the burden of the day. It is when to-morrow's burden is added to the burden of to-day, that the weight is more than a man can bear. Never load yourselves so, my friends. If you find yourselves so loaded, at least remember this: it is your own doing, not God's.—MACDONALD.

Testimonies.

Glasses Needed no Longer.

For about a year and a half before May 21, 1898, I had been doctoring with a prominent physician in Concord, N. H., for a very lame arm. It was so stiff that I could hear my shoulder crack when I attempted to move it backwards, and it seemed like a heavy weight. Electricity was applied; but I could scarcely feel it, and my physician said, "I did not know your arm was as bad as that; it is almost paralyzed!" I had many treatments by electricity, but my arm was not benefited. The doctor advised trying massage treatment, so I went to a lady in Concord who gave me about thirty treatments, but my arm remained just as stiff as ever. Becoming discouraged I gave up the treatment a week before Christmas, 1897. From then till the May following I kept trying various patent medicines with no effect whatever.

May 21, 1898, a beautiful morning, I drove to the home of a friend, Mrs. M., on State Street with my sister. Mrs. M. asked me how my arm was. I answered, "Oh, just the same, stiff as ever." She turned her head and said, "You know what I would do." I quickly said, "Well, you had better treat it," and she said, "I will if you do nothing more for it." I told her I was discouraged about trying any more medicine for it. She advised my reading "Science and Health with Key to the Scriptures." I procured a copy from the library and read it for the first time, feeling uplifted by it. I did not go to see Mrs. M. for a month, and then my arm was completely healed by her absent treatment, and it has remained so, perfectly free. Mrs. M. had just taken a course in Christian Science, and I believe I was her first patient. I realized it was a beautiful demonstration of God's love.

Sunday, October 9, 1898, I was suffering greatly with a pain through my eyes which I had had off and on for about twelve years. I had consulted several eye specialists, among them one of the most prominent in Boston. Each specialist that I went to gave me a new pair of glasses, telling me to wear them always when I read and sewed, which I had done for the twelve years, but not one of them relieved the severe pain. I felt it quite an affliction that I had to deny myself, reading but very little in all that time.

On this Sunday afternoon, while suffering with my eyes, the thought came to me, "If it is not God's will that I suffer so, why do I? I felt rebellious, got up, took my Bible, and told my husband I was going down to see Mrs. M. and investigate Christian Science and get some Bible texts to verify its truth. I was so afraid of doing something wrong I wanted to see it right in the Bible. Mrs. M. received me very kindly and after conversing a while she asked me to go over to the Christian Science reading room with her as she would like to get some tracts for me. Mr. and Mrs. B. were there and talked beautifully to me, explaining Bible references. Mr. M. selected some tracts for me. I took them, saying I could not try to read them without my glasses. Mr. B. said, "Your glasses do not help you any more than you think they do." That rather surprised me, and I echoed, "Any more than I *think* they do!" When I did try to read or sew without them I would suffer all the more afterwards for it. As I was about ready to start for home I said, "Well, am I to read these tracts without my glasses?" Mr. B. again said, "Your glasses do not help you any more than you think they do." As I left my eye still pained me so severely that I could hardly look at any one. Mrs. M. walked with me to the corner of Warren and State Streets, and as we parted she said, "Hold the thoughts that 'God is Love,' and 'Perfect Love casteth out fear,' your eyes will be all right." After supper that Sabbath eve I read those three finely

printed tracts *without* my glasses, and my eyes felt none the worse for it. I retired holding the beautiful thoughts that Mrs. M. told me to hold, and all the next morning I sewed without my glasses. My eyes were perfectly healed.

It seemed so beautiful to feel that God was helping me. I clung to those thoughts: "God is Love," "Perfect love casteth out fear." I felt very happy and so uplifted. When my husband came home at noon I said, "I believe Mrs. M. has been treating me, for I have sewed all the morning without my glasses, and my eyes feel all right. My husband was greatly pleased and said, 'I do hope she can help you.'" He knew how much I had suffered with my eyes and how careful I had had to be about using them even with glasses. As soon as I could in the afternoon I went to see Mrs. M. and said, "I came down to see what you have been doing?" She greeted me lovingly and said, "What is it?" I told her I had been sewing all the morning without my glasses, and my eyes felt perfectly well, adding, "Haven't you been treating me?" She said, "Yes, I did last evening." No one, unless they have suffered as I had with my eyes and been obliged almost to give up reading for twelve years, can realize the happiness I have enjoyed these past two years reading and sewing, without glasses, just as much as I liked, and experiencing no pain.

We were getting ready then to leave Concord for California, and I did a great deal of sewing both day and evening. When we packed our goods and sent them on ahead my glasses went with them packed away in a bureau which was crated, and we did not expect to unpack the furniture for some time after our arrival here. They were gold-bowed glasses, so I have not thrown them away, but they have not been out of the case since before I went down to see Mrs. M. that memorable Sabbath day, October 9, 1898.

Since coming to California I have become acquainted with some lovely Scientists. It has been very helpful to me getting out the weekly lessons in the *Christian Science Quarterly* and reading in my Science and Health. The more I read that beautiful book, the more I realize that there is but the one power of Love, and that it is the religion Jesus Christ came to teach. With the little understanding I have of the truth of the allness of God as taught in Christian Science, I have had some beautiful demonstrations in my own family. Can you wonder that I feel very grateful for the benefit I have received through Christian Science?—MRS. J. A. GRANT, Oakland, Cal.

A Severe Burn Healed.

I desire to tell of a small demonstration we had this past summer. One morning my little sister was helping me get breakfast. The water for the coffee was boiling, and beside the pot was a pan of chicken, frying, and nearly brown. My sister took the cup of coffee to put into the pot and splashed a few drops into the pan of chicken, causing the grease to spatter. When I looked she was badly burned apparently, as her arm, from the elbow down, was covered with the hot grease. I wrapped it up in a clean kitchen towel and began to realize the Truth as best I could.

She was greatly excited, nauseated, and in much pain, moaning continually, but in less than fifteen minutes she was enjoying her breakfast and had almost forgotten about the burn. In two days we could hardly find a mark. She was greatly impressed and said, "Why, even a little burn always takes over a week to heal."

She is just eleven years old. Shortly after going home she had a cough and cold, and was told to go and get some medicine from the doctor. She said she did not want any medicine, but as all at home are in material thought, they insisted on her taking it.

She poured the medicine out of the window and filled the bottle with water, for she thought, "It would be a sin to take it." My mother continued to dose her every half

hour, and by night the cough was gone. "Now," said she, "see how much good this medicine has done you. If you had not taken it you might have been real sick."

My sister afterwards said to me, "Do you know that medicine was awfully strong and would surely have made me sick? Why, when I poured it out of the window it fell on a rosebush, and that bush has never bloomed since."

M. S., Austin, Tex.

Testimony of a Traveling Man.

I am a traveling man, and have been on the road for twelve years. My attention was called to Christian Science through my brother being healed.

Most traveling men carry some kind of medicine in their grip, and I carried two kinds of medicine until four years ago. I was a heavy smoker, and used glasses for reading. The water at several places did not agree with me.

When I came into Christian Science the water lost its power to harm me; the medicine soon left my grip; about six months later the glasses were dispensed with, and a little over a year ago the smoking habit was overcome by six treatments.

A case of impersonal healing took place a short time ago that I am very grateful for. September 9 I met an old friend and brother traveler. We had talked on the subject of Science before. We went to Diamondville, Wyoming, that Sunday morning. I invited him to my room to read the lesson, and we read it together. He told me what medicine he had in his grip. It was the same I had used for years. I told him it was not necessary for him to take it. He borrowed my Science and Health and read himself to sleep. The next day we parted and I met him again, November 1, in Colorado. He inquired if I had been treating him. I told him I had not. He said he had not used any kind of medicine since the talk we had in September. He was feeling much better, and it was very strange to him. I told him that whenever he was ready for the Truth it was ready for him.

My territory is in seven of the northwestern states, and I can see a wonderful growth in the last four years. I find that if I diligently search for the Truth, it will meet my every need.—G. W. CURRAN, Kokomo, Ind.

Chronic and Other Diseases Healed.

Fourteen years ago I had an attack of inflammatory rheumatism. Since that time I suffered from it the greater part of each year, with the exception of three or four years. I was always considered a very delicate child, suffering also from indigestion and kidney trouble. The last five years previous to my healing I suffered most of the time. I tried many kinds of medicine, and resorted to mineral water baths, but all to no avail. I felt very despondent at not regaining my health. A friend advised me to try Christian Science treatment.

As a last resort I turned to God for healing. I wrote to a healer to take my case. Her reply was encouraging. Instead of telling me there was not much that could be done, that my trouble was chronic, she told me God could heal me. In less than four weeks I was completely healed, the swelling in my limbs disappearing in two days. That was over two years ago and I have enjoyed perfect health ever since. Others have been healed here since my recovery.

Asthma, lumbago, epilepsy, grip, eczema, etc., all yield to God's healing power. Three of us have had class instruction from a loyal student of Mrs. Eddy, and four of us belong to the Mother Church. We have the lesson at our home every Sunday, from ten to twelve attending. We cannot express our gratitude for what has been done for us through Mrs. Eddy's wonderful book, "Science and Health with Key to the Scriptures."

C. WRIGHT, Pembroke, Ont.

Religious Items.

The (Unitarian) *Christian Register* says: "Austerity is lean, haggard, wild of eye. It does not love human nature genially, and too often confounds its weaknesses and foibles with its vices and crimes. There is no urbanity in its conceptions of duty, but a dry, craggy outline that more often repels than wins. Austerity sat in the seat of power when religion was based upon fear, when men were willing to take the bitter drug as an antidote for the fire that is not quenched, the worm that never dies. As fear has vacated the seat of authority, the austere and frightful in religion find themselves without occupation. Men and women can no longer be scared to repentance. Religion is no longer to be regarded as a sour and bitter drug to be forced upon resisting patients, but a force that sets men and women in the normal, rational, reasonable way of life, the sane, true method of living, where all the powers of mind and body join in a symphony of harmonious action."

The *Christian Advocate* says: "Recently an account was given in the *Christian Advocate* of the union of the United Presbyterians with the Free Church of Scotland. Intelligence has been received in this country that it is meeting with serious opposition in the Highlands. The Highlanders believe that the principles of the Free Church are compromised, and empty benches are characteristic of the attendance under the auspices of the new organization; while hundreds are attending impromptu meetings in halls and elsewhere, conducted under the old Church rules. Many secessions are expected. We are told that in the Lowlands the amalgamation has been well received. It is pleasing to see any manifestations of strong adherence to conscientious convictions. There may be narrowness and blunders, and small things may be exalted to the place of high things; but steadfast adherence to what one believes is the most respectable trait in human nature."

H. K. Carroll, D.D., says in the *Homiletic Review*: "The interrelations of the various divisions of Christianity have been so changed by modern influence that the outlook is very different from what it might have been. Formerly these divisions were seemingly inseparable from antagonisms. Western and Eastern Catholics warred against each other; Catholic fought Protestant and Protestant fought Catholic; and Protestant also fought Protestant with almost equal bitterness; and the unbelieving world often had occasion to repeat in sarcastic tones Tertullian's remark: 'See how these Christians love one another.' Divisions have increased in the nineteenth century from causes ecclesiastical, theological, geographical, social, personal, etc., but it is quite probable that we have reached the ultimate in this direction. Denominational asperities have, beyond question, lessened, and the spirit of controversy has well-nigh disappeared."

The (Episcopalian) *Church Standard* says: "Bishop Potter retains his moral leadership in the movement for a better social condition in the City of New York with exemplary fidelity to first principles. On Friday of last week he delivered a sermon in St. Paul's Chapel, New York, on 'God and the City,' urging the citizens of New York to take in hand the practical reforms, of which there is such manifest need, by establishing a permanent and thoroughly organized Vigilance Committee for that purpose. Bishop Potter did not propose to head the committee, nor to belong to it. His duty, in his place and office as a teacher, was done when he showed the need and pointed the duty of the Christian citizen."

In an editorial the (Baptist) *Examiner* says: "Kindness is a universal need. What depths of revelation in our old, common Anglo-Saxon words! What can have suggested this word kindness but alikeness in kind, our kindredness one to another? If we give heed to what we say, each time we speak of kindness we should be reminded of our com-

mon brotherhood and divine paternity. Whatever the failings and weaknesses of our fellows, they are by nature as we are. In us as in them differing only in manifestation and degree, are weaknesses, frailties, and sins, that only divine grace can correct and conquer."

Rev. Henry Weller, in the *New Church Independent*, says: "Ever and anon, as the determined opposition of foes, or the timid fears of friends press upon us, we feel a voice calling within, 'Arise, and go to thy Father.' And such must be the resource of all who will truly work out the ends of their mission. After men have wrought out all the devices of their own imaginations, and exhausted all the powers of the will, there will come such a turning to the Lord, such a yearning and watching for His presence, that he will surely come and fulfil all our legitimate desires."

An editorial writer in the *Universalist Leader* says: "Once our pulpits addressed almost wholly the fears of men and women to secure their obedience. Their teachings disclosed a delirious burning with wrath, with a hell of literal fire for offenders, a law of inflexible vigor; but now it is quite otherwise. The oracles of Christianity have another voice for humanity—another picture for the heart of man. The heavens are shown to bend in love over all, and men are summoned to Christ in the spirit of his own Gospel, which is love."

Rev. Floyd W. Tomkins, writing for the *Congregationalist*, says: "The faith needed today, both by us men and women individually and by the world at large, is that which brings God into our daily lives to help us and to lift us up. Such a faith talks to God as naturally as to a friend; it looks to God for help in adding figures or washing dishes or teaching children just as much as in praying or reading the Bible or visiting the sick. That is what is meant, I think, by a reasonable faith. It is a faith which appeals to men and draws them to God."

The *New-Church Messenger* says: "The Son of man came eating and drinking, presenting his humanity to men as one who could enter into the pleasantness of life without loss of his essential purity and divinity. He did not come to make men's life a burden to them—to strip it of all pleasure. 'I am come that they might have life, and that they might have it more abundantly.' Something of his joy we should have, as though we felt the touch of his infinite life upon our life stirring us with gratitude for all."

The *Universalist Leader* says: "Every thankful person thinks about life and finds these things true: That life had a Creator; that all lives are dependent upon a Life that is superior to all lives; that the laws of life are established in perfect wisdom, and that individual conditions should be adjusted to those laws and regulated by them; that whenever and wherever this is done, peace, contentment, and happiness follow. The person who so reflects will seek to regulate his life accordingly."

The (Baptist) *Standard* says: "The best feature of friendship is its spiritual aspect. When Jonathan went to David in the wood, he strengthened his hand in God. Perhaps it was Jonathan who gave David faith to sing: 'The Lord is my shepherd.' A blessed friendship that upbuilds faith. The God-ward side of friendship is brightest of all. When we consecrate our friendships to God with the definite purpose of making them of spiritual help, their fulness of blessing is realized."

The (Baptist) *Watchman* says: "Twenty-five thousand copies of the English Bible, in whole or in part,—about one half the number being New Testaments,—are printed every working day of the week. That is over six hundred thousand for every month, and over seven million copies a year. This goes on from year to year, and the number is constantly increasing. How insignificant the most successful novel looks beside such figures!"

There is no great trust to be put in a frail and mortal man, even though he be profitable and dear unto us; neither ought we to be much grieved if sometimes he be cross and contradict us. They that to-day take thy part, to-morrow may be against thee; and often do they turn right round like the wind.

THOMAS A KEMPIS.

The London *Christian World* says that Mr. Bergmann of the London City Mission has published a version of the Old and New Testaments in the vernacular known as Yiddish, a mixture of Hebrew and German, spoken by millions of Russian and Polish Jews, to whom classic Hebrew is a dead language."

In an article on "The Beauty of the Lord," the (Methodist) *Christian Advocate* says: "The beauty of truth, of righteousness, of goodness, the beauty of the Lord, may be ours. We may lose the deformity of selfishness, of envy, of malice, of sin, and be transformed into the image of our Lord."

The *Christian Register* says: "Reformation of society in the lump is a slow process, often hopeless. But improvement of individuals taken one by one is always possible. Improved units make an improving society."

A road is being constructed, passable for carriages, between Jerusalem and Nazareth by the Turkish Government.

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on New York or Boston, but not on Chicago.

All orders for Journals, Sentinels, Quartettes, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or vice versa.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address of writer are given.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

- Cloth binding, each \$3.18
Two to Twelve books to one address, each, prepaid . . . 3.00
Twelve or more books to one address, each, prepaid . . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each,
prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Morocco, limp, round corners, gilt edges, convenient for
pocket, 4½x6½ inches, narrow margins, each, prepaid . . . 5.00
Twelve or more to one address, each, prepaid 4.75
Levant, divinity circuit, leather lined to edge, round corners,
gold edge, silk sewed, each, prepaid 6.00
Twelve or more to one address, each, prepaid 5.75
Orders for Science and Health in lots of twelve or more to one address,
may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS.

A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

- Price (cloth) each, prepaid \$2.25
Twelve or more books to one address, each, prepaid . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for
pocket, 4½x6½ inches, narrow margins, each, prepaid . . . 4.00
Twelve or more to one address, each, prepaid 3.75
Levant, divinity circuit, leather lined to edge, round corners,
gold edge, silk sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Orders for Miscellaneous Writings in lots of twelve or more to one
address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which
include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS.

An illustrated poem,
Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid . . . 2.50

RETROSPECTION AND INTROSPECTION.

A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

PULPIT AND PRESS.

A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE.

An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM.

The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES.

A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.

A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD.

A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP.

Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour."

Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER.

A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL.

Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL.

Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH.

Political and Governmental Notes.

The Hay-Pauncefote treaty was ratified by the Senate on December 20, by a vote of 55 to 18. It was first amended by inserting a sentence giving the United States more latitude in the matter of defending the canal, by making it "supersede" the Clayton-Bulwer treaty, and by striking out that part of the clause providing that the United States and Great Britain invite the other powers to adhere to the treaty. All other amendments were voted down. Administration leaders in the Senate believe that the amended form of the treaty will not be objected to by the government of Great Britain, and they hope for its acceptance. If rejected by Great Britain, it is stated that the United States will denounce the Clayton-Bulwer treaty and proceed with legislation looking to the construction of the canal.

The Veterans' Preference bill was defeated in the lower house of Congress last week by a vote of 105 to 51. The bill had the endorsement of all the G. A. R. posts in the country. It provided for giving preference, in appointments in the executive departments of the government, to honorably discharged soldiers of the Civil war, Spanish war, and of the war in the Philippines. It was opposed on the ground that it would build up a military caste.

The naval board of construction met on December 18 and decided on the awards for building the new battleships and cruisers now provided for. The decision arrived at was to give one battleship and two armored cruisers to the Cramps, two cruisers to the Union Iron Works, two battleships to the Fore River Engine Company, one battleship and two cruisers to the Newport News Ship Building Company, and one battleship to the Bath Iron Works.

The cost of the public schools of Greater New York for the year 1901 will be \$17,710,078. The number of pupils in the schools is estimated at 408,112. So that the average cost for each pupil is \$43.39. In 1890 there were 230,931 pupils, the total cost was \$6,000,639, and the average cost per pupil \$25.98.

The National House of Representatives passed bills on December 19 to compel the Pennsylvania and Baltimore and Ohio Railroad Companies to abolish grade crossings within the city of Washington, and requiring the Pennsylvania company to build a new station to cost not less than \$1,500,000.

William J. Bryan has publicly announced his intention of starting a weekly newspaper to be called the *Commoner*, of which he will be proprietor and editor. He says that it will defend the principles set forth in the Kansas City platform.

The determined obstructive tactics of the Senators opposed to the ship subsidy bill have forced that measure aside, and it is not believed to have any chance of passing before the close of the session, March 4, next.

Foreign News.

There has been a remarkable revival of the war in South Africa within the past two weeks. Just when Lord Roberts was leaving the field, after all but the last feebly smouldering embers of the war had seemingly been put out, the Boers under General Delarey astonished the world by attacking a British force under General Clements at Nootgedacht on December 13, killing five officers and nine of other ranks, and capturing 18 officers and 555 men of other ranks, a total loss of 587.

On the same day, December 13, a force of Boers near Zastron, Orange River Colony, attacked a force of British cavalry, killing four, wounding 16 and carrying off 120 as prisoners. After these successes the Boers are reported to have invaded Cape Colony. It is rumored that Lord Kitchener, who is now in command, has demanded re-inforcements.

A report from Cape Town says that General French, commanding a British force, routed twenty-five hundred Boers at Thornedale on December 19. The late reports last week told of the hurried dispatch of British troops to different points to head off the invading Boers.

M. Daniel Oslis, a Greek millionaire residing in Paris, has instituted a prize on the lines laid down by Mr. Nobel, though his offer is for Frenchmen only, except in a Paris Exposition year, when it becomes universal. He has set aside a sum to be awarded every three years in perpetuity to the discoverer, inventor, or producer of the most noteworthy idea or object for the benefit of humanity. The prize is to be never less than one hundred thousand francs, and may be double that sum.

Great Britain and her colonies own 7,930 steamers, aggregating 12,149,090 tons; 2,908 sailing vessels, aggregating 2,112,164 tons; grand total, 10,838 vessels, aggregating 14,261,254 tons. According to Lloyd's, the whole of the world's over-sea traffic, with the exception of the smaller, insignificant States, is carried on with 28,422 vessels of all kinds, representing a gross tonnage of 29,043,728 tons. Therefore, it will be seen that Great Britain and her colonies own about one-third of the world's vessels, amounting to nearly half the world's gross tonnage.

A press dispatch from London says: "It is reported that Signor Marconi is arranging to erect wireless telegraph stations along the route from Great Britain to Australia to enable voyagers to send and receive messages daily throughout the trip. The promoters predict that they will be able to transmit telegrams at the rate of two pence a word."

A balloon fitted with automatic registering instruments, was sent up in Paris recently to a height of fifty-six thousand feet, or over ten and one-half miles. At the highest point reached the temperature outside the balloon was 102 degrees below zero.

Lord Curzon, the viceroy of India, has abandoned his contemplated hunt for the remaining five or six lions in the Gir forest. Lions have rapidly and almost completely disappeared from India; not long ago they overran most of the country.

The Pope has ordered that about one hundred and fifty thousand old swords, halberds, spears, and battle-axes in the Vatican armory be melted and the iron sold. A furnace for the purpose has been erected in the Vatican gardens.

The German training frigate Gneissanau foundered off Malaga, sixty-five miles east-

northeast from Gibraltar, December 16. Out of 450 persons on board, all but 35 were saved.

A Pekin dispatch states that on December 19, everything in regard to the terms of the joint note to China were agreed to by all the foreign ministers.

Industry and Commerce.

The Russian Government grants subsidies for the purpose of helping new settlers. This money is spent in encouraging farming and fruit raising. Subventions are given for the first six years. During the following ten years these subventions must be repaid in yearly payments. Since 1894 \$2,605,500 has been spent in that way.

The Northern Pacific Railway is reported to have decided to equip its lines with a long distance telephone system, so that most of the telegraphing and much of the correspondence between the various officials and between local and general offices may be avoided, the telephone being used instead.

Three thousand tons of steel plates and angles for shipbuilding, from the works of the Carnegie Company, reached the Clyde by the steamer Dunstan, from Philadelphia, November 24. In spite of the railway freight to Philadelphia and the ocean freightage the price was \$2 per ton below English figures.

Memberships in the New York Stock Exchange were sold last week for over \$50,000 and it is predicted that they will bring \$75,000 to \$100,000 within a year. In 1893 Stock Exchange seats sold as low as \$14,000, and the price in 1898 was still below \$20,000.

The twentieth convention of the American Federation of Labor, held in Louisville, Ky., December 15, re-elected Samuel Gompers president.

General News.

Senator Beveridge says: "It is a remarkable thing that there is neither wit nor humor in any of the immortal speeches that have fallen from the lips of man. To find a joke in Webster would be an offence. There is not a funny sally in all Burke's speeches. Lincoln's Gettysburg address, his first and second inaugurals, his speech beginning the Douglass campaign, and his Cooper Union address in New York are, perhaps, the only utterances of his that will endure. Yet this greatest of story-tellers since Aesop did not adorn or deface one of these great deliverances with story or any form of humor."

Rev. Parley D. Root, a Baptist minister of Wakefield, R. I., has invented a device to lessen the risk of injuries to persons riding on passenger elevators. The device is such that when the elevator door opens the elevator car becomes locked and cannot move up or down until the door is closed and locked with a spring-lock. When the elevator is moving from one floor to another all doors are locked.

The two companies controlling the street railways of St. Louis recently subscribed \$250,000 to the local World's Fair fund for meeting the expenses of the great exposition to mark the one hundredth anniversary of the purchase of Louisiana Territory. The committee expects to have comparatively little difficulty now in bringing the fund up to \$5,000,000.

The *Boston Herald* says editorially: "The reported increase of \$14,500,000 in the value of the Vanderbilt estate since the possessor died, a little over a year ago, shows how big fortunes roll up in this country without any help."

The total cost of the pan-American Exposition, exclusive of exhibits, is now estimated at ten million dollars. Of this amount about three million dollars will be expended upon the Midway.

Recent Advances in Wireless Telegraphy.

As the subject of wireless telegraphy has not yet apparently lost interest for the general reader, I venture to ask a little space to make known for the first time some recent achievements by Mr. Marconi which have astonished those who have been allowed to examine them. Every one is aware that in his system of electric wave telegraphy an important feature is the employment of an elevated conductor, which generally takes the form of a wire suspended from a mast. When Mr. Marconi attracted attention by his feat of establishing communication across the English Channel without wires, critics raised a not invalid argument against its commercial utility, that a wave or signal sent out from one transmitter would affect equally all receivers within its sphere of influence, and hence the privacy of the communication would be destroyed. No one felt the force of this objection more strongly than the distinguished inventor himself, whose original work has caused so many others to attempt to follow in his steps. For the last two years he has not ceased to grapple with the problem of isolating the lines of communication, and success has now rewarded his skill and industry. Technical details must be left to be described by him later on, but meanwhile I must say that he has modified his receiving and transmitting appliances so that they will only respond to each other when properly tuned to sympathy. I am well aware that other inventors have claimed to be able to do the same thing, but I do not fear refutation in saying that no one has given practical proof of possessing a solution of this problem which for a moment can compare with that Mr. Marconi is now in a position to furnish.

These experiments have been conducted between two stations thirty miles apart, one near Poole, in Dorset, and the other near St. Catherine's in the Isle of Wight. At the present moment there are established at these places Mr. Marconi's latest appliances, so adjusted that each receiver at one station responds only to its corresponding transmitter at the other. During a three days' visit to Poole, Mr. Marconi invited me to apply any test I pleased to satisfy myself of the complete independence of the circuits, and the following are two out of many such tests: Two operators at St. Catherine's were instructed to send simultaneously two different wireless messages to Poole, and without delay or mistake the two were correctly recorded and printed down, at the same time, in Morse signals on the tapes of the two corresponding receivers at Poole.

In this first demonstration each receiver was connected to its own independent aerial wire hung from the same mast. But greater wonders followed. Mr. Marconi placed the receivers at Poole one on the top of the other, and connected them both to one and the same wire about forty feet in length attached to a mast. I then asked to have two messages sent at the same moment by the operators at St. Catherine's—one in English and the other in French. Without failure, each receiver at Poole rolled out its paper

tape, the message in English perfect on one, and that in French on the other. When it is realized that these visible dots and dashes are the results of trains of intermingled electric waves rushing with the speed of light across the intervening thirty miles, caught on one and the same short aerial wire and disentangled and sorted out automatically by the two machines into intelligible messages in different languages, the wonder of it all cannot but strike the mind.

Your space is too valuable to be encroached upon by further details, or else I might mention some marvelous results, exhibited by Mr. Marconi during the same demonstrations, of messages received from a transmitter thirty miles away and recorded by an instrument in a closed room merely by the aid of a zinc cylinder, four feet high, placed on a chair. More surprising it is to learn that, while these experiments have been proceeding between Poole and St. Catherine's, others have been taking place for the Admiralty between Portsmouth and Portland, these lines of communication intersecting each other; yet so perfect is the independence that nothing done on one circuit now affects the other, unless desired. A corollary of these latest improvements is that the necessity for very high masts is abolished. Mr. Marconi now has established perfect independent wireless telegraphic communication between Poole and St. Catherine's, a distance of thirty miles, by means of a pair of metal cylinders elevated twenty-five or thirty feet above the ground at each place.

I need not enlarge on the possibilities thus opened out for naval and military purposes. The importance of this practical solution of the problem of independent electric wave telegraphy, in which each wireless circuit is as private as one with a wire, is obvious without comment. My desire is solely to mention the above facts for the benefit of general readers, whose minds will thus perhaps be eased of any doubts lest this brilliant application of electrical discoveries should, like some others, fall short in satisfying the requirements of practical use, and be relegated to the region of imperfect inventions or unfulfilled hopes.

PROFESSOR JOHN A. FLEMING.
In the London Times.

A Cozy Club for Street Boys.

THERE is a club for boys in Hartford, Conn., which is novel and interesting in many respects. It is called the Good Will Club, and is located in a roomy building, where boys from the street can spend their evenings and be sure of having a jolly time and of learning lots of useful things besides.

The building resembles a vast beehive, and approaching it one hears the hum of the human bees. The basement is well lighted with electric lights, and here are held the classes in cookery, carpentry, and wood carving. The second floor, "Keney Hall," is used for games—crokinole, puff billiards, chess, checkers, etc., are all played there. The whole is under the management of Miss Mary Hall, who is assisted by her brother, David S. Hall, who meets the boys at the door, and after the coats and hats are checked, sends them to the various classes or the game room.

The club was the result of a small beginning. As far back as 1880 the idea occurred to Miss Hall, a lawyer, in Hartford, to form some plan to interest the poor boys of the city who had nowhere but the streets in which to pass their evenings. So she secured a room, gathered a few boys together, and read to them stories, furnished games, and talked upon natural history, geology, and other subjects. The boys were delighted, and she met with them once a week, the number of boys gradually increasing.

They soon had to seek larger quarters, and after a time the boys, under her supervision, organized, adopted a constitution and by-laws, and selected officers from their own number. The plan had nothing in it of the day school or Sunday School. The idea was mainly to entertain the boys with interesting games, stories, illustrated papers, etc.

The meetings had such attractions for the boys that they usually came with companions from their circle of playmates, and their quarters soon grew too small. Larger rooms were procured; they were opened two or three evenings a week, and finally every evening except Sunday. Entertainments were given to the boys from time to time, these being contributed by friends. Gradually they secured a library; a piano was hired, and singers volunteered their services.

The name Good Will Club was adopted in 1880, also a badge having for design a star and crescent. This is for regular members only, for there is a distinction between those whose names are simply entered on the books and those who, by reason of good conduct and attendance, belong to the regular organization and are eligible to office in it.

Boys are received from eight years of age to twenty-one, and about two hundred and fifty have been enrolled as regular members, while over eight hundred names were entered on the books the last year.

The club at the present time owns its own building, which allows boys ample room for their classes, gymnasium, and drill. Boys over twelve years of age who have been approved by the directors may become members in full and wear badges if they will take the following pledge:—

I solemnly promise to abstain from the use of all intoxicating liquors, except as a medicine, and from the use of tobacco in every form; from all profanity and vulgarity; and I also promise to honor and obey my parents.

Should they violate the pledge they forfeit both badge and membership.

For several years past the Good Will cadets have held military drills during the winter months, when they wear fatigue caps, belts, and cartridge boxes, and carry real rifles, cadet size. At the close of each season two prize medals, one of gold and one of silver, are awarded to the two boys who have been the most proficient in the school of the soldier, as well as faithful in attendance. The medals remain the property of the club, but the boys who have won them wear them on all public occasions.

There is a class in carpentry, where the boys are taught to use the tools properly. Then there is, too, a class in wood carving, also cooking, which, by the way, the boys enjoy immensely, especially the bread making.

Classes in paper cutting and jack-knife work have recently been added, and the Penny Provident Bank helps the boys to become economical and thrifty. Many of them sell papers, and, as they say they cannot "hold on to their money," the bank helps them to "hold on," and often a neat little sum is put by. It is saved for many different purposes—for clothes, wedding presents, bicycles, for Christmas, for small summer trips, etc. At the end of one year a boy had saved fifty dollars besides buying his own clothes.

At the Good Will Building every night between two and three hundred boys assemble to enjoy the privileges of the club.—*New York Tribune.*

The Lectures.

At Orange, N. J.

A public lecture on Christian Science, under the auspices of First Church of Christ, Scientist, of Orange, was delivered in Orange Music Hall, Thursday evening (December 13), by Judge Joseph R. Clarkson of Omaha, Neb. His subject was "Christian Science Reveals the Kingdom of Heaven at Hand." Judge Clarkson has been a member of the lecture board of this church for some time, and has given many lectures throughout the West.

The audience was a large one, and was representative of the highest culture of the Oranges.

Judge Clarkson is an interesting and able speaker, with a style that is at once simple, direct, and impressive. He speaks quietly and in unimpassioned tones, but there is an earnestness in his manner and a deep conviction in his utterances which are in themselves impressive and telling.

Judge Clarkson was introduced to the audience by Charles T. Root of East Orange, the well-known editor and publisher of *The Dry Goods Economist*. Mr. Root spoke as follows:—

Ladies and Gentlemen:—I presume there are few among the intelligent people of this country who have not at least heard of the new religious philosophy which, under the name of Christian Science, has during the decade now closing increased the number of its adherents from hundreds to hundreds of thousands; and which is now spreading with such rapidity as to render it easily the most conspicuous Christian movement, perhaps I may say the most conspicuous moral movement, since the days of Luther. But the degree of enlightenment concerning this philosophy is very varied.

The Christian Scientists themselves find in this system and its practice the Pearl of Great Price. A much larger number, though not professing this faith, know something by observation of its fruits—of the physical and moral healing that seems everywhere to follow its footsteps. But by far the largest proportion of those to whom the name of Christian Science is known have only the vaguest ideas concerning it, and those mainly derived from unfavorable hearsay. Such persons have for the most part read or heard of it only as something queer, something mysterious and occult, something for the doctors to scoff at, for orthodox Christians to shake their heads over, and for the humorists of the press to exercise their wit upon.

In the face of this ignorance, in the midst of this widespread misrepresentation, Christian Scientists maintain, so far as I have observed, a patient courtesy, perseveringly correcting and recorrecting the most absurd misstatements, and gladly explaining to every one seeking such information the doctrines and aims of their institution. In order to perform this latter function with system and uniformity, the central organization of Christian Science, at Boston, has in recent years established a Board of Lectureship, consisting of men and women thoroughly conversant with the subject and specially fitted by nature and education to expound their exalted theme. It is our good fortune to-night to have with us a distinguished member of this Board of Lectureship.

Some facts in this gentleman's history prior to his giving himself up to Christian Science work are of interest in this connection. For nearly twenty years he was a member of the legal profession, proverbially the most hard-headed and incredulous among men. During this long and successful career as a lawyer he was for a time the law partner of United States Senator John M. Thurston of Nebraska, and also served with distinction a term as District Judge at Omaha, an honor bestowed upon him at the instance of his brethren of the bar of that city. It seems

unlikely that a man of this sort of experience, long used to weighing testimony and discerning flaws in evidence or logic, would give in his adhesion to, and finally relinquish a lucrative and honorable vocation for the sake of, any system whose premises and conclusions would not bear the closest scrutiny.

From a mind of this general intellectual equipment, supplemented by special preparation for his present task, we are justified in anticipating, even within the limits of a single lecture, an outline of the Christian Science system which will be not only strictly authoritative, but instructive to those of us whose knowledge upon the subject is limited, and interesting alike to the initiated and uninitiated. I therefore take much pleasure in presenting to you the Hon. Joseph R. Clarkson of Nebraska, and I bespeak for what he will lay before you your closest attention.

Orange Journal.

At El Reno, Okla.

Judge William G. Ewing of Chicago, was greeted by a magnificent audience at the Opera House last night (Tuesday, November 27), and his clear and logical telling of "the old, old story" was as impressive as it was beautiful. The lecturer was introduced by Mr. Simpson, the editor of the *Bell*, and for more than an hour "the peace and gladness, song and melody," of the Christian life were thoroughly portrayed. The speaker demonstrated that Christian Scientists believe in God, in the Christ, the decalogue, the Bible.

In introducing Judge Ewing, Mr. Simpson said,—

Judge Irwin had intended to make the introductory remarks to-night, but owing to court matters in Kingfisher he has been unable to reach home in time, and the duty has devolved upon me. There is one pleasant fact about the arrangement: not having been prepared I can safely promise that I will not trespass on your time or patience; yet I cannot let the opportunity pass without submitting a few remarks.

If one standing on the threshold of the nineteenth century, could have been permitted to look into the future and witness the great panorama of inventions, grand results, and great achievements unroll before him, I can imagine how he would have started back in doubt that such things could be, and with far greater wonder than we who stand on the other bank of the century, can look back across the ocean of the last hundred years, and contemplate the marvels and wonders which have been accomplished.

When men consider the inventions and great results generally, some are inclined to say that the powers of inventive man are unlimited; and yet the same enthusiast would girdle with limitations the power of omnipotent God. We find with the material advancement which has been made during the century, there has been marvelous progress in the development of thought force, and this thought force has never been stronger or more potent than it is in the meditative twilight of the century's close. The betterment of man's condition is the theme of public speakers and writers. Churches, associations, and societies are reaching out, marching onward and upward to solve the great problem, and the conditions are better to-day for its being solved than they have ever been before.

If we could come to the realization that we are the sons of God, how that realization would arouse the sluggard and strengthen the weak, and give to men, women, and children noble aspirations to emulate the pure life of the great Master. We are reaching out after these things and, without being considered boastful, permit me to say that Christian Science, of which I am an humble student, is proving to be an engine of great power for good throughout the length and breadth of this great world. It does not intrude itself with the blare of trumpet and the flutter

of banners; its coming has been as silent as the flight of birds, but being grounded on Truth, its foundation is as solid as the Rock of ages.

I am but an humble student, delving among the foothills of the great Science: the lecturer is one who has scaled the mountain heights of scientific proof and demonstration. It seems unnecessary for me to bespeak for him your attention. El Reno audiences have the reputation of being attentive and courteous, even though they may not agree with the ideas expressed by the speaker, and I know that this magnificent audience to-night will be no exception to this rule. Ladies and gentlemen, I have the pleasure, yes, the honor, of introducing Judge William G. Ewing of Chicago.

It is impossible to give more than a brief resume of the great lecture. That it wiped out many false ideas as to Christian Science there can be no doubt. The audience was large, attentive, and courteous. Many visitors were in attendance, who had come from Shawnee, Enid, Gear, Chickasha, and other points.—*El Reno Bell.*

At Chillicothe, Ill.

A fine audience greeted Edward A. Kimball on his appearance here in Kelly's Hall Tuesday evening (December 11), and listened attentively to his address on the "Cause and Scientific Cure of Disease," under the auspices of First Church of Christ, Scientist.

The speaker was introduced by City Attorney H. C. Pettett, who said in part:—

Ladies and Gentlemen:—I have been honored by the invitation to preside at this meeting of those interested in the greatest question that has ever claimed man's attention. From the days when David, the Psalmist, asked of the Creator: "What is man that thou art mindful of him?" down through the centuries to the birth of Christ, who came in the likeness of man, on to the present day, in this bright dawning of the twentieth century, lighted by the researches and experience of six thousand years of life on earth, we still ask, in all seriousness, the same question. We have not learned our Alpha and Omega: our gaze into the future ends with the passing moment. We have religions or creeds by the score; we have earnest, faithful men and women believing each; we have honest men and women believing none but yearning for light with a longing that is part of their natures. Faiths are many; the Egyptian worship of the sun as the triune emblem of light, truth, and love, the worship of animals as having existence, hence a part of the Supreme existence; the fanatical faith of the Parsee widow as she mounts the funeral pyre to pass into Paradise with the soul of her husband: the suffering of the Christians under Roman cruelty; the martyrdom of the apostles; all these are evidences of a soul longing that is a part of every man's life, if not stifled.

This question being the one question of happiness here and hereafter, accounts for the fact that the eyes of the religious world are turned on those who teach under the name of Christian Scientists, or, if I may be allowed to define that title, I should say Christ Knowers. I am not a Christian Scientist, but have read a number of their lectures and have studied their arguments or statements with interest. A knowledge of Christ and his power to heal all our infirmities, conforming to his teachings, is certainly in line with better thought, nobler action, and higher spiritual life.

We have with us to-night a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., a gentleman from Chicago, whose ability and authority bespeak our careful attention, and I am pleased to present to you Mr. Edward A. Kimball.—*Chillicothe Enquirer.*

At Milwaukee, Wis.

At Plymouth Church Tuesday evening (December 4) a large audience listened to an address on Christian Science by Dr. S. J. Sawyer. He dealt with the subject in simple language and made clear the salient facts of his faith, which now has so many followers in Milwaukee and the country at large. The lecture was given under the auspices of First and Second Churches of Christ, Scientist.

Col. Charles H. Clarke, First Reader of Second Church of Christ, Scientist, introduced the speaker with the following remarks:—

Time is a world product. There is no time in God's kingdom. A thousand years are as one day, and a day as a thousand years. What is past is as a tale that is told. As the world reckons time, we, its citizens, are about entering the twentieth century, and while we are in part representing the race at its entrance, we are seeking to prove and to sustain the world's most advanced religious thought. We are searching to know God's eternal truth, and we should be found holding fast that which we have proven to be good and to be true. This subject of Christian Science we have met to hear about this evening, comes to us in the nature of an unfolding—it is a spiritual growth into the Christ-thought and work. It is to comprehend God, our Father, as All-in-all,—to learn our relations to Him, as sons and daughters, inheritors of all the Scriptural promises, whereby we are enabled to help ourselves and our fellow-men into newness of life, whereby we are enabled through Christ, our Mediator and Way-shower, to cast out evil and to heal the sick.

Ladies and gentlemen, the speaker of the evening, who has been long in the field, comes to us as an accredited member of the official Board of Lectureship on Christian Science, commissioned by The First Church of Christ, Scientist, of Boston, known as the Mother Church.

It is my privilege to present our fellow townsman, Silas J. Sawyer, C.S.D., who will now address you, and I bespeak for him your kind attention.—*The Evening Wisconsin.*

At Ardmore, I. T.

An intelligent and appreciative audience assembled at the Opera House Thanksgiving night to listen to a lecture by Judge William G. Ewing of Chicago, whose subject was "Christian Science, the Religion of Jesus Christ." Judge Ewing was introduced in a few brief but well-chosen remarks, by Hon. A. C. Cruce, ex-U. S. District Attorney, and the lecturer was accorded the most courteous and profound attention. While we only had two days in which to advertise the lecture, the local press extended every possible courtesy and facility in aiding us, and our church being few in numbers, perhaps it would be encouraging to others to know something of the success of our demonstration. When the desirability of a lecture was first suggested it looked well-nigh impossible of realization, but we agreed to work unitedly in the effort and leave the result to Him who supplieth every need. No one was solicited to give anything. The evening preceding the lecture the voluntary contributions amounted to seventy-one dollars, which was added to the next day. Eight dollars was voluntarily contributed Thursday night after the close of the lecture, by visiting Scientists, and verily we found the needs of the hour harmoniously supplied. While the lecture was given under the auspices of First Church of Christ, Scientist, we can but gratefully acknowledge the assistance, spiritually and financially, of our fellow-laborers in this portion of the Indian Territory.

It is also gratifying to state that the earnest, logical, and loving words of the lecturer, were as cooling, gentle rain-drops upon the censorious prejudice of many of his hearers, falling as veritable benediction of peace on earth, good-

will towards men. We feel that we were greatly blessed in this demonstration of a Thanksgiving feast for ourselves and the good people of Ardmore and vicinity.

Correspondence.

At Cleveland, O.

Chamber of Commerce Auditorium was scarcely large enough yesterday afternoon (Sunday, December 2) to accommodate the people who wanted to hear Mr. Edward A. Kimball of Chicago lecture on Christian Science. An audience of over a thousand people was present, and the assemblage included many of Cleveland's prominent people.

Cleveland Plain Dealer.

Mr. Edward A. Merritt made a short address introducing the lecturer, as follows:—

I am invited to welcome you here this afternoon, in behalf of the Christian Scientists of the city of Cleveland, and to express to you their gratitude that such a large audience should assemble to hear something about "The Cause and Scientific Cure of Disease." Christian Science is not a stranger in your midst, it is an established fact. It has a sure foundation, and the Christian Scientists of this city rejoice in the hope that before long they will have a church edifice, which is now in the course of erection, to which they can invite you to attend their services.

The interpretation of the Scriptures as given to the world through the writings of Mary Baker G. Eddy is accepted by Christian Scientists. They take the Scriptures for their guide. They find nothing in the Scriptures derogatory to, or which disapproves of, spiritual healing; but they find very much in favor of, and which does approve of, spiritual healing. And from this standpoint we shall hear from our lecturer, who is officially authorized to deliver the lecture as a member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass.

It affords me much pleasure to introduce to you my friend, Mr. Edward A. Kimball of Chicago.

Correspondence.

At Bryan, Tex.

A refined and intelligent audience listened to a fine lecture Tuesday night (December 4) in the district court room by Hon. William G. Ewing of Chicago. The speaker was introduced by Judge J. W. Doremus in a few remarks in which he told of the high standing of the lecturer in the legal fraternity and of the honors his people had heaped upon him during a long and useful life in the way of positions of trust and honor. The auditors were enjoined to grant a fair and impartial hearing to the distinguished speaker on a subject comparatively unknown to most of those present, to wit: Christian Science.

The lecture he delivers is a gem of chaste, refined, and forceful polemics. He brings to his aid a rare fund of knowledge of history, of law, of classical lore, combined in a style most pleasing, and an hour spent listening to his reasoning is an hour of entertainment and profit, whether afterward the hearer is any more friendly or not to the tenets of Christian Science.

Any who expect to hear irrational and unthinkable propositions submitted will be disappointed when they hear him. His talk consists of earnest persuasion to the hearer to lend an unprejudiced ear to the teachings of this comparatively new proposition in the religious world.

Bryan Morning Eagle.

At Silver Creek, N. Y.

Carol Norton, C.S.D., delivered a lecture on Christian Science at Academy Hall, Tuesday evening, November 20, under the auspices of First Church of Christ, Scientist, of Silver Creek.

Professor J. L. Walthart, M.A., introduced Mr. Norton with the following remarks:—

We are all believers in the Truth and seekers after a correct interpretation. Whoever comes to us with a message of the Truth should be welcomed. Whatever his conception, whatever his interpretation, we must, if we are sincere, be glad to listen to his words and to give attention to his message. It is with this spirit, I trust, that we have come here this evening. It is certainly with this spirit that I, although I do not endorse the teachings of Christian Science, avail myself of the privilege of introducing the speaker of the evening. With all that has been said and all that has been printed on the subject, it would be absurd for me to claim that I know nothing of Christian Science; and with what I know of it I cannot say that there is nothing in it. I hope to learn more of it and to find that there is more in it. I take great pleasure in introducing Mr. Carol Norton, who will speak to us on the subject of Christian Science.—*Correspondence.*

At Manchester, N. H.

At Mechanics Hall on Lowell Street last evening (Friday, December 14) at eight o'clock a lecture was given by Judge Joseph R. Clarkson of Omaha, Neb., on Christian Science.

The opening address was made by James D. Sherwood, First Reader of First Church of Christ, Scientist, in this city. During the course of his remarks he said:—

Christian Science is a subject that is attracting much attention, because of its becoming known that by it the sick are healed, the sinful are reformed and are given a brighter outlook upon life, a broader sense of the brotherhood of man, and a higher understanding of the Fatherhood and Motherhood of God. Christian Science appeals to the human mind because it blesses humanity through demonstration of God as "an ever-present help in trouble," as the Bible teaches. It proclaims the kingdom of heaven at hand; acquaints man with the Science of Being; and reveals health and harmony as within reach of any one who will apply, understandingly, the simple rules laid down in its text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

I have the honor and pleasure of introducing to you one who found health in just this way, Judge Joseph R. Clarkson, C.S.B., of Omaha, Neb.—*Manchester News.*

Semi-annual Communion at Concord, N. H.

THE semi-annual communion of First Church of Christ, Scientist, was observed Sunday morning (December 9) in Christian Science Hall. The beautiful audience room was filled with a large and attentive congregation. The impressive services were conducted by the First Reader, Rev. Irving C. Tomlinson and the Second Reader, Miss Mary E. Tomlinson. The subject of the sermon was "Sacrament," the Golden Text being, "And he saith unto them, Ye shall drink indeed of my cup, and be baptized with the baptism that I am baptized with."

Mrs. Cora Straw presided at the organ and Miss Villa Whitney White sang as solos a sixteenth-century hymn, "A Saviour Mine," and "Rest in the Lord." The congregational singing being "Here, O my Lord," by Bonar, and "Saw ye my Saviour," by Mrs. Eddy.

Seven new members were received into the church, making the present membership one hundred and twenty-eight. This church was organized February 22, 1899, with seventy-four members, and its growth has been steady and continuous.—*Concord (N. H.) Monitor.*

Board of Lecturers.

WE herewith republish the list of members of the Board of Lectureship as it now exists.

EASTERN SECTION.

The lecturers for the New England States are:—

Rev. Irving C. Tomlinson, C.S.B., Concord, N. H.

Rev. William P. McKenzie, C.S.B., 1010 Massachusetts Avenue, Cambridge, Mass.

Maritime Provinces, Rev. William P. McKenzie, C.S.B., 1010 Massachusetts Avenue, Cambridge, Mass.

The Province of Quebec, the cities of Ottawa and Kingston, Rev. Irving C. Tomlinson, C.S.B., Concord, N. H.

MIDDLE SECTION.

For the States of New York, Pennsylvania, New Jersey, and Delaware, and the Province of Ontario:—

Carol Norton, C.S.D., 170 Fifth Avenue, New York.

Rev. Arthur R. Vosburgh, C.S.B., Powers Block, Rochester, N. Y.

SOUTHERN SECTION.

Mrs. Sue Harper Mims, C.S.B., 575 Peachtree Street, Atlanta, Ga.

John Freeman Linscott, C.S.D., 1511 Twentieth Street, N.W., Washington, D.C.

WESTERN SECTION.

For the Western States and all Southern States west of the Mississippi River:—

Edward A. Kimball, C.S.D., 5020 Woodlawn Avenue, Chicago, Ill.

Mrs. Annie M. Knott, C.S.D., Suite 508, Chamber of Commerce Building, Detroit, Mich.

Judge William G. Ewing, C.S., 3743 Ellis Avenue, Chicago, Ill.

Judge Joseph R. Clarkson, C.S.B., Room 450, Bee Building, Omaha, Neb.

Silas J. Sawyer, C.S.D., Room 301, Masonic Building, Milwaukee, Wis.

PACIFIC COAST SECTION.

F. J. Fluno, M.D., C.S.D., 1319 Grove Street, Oakland, Cal.

Abraham A. Sulzer, M.D., C.S.B., 1062 Ninth Street, Riverside, Cal.

GREAT BRITAIN.

William N. Miller, Q.C., C.S.B., 57 Bryanston Street, Marble Arch, W., London, Eng.

Notice.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Exchange on Chicago and other cities not named above, will not be accepted.

A Full Line of Bibles.

The Christian Science Publishing Society carries a full line of Bibles. Catalogues will be mailed upon request. We are now prepared to fill all orders for the new Bible specially bound to match the pocket edition of Science and Health. The Bible is on India Oxford paper, bourgeois type, self-pronouncing, Alaska seal, limp, leather lined to edge, silk sewed, round corners, gilt edges. Catalogue number 01435x; price \$4.00.

Bound Sentinels.

We have Volume II. of the *Christian Science Sentinel* bound in cloth at \$2.50 per volume; half calf or half morocco at \$3.00 per volume, prepaid.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Christmas.

THE following article on Christmas by the Rev. Mary Baker Eddy is republished from the *Concord* (N. H.) *Evening Monitor*, it having originally appeared in the *New York Journal* of Sunday, December 23, 1900. As published in said *Journal*, however, this article on Christmas was coupled with another article by Mrs. Eddy which appeared, a few days since, in the *Providence* (R. I.) *Telegram* and also the *Boston Herald*, and was called by the *New York Journal* a sermon. They were entirely separate articles and were not intended to be joined together; nor has Mrs. Eddy written or delivered a sermon for several years.

This arrangement of the article by the editor of the *New York Journal* was the result of a mistake between himself and Mrs. Eddy, as she informs us, and therefore she attaches no blame to the editor of that valuable newspaper, nor need that have any effect upon Christian Scientists so far as perusing this splendid Christmas issue of the *New York Journal* is concerned.

Mrs. Eddy's article on Christmas is as follows:—

Again loved Christmas is here, full of Divine benedictions, and crowned with the dearest memories in human history—the earthly advent and nativity of our Lord and Master. At this happy season the veil of time springs aside at the touch of Love; we count our blessings, and see whence they came and whither they tend. Parents call home their loved ones, the Yule-fires burn, the festive boards are spread—the gifts glow in the dark green branches of the Christmas-tree. But alas for the broken household band! God give to them more of His dear love that heals the wounded heart.

To-day the watchful shepherd shouts his welcome over the new cradle of an old Truth. This Truth hath traversed night, through gloom to glory, from cradle to crown. To the awakened consciousness the Bethlehem babe hath left his swaddling-clothes, material environments, for the form and comeliness of the Divine ideal, that hath passed from a corporeal to the spiritual sense of Christ, and is winning the heart of humanity with ineffable tenderness. The Christ is speaking for himself and for his mother, Christ's heavenly origin and aim. To-day the Christ is more than ever before "the Way and the Truth and the Life," which lighteth every man that cometh into the world; healing all sorrow, sickness, and sin. To this auspicious Christmas-tide—which hallows the close of the nineteenth century—our hearts are kneeling humbly; we own His grace, reviving, healing. At this immortal hour all human hate, pride, greed, lust should bow, and own Christ's power, and the reign of Truth and Life divine make man's being pure and blest.

The Branch Churches and Societies.

INQUIRIES continue to come to us as to whether the branch churches and societies are under obligation to follow exactly the order of exercises in the Mother Church at the

Wednesday evening meetings. We have repeatedly heretofore endeavored to point out to the Field the fact that while it is desirable to conform as nearly as may be to the order obtaining in the Mother Church, for the purpose of securing that unity which is so desirable, yet reference must necessarily be had to the local conditions surrounding the branches. In a recent number of the *Sentinel* we referred to this, and suggested that in places where the attendance was small and the number of testimonies few, the extra time might well be occupied by reading articles and testimonies from our periodicals.

The situation, as we understand it, is this: that, while not departing in any substantial way from the order in the Mother Church, the branches should exercise good judgment and wisdom in the way of making the meetings as helpful and interesting as possible. These meetings are largely for the purpose of informing outsiders and inquirers as to the practical work which Christian Science does in the way of healing sickness, destroying sin, lifting mankind into a higher and better life, and emphasizing, through these practical works, the fact that man is dependent upon spiritual more than upon material conditions for his best welfare. In relating experiences, as we have heretofore suggested, the Scientist should endeavor to think of how his remarks will impress the stranger, who perhaps has heard for the first time anything of what Christian Science is and what it does, so as to avoid unfavorable criticism or cause therefor.

It is our understanding that where it seems best, in view of local circumstances, to take collections at the Wednesday evening meetings, this may be done. We know of no law to the contrary, and yet it may be well for the local Scientists carefully to consider what would be for the best interests of the Cause in each locality, in respect to taking collections, as in other respects.

Misstatements Corrected.

WE conceive a most important part of the work of the committee on newspapers, or the Publication Committee, to be the correction of misstatements of fact in reference to cases of sickness, death, etc., which are charged to Christian Science, whereas, in truth, Christian Scientists had nothing whatever to do with them. We are glad to note that this is being effectually done through the medium of this committee. This work has the double effect of informing both Scientists and the outside public of the real facts, as well as the managers and editors of the newspapers themselves, and of bringing to the attention of such managers and editors the increasing necessity for observing care in the publication of rumors coming to them. Often these rumors are wholly unreliable and cannot be traced to any legitimate source. We know it is the purpose and desire of the better class of newspaper men to confine themselves as nearly as may be to facts, and to do injustice neither to Christian Scientists nor to others. For these reasons we are glad to see the vigilance and good judgment exercised by the members of our committee.

To show some of the work that has been accomplished, as well as for the information they contain, we herewith publish some of the corrections of misstatements which have recently been made.

HE WAS NOT A SCIENTIST.

Chicago, December 1.

Editors Herald:—The following news item appeared in the *Herald* of November 20:—

"At the Christian Science cottage prayer-meeting in Wichita, Kan., John Crosky, while praying for the Holy Ghost to descend upon him, was stricken with paralysis. He has not yet recovered, and physicians say he will die."

I have had this story thoroughly investigated, and can assure you that it is wholly untrue. I submit the following extract from a letter received from Mr. William E. M. McCune, First Reader of First Church of Christ, Scientist, Wichita, Kan. :—

"First Church of Christ, Scientist, of which I am First Reader, is the only Christian Science Church in Wichita, and no such circumstance as that reported ever occurred in this church, or in connection with any of its services. I have been in the work here for nearly three years, and the people mentioned are unknown to me, and, so far as I have been able to learn from numerous inquiries, are unknown in the city. I have thoroughly investigated in the locality where the event was said to have taken place, but found no trace of any such circumstances. In fact, no prayer-meeting of any kind had been held anywhere in that part of the city at the time mentioned. The original story stated that the meeting was held at the residence of Mrs. A. W. Easton, about a mile south on Seneca Street. No such person lives, or has lived anywhere in that section. I had an interview with the reporter who brought in the story, and he admitted that it was written on hearsay, and that personally he knew nothing as to the validity of the circumstances. He was told by the city editor of the *Wichita Daily Beacon*, in which it was published, to go and verify the statements, but he did not succeed in so doing. The reporter also stated that he exaggerated somewhat on what was told him. The editor of the *Beacon* cheerfully published my statement refuting the report."

Will you please publish this letter in correction of the erroneous item.

ARCHIBALD MCLELLAN.

Quincy (Ill.) *Daily Herald*.

SAY THEY ARE NOT CHRISTIAN SCIENTISTS.

To the Editor of the *News*.

Sir:—Under the caption, "Christian Science Breaks Up Home," an article appeared in your issue of October 27, telegraphed from Trenton, stating that a divorce from his wife on the grounds of desertion had been recommended in the case of P. Bradley Martin, a Warren County farmer; that Christian Science is assigned as the primary cause for the breaking up of Mr. Martin's home; that Mr. and Mrs. Martin were married in 1865 and lived happily together until 1896, at which time Mrs. Martin became affiliated with a number of Christian Scientists and spent much of her time in visiting among them and attending meetings, many of which were held at her home during the absence of her husband; that he did not believe in the doctrines of his wife's friends, who he alleges filled her mind with false ideas, and turned her against him. The Trenton papers state his wife left him four years ago, and solely because he would not be converted to Christian Science. Mrs. Martin resides in the suburbs of Newark with her son and daughter, both of whom are adults. She has a kindly and intelligent face, a quiet and dignified manner.

Your correspondent, a Christian Scientist, who had never heard of the family before this item appeared, called upon them to ascertain how they could possibly so misconstrue Christian Science. Mrs. Martin promptly stated that she is not a Christian Scientist, nor is any member of her family; that she never held or attended a Christian Science meeting in her life, at home or elsewhere; never investigated Christian Science, and does not know what it is; that she has some relatives in New York City who are Christian Scientists, with whom, naturally, her family occasionally exchange visits, but none of them share the religious belief of these relatives, and never have shared it. Her daughter, who first came into the room, made substantially the same statement before the entrance of Mrs. Martin. Your correspondent then withdrew. No other questions were asked, and no information volunteered as to the real cause of the separation.

Diligent inquiry discloses the fact that the Christian Scientists in Newark and vicinity have no knowledge of the Martins, and there are no Christian Scientists in Warren County to hold meetings and never have been, so far as is known at the headquarters of Christian Science in Boston.

Inasmuch as this news from Trenton has been widely copied, will you not, in simple justice to Christian Science, insert this reply?

WILLIAM A. CHILDS.

Englewood, N. J., December 1.

Newark Evening News.

THAT WYOMING CASE.

New York, December 6, 1900.

To the Editor of the *Rome Sentinel*:—A dispatch from Cheyenne, Wyo., in your paper of November 16, referring to the death of Mrs. A. D. McNeil, does Christian Science an injustice. The following facts are given by Mrs. McNeil's husband and sister:—

When Mrs. McNeil was taken sick, her sister, Mrs. Simmons of Denver, went up to take care of her. Mrs. Simmons is a Spiritualist, and endeavored to treat Mrs. McNeil. She tried to keep the doctors out for a time, but they were finally admitted. The physicians who attended Mrs. McNeil gave her a dose of morphine, which put her into a sleep from which she never awakened. She lived for about five weeks after her sister arrived, but only a few days after the doctor was admitted. Christian Science had absolutely nothing to do with the case.

In view of the above facts, it must seem evident that justice and fair play demand a more careful statement of cases of this kind. This emphasizes the known fact that something like seventy-five per cent of the deaths which are said to have occurred under Christian Science treatment, are in no way connected with Christian Science. In this statement by Mrs. McNeil's husband and sister, it will be seen that a dose of morphine was given by a medical practitioner, and that Mrs. McNeil did not recover consciousness after taking this drug. There are many things happening outside the ranks of Christian Scientists which by them might be considered irregular, yet no attempt is made on the part of the Christian Scientists to give publicity to instances of this kind, and the same attitude ought to be assumed by those who undertake to criticise, where criticism is undeserved.

Yours truly,

WILLARD S. MATTOX.

Rome (N. Y.) *Daily Sentinel*.

Among the Churches.

Corner-stone Laid at Riverside, Cal.

On October 17, 1900, at sunrise—6.17 A.M.—was laid the corner-stone of the edifice of First Church of Christ, Scientist, Riverside, Cal.

The services were opened by the singing of a hymn from the Christian Science Hymnal. Several beautiful and appropriate Bible selections were then read by the Second Reader; the First Reader reading correlative passages from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. All present united in silent prayer and the audible repetition of the Lord's Prayer, with its spiritual interpretation as given in Science and Health.

After the singing of another hymn the "Scientific Statement of Being" was repeated, and the laying of the stone was proceeded with.

A galvanized iron box, hermetically sealed, was placed in the cavity under the stone, containing the Bible, a copy of each of Mary Baker Eddy's writings, and many periodicals published in the interest of Christian Science, and also a list of the names of the members of the church.

The stone is a solid granite block, two feet square and eighteen inches deep, polished on two sides; the one side bearing the inscription, First Church of Christ, Scientist, and the other, 1900.

When the stone was in position and the work of the masons completed, the Doxology was sung, and the ceremonies were over.

The service was simple, uplifting, and impressive in the extreme, and many comments on its beauty were expressed by the two hundred people gathered to assist in and to witness it. The edifice will be completed in a few months. The local press gave a detailed account of the exercises.

A number of people came in from Los Angeles, Pasadena, Colton, San Bernardino, Redlands, and Highland, and stayed over night to be present on this occasion.

Following are the selections read:—

The Bible,	Science and Health,
Psalms 91;	Preface, vii.—I to 20;
Isaiah, 28 : 16, 17;	151—8 to 13;
Isaiah, 54 : 11-14;	264—3 to 8, 18 to 24, 28
Matthew, 16 : 15-18;	to 6 next page;
Malachi, 3 : 12, 10;	574—9 to 16;
Ephesians, 2 : 4-7, 10,	493—3 to 22;
14, 18-22;	464—7 to 13.
Ephesians, 3 : 17-21.	

MRS. EMMA S. DAVIS.

Report of Literature Sold at Chicago.

At the annual meeting of the Central Christian Science Reading Room Association, held December 10, 1900, in Third Church of Christ, Scientist, Chicago, it was reported that the number of copies of Science and Health, "Miscellaneous Writings," Journals, Sentinels, and Quarterlies, sold at the rooms of the Association during the year, from December 1, 1899, to November 30, 1900, was as follows:

Science and Health,	
Cloth binding	834
Sheep	245
Morocco (Pocket edition)	732
Levant	111
Total	1922
Miscellaneous Writings,	
Cloth binding	149
Morocco (Pocket edition)	148
Levant	25
Total	322
Single copies,	
Journals	2974
Sentinels	6035
Quarterlies	5003
Subscriptions for	
Journal	544
Sentinel	810
Quarterly	370

FANNIE B. HUNT, Secretary.

From Everlasting to Everlasting.

From whatever angle the love of Christ is regarded, it is unspeakable. It is unspeakable in its length. It had no beginning; it knows no break; it has no end. The mercy of the Lord is from everlasting to everlasting. It is unspeakable in its breadth. It includes each and all. It is like a benediction upon every soul. It is unspeakable in its depth. It saves to the uttermost. And it is unspeakable in its height. It makes us joint-heirs with Christ, kings and priests with God forever.—A. J. F. BEHREND.

Testimonial Meeting at San Antonio, Tex.

AFTER the usual opening exercises the First Reader said in substance: "The enquiry frequently comes to us, that if Christian Science is the Christianity taught and followed by Jesus and the disciples, why is it so persecuted? To me this is the highest proof that it is the same. The disciples were persecuted and maligned; Jesus was despised and rejected of men, and in his healing and reformatory work he was stoned, and he asked the people 'for which of these works do ye stone me?' Think how he was persecuted for healing the impotent man. They sought to slay him, and when he restored the man to sight the Pharisees were offended at it, and excommunicated the man; and for raising Lazarus, the high priests and Pharisees took counsel together to put him to death.

"Stephen did great wonders and miracles for which they stoned him. Peter and John were brought before the Council for healing a lame man. They were imprisoned, but God released them. They rejoiced that they were counted worthy to suffer for His name. So when we as Christian Scientists meet with persecutions, we know it is because we *are* following the same Truth that Jesus taught and walking in the same strait and narrow way, and we are strengthened and encouraged and comforted through it all, for Jesus said, 'Blessed are they which are persecuted for righteousness' sake: for theirs is the kingdom of heaven [harmony];' and 'Be ye not troubled: for such things must needs be.' Paul says: 'All that will live Godly in Christ Jesus shall suffer persecution.' So, the only reason I can assign for mortal mind's antagonism to Truth, I give in the words of Jesus: it is 'because they have not known the Father, nor me.'"

A lady in the congregation who had been healed of a severe case of blood-poisoning, arose and said: "I am very grateful to God for Christian Science, for what it has done, and is doing for me every day. It is a source of comfort at all times, and I am thankful to our Mother in Israel for Science and Health."

This was followed by grateful expressions from another lady, for the great benefits derived from Christian Science. This lady is the wife of a retired English general, and was an invalid for twenty-eight years. She traveled extensively and was treated by eighteen of the best physicians in this and foreign countries. She was healed by reading Science and Health and attending the Christian Science services.

A man then arose and said, "I am always glad to tell what Christian Science has done for me. I came to Texas five years ago from Toronto, Can., on account of lung trouble, which the doctors declared to be far advanced. Then developed Bright's disease, so pronounced by one of the foremost physicians of San Antonio. Instead of improving I began to fall off perceptibly; was unable to work, and was depending upon my wife's earnings for our livelihood. Our neighbors were expecting me to take to my bed any day. One of my wife's customers loaned her Science and Health, and I read it two days and a half and realized that it was God's truth. I got up from my weak condition at once and started to work, and have been working ever since, part of the time doing harder work than I ever did in my life. Since the first flush of gladness was upon me I have naturally wanted to tell every one of Christian Science."

His wife then arose and said: "I must tell you how grateful I am to God for Christian Science, and for the healing of my husband; also for the spiritual uplifting it has been to us both. I did not need Christian Science for physical healing, but for a long time I have been very much dissatisfied with my religious teaching. I came away from the different services hungry,—longing for something better,—and this last summer I felt as though I would

rather not belong to any church. Just here my husband's healing came in, and he began reading Science and Health to me. I drank in the spiritual teaching, and kept saying, 'This is the teaching I have been looking for, this is just what I want, and I will go to the Christian Science Church with you.' I enjoy the lessons very much, and have said to my husband, 'Why, this Christian Science is an unfolding to me of Life, Truth, and Love; and I am grateful to God for having led us into it.'"

The next speaker was the Second Reader, who was a regular graduate of the Jefferson Medical College of Philadelphia, and who had practised medicine with fair success for forty years previous to accepting Christian Science eight years ago. He related a case of consumption healed through his understanding of Christian Science, saying in all his medical practice he had never known like results accomplished by himself or any of his colleagues. This case was a merchant who had been in successful business until forced to abandon it on account of this increasing and fatal disease. He had been sick several months, traveled and sought climatic and other material remedies, but instead of improving he grew worse and hopeless. Through the influence of a friend, he sought Christian Science, and was restored to health. This occurred nearly two years ago, and to-day this man is still well and stout, and is actively engaged in his former business.—B. B.

Concerning our Publications.

Publications in the Libraries.

New York, N. Y., November 30, 1900.

Editor Sentinel:—It may be of interest to the Field to hear a little of the work being done among the libraries by the Second Church of Christ, Scientist, of this city.

We find the libraries have a great demand for Christian Science literature, and the work among them has been most interesting and pleasant.

One librarian asked for as many copies of our books as we would give him for the different branch libraries under his supervision, saying there was a constant demand for them in all these libraries. On later inquiry we were told the volumes were out constantly.

At one library, where we found Science and Health and "Miscellaneous Writings" had already been placed, the request was made for a copy of "Retrospection and Introspection," and of course it was given.

Each library where the books have been donated, has sent a letter acknowledging the receipt with pleasure and thanks, or sent their usual printed formula.

One of the clubs hearing this work was being done wrote asking that a copy of Science and Health and "Miscellaneous Writings" by Mary Baker G. Eddy be donated to the club, as they were desirous of having these volumes on their shelves.

Many interesting letters have been received pertaining to this work, some of the librarians expressed the intention of reading the books before being circulated.

Of all the libraries in the city, but three have refused to accept the copies offered. In one case the refusal was owing to the rule of not receiving in the library any denominational works.

Another library, being connected with one of the oldest Episcopal churches in the city, refused Science and Health through the rector, as not, in his opinion, "being in accord with the doctrine of Christ, as we received it."

In the third case, it was refused by the librarian, who said she desired Science and Health should not be in the library, at the same time acknowledging the book was constantly asked for.

"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy has been placed in the following libraries, and "Miscellaneous Writings" in many of them, besides other works by the same author, and in some the *Journal* has been placed. Many of these libraries have a number of copies of each: Bruce Free Circulating Library with its many branches composing the New York Free Circulating Library; Mercantile Library; Lenox Library; Columbia College; Astor Library; Cooper Union; New York Hospital and St. Luke's Hospital; St. Agnes Free Circulating Library, connected with St. Agnes Episcopal Church; Cathedral Library (Free Circulating) connected with the Catholic Cathedral; Blackwells Island and in the Tombs; Masonic Library; Webster Free Circulating Library; Mechanics and Tradesmen; Library and Reading Room of Young Men's Christian Association; Mechanical Engineers; American Society of Civil Engineers; Aquilar Library: Mills Hotel; N. S. Army Aid Association; Society Library; Library of the Seventh Regiment Armory; in the twenty-five library cars of the New York Central trains; Salmagundi Club; Harlem Club; University Club, and Union Club.

ELLA BERRY RIDEING,
Chairman Library Committee.

Science and Health in Alaska.

Topeka, Kan. November, 24, 1900.

Dear Sentinel:—When Miss Emma L. Kelly made her second trip to the Klondike she kindly consented to carry for our Association a copy of "Science and Health with Key to the Scriptures," for the use of the miners. The following letter has been received and will be of interest coming from such a far-away point.

Circle City, Alaska, August 31, 1900.

The Miners Association of Circle City begs to offer to Mr. Fisk's Students Association its best compliments and thanks for the volume, Science and Health, which, through the kindness of Miss Emma L. Kelly, was presented to its library as a gift.

On behalf of the Miners Association,

DAVID PETREE, *Secretary*.

We understand that the book has been in almost constant use, and will send them the *Journal*, so that they may see what Truth is doing for the world and what it will do for them.

L. K. BUTTERFIELD, *Secretary*.

The Journal and Sentinel.

Boston, Mass., December 15, 1900.

Editor of Sentinel.

Dear Sir:—The letters which were published in a recent issue of the *Sentinel* under the heading, "Concerning our Publications," has awakened me to the point of having to tell of the great help the *Journal* and *Sentinel* are to me. For some time I have found that if some point of Christian Science does not seem quite clear to me, or if I want some reading matter of a certain nature to hand some one to whom I am talking and whom I wish to interest in Science, that each new *Sentinel* or *Journal* contains just what I require.

I am glad that Science found me in business, as it gives me an opportunity to talk with, and give our valuable literature to, people who so much need what I have proven in my three years' experience, Science will give,—more and better business, relief from anxiety, happy relations with customers and tradesmen, relief from lack of finances, better health for mind and body, and a contentment and happiness never known before.

Very truly yours,

A. FLORENCE GRANT.

From Our Contributors.

The New Century.

BY J. E. DOWNEY.

WE stand expectant at the portal
Of the new century's dawning day;
We catch the sounds of strains immortal
As mists and darkness melt away;
And as we gaze, the view resplendent
Grows brighter as the day comes on,
Till scenes and sounds become transcendent,
Which were but faint at early dawn.

We heard the inspired poet singing,
About "The Christ that is to be,"
And our hearts throbbed as it came ringing
So grandly to us 'cross the sea.
But now we sing a newer chorus
About the loving Christ that IS,
As the transforming thought comes o'er us
That every living soul is His.

Man's universal brotherhood
Is now impressed upon the heart,
While fatherhood and motherhood
A new and sweeter sense impart.
The century dawns! The bells are ringing!
We hear their loud, glad sound again.
Above, angelic hosts are singing:
"God's tabernacle is with men."

Truth Makes Free.

BY JULIA M. C. TOMLINSON.

Ye shall know the truth, and the truth shall make you free.—*Jesus*

BORN and brought up in an atmosphere of theology and medicine, it was my privilege to hear much learned conversation on these subjects. I well remember how the uncertainty of everything troubled me. The best informed seemed most hopelessly at sea regarding

I, I, I, I myself, I,
The inside and outside, the what and the why,
The when and the where, the low and the high,
All I, I, I, I myself, I.

I early learned to say, "Consistency thou art a jewel," but I have never been able to learn the origin of this saying.

Later I did my own thinking and became an agnostic. I read and questioned only to hear the ghost of my childhood echoing back to me. "No one can tell; no one can answer these questions." Judging from what Christian and scholar said, death seemed the gateway to immortality, yet no matter how wretched their circumstances no one wanted to die.

Finally there came a day when it seemed as if I was to leave earthly scenes. I bade farewell to loved ones, but I knew I had left unfinished work so I came back and took up the tangled woof and warp of life again, weaving a few more years of golden hopes and solemn shadows, then came the verdict, "Take her away from here, she cannot live a year longer." I had concluded that my life-work was about done. The burden of living was too great, and death seemed a welcome friend.

I longed for a glimpse of my childhood's friend, the ocean. To me it was always a symbol of freedom and eternity, and this is just what it proved to be, for on the blue waters of the Gulf of Mexico, I met one who told me of Christian Science. He wisely allayed fear and prejudice, for he saw my great need, and gently engaged me in conversation on my favorite topics,—religion and philosophy.

I asked him these questions: Does Christian Science give you a God to be worshiped in Spirit and in truth? A God who is of too pure eyes to behold iniquity? A God

who is an ever-present help in time of trouble? Does Christian Science give you a God of love? To these he replied in clear, ringing tones, "Yes!" and I said, "Then it is the Christ-Truth and I want it." I had long since ceased to think of my body. I was dying, mentally, starving for Truth, and of course I was made whole through partaking of this bread of Life which restored me mentally and physically. I began to read Science and Health, and how I loved its author!

Only those who have had a similar experience can know what a resurrection from the dead this was to me. To be well was joy, but to open the Bible again and study it in the light of Christian Science was a realization of "The kingdom of God is at hand." The book of Genesis, which had seemed a paradox, became wonderfully clear. The book of Revelation, which has been so fearful, now seemed truly the "Apocalypse," and as I read the "little book," I began to understand the significance of Revelation, 3 : 8. "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy sustained and explained the Bible, and I had continued proof that not only the words of Jesus were understood, but his works, for through this understanding I saw the demon of drink cast out; cancer and epilepsy destroyed; catarrh of stomach and bowels, which had been pronounced incurable, ceased its torture, and the sufferer was made every whit whole and is now a successful practitioner of this gospel of "Peace on earth, good will to man." "Ye shall know the truth, and the truth shall make you free." There is no uncertain sound to this word *shall*, and the Bible is full of it; mark its significance in Isaiah, 55 : 11; Matthew, 6 : 33.

Shall is the law, you cannot get away from its demands and commands. The history of Job is a valuable lesson in this direction. Therefore "Acquaint thyself with God and be at peace." Yes "Go and take the 'little book' " and learn the meaning of Jesus' words, Mark, 12 : 29-31, and you will find you are making some progress.

The Friends we Meet.

BY H. V. A.

No one can attend the Sunday and Wednesday services of the Christian Scientists very long, before he learns that not only are functional and organic disorders met and mastered by Christian Science, and that ills which have long been assailed in vain by medical practitioners are removed, but that it supplies man's every want in every line. No happier men and women can be found than in these Scientist gatherings, and joy and love beam from every face. That this love is real is proved by its results.

It has been the writer's good fortune to attend the Wednesday evening meetings in many churches, and the best testimony as to the real, vital brotherly love of the Christian Scientists is found in the almost uniform experience, as related in the testimonies, of the new follower who has just been healed in Science. He begins by reciting the dream of the past; relating the material efforts to help him, then, just as he was in despair and perhaps under sentence of death or the hospital, he "met a friend who told him of Christian Science." Even though this was met with raillery, scorn, and unbelief, yet the Scientist, voicing the Truth and the immanence of God's love, was indeed so happy and healthy and confident that at length the sick one concluded to "try" Science. And thus was brought into his daily experience the blessed comfort which is alone to be found in "Science and Health with Key to the Scriptures."

Great is the growth of Christian Science and the permanency of this growth is best shown by this uniform testimony of those in need who "met a friend." Permanent because it is grounded in the hearts and affections of those

to whom it came as a revelation of the infinite Love that is ever-present and all-powerful.

As one listens to the recital of healing in these meetings, he learns that every possible form of disease or discord is being overcome in the practice of Christian Science. The writer had several years hospital and sanitarium experience, and after all else had failed was healed in Science. While in the various sanitariums he prided himself on the "knowledge" he had acquired respecting the various forms of so-called organic and incurable disease, and could talk about them as glibly as any interne that ever wielded a scalpel. Since his attendance at Christian Science meetings he has heard testimony respecting the healing of practically all these diseases, and most of the sufferers, like himself, first heard of Science when, in the extremity of his need, he "met a friend." At the last testimonial meeting eight out of twelve specially mentioned this as the way the speaker came into Science.

Wisely does Mrs. Eddy admonish us to exhale always such a mental atmosphere as will induce health and holiness, for any hour may bring to us an opportunity of expressing our gratitude to Science and our Mother in the way she would most desire, in leaving in the heart of some one in need the words of Love and Truth which show what Life really is, and bring home to the hopeless one the fact that brotherly love is an actuality, so he, too, can say, "I met a friend."

A Thought.

BY L. L. G.

IN talking to a friend about her plants, I asked why such small pots were used for slips, and her answer was, "Because in larger ones the slips run all to root."

The thought came to me that the same rule applied to our spiritual growth. If our surroundings are too comfortable, too satisfying to the material senses, we grow in selfishness—we remain in them, and throw out but few leaves of Life and flowers of Love to bless those who come in contact with us.

If, on the other hand, our surroundings are rather cramped, our growth, instead of being retarded, continues with the same vigor, but not having room below in the darkness of earth (self), it is forced out and attracted upward by the warmth and light of Love. Instead of being manifested only in root it quickly develops in the form of beautiful foliage and flowers, visible to, and blessing all with their beauty of form and color, and their perfume of gratitude breathes out rich promises of a loving Father's care for His creation.

Working for God.

BY MABEL BIRDNO.

WHEN taking the first steps in Christian Science, we find many errors to overcome, which formerly seemed to be real, stubborn facts; but looking through the clear lens of Truth, their nothingness is seen. To destroy the false sense of error we must not work for good results only, or for place or power; but must go forth, always bearing in mind that we are working for God.

When confronted by error's myriad forms, no matter how slight its manifestation, our duty is faithfully to perform our work by declaring God's allness. Love, filling all space, leaves no room for anything unlike God. What joy to work for the Master, scattering the seed of Truth by the wayside and all along the shining path.

In all places, under all circumstances, at all times, may we, as loyal Christian Scientists, be found working for God, bearing onward our banner, "God is Love;" marching on to receive our reward, "Well done, thou good and faithful servant."

Testimonies.

A Wonderful Demonstration.

I have expressed my gratitude many times at our Wednesday meetings, and there is scarcely a day passes that I do not tell some stranger of the great benefits I have received from Christian Science, having been healed through the reading of "Science and Health with Key to the Scriptures."

It was fourteen years ago last February that the good news came to us of several persons who had been healed by Christian Science. For about seven years I had been deformed from a dislocated hip and curvature of the spine. The physicians said I could never be any better, and that they thought a great deal had been done for me in preventing an abscess from forming, telling me what a terrible thing it was. Walking much would cause a soreness in the joint, and some days I could not walk at all. In addition to this, I had what the doctor called ulceration of the eyelids, with which I had been troubled since having the measles when three years of age, and almost every spring for two or three weeks I could not open my eyes, the suffering being so severe. After hearing of the work Christian Science was doing I wasted no time in going to see the Scientist who had started the work in our city, Grand Rapids.

My interview with him was not satisfactory; as he would not promise a cure, but tried to explain to me; but I could not, or would not, understand. I confounded Christian Science with faith cure, and thought that not to be willing to promise showed a weak faith, and I would not take treatment.

My mother was with me, an invalid for several years, and did not feel as I did about it and was treated. She was relieved after the first treatment and bought Science and Health. I knew she got the book, thinking I would read it. As days went past and she saw I would not, she tried to read it to me, but I would not listen. Finally I thought I had better read the book and find out what it was I was antagonizing. So I started to read Science and Health, as a critic, but I am thankful to say that I never criticised one word. I read the book for several days, then told my family that I was a firm believer in Christian Science, and if I were not cured, and never saw any one cured, it would not change my thought, for I knew that the fault would be with persons and not with God, the Principle.

I felt it was a revelation, and I loved the author. I could not believe that God saw all the suffering in this world and had power to prevent it, but for some good reason did not. We were told we must love this God, and believe He was good, we must also believe that He was all powerful, and that it was His will that every one should be saved, that He governed the world, and yet the sinful seemed to flourish in all ways, and to drag a great many down with them, while the good were prevented from doing God's work on account of illness. How different from the teachings of Jesus.

Can it be wondered that I accepted Science and Health as a revelation, when it took me out of such darkness? I did not think about myself when reading, whether I should be healed or not, until one day about two weeks after I had begun reading Science and Health I had a severe pain in my hip joint. It was so severe for a few seconds that I could not move. I had never had anything like it before, and when I got up from my chair I knew that the joint had slipped in place. The demonstration was complete. Since this time I have had no trouble with it whatever. It seems needless to try to tell how grateful I am to our beloved Mother for the light she has given us and the work she has done and is doing, for deeds, not words, prove gratitude and love. Jesus said, "If ye love

me, keep my commandments." The word *try* which mortal mind has rested upon for so long, Jesus never used. The only way to prove gratitude and love is through true obedience though there is an obedience through fear of punishment which perhaps is better than not to obey at all. Of course we begin our journey by trying, but we must not be satisfied with the thought that we are trying. We must *do* the best we can, we must prove our love for God, for Christ Jesus, for our Leader, and for mankind, through our obedience and works.

ADA H. HAMMOND, Baltimore, Md.

A Case of Healing of Paralysis.

Fifteen years ago, I lost my voice. I did not emit a tone for six months. An eminent Chicago specialist examined my throat and said that one of my vocal chords was paralyzed. My family physician, after he had treated me for some time, took me to the specialist, at whose hands I suffered great torture through the use of arsenic and local applications of electricity. I was finally dismissed by him without any benefit having been received, and told that he could do nothing further to help me.

After this I did some traveling, but without benefit. Then, in sheer desperation, I went to a Christian Scientist, who not long before this time had come to Chicago from Boston. My healer gave me a treatment each day for thirteen consecutive days, when my voice was fully restored.

The foregoing is a very simple and concise narrative of the general facts. To be more specific, let me say that, fifteen years ago, I was a practising lawyer, with a wife and young children. We were occupying our first home, a new house, with a new mortgage on it. I was meeting with satisfactory success, was fondly planning to rear and educate the dear children, pay the mortgage, and make a reputation as a lawyer and a citizen of which my family at least would approve.

In one day I was stricken dumb—deprived of the power of speech. I soon saw my clientage disappear, and I became thoroughly alarmed for the future of self and family. I urged my family physician to greater diligence and skill; he soon doubted his ability to help me and took me to the specialist, one who, through his contributions to medical literature and acquiring a large and lucrative practice, had become eminent in his profession. After a very careful diagnosis, he pronounced my trouble to be paralysis of a vocal chord.

Then began a long and painful series of tortures of one kind and another. However, let me say for this kind doctor, that he was very desirous, even anxious, to help me, and, literally, exhausted the resources of his skill in my behalf. He, like many another noble man of his profession, has given all his time and energy to acquiring knowledge along the lines of *materia medica*.

After weeks and weeks of this kind of treatment, without the slightest indication of relief, the specialist told me that he knew of nothing further that could be done to help me. Thus given up by this eminent representative of a special branch of the medical profession, I felt hopeless and helpless, as if a stone wall of despair had been built about me. In this condition of mental agony, and in the desperation of despair, I went to a Christian Scientist, expecting nothing, and so declaring myself. In thirteen days, with a treatment each day, my voice was fully restored to me.

My healer did not at that time tell me that it was divine Love that brought me relief from the dreadful fears which had enslaved me and held me in such tyrannous bondage. Perhaps if she had told me I would have been as one of the nine lepers who had been healed by the Master, and went away, and stayed away, in ungrateful forgetfulness of acknowledgment. I am sure I should have refused its

ministration as something likely to disturb my established religious convictions.

While I look back upon this demonstration of the power of Truth to heal and to restore as the most remarkable of all my experiences to relate, yet I have since experienced many demonstrations, through the healing of sickness, and sin, and sorrow, of the power, willingness, and goodness of God.

I have learned how to invoke this power and gain its benefits now and always, through an understanding of the Truth, as revealed in Science and Health and the other writings, sayings, and doings of the dear Mother, to whom I lovingly yield constant gratitude and obedience.

ADLAI T. EWING, Chicago, Ill.

Wound Quickly Healed.

About eight years ago I was called to a country town in Missouri to attend the case of a small child. One morning when taking a stroll over the farm with the owner a revolver was prematurely discharged when taking it out of my pocket. I felt a queer sensation in my thigh, but denied it at once and repeated the Scientific Statement of Being. Upon examination it was found that the ball had entered the thigh but had not passed entirely through, lodging about half an inch from the other side. I asked the friend with whom I was staying to cut the ball out, but could not persuade him to do it. He said he knew of an old army surgeon some five miles from there, and if I could stand it to ride that distance he would at once hitch up and take me. I replied that I could stand it, as I was feeling all right. On the way over I was often asked if it hurt much and as I always replied in the negative my friend would say, "That is funny." Finally we arrived and had the surgeon extract the ball. After cutting it out he remarked, "What are you made of? You did not make a groan, and the flesh didn't even quiver when the knife was used. I cannot understand it." I looked at him a moment and smiled. He said, "You had better come back to-morrow and let me dress the wound." I said, "Thank you; but I will take care of that all right." While paying him, he remarked, "You puzzle me, but I believe you must be one of those Christian Scientists that are going the rounds here and curing people." I replied that I was. I rode over the rough roads back to the farm, feeling no discomfort whatever. I attended to all my duties and felt no pain. In three days all was as if the accident had never occurred, and has remained so to this day. Surely Truth and Love are our only support.

The friend who witnessed the accident and saw me almost constantly for a week afterwards said, "I never would have believed it had any one told me, but what I see I know. It is wonderful what your Christian Science did for you in time of need." It gave him and myself also more faith in its teaching to see such a practical demonstration of its power to prevent inflammation and pain. I am extremely thankful for such a great gift, Christian Science, even the partial understanding of which leads us beside still waters.

It is needless to say that the child also responded quickly through the parents' faith and the healer's understanding of what Christian Science could and did do on this occasion.—H. L. D., Boston, Mass.

We may not understand the Bible merely by studying it. It will not reveal itself to us until we begin to do what it teaches. He that seeks to obey it shall know it. Many people have the impression that there is something occult and mysterious about the words of the Scriptures. But this impression vanishes if they accept the divine teachings and begin to fashion their lives according to them.

J. R. MILLER, D.D.

Religious Items.

Rev. George W. Solley has an article in the (Unitarian) *Christian Register* on "The Country Town Problem," in which he says: "The New England country towns need converting over again to another philosophy. To-day our country people are, almost to a man, fatalists and pessimists. These beliefs are the parents of no reforms. Pessimism and fatalism are the agents of death. It is not the emigration to the West nor the small families at home, nor the poverty of the country towns (although they are poor enough), nor the changed conditions of country towns which is the trouble: it is their change of belief. Our fathers looked toward the future, and labored with a vision in their minds. It might take a week to travel to Boston. Letters were scarce and newspapers scarcer, but still they believed in great things. It is not a question of railroads or mail systems or markets or climate or any other condition, and it never has been since Paul and Barnabas set out to evangelize the Roman Empire. It is the question of belief."

The *Springfield Republican* prints the following: "An Ohio mother, whose daughter had been killed in a most cruel manner by a jealous woman, consented that the murderer should be tried on the charge of manslaughter instead of murder in the first degree, the penalty for which is death; and she gave this as her reason:—

"I could not rest content that the crime which had cost my daughter's life should go unpunished, but it could bring to me and mine no comfort, nor could it lessen our sorrow that another life be taken in vengeance for our loss. This could not restore my daughter to us, nor blot out the weeks of anguish which have been made her and our portion. I know what suffering means as no one can who has not undergone affliction such as mine; and a vengeance adding to the sufferings of others who are innocent of wrong themselves could bring no balm to my heart."

"A sound objection to capital punishment is here expressed most patetically."

The London correspondent of the (Episcopal) *Church Standard* in one of his weekly letters quotes the following from a lecture by Canon Gore on "The Municipality:" "I was once in America, and through the two months of my visit nothing was so constantly impressed on me as how incomparably more the American thinks of his shorter history than we do of our longer and completer history. The American has an extraordinary interest in that hitherto brief page which constitutes the life of the United States. London has a vast history, and Londoners are profoundly ignorant of it. It is the same about the history of English achievements. It behooves us to think about the qualities of our great life; about the narrowing horizon which goes with indifference; about the absence of reflection consequent on the hurry of the life we live."

The revision committee of the Presbyterian General Assembly met the week of December 4-8, to canvas the votes of the various Presbyteries on the question of revising the creed. All the Presbyteries have voted on the question, resulting in the revisionists receiving about 72 per cent of the votes cast, 126 Presbyteries voting for revision and 46 against. The committee unanimously agreed to recommend to the General Assembly that some revision or change be made in accordance with the returns from the Presbyteries which "plainly indicate that the Church desires some changes in its credal statements." The committee will meet again February 12, 1901 to prepare its statement to the General Assembly.

A writer in the *Congregationalist* says: "Observing the tendencies of character to become fixed, to dwarf and wither in the terrible, unerring sequence of evil-doing; unable to see how the accident of death, even though the fleshly handicap be removed, can suddenly transform the moral nature; recogniz-

ing that we must in all probability continue in the next world about where we leave off in this world, and there, bear the natural, moral, and spiritual effects of the life lived here; we must feel the urgency of immediate obedience; we must admonish ourselves and others that now is the acceptable time, now is the day of salvation."

The *Universalist Leader* says: "Now these two things co-operate in all improvement. We must have a correct and unchanging standard of conduct and character, and we must see things as they are. False standards and blurred vision mean barbarism and old night. But false standards and confused seeing have ever been the common inheritance. What the world has always needed, therefore, more than it has needed everything else, in order to progress, have been oracles and prophets. Some one to lift up the standard and cry, Repent, for the kingdom of heaven is at hand!"

The third (Christian World) number of the *Congregationalist* contains an article headed, "A Modern Minister's Theological Beliefs," in which the writer says: "The purpose of Christ is to bring to realization the ideal humanity to which the race is born as to a birthright, to make men know and enjoy their sonship and brotherhood in the Father's house. In this Jesus we behold the ideal man. He gathers up into himself the common human nature and fulfils and glorifies its latent powers and capacities. We see in him our own selves at their best."

Early in his ministry in Boston Theodore Parker wrote: "My chosen walk will be with the humble. I will be the minister of the humble, and, with what culture and love I have, I will toil for them. I rejoice to see that most of my hearers are from the humbler class of men. If it had only been the cultivated and the rich, I should feel that I was wrong somewhere; but when the voice comes up from the ground, I can't refuse to listen to it."

"The foreboding, forecasting temper does much to destroy the happiness of life," says the (Baptist) *Watchman*. "Instead of throwing ourself s heartily into the enjoyment of proper occasions, we suffer the imagination of what may come to us to make us miserable. A great many people are looking forward for happiness. They do not realize that probably present conditions are as favorable for it as they ever will be in this world."

A press dispatch from Tacoma, Wash., says that a committee of rich Dunkards has purchased the town site of Sunnyside, in the irrigated section of Yakima County, Wash. The purchasers include Elders S. J. Harrison of Sunnyside, and C. Rowland, a wealthy banker of Danark, Ill., and they purpose founding an ideal colony which shall be noted for its temperance, Christianity, and educational institutions, so the dispatch says.

One of the editorial departments of the *Universalist Leader* contains the following: "The man having but little of this world's goods, whose limitations are as walls about him, will be equally at peace if he finds God in his daily life. The few mercies which others may recognize as his are magnified in his own mind and supplemented by others known only to himself, because he translates every experience by God's love."

The (Baptist) *Examiner* says: "It is quite possible, and indeed quite common, to confess Christ with the lips and deny him by the life. It is against that kind of denial that we should be peculiarly solicitous to guard ourselves; and this we can only do by living in close intimacy with our Lord and seeking always to follow in his steps."

"We are naturally blind to our faults and have exaggerated estimates of our virtues," says the *Examiner*. "A man may be quite willing to acknowledge his errors; but how deeply he feels them—how little, indeed, he regards them as errors at all—will quickly

appear when some other person accuses him of them."

St. Paul's Lutheran Church at Schwenksville, Pa., has been celebrating the one hundred and fiftieth anniversary of its foundation. In the past seventy years it has had but two pastors—Rev. Frederick Waage and his son, Rev. Oswin F. Waage. The latter has been in charge since 1870.

"One reason why the broad way is so popular is that those who are entering it do not see to what it leads," says the *Congregationalist*.

Notices.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

No. 6.—Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

--	--

PULPIT AND PRESS.

A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDDIMENTAL DIVINE SCIENCE.

An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM.

The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES.

A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.
